

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

The Nation.

NEW YORK, THURSDAY, JANUARY 5, 1899.

The Week.

The news from Manila which tells of the surrender of Iloilo to the insurgents, and of a new and strong cabinet formed by Aguinaldo, is supplemented by news from Washington that President McKinley is thinking of sending a commission to the Philippines to study the conditions there, and to make recommendations as to the policy to be pursued in dealing with the islands. Gen. Merritt, who is now at Chicago, is reported as strongly disapproving the act of the Spanish Gen. Rios in surrendering to the insurgents, unless he (Rios) was compelled to do so by hunger or other *force majeure*. A fortnight ago the newspapers contained another remonstrance from Agoncillo, the diplomatic agent of the Filipinos, against the annexation of the islands to the United States. He argued strongly that Spain had nothing to cede in the Philippines; that her claims were annulled long before the Paris conference took place, and that since her pretended sovereignty had been overthrown she had nothing either to sell or to give away. If we add to this that the American troops in the islands are many of them suffering from climatic diseases, that they are pining to come home, and that their relatives are sending petitions to members of Congress every day for their discharge, and that the new army bill is not passed, we have a condition that may be rightly called a muddle. Nor is it likely that the conditions will simplify themselves with the lapse of time.

No illusion should be entertained about the antecedents and probable aims of the men of mixed blood who are now at the head of the so-called Philippine republic. Their patriotism has been, in the past, of too glaringly a mercenary character to make it easy to believe it now entirely disinterested. Most of them were concerned—certainly Aguinaldo was—in the famous treaty of Biacnabató, which was negotiated by Governor-General Primo de Rivera on December 14, 1897. This treaty was simply a contract for bribery on a gigantic scale. The sum semi-officially divulged in Spain was \$5,000,000. Of this, Aguinaldo's share was \$400,000, in consideration of which he agreed to waive his love of liberty and independence, and retire to Hong Kong, as he did. There may be more or less uncertainty about these figures, but there is none about a document which one of the Philippine insurgent leaders sent to Spain, and which was read openly before the Cortes. He was one Pedro Paterno,

afterwards elected President of the native Assembly, who informed the Spanish Government last February that the treaty of peace through bribery was due to his labors with the insurgent chiefs. He enclosed a bill for his services—namely, \$1,000,000, a dukedom of Castile for himself, and a Spanish title of Count for his brother. Later he issued an appeal to the islanders to cast their lot with Spain against the American invaders. The conversion of this man into a stern republican is a trifle sudden.

Nobody yet knows how large a part of the army must prepare for foreign service, or how long those regiments now in Manila or Cuba or en route must stay there. In the English army 102,000 men are kept abroad, each regiment being sent home for seven years after it has passed a like period in India, South Africa, or Egypt; and the draughts upon the 117,000 home troops for recruits to take the places of those incapacitated or killed by disease abroad have been so great as to cause the War Office much concern, and to lead to a large increase of the army as well as a partial reorganization. Our regiments are going across the seas with no home battalions to supply them during their absence with the fresh victims ever demanded, even of a conquering army, by the conqueror of all. Our War Department and generals, throwing away a rare opportunity for reform, have clung to a vicious, out-of-date staff system, and to numerically weak regiments, while making entrance to the commissioned offices free for all men without fitness and with pulls. The forty-seven regiments we are to have when Mr. Hull's bill passes in a month or two will, in all probability, not begin to supply the military needs of Cuba, Porto Rico, the Philippines, and our own unsettled West, even with native auxiliaries to fall back upon, if our regulars are to have the boon of coming back to civilization at stated intervals. If we retain these island dependencies, we may count upon yearly assaults upon Congress for more soldiers as well as for more ships. It has been and is so the world over. Our Mahans and our Mileses, because of their training, will see new dangers every twelvemonth or oftener. Each island must be fortified, and must have its trained garrison to protect its flag. For the country that has once set its face squarely towards militarism and military governments there is no stopping. Does not Germany alone prove this?

The wage-workers of the United States have been slow in realizing that the annexation of the islanders of the

East and West Indies brings them face to face with something akin to Chinese cheap labor, and that they will not be able to resist it when it comes in that form. They seem now, however, to be waking up to the fact. On Saturday week the Central Labor Union of New York passed, with only one dissenting vote, resolutions against expansion. On Thursday evening last the similar organization at Boston took similar action, recording its "emphatic protest against the policy of imperialism now being shaped as the result of a war undertaken in the alleged name of humanity." In some parts of the country, resolutions have been passed by workmen expressing the belief that annexation of the Philippines is a part of a capitalistic scheme to bring about a reduction of wages. We do not think that there is any ground for this suspicion, but we agree with the Boston Central Labor Union that, if such a result should follow, it would aggravate industrial discontent to a dangerous degree. As surely as the Philippines are annexed, whatever the forms of annexation may be, and however we may seek to guard against the admission of their inhabitants to the present United States, they will find their way hither, and they cannot be kept out except by trampling under foot the foundation principle of the republic, which is the equality of all citizens under the law.

Ex-Secretary Day, in his speech on Monday night at Canton, surpassed all rivals, and they are many, in fulsome adulation of the President. He said of him that he could "not forbear an expression of satisfaction that the verdict of his countrymen, no less than the approving judgment of the world, gives him first place among the great men who have filled that high office." Shovel on the flattery thick, was Disraeli's cynical account of the way he came to stand so high in the Queen's favor; and we have seen a sickening amount of such shovelling, done in the most ostentatious way, by men who wanted something from Mr. McKinley. Mr. Day speaks as a man who has had something, and is squaring the account by this public fawning. It is not only a disgusting business, but a thing most demoralizing to public manners and morals. What becomes of our historic sense, of our standards of judgment, to say nothing of good taste and even decency, if we are to be called upon every day or two to fall down and worship a man whose life has been before the country for twenty-five years, and who never, in all that time, displayed a single first-rate quality of intellect or character? If he were half the great man his flatterers trumpet before him

that he is, the first thing he would do would be to bid them be still, for very shame's sake. A really great man in the Presidency would never let it even be imagined that the way to get office from him was to cover him with obsequious flattery; and if he caught the editor of the *Tribune* trying it on, he would say to him, as the Duke of Wellington said to a man singing his praises to his face, "Don't be a d—d fool!"

Señor Romero, the Ambassador of Mexico, whose death occurred last week, represented his country so long at Washington city, and made himself so much liked both there and elsewhere, that he seemed almost like one of our own citizens. He was long the Dean of the diplomatic corps, the social functions of which position he discharged in a charming manner. He was a frequent visitor to New York, and a welcome guest among all those who had the pleasure of acquaintance with him. He first came to Washington as Secretary of Legation in 1859, and was soon afterwards made *Chargé d'Affaires*. He returned home to fight the French when they invaded his country, and was appointed Minister at Washington when the government of Maximilian came to an end. He was also Secretary of the Mexican Treasury for a short time. Thus his diplomatic service was of nearly forty years' duration, and would have been quite so but for the interruptions mentioned above, which were voluntary on his part. His long official sojourn among us teaches that a diplomatic career, as distinguished from appointments made by the rules of chance and luck and party spoils, is not impossible or unbecoming in a republic, and that the best results of international intercourse are to be obtained when the diplomatic office seeks the man, and when it finds him holds him. Usually the importance of a Minister is in exact proportion to the importance of the country he represents, but it was not so in Romero's case. He added to the importance of his country in the eyes of the Government and people to whom he was accredited.

The difficulty which Governor Roosevelt is experiencing in finding a really first-rate man who is willing to accept the position of Superintendent of Public Works, calls attention anew to one of the most radical defects of our system of government. If we had permanent tenure during good behavior for all such places as this, we could then pay a sufficient salary to make it possible to obtain the very best talent for the public service; but so long as the term of service is limited by political changes in the Government, it would be folly to raise the salaries above their present limit, for to do so would have no other effect than to make more furious the

pursuit of the politicians for possession of them. A Governor of the Roosevelt type could be depended upon to fill them well, but one of the Black type would put Aldridges and Payns into them, and the only result would be that the State would pay expert prices for very bad service. Large salaries with uncertain tenure would not make the positions much more attractive to really desirable talent than they are now, for few experts would be willing to give up permanent private employment for two years' employment by the State, with a prospect of constant annoyance during that period and dismissal at its close. Col. Waring's experience in this city is typical of what a really desirable man is called upon to do when he is asked to take a public office in which expert ability is desired. He gave up a private business which brought him in something like \$20,000 a year, in order to serve this city for \$6,000 a year. He served the city in a way as nearly perfect as any official anywhere has ever done. There was absolutely no question of the faithfulness, success, and incalculable value of his work. What was the result? He was turned out of his place with as little ceremony or even decent respect as if he had failed utterly. His salary had been so inadequate for his very modest demands that a fund had to be raised after his death for the support of his family.

Col. Roosevelt caused the machine keen disappointment last week by appointing Lieut.-Col. Avery D. Andrews Adjutant-General of the National Guard. Even though that office has lost much of its former importance because of the new military code about to go into effect, the Governor-elect's readiness to place the disposal of its not inconsiderable patronage and moneys in the hands of an independent Democrat must be taken as highly significant of his determination to appoint to office the very best men available, without regard to the likes or dislikes of the party bosses. As a graduate of West Point, who has served almost continuously in the regular army and the State militia for the last twelve years, Gen. Andrews is in every way fitted for the duties of his position, while his excellent record as a Police Commissioner, and the independence of his attitude on all the questions which came up before the Police Board during his term of service, are guarantees that his new office will be administered with an eye single to the interests of the State and to the advancement of its military forces. Thus the National Guard enters upon the brightest year in its history under a sensible and progressive code of laws, and under the leadership of two trained and able soldiers, Gens. Roe and Andrews, who have the vigorous aid and hearty support of the first Governor in many years to possess military tastes

and knowledge. The change has come none too soon. Under the wretched military administration now passing from office and its present incompetent and political Adjutant-General, the State force has sunk low indeed. Its war record is tarnished by serious charges of cowardice and inefficiency, its armories have become primarily breeding-places of dissensions and scandals, and its entire condition is distempered and disordered. For it the dawn of good government has come at the darkest hour.

At first thought, the proposal of Mr. Croker to start an insurance company seems to be somewhat inexplicable, but when you come to consider the matter for a moment, you will see that there may be something in it after all. He started a club, and it has become a roaring success. He has started a surety company, and that is doing a fine business—how fine, nobody knows so well as the Platt Family Surety Company which gave Mr. Croker the idea. Both these Croker institutions owe their prosperity to the same basic fact—that everybody who wishes to stand well with the ruler of the city must join the one and do business in bonds with the other. Why may not the same principle be applied to the insurance business? If you want any favors from Tammany Hall, any nominations for office, any contracts, any places for yourself and friends—want, in short, to fortify and fructify your worldly fortunes by means of the Croker pull, why should not a good policy on your life in the Croker Life Insurance Company (Limited) be a sure way of doing this for you? In fact, so long as the Croker "pull" is the inexhaustible and irresistible source of power that it is at present, why should it not be made the working capital of business of all kinds? With an annual budget of \$100,000,000 behind it, with an enormous list of places to fill as the boss wishes, and with all the corporate wealth of the city as a mine from which to draw contributions, the resources of the "pull" are as near boundless as anything in the way of capital that the modern world has seen.

The practical disfranchisement of the blacks in Alabama and other Southern States, through the device of constitutional changes, is urged for various reasons, among others that the elimination of this element will enable the whites to divide their votes in safety, as they cannot now do. Thus the Savannah (Ga.) *News* recently asserted that, "if the menace of the black vote were removed, there would be two parties of white voters in all of the Southern States, and there would be just as much interest in Southern State elections as there is in an election in Vermont or any other State." But this theory is not sustained

by the experience of Mississippi, which was the first State to adopt the new policy. The colored vote was practically got rid of there eight years ago, and yet the whites show far less interest in elections now than they did before the change. The extraordinary situation which now exists is strikingly portrayed by the Vicksburg Herald, as follows:

"The restrictions and what preceded them have completely enervated the electoral body. Habituated to dependence upon organization for so many years for protection, when the peril of negro debasement is removed we find that the surrender to party absolutism has become second nature. The primary or the convention having spoken, the election is a mere formality. This is a realization of what Mr. Evarts, in the Senate debate upon our Constitution in 1891, called 'a desiccated suffrage.' The resulting political status is not democracy, it is oligarchy. But it is better than that from which we escaped. Still, does Georgia—which has not the depth and degree of negroism that we had—wish it?"

For more than a year a railroad-rate case of special interest has been pending before the United States courts. The North Dakota Railway Commissioners in May, 1897, adopted a schedule of rates for the railways operating in that State, which involved a reduction from existing charges of about 14 per cent. For refusing to publish the new schedule, or for disregarding it, the penalties were very severe; but the railroads applied for an injunction from the United States court to restrain the publication of the rates, thus bringing up the whole question of their reasonableness. This was elaborately argued for and against the State's contention, and a decision was finally handed down last week sustaining the railways. Judge Amidon, District Judge for Dakota, and Judge Thayer of St. Louis, sitting with him, found that the proposed rates would not have yielded a sufficient return to pay for the cost of handling the traffic, that they were therefore unreasonable, and that the order restraining their publication should be continued. To the lay mind this doctrine of "reasonableness" seems in conflict with the one laid down by the Supreme Court in the pooling case, in which it was held that a law of Congress need not be reasonable in order to be binding. But as North Dakota will probably appeal its own case to the Supreme Court, we shall find out in time if there is a conflict or not. Meanwhile, the decision of the District Court is a severe blow to the railway-barriers of the West.

Imperial penny postage took a long stride onward on Christmas Day, when the English Postmaster-General announced a list of some forty-five British possessions, including India, to which the letter-postage is hereafter to be one penny the half-ounce, instead of the present rate, 2½d. This is the result of prolonged agitation, led of late years by Mr. Henniker Heaton, and of many con-

ferences between colonial governments and delegates and the imperial authorities. The final upshot was an agreement that all those parts of the British empire which desired to have penny postage between themselves should be allowed to do so. Australia and Cape Colony do not as yet see their way clear to join the movement, on account of the expense of carrying letters inland; but all the other great colonies have now availed themselves of the privilege. This is a form of imperial federation and expansion which everybody must approve, except those who insist upon making expansion mean fighting. If empire meant solely the free exchange of ideas, as of goods, it would seem very tame to some of our military romancers, but it would really be empire at its best. There is a temporary expense involved, as a postal deficit will have to be made good for a time. This should recommend it to the expansionists, who fairly dote on expense. Yet our expansive Postmaster-General drew back from the proposal that penny postage should be established between the United States and Great Britain, on the ground that we could not afford it. We are spending so much on guns and ships and policing our empire that we have nothing left to pay postage.

Lord Salisbury, in his speech to the Constitutional Club on December 16, put in his neatest manner the difficulty of mixing the new diplomacy with the old. The cry of the new diplomats is that you must take the people into your confidence. Very good; but how can you take them into your confidence without taking everybody else in too—including the foreign nation with which you may have some delicate negotiation in hand, and to which you do not care to blurt out all your case? Lord Salisbury said he had always preferred greater reticence, but some of his colleagues had not taken the same view. But what had been the result of their attempts to lift the veil? Why, they had been instantly denounced for using indiscreet and provocative language. There is the dilemma. "If you want discretion and reticence, you may have it; but if you want the reverse of reticence, whatever it may be, you cannot expect to have what you consider to be discretion." Therefore, any unlucky Minister who ventured to speak at all about foreign relations was certain to be charged with indiscretion, or else charged with the more heinous crime of not taking the people into his confidence. Chamberlain and Sir Michael Hicks-Beach and Sir Edmund Monson will read this gentle railery with mixed feelings; but it certainly gives plausibility to the rumor that Salisbury is tiring of the cares of the Foreign Office, and that his throwing the reins so often on the necks of his subordinates is but preliminary to getting off the box altogether.

The same speech contained some sentences which certainly support the view of "Diplomaticus" in the *Fortnightly*, on which we recently commented. This was, that it was the knowledge of the threatening French conspiracy in Africa which tied the Prime Minister's hands in Armenia and in China. As if precisely to bear this out, Lord Salisbury said: "It may be quite true that there are some matters on which you do right to go to war, and yet the extreme step was not taken, but you must be sure before you take that action that there were no other possible or immediate complications within view which made it necessary to economize the force that was at the disposal of the Government." He also maintained that a government should be judged as a merchant would be who had failed in some enterprises, but succeeded in others, the failure being excusable by the necessity of reserving all his capital "for work that he knew was impending upon him, and of which he knew that all his capital was necessary for the success." This was only a diplomatic way of saying that the Foreign Office had to lie down in Turkey and China in order to be able to checkmate France at Fashoda.

The *Journal des Économistes* has a sad story to tell about French commerce and colonial policy, apropos of the Fashoda affair. Inquiring what can be the cause of the English feeling of irritation towards France, it attributes it to the operation of the Méline tariff on the commercial relations of the two countries. Under the treaties of commerce the exportations of England into France amounted to 665,000,000 francs; under the Méline tariff they have declined to 485,000,000 in 1896; while the French imports into England have risen, through English free trade, to 1,335,000,000, an increase of 300,000,000. More mischievous than this, the *Journal* thinks, is the French practice of closing to foreign commerce all her new colonial possessions. In 1880, under the treaties of commerce, the French foreign trade amounted to 8,500,000,000 francs; in 1897, under the Méline tariff, it has sunk to 7,554,000,000. The French exports to Algeria amount to 100,000,000 francs. This is the exact cost of the defence and administration of the colony, per annum. In other words, the taxpayers of France pay the profits of the French exporters, and this sixty years after the acquisition of the colony. There are among us a good many low "kickers" and grumblers, who predict exactly the same results for our colonization—that is, the payment, through the cost of defence and administration, by the taxpayers of the American exporters' profits. We are on the way to that glorious result already, and would advise that the persons who call attention to it be sent out of the country.

DEMOCRATIC WARS.

Mr. Charles J. Bonaparte read, at the meeting of the Civil-Service Reform Association, a fortnight ago, a very powerful paper in answer to the question, apropos of the events of the late war: Can we trust our army to spoilsmen? No more trenchant exposure of the levity and imbecility which marked our military operations has yet appeared, and we are glad to see that it has been reprinted in pamphlet form. But Mr. Bonaparte has to begin his observations, as most writers have to-day, by showing that he does not disapprove of war in general, or believe, with Gen. Sherman, that "war is hell!" or that Washington was a "Beelzebub," or that the men who fought at Bunker Hill, Saratoga, and Yorktown were "demons in training." What Gen. Sherman undoubtedly meant, and had to mean, was that war was as near a reproduction of the hell of the theologians as man could produce here on earth, which is strictly true. Any one who denies it cannot have seen war. War involves a complete dissolution of the ordinary bonds of civil society, and an abrogation of most of the rules of morality. What else could man do to imitate the state of things in the kingdom of Satan? Literal reproduction of hell is not within our reach. We cannot command lakes of fire, and eternal torments, with three-pronged forks, but we inflict all the tortures of which we are capable, and to-day thousands of our best minds are busy improving the means of killing and maiming human beings and destroying the material results of civilization over large areas, so as to make the lot of the inhabitants as unhappy as possible. What else is Satan's regular business?

This part of Mr. Bonaparte's address is, in fact, what we call rhetorically "the placatory clause" which most of our writers have to use in order to secure a patient hearing from a public not accustomed to plain logic. Mr. Bonaparte says he addresses "those of my fellow-countrymen (numbering, in my opinion, certainly nine out of every ten of them) who have no longing for wars or conquests, and view with distrust and misgiving our adoption of a meddling, visionary foreign policy which leads to these, but who know that, while men remain neither better nor worse than men, there will be times when the sword must be drawn, and know, moreover, that often it can remain in the scabbard because, and only because, it is, and is known to be, sharp and ready to the hand which shall wield it." We presume he also addresses "many thousands of our young men who left their homes for a war which, as I have reason to think, a large majority deemed unnecessary and unwise. In their cheerfulness and obedience under privations, all the harder to bear because plainly needless, and in the steadiness and gallantry displayed

by substantially all of them who went into action, I see, perhaps, the most encouraging and healthful symptoms of our national life."

As Mr. Bonaparte's thesis is simply that a nation should not go to war without preparation, he is, doubtless, not called on to discuss the proper causes or proper time to go to war. But so strangely constituted is the human mind that we see in this readiness of young men to take the field in person in "a war which a large majority deemed unnecessary and unwise," not a "most encouraging and healthful symptom of our national life," but a dangerous one. There could not be a better illustration than the late war, as Mr. Bonaparte describes it, of the enormous danger and barbarism of any war, except a plainly defensive one, for a democracy like ours. The war with Spain was, he admits, "unnecessary and unwise," and, therefore, frightfully wicked. It was more than usually wicked because we were entirely unprepared for it, and, therefore, it promised great loss of life among our own people, and great injury to the health of our young men, without any compensatory damage to the enemy.

Now, who got up this "unwise and unnecessary war" and hastened its outbreak? A small set of distrusted politicians at Washington known to Mr. Bonaparte as the "spoilsmen"—that is, men without much conscience or honor or real patriotism, for whom these young men, who went into the field so readily, had no respect in private life. But, by an old monarchical tradition, these spoilsmen were, for the time being, "the country," and, therefore, at liberty to launch Christian men, without inquiry, into any enterprise they chose to designate as "patriotic," as if man was not a moral being before he became a citizen, or ceased to be one after he became a citizen. An American citizen has still, in the nineteenth century of the Christian era, to follow our politicians to their wars, as Englishmen had to "follow the king to his wars" in the fifteenth century, without any inquiry as to what the war was about.

The belief that a wish on the part of a politician for war gives him a claim on your life and property and health which you are bound to honor, without question as to cause, or preparation, or prospect of success, is to us one of the greatest dangers of modern democracy. In the sixteenth and seventeenth and eighteenth centuries, when the kings were, like Louis XIV., held to be entitled, if they enjoyed war, to ruin their countries with it, the evil was in some degree, as we pointed out the other day in connection with Taine's comments on the Napoleonic conscription, mitigated by the fact that wars were carried on by voluntary enlistment. The people who were carrying on the work of civilization in their various occupations were not held bound to leave them, that the king

and the court might see them march and counter-march, and open trenches, and die miserably, for their entertainment. Most of their victims were men to whom no better lot was open. But as the tradition has come down to us, anybody who can secure a nomination, or even buy it, can call for the flower of our youth for a hopeless conflict, as the Venezuela war would have been, or for an "unnecessary and unwise" conflict, as the late war admittedly was. This readiness of our youth to respond, like Italian mercenaries, is to us alarming, and, if it continue, full of evil promise. For we may rely upon it that, with the increase of our army and navy and of our ambition, this will not be the last war the politicians will get up, in order to save an election, or to help financiers, or to get money through contractors for "the party."

Are we, then, in favor of peace at any price, or opposed to all war? Have we no respect for "the soldier's glorious trade," or for military courage, or for the great exploits by which empires have been built? The greatest possible. We have here a placatory clause against which the gates of hell cannot prevail, namely, Do not go to war until you know what it is about and whether it cannot be avoided. Above all, in a democracy, see that your wars are defensive, and not wars of conquest or contractors' wars. The morality and necessity of all offensive wars are doubtful, for their secret causes lie beyond the reach of the ordinary citizen's inquiry. The politician's temptation to deceive or humbug him is almost irresistible. But there never can be any doubt about the morality and necessity of a defensive war. For that too great a number of young men cannot rush to the field. Washington's war was defensive. The soldiers of Bunker Hill and Yorktown and Saratoga were defending their liberty. They had that most precious thing, "a cause" which they understood and could justify. When they suffered, they suffered from poverty, not from villany. When they died, they were sure they died for man, and not that a political party might keep "the offices" and demagogues blather over the dead.

THE QUESTION OF RESPONSIBILITY.

Some days ago the organ of the Administration in New York, in a passage on which we made a few remarks last week, spoke as follows:

"The final character of our colonial rule depends on the people, not on the President. No Administration makes the spoils system, but the popular pressure against which Presidents with varying force contend, and the public opinion which encourages or discourages them in resisting spoilsmen."

It has been impossible or very difficult (for those, at least, who neither admire nor trust Mr. McKinley) not to take this sort of semi-official announcement as connected with a President's failure,

for the first time in twenty-five years, to make any mention in his message of civil-service reform. This almost formal warning that the present Executive will not be responsible for the way in which our new possessions are to be governed, is enough to send a cold shiver down the back of an honest expansionist. We know, too, that he is at this moment contemplating the removal of about 2,000 places from the classification, and handing them back to the spoilsmen on a report from them that they would like to have the disposal of them. In fact, the signs and omens are to-day all unpleasant as regards the Executive, good as they may be as regards the public at large.

Various commercial bodies all over the country are already moving in the direction of consular reform, and their memorials to the President all assume that he can bring about the change and make our shame to cease if he pleases; and this at the very moment that his own organs are giving out that the matter does not depend on him, but on the "people." In a speech which Mr. McKinley made at Savannah recently, he said:

"If, following the clear precepts of duty, territory falls to us, and the welfare of an alien people requires our guidance and protection, who will shrink from the responsibility, grave though it be?"

Here he clearly recognizes the existence of responsibility somewhere—how created, he does not explain—for "the welfare of an alien people," and inquires, "Who will shrink from the responsibility, grave though it be?" Now the responsibility for the welfare of an alien people always devolves, in civilized governments on the chief of the state, that is, on the Executive. There are both reason and business in this arrangement. Seventy millions of men, women, and children engaged in earning their bread or completing their education cannot "afford guidance and protection to an alien people."

They have enough to do to secure "guidance and protection" for themselves. They pay \$50,000 a year and provide with a house a gentleman named McKinley, for taking care of such "alien peoples" as he brings home, all out of their scanty earnings. They do not expect him to shout to them to look after the Tagals and the Malays, after he has himself invited them to look on him as their "great father." The great Griggs has, it is true, perorated much about the eagerness of the American people for "responsibility" for inferior races, but the only sign of this responsibility we have seen is to be found in the Griggs "rainbow" speeches. What the American people *plainly* wishes, is that Admiral Dewey should supply the guidance and protection, and they will gladly read accounts of his chastisement of inferior races with quick-firing guns. But that "the people" means itself to take any

special measure about any "alien people" we have never heard, and do not believe.

Another thing to be remembered is that this tendency on the part of American officials to throw responsibility on "the people" and shirk it themselves, is almost as old as the republic, and the principal thing against which the friends of good government have had to contend ever since "reform" first began to be spoken of. If an official does not take refuge behind "the people," he takes refuge behind "the party." He always tries to make "the party" responsible for the administration of his office. If he or his subordinates do wrong, it is "the party" which is to blame. In large affairs it is "the people"; and, of course, "the party" and "the people" are both bodies which, for purposes of administration, can neither be found nor called to account. It was an old maxim of the Schoolmen that the same rule applies both "to things which are not visible and things which are non-existent." This is singularly true in politics. In the mouth of a guilty or negligent official "the people" is simply the "wicked partner." All that has been accomplished in the way of civil-service reform has been the work of Presidents who boldly met their responsibility to the nation. All the failures which civil-service reformers have met with have been due to the dishonest or corrupt pretence of Presidents that they could not resist "the pressure"—that is, the persuasion of a small group of men in Washington whom they knew to be both venal and selfish.

If, now, the proper government of our dependencies is to be prevented by a pretence of "pressure," if nobody is going to take it in hand until 70,000,000 of people busy themselves about the "guidance and protection" of our new acquisitions, we confidently predict that the 12,000,000 we have seized will "get left." War is a delightfully exciting pastime, for the women and boys especially, who read about "thrilling exploits" in the newspapers. It seems so easy to govern "dependencies" by reading of their seizure by the army and navy in the penny *Blatherskite*; but governing them in a manner on which we can invoke "the considerate judgment of mankind and the gracious favor of Almighty God," is a very different matter. Very few want to read about the details of administration, and least of all the women who love war and think it improves a young man's character. Administering subject-races when you receive little or no help from the ruled, is one of the driest and dreariest of human occupations. To do it honestly and efficiently requires the highest character, indomitable industry, and an unconquerable love of detail. The notion that "the people" will engage in it, or watch it, or concern themselves about it abroad, any more than they have con-

cerned themselves about it at home, has a dishonest stamp on its face when produced by an expansionist. Those on whom the responsibility of governing our new dominions falls are the Executive first, and then, Congress, and they ought to be at work at it now, instead of delivering homilies on the magnificence of the task and urging their neighbors to tackle it.

JUSTIN S. MORRILL.

The biography of Justin S. Morrill will, if it come to be written, embrace a large part of the political and especially of the financial history of the United States during the last forty-five years. He was elected a Representative in Congress in 1854 and has held a seat in one house or the other ever since. No other member now living has sat there so long without intermission. When he entered public life, Franklin Pierce was President and Jefferson Davis Secretary of War. Stephen A. Douglas was the leader of the Democratic party in the North, and Abraham Lincoln, though he had sat in Congress, was little known beyond the borders of his own State. James Buchanan came to the Presidency two years later, and the drama of secession and civil war did not open until Mr. Morrill's third term in the House. Only persons well past middle life can remember the time when he was not in Congress. It was his fortune to represent a State not afflicted with the Boss system. Consequently, there was never any question respecting his seat so long as he cared to occupy it. The office sought him in the beginning and continued to seek him to the end. He never had to fight for his seat, or to concern himself about retaining it; and in this respect, as well as in the length of his occupancy of it, his career has been unique.

A man thus favored by opportunity ought to have made a mark upon the times in which he lived, and this Mr. Morrill has done in two or three ways. His name is coupled with the tariff legislation of the civil war. This may or may not have been wise. History will deal with that question as it has dealt with the corn laws of England and other restrictive legislation of the past. The principle of protectionism was dead when Mr. Morrill entered Congress, and he never thought of reviving it until the war made increased revenues, both by tariff and internal taxes, necessary. Mr. Morrill, while a believer in protection, was not an extremist. The bills later than his own (of which there were two or three while he was still a member of the House) were not at all to his liking, but he went with his party. He could hardly do otherwise, yet his influence was generally given for lower duties than his party associates desired. So well was this known that the protected

classes made it a practice of doubling their demands, because they knew that Father Morrill would cut them down one-half.

Mr. Morrill's best influence upon the financial legislation of the country was negative rather than positive. He was a stubborn opponent of Government paper money in all forms, down to the day of his death, and he never omitted an opportunity to express his opinions. When the legal-tender act was introduced in the session of 1861-'62 he spoke against it, voted against it, and wrote against it. His early arguments on this subject as read to-day do not suffer by comparison with anything that has been said or written since. He held that honest taxation and honest borrowing were the only safe and just methods for obtaining the means to carry on the war, and that legal-tender issues were both dangerous and dishonest. It was largely due to his efforts and his rising influence on the financial side of legislation that a limit was finally put to greenback issues. In the latter part of 1863 that limit was reached and was adhered to. Congress had come to Mr. Morrill's platform, and from that time forward the war was carried on by taxation and borrowing only. Government notes were still issued to some extent, but they bore interest and hence were in the nature of loans, and were as little mischievous as possible. Mr. Morrill, as he had opposed the greenbacks in their inception, was always in favor of their retirement, and in the later struggles over the silver question was always the leading opponent of every form of depreciated currency. The Government credit was ever the object of his solicitude and the very apple of his eye.

Mr. Morrill left his mark in another department of public affairs. He was the author of the Agricultural College act, by virtue of which a large part of the public domain was saved from the grasp of railroad speculators and applied to the purposes of education. This is perhaps the act by which Mr. Morrill will be longest known to posterity. He was distinguished also by his opposition to all kinds of foreign adventure. He opposed the annexation of San Domingo, of St. Thomas, of Hawaii, and of the Spanish colonies in the East and West Indies. His death at this time is a serious loss to those who are opposing the ratification of the treaty with Spain.

Mr. Morrill was not an orator. His speeches were all written and read from manuscript, yet they will outlive most of the random talk of the Senate of the present day. He was a man of spotless character. He was never a place-seeker for himself or for anybody else. Among all the bad appointments that have disgraced the civil service from time to time, nobody can recall one that is associated with his name. No scandal ever came near him. He was modest to a

fault. He had no aim or desire beyond the performance of his duty. He never wore his patriotism on his sleeve. He was of the best type of American statesmanship—one of the old school that we read about in the history of the American Revolution and of the years immediately succeeding—the school of Roger Sherman and Albert Gallatin; and as he is carried to the grave we ask ourselves doubtfully, not whether his successors will be born, but whether they will find their way into public life.

THE SPANISH STORY OF SANTIAGO.

Almost the first full account of the siege and battles of Santiago from the Spanish point of view is to be found in a book published in Madrid by a lieutenant in the Spanish navy, Don José Müller y Tejero. Stationed at Santiago before the arrival of Cervera's squadron, he was personally cognizant of most of the subsequent operations; and from his own diary, and from accounts given him by participants in the land battles and in the sea fight, he is able to give a connected and consecutive story of each day's events. He includes in his book, which he entitles '*Combates y Capitulación de Santiago de Cuba*,' a few official documents—such as reports of the number of troops, the returns of killed and wounded, the paper drawn up by the Spanish officers advising Toral to surrender, etc. None of these throws much new light on the campaign, their chief value, as also that of Lieut. Tejero's records from day to day, being to show under what hopeless disadvantages and mismanagement the Spanish cause labored from the first.

The Lieutenant makes no complaints. He writes with true Spanish fatalism. Yet his narrative avails to set forth the neglect and *insouciance* of the Spanish authorities in strong colors. When Cervera entered Santiago, he knew, in spite of the rejoicings in Spain, that his fleet was doomed. So did all the military authorities at Santiago—at least, as soon as they learned that no more ships were coming to support Cervera. While Madrid was joyful, consternation reigned in Santiago. The naval and army authorities foresaw at once what would happen—the blockade, the siege and its predestined end. Yet what was done? Absolutely nothing, except to prepare to die like Spaniards. The town was but scantily provisioned to begin with. There was a margin of nine or ten days before the blockade began, in which to import supplies from Jamaica, but not a ship's load entered. After it was too late, the attempt was made to run in cargoes of provisions, but, of course, the American blockaders captured them all. Then there was the question of reinforcements. Fifteen or twenty thousand troops were within call at Holguin, Man-

zanillo, and elsewhere; but not a battalion moved. Finally, when again too late, Gen. Escario marched his 3,000 men from Manzanillo, only to arrive after the fighting was over and to hasten the surrender of the garrison by the sooner exhausting their meagre supplies.

As for Cervera's squadron, Lieut. Tejero adds new details to the facts showing the crippled condition in which it went out to be destroyed. Short of coal, short of guns, short of ammunition, with boilers and engines out of order, the ships were lost before they sailed. No one knew this more certainly than Cervera and his men. They went out only on positive orders, and they went out to infallible destruction. The serene courage with which they did it is enough to justify Lieut. Tejero in asserting that July 3, in spite of its disastrous results, was a glorious day for Spain. No country ever saw her sons go to certain death with a calmer bravery. It is a fine picture which the Lieutenant gives us of a gallant gentleman when he describes Cervera on his flagship at the moment of clearing the channel. Already the *Maria Teresa* was under a hail of shot, already the dead and wounded were thick on her decks and in her batteries. But the Admiral coolly stepped to the ship's side to see the pilot off, and called out, smiling, "Good-bye, pilot. Hurry out of this! They mustn't fail to pay you, for you have earned your money."

The fighting on land was clearly as much of a revelation of the American soldier to the Spanish as it was of the Spanish to the American. Lieut. Tejero speaks in warm praise, and with a certain surprise, of the intrepid dash of the American troops charging entrenchments held by men with modern repeating rifles. But the Spanish regulars lived up to that proudest Spanish boast, that they "knew how to die." Out of 520 men in the trenches at El Caney, but 80 came out alive. It was the Twenty-ninth Battalion of the Constitution that bore the brunt of this deadly assault, and Lieut. Tejero says, what we have heard from other sources, that, after the surrender, whenever the American soldiers saw a Spaniard with "29" on his collar, they instantly fell to shaking his hand and offering to treat him. A like agreeable discovery of each other's quality was made in the care of the Spanish wounded who fell into our hands. When told by a Lieutenant of the attentions lavished upon him in the American hospital, Señor Tejero innocently wrote: "So it was only the American Government and the Jingoos who were bloodthirsty."

He closes with a few frank remarks about the causes which led to the Spanish loss of Cuba. Chief among these he places the selfish exploitation of the island, solely in the interest of Spain and of Spanish officials. Then he also admits, while he deplures, the excessive

cruelty which had marked Spanish administration, and especially Spanish attempts to put down insurrection. Outrage provoking outrage, and massacre leading to massacre, the condition of things in Cuba at the beginning of this year was, he confesses, such as to excuse, if not justify, interference by other countries.

THE ECONOMIC ASSOCIATION AT NEW HAVEN.

NEW HAVEN, December 30, 1898.

The eleventh annual meeting of the American Economic Association, held here this week with Yale University, was one of the most satisfactory in the recent history of the Association. Attendance was large and representative. The academic element predominated, and certain familiar figures from the Western and Middle States were absent; but this seems to be remediable neither by variety in programme nor alternation in place of assembly. The simultaneous meeting of the American Historical Association offered pleasant opportunities for joint sessions and personal intercourse, and many will regret the apparent necessity for separate gatherings of the two organizations in 1899.

The characteristic features of the meeting were the successful use of special committees for the investigation of assigned economic topics, and the relative dominance in programme and in discussion of practical economic questions over aspects of economic theory. The first fact represents a further stage in the evolution of the traditional scheme of detailed, miscellaneous papers into a series of general discussions of larger economic problems. The use of special committee reports as a basis for discussion removes the one danger of this plan by assuring active debate and substantial results, and is likely to become the future policy of the Association. The emphasis put upon problems of economic practice as contrasted with economic theory reflects the current phase of economic study. A few years since, the reaction against the historical movement in economic science, accentuated by the acute deductive studies of the Austrian economists, led to remarkable activity in economic analysis. The results can hardly be said to have been commensurate with the effort expended, and the return of the younger American economists to the domain of concrete economic investigation, leaving the field of constructive economic theory, temporarily at least, in the possession of the few mature economists possessing especial fitness therefor, can only be accounted a distinct scientific gain.

Singularly enough, this was foreshadowed in President Arthur T. Hadley's brilliant address on Tuesday evening on "The Relation between Economics and Politics." With characteristic originality of thought and vigor of expression, Prof. Hadley analyzed the palpable phenomenon that, at the present day, with economic science in some respects at the height of its prosperity, the practical influence of the economists on government and legislation is not only less than it should be, but actually less than it many times has been. It is the same circumstance which Prof. F. H. Giddings briefly discussed at the Baltimore meeting two years ago under

the title, "Popular Respect for Economic Knowledge." Prof. Hadley found the primary cause of this condition of affairs to be the fact that the new political economy has substituted a vaguer conception of wealth for the more concrete one, and many of its propositions have suffered a corresponding loss of clearness and precision. With this loss of concreteness of conception has come a loss of definiteness of aim—the almost inevitable result of substituting the principles of a science for the practice of an art. Not only have the utterances of the economists thus lost in precision, but the scope of their influence has been further reduced by the modern development of jurisprudence and administration. The courts have made themselves independent of the aid of the economists by basing their adjudication of distinctly modern problems upon precedent rather than upon scientific analysis. Similarly, the organization of modern representative government, with its neglect of collective interests and its checks upon administrative power, has further reduced the economist to the exercise of an uncertain, spasmodic influence.

Such an analysis affords no warrant for pessimism. It simply emphasizes the message—delivered by Prof. Hadley in no uncertain tone—that at this time, of all others, with new problems at hand of the gravest economic import, the economists should recognize that their largest opportunity in the immediate future lies "not in theories but in practice, not with students but with statesmen, not in the education of individual citizens, however widespread and salutary, but in the leadership of an organized body politic."

The session on Wednesday morning was devoted to the report of the special committee appointed at the Cleveland meeting a year ago to consider the scope and method of the twelfth census. Under the chairmanship of Prof. Richmond Mayo-Smith of Columbia University, the committee have performed a valuable service by securing a series of valuable papers from independent authors upon various phases of the last Federal census, together with suggestions regarding the scope and method of the next. These papers will be printed at an early date as a monograph of the Association. In addition, a circular-letter was sent to all members of the Association inviting specific criticisms and suggestions, and the practical conclusions of the committee are based in part upon the opinions thus received. The desirability of a permanent census organization and its subordination to civil-service rules is noted; and a reduction of the number and variety of the investigations ordered, by the transfer of certain subordinate inquiries to established departments, is advised. Attention is also called to positive defects in census methods, such as the lack of comparability in the data from census to census, the lack of co-ordination, faults of enumeration, and faults in the textual analysis of the figures.

The only two phases of the committee's report discussed by the Association were the attempts to secure statistics of capital in manufacture and statistics of municipal finance. As to the practicability of securing any adequate presentation of the capital engaged in industry, there was marked difference of opinion. As to the painful inadequacy of the statistics of municipal finance contained in the last census, and the importance of sound but simple classification in

the coming enumeration, there was practical unanimity.

A no less noteworthy report was presented on Thursday morning by the committee on currency reform, also appointed at Cleveland a year ago, under the chairmanship of Prof. F. M. Taylor of the University of Michigan. Expressly disavowing any responsibility of the Association for the views presented, and making no attempt to further complicate the situation by the formulation of another comprehensive plan of reform, the committee expressed their own opinions as to the need, objects, and methods of such reform in a series of candid, moderate statements.

The need of reform is found in the insecurity of the standard, the inelasticity of the circulation, and the present peculiar conjuncture of circumstances favorable to reform. The committee admit that to a large number of economists the gold standard, abstractly considered, is undesirable; but the particular substitute which such economists favor, *i. e.*, international bimetalism, is described as no longer a practical issue, and until it again becomes so it is highly desirable, as even the sturdiest international bimetalist will admit, that all uncertainty as to the basis of the currency be removed. This can be effected by an explicit definition of the standard in terms of gold, by devolving upon the banks the task of maintaining the convertibility into gold of other forms of currency, or, if this be found impracticable, by a reorganization of the Treasury Department with reference to the duty of maintaining the standard.

The security of the standard once established, some measure of elasticity should be introduced in the circulating note system and some provision made for the extension of banking into country districts. Note issue based in part upon ordinary banking assets, and a supplementary system of branch banking, seem the best methods for accomplishing these results. Failing these, a number of familiar amendments of the national banking act are suggested.

In connection with the report on currency reform is to be mentioned Prof. F. W. Taussig's striking paper on "Some Aspects of the United States Treasury Situation in the Years from 1894 to 1896." The paper dealt with the manner in which the Treasury accumulated and hoarded legal tender notes in these years, and more particularly during the period from November, 1895, to October, 1896. This process of hoarding greenbacks must have been the result of deliberate policy by the Administration; yet, strange to say, not a word is to be found concerning it in the official Treasury reports. Just as the silver currency, issued under the act of 1878, proved to be excessive during a period of depression, and flowed back into the Treasury in 1884-86, so the legal tenders flowed back in 1894-96. The essential difference was that in 1884-86 the Treasury was so fortunate as to have a large excess of receipts over expenditures, and was able quietly to hoard a large volume of silver currency. This condition was lacking in 1894-96, and the resulting difficulties and disturbances may be expected, in the entire absence of any means of accommodating the volume of the currency to the varying condition of business, to recur with any period of depression.

The only contribution to economic theory, but probably the most important single pa-

per, presented at the meeting, was Prof. John B. Clark's profound study on "Dynamic Standards of Wages and Interest." Both in its interpretation of the classical theory of normal cost and in the analysis of the interrelation of wages and entrepreneur's gain, the essay formed a weighty addition to the modern theory of distribution. It afforded new evidence of the completeness with which Prof. Clark is developing the details of his economic system, and heightened the eagerness with which his long-promised treatise is awaited.

The session of Wednesday afternoon was devoted to papers on American Economic History. In addition to Prof. Taussig's study noted above, Dr. G. S. Callender presented an admirable essay upon the origin of internal improvement enterprises in the United States; Prof. J. C. Schwab gave a further instalment of his laborious researches into the financial history of the Confederate States, in the form of a careful survey of prices and price movements during the civil war; Prof. C. S. Walker reviewed the course of recent economic changes in Massachusetts. The remaining papers were presented on Thursday afternoon by Mr. W. F. Willoughby on the present study of labor problems in France; by Mr. C. W. Curtis on municipal taxation as a means of public control of corporations; by Dr. Max West upon the nature of municipal franchises. In the uniformly high quality of the papers presented, this session was one of the most successful of the meeting.

The arrangement of the programme permitted attendance upon the address of the President of the American Historical Association, Prof. George P. Fisher, on Wednesday evening, and upon the session of that association on Thursday evening, devoted to papers on matters affecting the present foreign policy of the United States. The social features of the meetings were most attractive. Yale University, the New Haven Historical Society, the local committee of arrangements, and resident members of the Association vied in cordiality, while some of the most delightful incidents of the meeting were made possible by the hospitality of the Graduates' Club.

The business transacted by the Council of the Association was for the most part routine. The place and time of the next meeting were fixed, after some discussion—at Ithaca with Cornell University, and the Christmas recess of 1899. The policy of special committees for the investigation of designated economic topics was endorsed, and the executive committee were authorized to make necessary selections and appointments. The affairs of the Association are in a satisfactory condition, and additional members will be welcomed upon the nomination of the Secretary, Prof. Walter F. Willcox, Cornell University, Ithaca, N. Y. Prof. Hadley was reelected President for the ensuing year.

J. H. H.

THE ABBÉ MORELLET.

PARIS, December 13, 1898.

The Abbé Morellet, so well known in the latter part of the eighteenth century among the promoters of the science of political economy, was a great friend of Lord Shelburne, who became Marquis of Lansdowne. His correspondence with Lord Shelburne is now in London, at Lansdowne House. It has just been published by Lord Edmund Fitzmaurice,

author of a Life of Lord Shelburne.* The intimate relations of the Abbé Morellet with English society lend a particular interest to this correspondence.

"The cause of peace," says Lord Edmund Fitzmaurice in a short preface, "and the cause of the abolition of commercial hindrances, especially of those which hamper the trade between France and England, are the causes which Morellet defends always and everywhere. He will say with Talleyrand: 'What is a treaty of peace? It is not a treaty which, regulating the sum of the contested objects, substitutes a state of peace for a state of war; it must besides substitute friendship for hatred.' Morellet thought that he saw such a peace in 1783, when the Treaty of Versailles, negotiated by his friend Lord Shelburne, put an end to war in Europe and recognized the independence of the English colonies in America."

Such a peace, a peace substituting friendship for hatred, is seldom to be obtained, and the close of the present century seems to show us, in Europe, a renewal of international hatred like that which embittered the last days of the philanthropic Morellet. Could he live again, he would also see how little progress those principles of political economy of which he was an ardent defender have made. He had the satisfaction of seeing many barriers to trade destroyed in France, and destroyed for ever; but he would now see international barriers raised all over the world, and protectionism in the ascendant at the end of a century which prides itself on being an era of progress. Some of the letters of Morellet on the question of protection are singularly eloquent. Read, for instance, this written on the 13th of March, 1776, from Paris:

"Our peasants have been delivered of the corvée and do not revolt in order to be subjected to it again. Guilds have been abolished, and we have as good cloth and as good shoes as before, and the workmen have not begun a civil war. We have given liberty to the trade in bread and meat over a territory of four hundred square leagues about the capital; bread and meat abound in Paris more than before. Such is the effect of the plain policy which restores liberty to us; for, as liberty is a natural state, and as all hindrances make on the contrary a forced state, if you give liberty, everything takes its place again and all is at peace."

Morellet, in the same letter, blames the English Government for its behavior towards the Americans:

"You are, unfortunately, still far from the principles I have set forth, though you have already very precious liberties. The liberty of commerce is still wanting. . . . Your Ministers have not seen that by enslaving and ruining the Americans they are drying up an abundant source of wealth and of necessities of which the natural relations between a metropolis and a colony, between people of the same blood and speaking the same language, would assure them the principal part, even if they were left completely free and absolutely independent. The stupid jealousy of trade which, for two centuries, has taken the place of other political follies, makes you to-day increase the burden of the national debt—that is to say, impoverishes you now, and will impoverish you more in the future, by the ruin of a vast country which you ought to regard as land added to your own. Your ministers are like a feudal lord who . . . should make war on his own farmers, and seize their horses and set fire to their barns—which would certainly hinder them from paying their rent the year after. This is the sublime policy against which you and a few sensible people have arrayed yourselves with so much force and reason."

The Abbé Morellet's correspondence with

**Lettres de l'Abbé Morellet à Lord Shelburne.* Paris: Plon, Nourrit & Cie.; New York: Dykes & Pfeiffer. 1898.

Lord Shelburne begins in January, 1772, and goes as far as 1803. We find in it details on Helvetius, Baron d'Holbach, Dr. Priestley, Dr. Price. Morellet takes much interest in English affairs. He gives his friend all the news of Paris, of Madame Geoffrin, of whom Shelburne said that she was the only person "whom he would like to be governed by"; of Mademoiselle de Lespinasse: "She continues to say that you are of all Englishmen the one who pleased her most—I would not say the most amiable, since you have a little aversion to that word."

In 1775 Turgot was appointed Controller-General. France was threatened with famine, and bread became so dear that the people rose in various places against the bakers and the farmers. At Versailles a troop of peasants pillaged the market; in Paris four or five hundred people forced an entrance into all the bakers' shops, and the police did not interfere. Turgot obtained at once from the King the dismissal of the Lieutenant of Police, named Le Noir; he took energetic measures, notwithstanding the resistance of the Parlement, and the King supported him against it. "The King showed himself very reasonable and firm." At that very moment Necker wrote a pamphlet on "Legislation and the Corn Trade," which Morellet sent to Lord Shelburne. In it Necker attacked violently Turgot's administration. Morellet stood by Turgot. "Some," he says, "find the pamphlet excellent; others, among whom am I, find it very bad." Turgot suppressed as fast as he could all privileges.

"He has just suppressed the privileges of the cities of Bordeaux and of Marseilles, which were a great inconvenience to the wine trade. It is to be hoped that this operation will bring agriculture in all the provinces of Languedoc to a high state of prosperity. You will have cheaper wine and our gains will be greater. Turgot continues to destroy all the hindrances to liberty of trade—our guilds, with their privileges always fatal to industry, to the activity and the wealth of the nation; he attacks and suppresses all the rights of way, etc., all the tolls on roads and rivers; . . . he reforms all our municipal administrations, whose expenses were excessive, often without object or utility. . . . In short, we are going in the right direction, and if we have only three or six years of this administration, there will be so much good done that we shall be obliged to continue, and I do not doubt that this will be a memorable time in the history of our monarchy."

When the American crisis became acute, Morellet wrote to Lord Shelburne (January 5, 1777):

"We take much interest in American affairs, and there are more partisans of liberty for Americans in Paris than in the whole province of New York. We have read with much pleasure the letter of Franklin to Lord Howe, and we wait with some impatience for the good news of a defeat of Gen. Cornwallis. You will say, perhaps, that we are less the friends of liberty for Americans than the enemies of Great Britain, and this may be true of many people among us; but I am glad to tell you that everybody is not so anti-British, and that I wish you great prosperity while I want the Americans to be free, and that many of us are of that mind."

Turgot was dismissed in the beginning of 1777. Morellet regrets it, though he confesses to Lord Shelburne that Turgot was very maladroit in persuading men. He announces in the same letter the marriage of his niece to Marmontel and the illness of Madame Geoffrin; a little later the death of this famous "mother of the philosophers."

The American war is the subject of many letters. Morellet never had a doubt as to the final triumph of the American cause; he told Lord Shelburne over and over again

that England could not bear for many years the expense of a war on the continent of America and on the high seas in all parts of the world. He quotes often the French proverb, "*Les plus courtes folles sont les meilleures.*" When war was declared between France and England, the relations of Morellet and Lord Shelburne were not interrupted, though they became more distant and difficult.

"Turgot's rival, Necker, supports himself in a difficult situation. He seems to conduct our finances to the general satisfaction. He has introduced some order and economy into them. He resists with courage the avidity of the courtiers. He maintains the public credit. His principles regarding the administration of commerce are not those of the men who have most reflected on the subject, and I count myself in that number. But he does not much interfere with that object, and leaves things as they are" (July 13, 1780).

We see by this letter that, though Morellet was personally much attached to Turgot, he could be just to Necker. He considered the latter, however, an ordinary man, and he writes that "people must be mediocre to be called to the administration of the state by the sovereign. It is with you as with us. I think that kings have discovered that men of genius can only spoil everything, and that mediocrity of mind and of talent is for them *cumes mediocritas*. It certainly is for those who are endowed with it, and it conducts them surely to wealth and honors."

In 1782 Lord North fell from power, and a new cabinet was formed by Lord Rockingham. Lord Shelburne became Under-Secretary for the Colonies in this cabinet, while M. Dunning and Colonel Barré, both friends of Morellet, became the one Chancellor of the Duchy of Lancaster, the other Treasurer of the Navy. "Yes, my lord," writes Morellet, "though we are divided by war, I am glad to see your country better governed. You know my cosmopolitan disposition."

Morellet has many interesting observations to make on the movements of opinion which preceded the French Revolution. We find in his letters important remarks on the Assembly of Notables, convened in 1787, on the administration of M. de Calonne and of Necker, on the financial situation of France, on the convocation of the States-General. We see him becoming more and more uneasy as the Revolution goes on. Some of the changes wrought by the Constituent Assembly meet with his approval. "I consider," he says, "as established for ever consent to taxation, ministerial responsibility, liberty of the press, the abolition of all privileges, and even the distinction of the three orders; I believe, also, that the old divisions of provinces which, by remaining separate, might have created obstacles to the new constitution, will cease to exist; and, finally, I regard all these changes as the happiest event which could befall a nation." His criticisms are formulated thus: "I consider as defects in our new constitution [of 1791] (1) not to have established two chambers; (2) not to have left to the King an absolute and independent veto, limited only by the obligation of consent to taxation and of ministerial responsibility; (3) not to have given sufficient power to the executive, which is placed in a position of weakness that cannot be remedied." Morellet's fears were not vain; and the event soon proved that the executive power was totally disarmed.

Morellet's relations with England were

long interrupted by the Revolution and by the war; they were resumed only after the peace of Amiens. Morellet early prophesied that the republican form of government would be followed by a military despotism. His letters of December 3, 1802, and of January, 1803, are the last of the volume. He says in one: "You can form only a very imperfect idea of all we have had to suffer." We can imagine it when we contrast the liberal and generous thoughts of Morellet with the doctrines to which France became a prey in the years of the Terror and of the Directory.

Correspondence.

MR. CALKINS'S PROGRAMME.

TO THE EDITOR OF THE NATION:

SIR: I wish to suggest that Mr. Calkins, in the *Nation* of December 5, makes some very heavy demands on us. I suppose we must, as he says, "pay the twenty millions to Spain, and then give it all away." And not only that, but if we keep the islands wrested from Spain even for a short time, we buy with the twenty millions the privilege of wasting countless millions more on battle-ships and standing armies; we buy with the twenty millions the privilege of playing the fool. But why must we "secure order, religious freedom, and equality before the law" in those islands? We have neither order nor religious freedom nor equality before the law at home. Hadn't we better first try to secure those priceless blessings for ourselves and our posterity? Is not that the duty that lies nearest to be done? It is a trite saying that the age of miracles is past. For one, I do not see how I can give to islanders half round the globe what I am not able to secure for myself at home.

But admit, for a moment, that we are a civilized nation, and not 70,000,000 savages, or, what amounts to nearly the same thing, men of "dull, commonplace, untrained, incoherent" minds. Admit that we could accomplish what our experience has shown to be clearly impossible; is it our duty to attempt it? What duty do we owe those islanders, other than what we owe the rest of mankind, Spaniards among the rest; that is, freedom? And is not that debt fully discharged when we simply let them alone?

I do not see, then, how I am "bound in conscience and before the world to take care of the helpless people whose cause we rashly took in hand." I cannot take care of myself and my family. Every day my own liberty and those of my neighbors are trampled under foot by war, humbug, and imperialism. But I am surely as much bound in conscience as Mr. Calkins or Dr. McKinley—unless, indeed, they have done the people in question a wrong in overthrowing the Spanish authority; and this Dr. McKinley at least indignantly denies.

It is no man's duty to govern any other man. The affirmative of the proposition is a rank absurdity. It is no man's duty to take care of another man while the latter is learning to govern himself. Our first duty to all islanders and all men is to let them alone. Our second duty is to let them alone. Our third duty is to let them alone. Here we have the great fundamental higher law of liberty, which, to my mind, comprises the

whole duty of man in his relations to his fellow-man.

"Our true country," says Lowell (he puts it in the mouth of the Rev. Homer Wilbur, who never, I doubt not, preached from the text, "I came not to send peace on earth, but a sword")—"Our true country is bounded on the north and the south, on the east and the west, by justice, and when she oversteps that invisible boundary line, even by so much as a hair's-breadth, she ceases to be our mother." The McKinley Administration has overstepped that invisible boundary-line by the width of the seas that wash Cuba, by half the circumference of the globe; and we have lost our country. It is an overwhelming calamity not only to ourselves, but to all mankind.

A. F. HAMILTON.

GRANVILLE, O., December 24, 1898.

THE SUPPOSED LINCOLN PARALLEL.

TO THE EDITOR OF THE NATION:

SIR: Mr. Lincoln became President under pledges not to interfere with slavery; yet within two years he issued the edict of emancipation. This is urged by our imperialists and expansionists as a reason why we may seize Cuba, notwithstanding the solemn pledge made by Congress to Cuba and to the world just before the declaration of war against Spain. Mr. McKelway (who, unfortunately for his past reputation, seems trying to pose as the Ideal Jingo), for one, has publicly urged this argument, and it is of such a popular and taking kind that its fallacy needs pointing out before, by constant repetition, it becomes stereotyped.

The proposition as to Mr. Lincoln is true. He represented the general sentiment of the Republican party. The writer was able to say to one of the most prominent citizens in Lynchburg, Va., after the beginning of the war: "I am a Republican, and live in a Republican town, in a Republican State; my profession makes me acquainted with the ideas of the people; I know what they say at their firesides; and there is not the slightest wish to interfere with slavery in the Southern States, where we believe it is guaranteed by the Constitution. We think it an evil, and are opposed to its farther extension. The Abolitionist candidate for Governor, Gerrit Smith, only polled a little over 5,000 votes in the great Empire State of New York."

The fallacy lies in the application. Mr. Lincoln's pledges were made on the supposition of continued peace. War breaks all bonds and changes all conditions. The solemn pledge made by Congress about Cuba, on the other hand, was made with the full expectation of war, and even a confidence in a successful war. The circumstances have not changed. They are precisely what Congress contemplated when it gave the pledge. Is there any parallel here for a moralist?

W. ALLEN JOHNSON.

MIDDLETOWN, CONN., December 30, 1898.

SENATOR HANNA'S NAVAL IDEAS.

TO THE EDITOR OF THE NATION:

SIR: It seems to me that the real objection on the part of Senator Hanna of Ohio to the increase of the navy recommended by Secretary Long is not on account of economy, nor on account of the progress made from time to time in ship construction, but because the money asked for the increase of the navy is desired for the shipping subsidies called for

in the measure recently introduced in the Senate by Mr. Hanna himself. An argument against building ships for the navy because ships improve in type and efficiency from time to time, is similar to the objection urged by the small boy to washing his face—because it would get dirty again.

The close of the war with Spain leaves the navy in an absolute sense no stronger than it was before the destruction of the *Maine*, while in a relative sense, with the duties of the protection and defence of our new insular acquisitions, and (above all) with our appearance in the rôle of an Asiatic Power, we are very much weaker as a naval Power than before.

Destructive criticism is of course easy and cheap, while criticism of a constructive nature is difficult to be had; still, it may not be too late for Senator Hanna and others to realize that the only statesmanlike way of avoiding the necessity of a very natural increase of the navy and naval expenditure is to resign the Philippines to their inhabitants, or to exchange them for British islands near our own coasts. By the latter method our naval power and responsibilities will be more self-centred and hence less extravagant in their necessities. H.

THE PROFESSOR AND HIS ASSISTANT. TO THE EDITOR OF THE NATION:

SIR: The "American Professor" contributing the leading article to the December *Edinburgh Review* claims for his colleagues more liberal salaries, larger authority, and more leisure. He has my hearty support, and I wish his arguments might be brought to the notice of all trustees and others concerned. But another desideratum in university administration has been suggested to me (not for the first time) by his article which has in view the advancement and increased influence of the American university. I refer to the *propræ* use, on the part of the American professor, of such authority as he enjoys. So far as I am aware, the professor in the higher institutions has, as a rule, pretty free control over his own department; but my observation has been that such control is not always exercised for the best interests of the department and of the institution, and, hence, of the higher learning. To make a long story short, human weakness of one sort or other frequently causes the professor to fail either in having the right men appointed as assistants or in sufficiently encouraging the younger instructors to do their share of the higher university work. In the course of years, not one, but many such cases have come to my notice. The failure to get out of the younger elements of the faculty the best that is in them has a retarding influence on university development, quite as much, possibly, as the older professors' poor pay and lack of leisure; it is one of the causes of the continued preponderance of preparatory work even in some of our greatest universities—not in all, and not in all departments alike; the most extreme cases occurring probably in the modern languages, where elementary work is the rule and philological, post-graduate study the exception. Here, then, is an opportunity for many a professor, faculty, and president to use such authority as they have for the advancement of higher education. Greater influence in university management, more money, and more leisure, it is to be hoped, will also be theirs in due time. In regard

to salary, however, the status of the instructor or assistant is also deserving of consideration: but this concerns the trustee. As one of the older, I feel free to plead for the younger. X.

Notes.

Houghton, Mifflin & Co. will publish immediately, in one volume at a low price, all the requirements in English for "careful study" for the years 1900-1902, as prescribed by the Joint Conference of Colleges and Secondary Schools on Requirements in English for Admission to Colleges. The contents are from Macaulay, Milton, Shakspeare, and Burke.

Dodd, Mead & Co. have just imported 'The Dreyfus Case,' by F. C. Conybeare. Mr. Conybeare is probably better informed about all the intricacies of the *cause célèbre* than any other Englishman, and his analysis of the documents and of the various stages of trial and retrial is marked by an acuteness and vigor which his unconcealed belief that Dreyfus is innocent does not at all impair. His work is an excellent preparation for an understanding of the further legal proceedings.

'Angels' Wings' is the title selected by Edward Carpenter for a series of essays upon art and life, to be published soon by the Macmillan Co. The same firm will begin publication next month of *Bird-Lore*, a bi-monthly popular magazine of ornithology, edited by Frank M. Chapman. It will be the organ of the Audubon societies for the protection of birds.

A promising offshoot of the admirable 'Encyclopædia of Sport' recently reviewed by us upon its completion is 'The Sportsman's Year-book,' edited by two of the contributors to the 'Encyclopædia,' Messrs. C. S. Colman and A. H. Windsor (London: Lawrence & Bullen). Its aim, as suggested by Mr. Aflalo, is "a Sportsman's Whitaker," and so it embodies the rules of the chief English sports and games, and takes due notice of "events." Inactive games, like cards or chess, find no place here. The arrangement is alphabetical, from Angling to Yachting. Appendices treat of books of the year to November, 1898; and deaths. Typographically the volume is all that could be desired, and it will fit upon the same shelf with Whitaker.

The eighth issue of *Minerva* (Strassburg: Trübner; New York: Lemcke & Buechner) conveys the gratifying editorial assurance that the enterprise is now on a firm foundation. Among the learned institutions either newly admitted or more thoroughly exhibited in their faculties and personnel, those of Canada are remarked. Non-German institutions now first begin to have their various chairs described in the appropriate vernacular, to avoid error in translating; but this change is too extensive to take place all at once. In view of the scientific congresses convoked for 1900, *Minerva* will next year publish as full a list as possible, with particulars as to place and date of meeting and programme. A portrait of the great Russian international jurist Martens serves as frontispiece to this welcome issue of an invaluable clue to the labyrinth of the "learned world."

From Lemcke & Buechner we receive also the second volume of that other important and in a certain sense kindred un-

dertaking, the German Poole—'Bibliographie der Deutschen Zeitschriften-Litteratur,' embracing not only the German periodical literature of 1897, but additions to the 1896 record (Leipzig: Andrä's Nachfolger). The 399 publications here indexed are most conveniently displayed in numerical order on a single folding sheet. This is, we may remind our readers, a subject-index.

Through the Musée Social is published a work on 'Les Industries Monopolisées aux États-Unis,' by Paul de Rousiers. After giving a history of the more important Trusts, interspersed with observations based upon a visit to this country, M. Rousiers concludes that concentration of industry is a perfectly normal movement; but monopoly is based upon some exceptional condition, which always owes something to artifice. The Standard Oil Trust rests upon an element "essentially artificial," the methods of railroad management, a "disorder purely American." In coal the small operator was crowded out by the larger, and the railroads aided. Sugar rests upon the tariff, and iron and steel did derive support from the customs duties, but have outgrown them, and now stand on an abundance of cheap material and highly specialized methods of manufacture. The author expresses surprise at the duties on pig iron and steel rails in the Dingley bill. In the case of the Whiskey Trust, he attributes too much influence to the tariff and the prohibition movement, and not enough to the internal-revenue legislation. In municipal concerns he believes less danger threatens from private Trusts than from such state Trusts as exist in France. Without being a profound book, this essay is pleasant and suggestive reading, and contains not a few remarkable statements. The "big four" become persons, and the early Presidents are made to come from Virginia, Georgia, and Maryland. The earlier work of Von Halle has been liberally drawn upon.

Pope Leo XIII., notwithstanding his nearly ninety years, is still a devotee of the Muses. In honor of the anniversary of the conversion of King Clovis, he has composed a Latin hymn entitled "The Baptism of Clovis." It begins with the line "Vivat Christus, qui diligit Francos," a sentiment that has aroused enthusiasm throughout France, "the most faithful daughter of the Church." Cardinal Langénieux, the Archbishop of Rheims, intrusted the poem to the Paris composer Théodore Dubois, with instructions to convert it into an oratorio. This was done, but not in time for the great celebration in Rheims in December. It will, however, be rendered later by an orchestra of 150 pieces and a chorus of 200 voices, male and female. According to the report of the *Frankfurter-Zeitung*, the oratorio consists of three parts, one treating of the baptism of Clovis, a second of the heroism of Christianity, a third of the triumph of Christ.

The Social Democrats of Germany make ample use of the periodical press and of book concerns in the interest of their propaganda. The chief organ is the *Vorwärts* of Berlin, which has a subscription list of 52,000, and paid a profit during the past twelve months of 53,000 marks into the treasury of the party. In all, the party publishes 68 papers in Germany, of which 37 appear six days in the week and 16 are bi-weeklies and the rest weeklies.

The protagonists of Social Democratic ideas and ideals have united in a literary

venture of an international character, namely, the production of a history of Social Democracy, the propaganda in each country to be treated by separate authors and in separate volumes. The German number of this contemplated series has appeared in the 'Geschichte der Deutschen Sozialdemokratie,' by Franz Mehring, the veteran editor of the Berlin *Volkzeitung*. The work is in two good-sized volumes of 1,136 pages, large octavo, altogether, and is published by Dietz in Stuttgart. Significantly, the price per volume is only 3.60 marks, as the history is evidently intended for wide circulation, and is practically an *apologia pro domo*. The ordinary rules of objective historiography sit lightly on the shoulders of Mehring; and to outsiders his presentation of the immediate past is chiefly interesting and important as an exhibition of how modern political and social developments look through Social Democratic spectacles. The author is himself a representative rather of the older school of Social Democrats, of which probably the best exponent in Germany is Liebknecht, who are characterized more by their bitter antagonism to the existing order of things than by a wise and carefully digested method of effecting a change, which is seemingly the ambition of the newer school. The work is particularly severe in its denunciation of the Hohenzollerns and of Bismarck.

In France the central Government has in recent years taxed bicycles to the extent of ten francs annually for each wheel, receiving from this source a revenue of four millions. Recently the tax has been reduced to six francs. The number of wheels in France is now computed at more than half a million.

By a special ukase of the Czar, the most northeasterly point in Asia, hitherto known as "East Cape," is to bear the Russian name of Cape Deshneff. The object is thus to vindicate for Russia a priority in the discovery of Bering Strait, which was first discovered by the Russian Deshneff in 1648, while the Dane Bering did not arrive in these waters until 1728. The claims of Deshneff in this regard have recently been thoroughly investigated by the Russian Arctic explorer and specialist Ferdinand von Wrangel, on the basis of whose report this new geographical term has been officially introduced by the Russian Government.

The glaciers of North America are described by Prof. I. C. Russell in the opening article of the *Geographical Journal* for December, in which he calls attention to the fact that America is the only continent which "furnishes characteristic examples of all the types of glaciers now known." This is followed by a brief account of two oceanographical expeditions, in which it is said that the material procured by the closing nets shows that "the intermediate waters of the ocean, from about 100 fathoms beneath the surface down to about 100 fathoms above the bottom," are inhabited, contrary to Mr. Alexander Agassiz's observations. Prof. P. Geddes treats of the influence of geographical conditions on social development, and Dr. Sambon, in a suggestive paper on the acclimatization of Europeans in tropical lands, contends that the great obstacle to tropical colonization is not to be found in the climate—that is, heat and moisture—"but it is with living organisms, from man, wild beasts, and snakes to protozoa and bacteria, that we have to struggle for existence." The

achievements in tropical pathology by Pasteur, Koch, and others lead him to believe "that the diseases of the tropics are greatly under our own control."

The *Scottish Geographical Magazine* for December contains an account, by Mrs. Theodore Bent, of a visit to the island of Sokotra, on the east coast of Africa. She dwells particularly on its strange vegetation, especially the dragon's-blood, cucumber, and frankincense trees. In one place the explorers came to a valley entirely full of the latter tree, "with rich red leaves like autumn tints, and clusters of blood-red flowers. No one touches the tree here, and this natural product of the island is completely ignored. There are myrrhs, also ignored, and other gum-producing plants." Some Ethiopic, but no Greek inscriptions were found. The other contents are: the oceanographical results of the Austro-Hungarian deep-sea expeditions, an abstract of a lecture by Prof. Suess on the asymmetry of the northern hemisphere, and a description of the difficulties attending a journey, by sea, from Shanghai to Tientsin and back.

Among the various subjects treated in the Consular Reports for December is "Nuts as food in foreign countries," from which it appears that in 1896 the production of filberts about Trebizond was 38,518,771 pounds, the greater part of which is exported to Marseilles, Trieste, and Italy. There is also an interesting account of Tientsin, which was formerly a military station only, but "to-day it is the home of a million people, with an annual import and export trade aggregating \$42,350,000." It has macadamized streets, on which there are "three and even four-story brick buildings, gas works"; and now pipes (from New York) for a very elaborate and perfect water system are being laid. It is the terminus of the Imperial Chinese Railway, of which 320 miles of road have been constructed (80 miles in double track), and 125 are now under construction. During the eleven months ending in June there were carried 1,216,885 passengers and 1,870,118 tons of freight. "The traffic is rapidly increasing, and already the road is paying handsome dividends."

In a late number of the *Monthly Weather Review*, the probable state of the sky along the path of the total eclipse of May 28, 1900, is shown from observations made by the United States Weather Bureau, according to the method originated by Prof. Todd. Results are given from May 15 to June 15 last, on the same plan as last year, and a third report will be issued in 1899. In general the line runs from New Orleans to Norfolk, with better probabilities in the northern portions of Georgia and Alabama, at the southern end of the Appalachian Mountains, than nearer the coast line in either direction—towards the Gulf or towards the Atlantic. In both years the percentage of cloudiness was three times greater near the coast than in those portions of the track lying in Georgia and Alabama. Stations a few miles southeast of Atlanta will be very favorably situated, and the railway service throughout the totality belt is ample.

—Under the modest title of a "bibliographical note" Miss Dixon has given a sketch of the 'Florentine Wool Trades in the Middle Ages,' issued by the Royal Historical Society. It is a most suggestive paper, imperfect as it confessedly is. Why should Florence, unfavorably situated for war or commerce, and far from any region

where sheep-raising was an important industry, have come to occupy a leading position in the wool trade of mediæval Europe? Miss Dixon shows that it was the energy of the people that overcame enormous disadvantages. Certain Lombards, banished to North Germany early in the eleventh century, learned the art of wool-weaving, and formed an industrial and devout fraternity of the Umiliati. Returning to Italy after a few years, they continued their association, now recognized by the Pope as a religious order, and became influential through their business abilities. The Florentine Republic, alert for commercial advantage, invited them to come to Florence and establish a great training school of industry. Here they formed a local industry under the guilds of *Lana*, or wool, and *Calimala*, or merchants in foreign cloths. As the citizen of the time was bound to live within the city walls, he had a profound contempt for agriculture, and to encourage wool-raising would be beyond his comprehension. Hence it is that the laws of these republics bearing upon industrial life are full of foresight and good sense, while those bearing on agriculture or rural life seem dictated by prejudice and jealousy.

—Fine cloth could not be made from the coarse wool of Italy, and commercial conditions forbade the importation of fine wools from Spain, Flanders, or England. The Florentines began by buying the coarsely worked cloths of North Germany, and brought them home to refine and redye. "Before very long the merchants of *Calimala* were doing a brisk trade in cloth of excellent quality. Torselli, or great bales of rough foreign cloth, poured into Florence from Northwestern Europe, and were carded, sheared, cut, and dyed. By the preliminary operations the exterior roughness or outside layer was skillfully removed, and the result was a woollen cloth much finer than any of native Italian manufacture, capable of taking a most delicate dye. And in this latter branch also the Florentines speedily outdistanced all rivals. The cloth was now stretched, calendered, and rolled, and returned upon the market with a greatly enhanced value. At once it was in high demand in Italy; next it was exported to the East, and there exchanged for dyes, chemicals, and other products of Asia; and at length reappeared in the very markets of Northwestern Europe from which it had originally come." The rules of the guild were expressly framed to interfere with the liberty of the subject to cheat, and, with stringent police regulations against fraud or imperfect workmanship, the industry thrived. With the increased demand it became profitable to import fine foreign wools, and the guild of *Lana*, forbidden to touch foreign fabrics, brought in the raw material which the *Calimala* was forbidden to fabricate. The trade in wool and cloths thus enabled a local manufacture to grow which soon overflowed the limits of the Republic, and controlled the wool trade of Europe for centuries. Had the Florentines imposed a prohibitive duty on wools and woollens to encourage the raising of sheep and the manufacture of cloths, they would never have enjoyed more than a local market. These *Arti* or guilds were not suppressed until 1770.

—Stopford Brooke's 'English Literature from the Beginning to the Norman Conquest' (Macmillan) is something better than a mere condensation of his 'History of Early

English Literature.' The later work presents 338 widely leaded pages to the 500 closely printed pages of the earlier; includes prose as well as poetry; and covers an additional period of a century and a half. Yet, through the exclusion of otiose matter and through observance of the laws of literary perspective, a cumbrous book has been made a well-regulated book, and there is no sense of loss. The main defect of the earlier work was the incessant outcropping of suggestive but frequently questionable speculation. We will not say that this abuse is entirely done away with in this volume, but it is very largely abated. The author is doubtless well-advised to centre the interest on the historical background and on the coloring of the sagas in the earlier period, where the materials are fragmentary, but the treatment here is still a bit too discursive and vague. We doubt, too, whether it is advisable in a work of this kind to make so much of the theory of the season-myth in the interpretation of "Beowulf." Two things in Mr. Brooke's treatment of Old English literature are conspicuous—insistence upon the feeling for nature in Anglo-Saxon poetry, and upon the importance of the Celtic element in English literature. To this last point the author recurs in the present volume with redoubled confidence and emphasis, placing the Celtic influence in importance far above the later French or Italian influence. Most readers will turn to the discussion of the question (throughout chapter I., and at pages 293 and following) as the matter of greatest actuality in the book. The speculation is ingeniously presented, but it still remains speculation. Mr. Brooke's style is sometimes dull, and there is a good deal of awkward English in the book: "refuged" (at pages 16 and 214), "delightsome" (23), "over-worked" (for worked over, 44), "longish" (47), "couraging" (50), "as he tops the hill" (71), "ganging" and "gangers," *passim*, "ulcerous welter" (75), "peopleship" (78), "weirded" (79), "hosters" (90), "fleetingness" (158), "roomed" (169), "to ready" (178), "a recklessness all round of the present" and "a fierce and *claiming* individuality" (296), are locutions not to be encouraged. At the bottom of page 76 appears a sentence of uncomfortable levity, and misprints or other errors are to be noted at pages 204, 249, 250, and 296. A history of the Middle English period, to follow, is hinted at on page 35.

—Dr. Brandes's two new books—the one a volume of verse, 'Ungdomsvers,' the other a warm tribute of friendship to the late Julius Lange, the art historian—have each in their way been events of the season in the Scandinavian literary world. Indeed, the latter volume has already reached a second edition, no small tribute to a book in a little country like Denmark. In the charming letters which form the greater part of it, there is much pleasant and always original talk on art questions, there are interesting glimpses of people and places, and, above all, a delightful picture of a man of genial humor at the most interesting period of his life. Julius Lange, who died in 1896 at the age of fifty-eight, was one of the defining forces in modern Danish aesthetics and art criticism; these letters, however, come from a period anterior to his principal academic and literary activity. Those who may have tried to distill the Danish national character from the modern literature of Denmark will find something

typically Danish in Lange. There was, as Dr. Brandes says, "something about him which might perhaps be described as the finest flower of the Danish nature, something very difficult to define, something which is bound up in the character of our language and our ideals, a concentrated essence of Danish earnestness and Danish playfulness, of Danish melancholy and Danish irony—something which is on that account never found outside of Denmark." It would be impertinent to say anything at this late date of Dr. Brandes's masterly power of making the people of whom he writes live again for us; but almost nowhere has this plastic, artistic side of his genius shown itself in such attractive colors as in this volume on his dead friend. With exemplary self-effacement, where self-effacement was difficult, he seems to have concentrated all his effort on painting an unforgettable portrait. One could, indeed, have wished that he had at times been less self-effacing; it would, for instance, have given the little book a new value had it been possible to publish the editor's share in the correspondence. But, with the exception of one letter, Lange had destroyed all Brandes's letters to him which might have been included here.

—In the volume of youthful poetry, whose appearance we have already mentioned, it is also the personal element that attracts us most. One misses in the majority of these little poems the singing qualities of the born lyric poet; only occasionally do we feel that the poet's inner life has found its happiest mode of expression in the lyric. But, none the less, these poems have a deep interest for us as the personal "confessions" of an intellectual leader of men. They, too, mirror the struggles of the young Denmark of thirty years ago to get out into the main stream of European thought. The note that recurs most frequently in these poems is a note of defiance: "Trods alt!" (In spite of everything!). No one in our time has earned more worthily the honor to be numbered among Heine's "soldiers in the Liberation War of Humanity" than Georg Brandes. But there are fighters and fighters. In the modern world there are still plenty of soldiers of the old Thirty Years' War type, soldiers to whom fighting is the business and joy of life. But there are others upon whose nature battle is forced as a kind of Hamlet task; every blow they strike leaves a furrow upon their souls, every battle won is won at an inner sacrifice. Is it too much to see in the personality these lyric confessions disclose, one of these essentially modern "Ritter des heiligen Geistes," fiery and highstrung, but with the sensitive soul of the poet and the artist?

LOWELL, PAST AND PRESENT.

Loom and Spindle; or, Life among the Early Mill Girls. By Harriet H. Robinson. Boston: T. Y. Crowell & Co. 1898.

This little book makes its appeal to many classes of readers. It tells a tale which is quite true, in a style which is as attractive as it is sincere and unaffected; it describes a very curious phase of factory life in this country which is likely to remain unique; and it adds some characteristic traits and glimpses of the New England spirit and manners in the early part of the century. Its vivid reminiscences of Lowell sixty years ago will also, of course, especially appeal to the recollection of those who knew that

town before the fifties, or those who are interested in its chronicles and antiquities.

Mrs. Robinson was one of that remarkable band of young women who came to Lowell when the cotton manufactory was first started in this country. She thought Lowell a small Utopia at that time, though Mr. Bellamy would have severely criticised many of its regulations. On the other hand, the girls themselves would have been very much astonished at Mr. Bellamy's notion of an honest day's work. They came from homes in the country, "the flowers gathered from a thousand hill-sides and green valleys of New England," as Whittier called them in a flowery rhetorical burst; but these lilies of the field were more than willing to toil and spin, and relaxed themselves with literary labors when their long day's work was over. They were mostly of a strong and superior Yankee stock. Mrs. Robinson came of a family of Quakers who settled first in Dover, N. H., in 1705; her great-grandfather, William Brown of Cambridge, sold to the corporation of Harvard College a large portion of the present site of the university buildings. She had, therefore, in common with many of her mates, that strain of blue blood which is not recognized in the peerage lists, but which has left its positive trace in so many Western hamlets and institutions, and which contributed so profoundly to the success of our early experiment in democracy. This class of girls—a picked class—dropped down into the midst of an artificially protected life, which happened to suit, in some respects, their previous training and habits. They were a community under special rules and control. The boarding-houses were provided by the manufacturing company, whose officials claimed and maintained a semi-autocratic oversight over the habits and morals of their employees. These officials were, however, educated and able gentlemen of high character, and the general intent of their despotism was judicious and benevolent. The corporation required children under fourteen to attend school three months in the year. The girls were required by their contract to attend some religious service regularly; they were even at first obliged to contribute a small monthly sum towards the support of the "Established Church" (the Episcopal); and finally, when they quit work, they received an honorable discharge.

These somewhat intrusive regulations worked well enough, because they fell in with the temper and bringing up of the girls, who were disposed to carry them out obediently. The boarding-houses were comfortable, and were at first subsidized by the corporation; the life in them was moral and marked by a certain degree of refinement. "The young ladies," says Dickens, "had the use of pianos." They had also the characteristic Yankee thirst for knowledge and self-culture. They snatched a moment from their work at the loom to read or to commit to memory a poem; they were not too tired in the evening to attend lectures, and to flatter the lecturer by taking notes assiduously. They founded the earliest women's clubs in the country for mutual improvement, and they edited and published for some years the *Lowell Offering*, a periodical which was noticed in England and France, in which Mrs. Robinson first practised her skillful pen, and which was quite as good literature as the "Friendship's Garlands" and the "Elegant Extracts" that were current at the time. A large part of this exuberant intel-

lectual activity was undoubtedly due to the natural bent of Puritan strain and Yankee energy. It was in the blood. One might still board the train from Lowell to Boston a few years ago, and hear the ancient pop-corn peddler inquire, "Wa'al, how did you like the lecture last night?"

Mrs. Robinson fell in love with her life on the Merrimack, and apparently even with the factory régime. She thinks that the present factory-girls might renew the same intellectual interests which she and her friends once pursued, and that the Utopia of her recollections might be charmed into existence once more. She tells of a visit made to Lowell not long ago. She found the boarding-houses rather dilapidated, the work in certain rooms trying on account of the heat. She thinks the status of the factory population is reduced from what it was in her time. She addressed the young women at the "People's Club." She thought they looked tired and hopeless; "it was plainly to be seen that they did not go to their labor with the jubilant feeling the old mill-girls used to have; that their work was drudgery done without aim or purpose." She believes that the present "corporations" are at fault, and recommends as a solution of the perplexities of the cotton factories the system which prevailed in her own time. "It embraced the then novel idea that corporations have souls and should exercise a paternal influence over the lives of their operatives." This, indeed, is the thesis of her closing chapter. She speaks of the factory as her "alma mater," and of her life as a "lost Eden," which she wishes she could restore to the workers of the present day.

A year's residence in Lowell and some accurate observation would give Mrs. Robinson good reason to change her opinion, and to take a very different view of the situation. Times have changed since she lived in this city of spindles, but they have changed almost exclusively for the better. We are convinced that the present factory-girls would not tolerate the Eden which she recommends. Its enchantment lives largely in Mrs. Robinson's memories of the distant morning of youth. The wonder is, in fact, that she and her mates could stand such work and such play, and where they got their nerves of steel and their Amazonian constitutions. The secret, however, is a simple one. They came fresh from the country, they took long vacations, and, as a rule, they did not come to stay. Their labor in the factory was only an episode. Mrs. Robinson, when she was ten years old, began work at five in the morning and quit it at seven in the evening; she complains that she never could make up the sleep which that little girl of ten lost in the mornings. The actual working-day was then thirteen hours—it is now ten; the time for meals is longer now; no work at all is done on Saturday afternoon. No child under fourteen is allowed by law to be employed at all. Thoughtful employers have seen that it pays to keep the operatives physically and mentally fit for their work. They have co-operated in securing the enactment of enlightened legislation which applies not only to hours, but to safety and sanitary measures. The boarding-houses have fallen into decay because the boarding-house system has fallen gradually into disuse. Instead of these, the tendency—an entirely natural and proper one—is for families to make homes, and these homes are, as a rule, detached and surrounded by a plot of ground.

The danger of overcrowding which Mrs. Robinson apprehends, exists in only one spot in Lowell, and that is in the settlement known as "Little Canada"; but this place is really only a half-way house for new arrivals. Of this spot a French Canadian house-builder observes: "A Canadian family moves in there and sleeps all together till they have a hundred dollars; then they buy a cottage and move out and another set moves in." Even in this crowded spot, the pitched battles which Mrs. Robinson describes so truthfully as once taking place every day on "The Acre," would not now be tolerated by public sentiment, not to speak of the police. That Irish settlement, "The Acre," its shanties and its riots, are things of the past. It is now built up with decent habitations, and its occupants are as a rule decent and orderly citizens. The fact is that the process of education and amelioration which Mrs. Robinson so earnestly and honestly desires (and all of us too, for that matter), is steadily going on and showing itself in the younger generation. They do not go in for literature, perhaps; but their energy and enterprise are shown in other directions; they have an honorable ambition and self-respect, they like their children to dress better and to stand higher in the social scale than they did themselves. Any one who lives in the city and keeps his eyes open, will notice these changes going on in his neighborhood. The Canadians, in particular, are thrifty, industrious, and clever; one sees among them often the employee transformed into employer, the mason or carpenter into the builder and contractor, the laborer into the capitalist. The partition that divides these two characters is in our country very thin and removable; both are, in fact, often taken by the same man, and it cannot reasonably be supposed that, in such cases, he plays alternately the part of Dr. Jekyll and Mr. Hyde.

Yet this is exactly what Mrs. Robinson implies in her appeals to mill-owners and managers. She entreats them to beware of strikes, to avoid "degrading their working-people to the level of the same class in other countries, and to mix a little conscience with their capital," as if mill-owners and managers lived in another sphere, and were made of different flesh and blood from the working-people; whereas, they have in most cases sprung from the ranks themselves. In point of fact, next to his business (or, rather, as a vital part of his business), the manager of a successful mill must nowadays study human nature—the nature, the needs, and the feelings of his employees. If he does not do this from humanity, he must do it from policy. He must study his employees as he knows and studies the market. If he fails to understand them sympathetically, he is apt to knock his head against a wall. The manager is constantly beset with two problems, how to keep the factory running with a return to the stockholders, and at the same time to be fair—to be liberal, if possible—to the employees. The skilful manager knows perfectly well the constant menace and peril of strikes; he must study constantly the character and wishes of his "hands," who are really, in a sense, his hands to work out the designs of his brains. He must be keen and shrewd and close if he is to run his mill and make dividends; he must at the same time be as liberal to his workmen as the markets will permit. If he oversteps his line on either side, he comes to

grief—he must either shut up his mill for want of a market, or have it shut up by a strike. This is the real state of things; employers and employed all turn round and move geared to the same iron wheels of necessity. We have in mind at this moment a large woollen manufactory which is closed for three months. The shut-down brings distress and privation upon the population of a small town. Yet it is owned by a family of most genuine philanthropists, who deeply sympathize with their people and have an enlightened aim and desire to improve their lot. They dare not make up goods which they cannot sell.

Those who have had most experience know best the difficulty of exercising "a protecting care and parental influence over the operatives." What the operatives want first and foremost is just and fair dealing; what they want next is to be let alone. They love independence, they dislike interference, they tolerate benevolence only in misfortune, and in its most disguised and delicate forms. Some years ago there was in Connecticut a manufactory which in various ways seemed to offer an ideal pattern of the sort which Mrs. Robinson is seeking. The building and the grounds were decorated with flowers, the skylights were of stained glass, lunches were provided for the younger people, and all this was done by the manager with the best intentions. Yet, strange to say, these arrangements were a failure—the results were as unsatisfactory to the operatives as to the stockholders. The operatives felt that they were on exhibition, and their pride was offended, and the régime did not pay the stockholders. Something of the same feeling mingled with the various grievances at Pullman. The workman hated the Platonic tyranny of this neat and convenient Utopia that thrust its regulations so persistently upon his domestic life and privacy. It sat upon him as uneasily as an evening suit might, when he wanted to smoke his pipe in his shirt-sleeves.

The problem of the cotton-mill, which Mrs. Robinson thinks may be solved by the operation of the golden rule, is really very much like that of the deserted farms in New Hampshire. Who would have thought, thirty years ago, of Southern competition in the print manufacture? Yet if the New England factories hold their own at all now, it is because they have the "right of way"—the possession of the market, the control of abundance of skilled and highly trained labor, the momentum of enormous capital, the inertia of heavy investments in costly plants. The Southern mills have, in many cases, coal on the spot at one-third the price in Lowell, and cotton on the spot, the fibre of which remains one "grade" higher than after packing and transportation to the North. They have laborers who are at present glad to work longer hours for lower wages; they are less trammelled by Legislatures and the meddling of guilds. Who can fight long against the bounty and the favoritism of nature? The New Hampshire farms no longer raise wheat; the New England factories may have to abandon cotton.

But if they do give up this manufacture, it will not be because of any deterioration in the fineness and quality of their goods. Mrs. Robinson misses the old-fashioned calicos which "wore like iron" and lasted in Protean forms through several generations. The very same quality could be furnished by the calico-printers in endless bales on two

months' notice, and no one would be better pleased than the printers themselves. But the printers are slaves who wait on the caprices of fashion. Nobody wants this class of goods now. The ladies want variety, they want new styles, they would be alarmed at the prospect of a gingham's wearing them a lifetime. They demand the tasteful fabrics and designs which have been multiplied within the last twenty or thirty years. They can afford to wear two or three new dresses for the price of the single gown of their grandmothers. If the people look to England for woollens, as Mrs. Robinson says, and for silks to Lyons and Zurich, the question is, Why should they? There is more silk and less lead in a pound of American silks than in the silks of Lyons or Zurich; there is less shoddy in our inferior woollens than in the same class of English goods. Our manufacturers have never taken kindly to shoddy and pipe-clay. This is the sober truth and is certainly not discreditable.

Our remarks apply strictly to the social conditions of Lowell, and our criticism solely to some unguarded statements and generalizations of Mrs. Robinson's final chapter. Her reminiscences form, as we have said, a particularly vivacious and accurate sketch of an experience that was well worth recording. Such a picture of hard and honest and cheerful toil, combined with self-respecting independence, forms a charming and suggestive contrast to those lurid diagnoses which Mr. Wyckoff has lately been giving us of the agonies and the vicissitudes of the amateur workingman.

LANE'S LATIN GRAMMAR.

A Latin Grammar for Schools and Colleges.

By George M. Lane, Professor Emeritus of Latin in Harvard University. Harper & Bros. 1898. Pp. xvi, 572.

It has been said that the desire to write books is immanent in every Latin teacher. The number of Latin grammars, large and small, of Latin primers, readers, lessons, and foundations, which are constantly appearing seems to bear out the assertion. The late Prof. Lane was a great teacher rather than a great writer. He left his impress upon hundreds of pupils, who respected the accuracy and breadth of his scholarship and felt the charm of his personality. For thirty years, during the intervals of teaching, he was engaged in the preparation of a Latin grammar considerable portions of which were in print many years before his death and subjected to repeated revision. The appearance of the work was awaited with impatience by many scholars who knew the superior qualifications of the author. Unhappily, it was not permitted him to give it the finishing touch, but it was so far advanced towards completion that one of his younger colleagues, a former pupil, Prof. Morris H. Morgan, has with loyal devotion carried the book through the press within a year after the author's death. The chapter on versification was written at Prof. Lane's request by a former pupil, Dr. Herman W. Hayley, but was not revised by Prof. Lane. Parts of the book—namely, pages 303 to 373 and 387 to 436—were left by Prof. Lane only in the condition of a first draught. Here the editor has conscientiously kept, so far as possible, the original language of the statement of syntactical principles, but has made some additions and modifications for the sake of complete-

ness. Some seventy sections are due wholly to him.

It need hardly be said that the work bears upon every page the evidence of Prof. Lane's accurate scholarship, and of his constant endeavor to make the statements conform to the actual facts of the language as represented in the existing monuments. Forms found in inscriptions are given as well as those occurring in the literature. Statistics of usage, often stated very briefly, bear witness to a microscopic examination of various authors. It is to be regretted that Prof. Lane could not have written a preface explaining more fully the scope of his work, and the extent to which he had endeavored to represent the usage of different periods. The list of writers given on pages 486 and 487, although it includes Macrobius, shows that he did not intend to go much below Tacitus and Suetonius. Indeed, in section 777 the term "late writers" is applied to Lucan, Quintilian, Tacitus, Juvenal, Martial, and Pliny, whereas we should prefer to reserve it for a still later period. We must not, then, expect to find here the deviations in later syntactical usage which ought to have a place in a complete historical grammar. All the passages quoted in illustration are translated, and there is a charm and exquisite flavor about the versions which bespeak the finished scholar. Indeed, the excellent treatment of syntax might be read purely for literary enjoyment by one not especially interested in syntax.

Although the book is admirably printed, its attractiveness is marred by the predominance of fine type, necessary for the inclusion of so much matter. It is not a grammar for beginners, but will be most valuable for advanced students, and indispensable for teachers. The very full index referring to the sections, 2745 in all, makes it very convenient for reference. It may be noted here that the terminology often differs from that current in the ordinary grammars. We have "person endings" and "gender accusatives." One will look in vain for the "ethical dative" or the "historical infinitive," which have been newly dubbed "the emotional dative" and "the infinitive of intimation." A nice distinction is drawn between the Present of Vivid Narration (1590) and the Annalistic Present (1591). The Vocative gets scant recognition as a case. In 419, nouns are said to have five cases, but immediately afterwards, with a slight inconsistency, we are told that "All cases but the nominative and vocative are called *Oblique Cases*." That there should be some inconsistencies and errors in so comprehensive a work is not surprising. Glaring mistakes are not easy to find. Great care has been taken to indicate the quantity wherever long; and while one may question sometimes the accuracy of the hidden quantities assigned, which the reviewer is disposed to do in more than one instance, yet one is glad to have upon this difficult point the opinion of so careful a scholar as Prof. Lane. When *classis*, however, is printed in 521 (so Bennett) and *classe* in 555 (so Marx), one is left in doubt as to Prof. Lane's real opinion. The index, prepared by Dr. Walden, gives *classis*.

To sound-change more attention than usual is given. The statements, however, are brief and sometimes lack scientific precision, while the explanations and discussions which make Lindsay's work on the Latin Language so valuable, are of course wanting. The dates given (28) for the

doubling of vowels to indicate length, namely, from 134-74 B. C., need modification in view of the Curubis inscription of the year 49 B. C., discovered in 1894, in which both *VAAARVS* and *POSTEICVVS* occur. Examples, moreover, of *uu* occur much later; e. g., *FVVCO* in a *tessera lusoria* of the Imperial age.

In 30, the apex (') is said to have been turned by grammarians into the horizontal mark (—), but that this is actually found in inscriptions (e. g., Corp. VI. 8979) is not stated. The statements in 65 relative to the retention of final long vowels in early Latin need to be entirely revised. Evidently older authorities are here followed, and the views of Klotz and Lindsay are not recognized. To speak of *o* being weakened to *e* in *bellus* from *bonus* (76) is not scientifically exact, nor is the *e* of the vocative *serve* specifically Latin. In 81 it would have been well to indicate that the change of *au* to *u* in *cludo* is not direct, but rather due to the analogy of the compounds. In 86 the explanation of the future *regemus* from **regaimus* is unsatisfactory. *Nolo* in 100 and 775 is said to be from *non volo* instead of from *ne volo*. In 103 *socors* is given with the first *o* long. Havet and Solmsen regard it as short, as it certainly is in Prudentius. Exception may be taken to the form of the statement in 118: "Initial *ð* sometimes comes from *r*, before which a *d* has disappeared, as, *dronos bonus*." In 130 nothing is said about the aversion of Latin to two *r*'s in successive syllables. *Muliebris* is not from *mulierbris*; *praestigiae* for *praestrigiae* furnishes a better example.

In 139 and 747 the old second singular of *sum* is given as *es* for *ess*, but probably it was never pronounced *es* in early Latin, but rather *ees* before vowels. A similar explanation applies to *milēs* given in 2465. We question the propriety of speaking of final *s* being lost in *iste*, *ille*, *ipse* (142), or of *abs* becoming *ab*. The statement in 146 and 350 that *t* of the suffix *-timo* sometimes becomes *r*, as in *pauperrimus*, sometimes *l*, as in *humillimus*, is misleading, and the assertion (148) that *n* becomes *m*, as in *acumbo*, *rumpo*, certainly needs further explanation. *Publicus* can hardly be regarded as coming from *poplicus* (151). Under the first declension, forms like *drachnum* and *amphorum* should be distinctly mentioned. *PROSEPNAS* (443) ought not to be given as a genitive form, for the *s* formerly read in the inscription is now recognized to be a lock of hair, as Prof. Lane knew perfectly well, for he used to say wittily that the form turned upon a hair. The genitive in *ā* is said to occur once in inscriptions, *COIRA*. A second instance, *VESTA*, occurs in a similar inscription first published in 1895. The form *Sardis* cited in 461 is by no means certain as a nominative. In 478 *lact* should also be given, the form being attested for Varro. In 663 it is implied that the forms *hucce*, *huncce*, and *haruncce* are frequent in the dramatists, which is not the case. The derivation of *nuper* in 698 from **novomper* cannot be defended. In 749 *insens* from *insum* found in an inscription should be added to *absens* and *praesens*.

The list of verbs with the principal parts actually found in use is quite complete, although forms found in the later period, and some of those attested by grammarians for the early period, e. g., *meminens*, are not included. Dependent verbs receive rather scant treatment in 798 ff. and elsewhere, and not

sufficient attention is given to the active forms found. In 1006 *absorpsi* should be credited to Lucan and Macrobius, and *exsorpsi* to Seneca. In 1092 Afranius's use of *absorpsi nobis* should be noticed.

In 1146 the range of usage of expressions like *id genus*, *hoc genus*, originally appositives, which are wholly wanting in some writers, is not indicated; *e. g.* they are not found in Plautus and Terence, and occur first in Cato and Lucilius. The dative of purpose deserves a fuller treatment than it receives in 1223-25. The dative of comparison with *inferior* found in Sallust is not mentioned. In the treatment of the Ablative of Comparison in 1320, no mention is made of the ablative after *malle* as in Horace S. 2, 8, 79. To the genitive of comparison and the ablative with *ad*, no reference is made, as these belong to a period later than the one surveyed.

In 1380 Cato should be named as using the accusative with *abutor*. The example of *clam* (1415) with the ablative in Cæsar B. C. 2, 32, 8, is called in question by Wölfflin, who, however, is wrong in denying the construction for later prose. Lactantius has *clam Nefarno*, and Macrobius has *clam ceteris* and *clam vulgo*. For the use of *absque* with the ablative, no examples are given in 1421. To the passages given for *noenu* in 1444, Tyrell would add Cicero *ad Att.* vii, 3, 10, but Mueller, in his edition just published, does not admit it. The historical infinitive, happily named (1534) "the infinitive of intimation," might be treated more historically. It is wholly lacking in Suetonius. Although it is true that two or more infinitives are usually combined, Fronto even using seventeen in succession, still Tacitus uses sixty such infinitives singly, and once he uses it with *donec*, a fact not stated in 1539. In 1551 no sharp distinction is drawn between the use of the present and perfect subjunctives in prohibitions. The use of *accrescat* with *ut* and the subjunctive is not recognized in 1709 or 1965.

A good example of the concise statement of the usage of different writers is found in 1427: "With *quippe* qui the indicative only is used by Sallust, and is preferred by Plautus and Terence. Cicero has, with one exception, the subjunctive, Tacitus and Nepos have it always, Livy has either mood. Not in Cæsar." As Tacitus and Nepos have each only one case of *quippe* followed by a relative, the word "always" is a little misleading. Moreover, the *quippe* qui of Plautus is different from the *quippe* quem of Nepos. It might be added that *quippe* qui occurs once with the subjunctive in the 'Bellum Africum.' In 1879 *utpote cum* is said to be used twice in Cicero's Letters, but in one of the passages, *ad Fam.* 10, 32, 4, Pollio is the writer. The treatment of conditional periods is somewhat disappointing, although the possible varieties of protasis and apodosis are fully illustrated by examples. Here we miss the author's final revision.

The treatment of the infinitive used as a substantive in 2205 and 2215 should have more illustrations. That Cicero was the first to use it with *inter*, and Horace the first with *præter*, might well be mentioned. In 2254 *quisquis* for *quisque* is illustrated by a Ciceronian passage in which the more common *quidquid* occurs. *Quisquis*, however, is found in Cicero *ad Fam.* vi, 1, 1 (Mendelssohn).

The chapter on Versification is excellent. Both theories of the Saturnian verse are

given, but no attempt is made to decide between them. In the list of authors and their works (pp. 486 and 487) there are many slips of quantity. *Vidularia* has the support of the dictionaries, but the *i* is long. Other errors of quantity elsewhere might be pointed out, but the wonder is that they are so few.

We cannot close this notice without giving some specimens of the translations which lend the book a distinct literary value. In 1450 a line of a well-known inscription, *hic est sepulcrum huius pulcrum pulcræ feminae*, is rendered "Here is the site not slightly of a slightly dame." In 1620 Chaucer is pressed into service, *cantabit vacuus coram latrone riator*, "The pourè man whan he goth by the weye, biforn the thevès he may syng and pleye." Under the emotional dative, 1211, *at tibi repente, cum minime cœspectarem, venit ad me Caninius manens*, "But bless you, sir, when I least dreamt of it, who should drop in on me all at once but Caninius, bright and early." In 1352, *quæ hic monstra fiunt, anno vix possum eloqui*, "What ghost transactions take place here, I scarce could tell you in a year." In 1319, *curatus inæqualis tonsore capillos*, "My locks by unsymmetrical barber trimmed." In 1216, *nulla placere diu nec rirere carmina possunt, quæ scribuntur aquæ potioribus*, "No verse can take or be long lived that by teetotalers is writ." This rivals in brevity even the Latin.

THE CALIFORNIA HISTORIANS.

History of California. By Theodore H. Hittell. San Francisco: N. J. Stone & Co. 1897. Four volumes, pp. 799, 823, 981, and 858.

The completion of Mr. Hittell's interesting history is a literary event of importance to all students, especially in these days of territorial expansion. Those who wish to know more about Spanish methods of governing colonies, and also about American methods of dealing with people of Spanish stock, will do well to refresh their memories of the California records. Mr. Hittell's first two volumes were duly reviewed in these columns in March and July, 1886. The two volumes since added carry the story to the close of Gov. Bartlett's administration in 1887, with allusions to events as late as 1895. The fourth volume concludes with a very complete general index of 134 pages. It is evident that Mr. Hittell has done much and faithful work for many years upon his book, which probably represents the largest result yet obtained by any one man's unaided work in historical writing about California.

Although the methods of Bancroft and Hittell are very different, no review of the present work can be complete without a brief comparison of their results. It becomes more necessary from the fact that both Bancroft and Hittell, though fellow-workers in the same ample field, have ignored or decried each other. The saddest thing in Mr. Hittell's book is his reference to the attempt made in 1887 to have the State purchase the Bancroft library. Here he notes as legislative history the mere appearance of a bill soon withdrawn and never voted upon, in order to call the manuscripts of the Bancroft collection "of little value" and "unreliable." Few Californians favored the purchase of the Bancroft collection, and the futile effort to sell it does not deserve any place in a dignified history of the State, while any attempt to belittle the importance of that col-

lection, so rich in original documents, can only injure Mr. Hittell's own standing. There seems to be no reason to think that the older historian of California can be superseded by his rival, although it is plain that students must consult both, and will find Hittell particularly useful for the period after 1850. Mr. Bancroft's seven regular and several supplementary volumes, such as "California Pastoral," "Inter Pocula," and much of his "Popular Tribunals" taken collectively, form a great storehouse of historical material. It is unfortunately true that large portions of Bancroft's history are not easily readable, while a much greater offence against sound literature results from the composite nature of the authorship. For these and lesser, more local, reasons a somewhat unjust but very natural reaction against Bancroft has taken place, especially in California itself. After this generation has passed away, the great wealth of material accessible to and used by Bancroft, especially in relation to the period before the Conquest, will certainly give his work (despite its lack of personal unity) a place of primary importance for students of early California history.

But Mr. Hittell's peculiar virtues, which show to better advantage in the later than in the earlier volumes of his book, will probably attract more readers than Bancroft's, and will make at least his later volumes indispensable to the historian. Briefly, these virtues are those of a trained lawyer, unusually well versed in land-matters and in legislative proceedings. His accounts of mission secularization and of Spanish and Mexican land-grants constitute some of the most valuable portions of his two earlier volumes. So also, in the last two, whatever touches upon law or the administration of law is told in a quiet, careful, deliberate, and wholly convincing way. In this extensive field, therefore, the present reviewer, after re-reading the greater part of Bancroft and Hittell, in order to refresh his memory and compare style and methods, must rank Hittell as easily Bancroft's superior. With a few exceptions, Mr. Hittell's entire fourth volume on State administrations, and large parts of his third volume, are models of trustworthy, impartial historical writing. His account of the pioneer California of the gold-miners, and of the two vigilance committees, deserves more extended notice than space will permit. We quote his description of the manner in which the vigilantes, on Sunday, May 18, 1856, surrounded the jail, after James King of William had been shot:

"The different companies started about noon, and, marching by different routes, took up their various positions. There were about fifteen hundred men under arms. Some marched up Kearney Street, others up Dupont Street, and still others up Stockton Street. When they halted, most found themselves upon Broadway Street in front of or near the jail. They came together with admirable, almost mathematical precision; and, as they fell into position, they of course understood what was intended. It was an extraordinary spectacle. The whole place was closely invested by armed men, not, indeed, in uniform, but with muskets and bayonets flashing in the brilliant sunlight. Some few had hunting-rifles or shotguns, and one tall Nanucket whaler, besides a navy revolver in his belt, carried a harpoon and several fathoms of rope on his shoulder. Around, and as it were hemming in all, crowding the streets, covering the summit and vacant slopes of Telegraph Hill and the neighboring roofs, and filling porticoes and windows, were dense masses of people, eager to see what was to be done and hushed in expectation."

Although we find Hittell's narrative generally clear, interesting, and reliable, and though we often prefer his conclusions to those of Bancroft, there is yet a certain quality of distinction lacking in both alike. In truth it is more or less lacking in many other ponderous and authoritative histories and is often found in less pretentious volumes; the quality which Prof. Wilson of Princeton once called "mere literature." Royce's little History of California, for instance, raised a storm of criticism west of the Sierras when it first appeared, and indeed it is only what it purports to be—a study of American character as shown in California during the ten years after the Conquest. Certainly, then, it cannot be reckoned with as a complete history. But it contains some word-pictures of men and scenes that should long live in California literature; it brings home to the meanest understanding such merciless analyses of motives, such brilliant generalizations, that the whole story is illuminated. Note this, for instance, written by Royce some time in 1884, and observe the historical foresight. (It is apropos of the Bear Flag episode):

"For my part, if ever I hear in future of our great national mission on this continent as civilizers of the Spanish-American peoples, if ever I find that this mission has come once more, as it surely some day will come, to the surface of our vainglorious national consciousness, I shall be able to think of nothing but poor Ide, the self-appointed Yankee captain of a chance crowd of marauders, standing benevolently in the 'calaboose,' before the forty or fifty innocent and imprisoned citizens of Sonoma, and feeling in his devout kindness that he does God service while he bellows to them an unintelligible harangue, 'not a twentieth part interpreted,' about man's inalienable rights to liberty and equality, and while he concludes with a reference to Washington, believing himself meanwhile to be the Father of the Bear Flag Republic."

Not only the general reader, but the historian as well, must find in Royce's brief accounts of the first constitutional convention, of the vigilance committee of 1856, of land-title troubles and other things besides the Bear Flag, two especial virtues, the literary quality and the courage to draw striking conclusions. Therefore in Royce, more than in Hittell or Bancroft, and much more than in the yet unpublished 'California History to 1849' of the late Gen. Halleck, there are living men such as Ide, Gwin, Semple, Frémont, Broderick, Terry, and a score of others. One may, and often does, differ with Royce's views of these men, but his character-sketches are not easily forgotten.

Returning to Mr. Hittell's work, it is a pity that the earlier volumes, stereotyped in 1885, could not have been rewritten. Revision should have modified the romantic view of Rézanoff's courtship of Señorita Argüello, and could hardly have failed to improve his unsatisfactory account of the Portola expedition of 1769-70, chronicled by Father Crespi. Even Bancroft's incomplete geographical note on this expedition leaves room for considerable original investigation hereafter. The interesting exploring expedition of Capt. Luis Argüello in 1821 up the Jesus Maria (Sacramento) valley nearly or quite to the Shasta and Trinity region has been entirely overlooked by Hittell. Padre Blas Ordaz was the chaplain and historian of this journey.

Mr. Hittell's views as to what does or does not belong to a history of California are sometimes eccentric. His nearly 3,500

pages are none too many to contain a complete narrative upon the scale he has attempted, and he should have no room for the irrelevant. Perhaps he may be excused for digressing to summarize the events of the Coronado expedition, or even to describe the capture of Guayaquil by Cavendish, and the South Sea Bubble, though a trained literary conscience would have discarded these outside particulars. But by what logic does he include the story of the captivity of the Oatman girls, and why, in the chapter devoted to Col. Mason, does he minutely review the events of the Mexican War? Lastly, and chiefly, why does he, in volume iv., in chapters ostensibly devoted to the administrations of Governors Stanford and Lowe, give the reader upwards of twenty-eight pages upon the campaigns of the Civil War? Here, under page-headings of "State Administration," one can, for ten pages at a time, look in vain for a single word referring even remotely to California. It seems hardly necessary to say that sound literary judgment would have clung closely to the work in hand, avoiding these curiously useless notes on the campaigns of Grant and Lee.

It follows, perhaps inevitably, from Mr. Hittell's division of his subject into books as well as chapters, that some material falls into the wrong places. The worst case of this occurs in chapter x. of book x., "Agricultural and Horticultural Advance." The first three pages of this chapter relate to such discoveries as that of the Geysers, and have nothing to do with the title. When new plates are called for, there should be a thorough revision of several chapters so as to bring into closer relationship materials that belong together. If Mr. Hittell could have had some editorial training and sat in judgment upon other men's articles, his own arrangement of topics would have been better than it is. Lastly, when Mr. Hittell, or his publishers, decided to bring out these four stately volumes without even one map, a serious blunder was made.

The Control of the Tropics. By Benjamin Kidd. Macmillan. 1898.

The argument of this little book, by the well-known author of 'Social Evolution,' may be summed up briefly as follows: The trade of the world, and especially of England and the United States, with the tropics is of immense importance. By "the tropics" the author expressly wishes to have understood (p. 8) the belt of territory on either side of the equator within the parallels of 30° north and 30° south. The trade of the United States with the countries lying within this belt he puts at £70,000,000. The trade of the United Kingdom with the same region he makes £138,000,000, the sum total of the two being £208,000,000. The combined trade of the United Kingdom and the United States with the remainder of the world outside English-speaking lands he puts at £473,000,000, so that their combined trade with the tropics is about 44 per cent. of their trade with the rest of the world. The "complex life of the modern world," therefore, "rests upon the production of the tropics to an extent which is scarcely realized by the average mind." Now the existing relations of all civilized nations to this important region "may be resolved into three types" (p. 20). The first is that of which the best example is furnished by the Dutch and Spanish possessions in the East and West Indies. Here the ter-

ritory is regarded as an estate—a plantation of the mother country, to be worked for the largest profit it will bring, mainly irrespective of other considerations. This system is wholly wrong, according to our ideas, but we must admit that, "given the conditions which allowed of capital being invested and of labor being applied to tropical regions, even under this system there are unmistakable proofs of a large production and a large resulting trade" (p. 24). The second type is that of French and German colonization, which is also based on the estate or plantation theory, but which is peculiar in having for the principal field of development the continent of Africa, where expansion for white races is impossible.

We do not ourselves perceive any substantial difference between Mr. Kidd's first and second types, but there is an undoubted difference in the results—the Dutch and Spanish Indies having turned out revenue-yielding estates, the French and German experiments in Africa having proved very unprofitable investments; but this is immaterial to our author's argument, which is really based on the essential difference between both the first types and the third or English system (Mr. Kidd, without explaining the grounds of his assertion, says that this is, or will be, also the system of the United States). In this the idea of working a colony as an estate or plantation is abandoned; it is governed by a small staff of experts in its own interest, and it is allowed to trade with all the world. A generation ago there was an idea prevalent in England that its tropical colonies would become self-governing, but the native races are incapable of self-government. The United States has also been a victim of the same mistake, for it has allowed (in South America) the establishment of several so-called nations which are incapable of good administration of the functions of government, and consequently "the resources which their inhabitants have in charge remain undeveloped and practically beyond the reach of civilization" (p. 44).

The world is filling up with population, and "the rivalry and struggle for the trade of the tropics will, beyond doubt, be the permanent underlying fact in the foreign relations of the Western nations in the twentieth century," and any future policy as to the tropics must be based on a recognition of the following facts: first, the attempt to acclimatize the white man in the tropics must be abandoned as a blunder; second, the management of any tropical region as an estate must be given up; third, we must admit that the tropics cannot govern themselves; fourth, the tropics "can only be governed as a trust for civilization and with a full sense of the responsibility which such a trust involves" (p. 58). But the only race which has shown any capacity to govern these regions in such a way as to promote the interests of civilization is the Anglo-Saxon race, e. g., in India and Egypt. The conclusion would seem to be that the Anglo-Saxon race ought to control the tropics, or that portion of the world between 30 degrees north and 30 degrees south latitude.

The map of the world shows that what Mr. Kidd calls "the tropics" embraces the following countries or parts of countries—a southern fraction of China, most of India, Siam, French Indo-China, the Dutch and Spanish East Indies, the larger part of Australia, most of Mexico, Central Ameri-

ca, the West Indies, part of the United States, most of South America, a slice of Persia, and most of Arabia. His argument appears to relate to "colonies," but this is a term which he stretches so as to cover the South American states, which were formerly colonies, but are so no longer. We are to understand, therefore, that whenever in these regions it appears that a country exists the resources of which are not developed, as they might be, according to their highest standards of production, the United States or England, or both, are to supplant or override the existing government, and assume control of it as "a trust for civilization."

We confess we are unable to perceive either continuity or coherence in this argument. It rests on three premises—the overcrowding of the world with population, the consequent necessity of expansion for trade, and the unfitness of any government in the world except that of England or the United States to be a "trustee for civilization" between 30 degrees north and 30 degrees south latitude. But so far as this country is concerned, the world is not overcrowded, but underpopulated, there being room in it for the entire population of England several times over. Mr. Kidd may not know it, but he can easily rent an excellent farm in Illinois (or, if he prefers the Eastern States, a farm with good buildings in Massachusetts) almost on his own terms. But if it were overcrowded, how would the expansion of trade with countries in which the white races cannot permanently settle cure overcrowding? The trade of England with India expands, but it does not relieve the pressure of population. In the third place, the unfitness of other governments to be "trustees for civilization" between 30 degrees north and 30 degrees south latitude is not admitted by them.

The only sense in which England is better fitted to be a "trustee for civilization" is that, under English rule, trade is free; there is greater freedom politically, and better security for life, liberty, and property. But should such blessings be confined to "the tropics"? Russia is in a sadly backward economical condition; internal administration is very corrupt, liberty is unknown. Would it not be a good thing for England to overrun and conquer and administer the affairs of Russia as a "trustee for civilization"? The idea is not preposterous; Napoleon made the attempt eighty-six years ago, and, had he succeeded, he would have extended his trust and taken in England too.

It by no means follows that because a nation is to-day capable of governing dependencies well, or, on the other hand, incapable, this state of things must continue indefinitely. It is only within the last fifty years that English administration has become so good. Fifty years hence, who can say that this superiority will be maintained? A hundred years ago German government was almost a laughing-stock. To-day German administration and police are of the first rank. Twenty-five years ago the whole Christian world looked upon Japan as unfit to administer ordinary justice according to civilized ideas. To-day Japan is admitted to the family of nations, as a self-governing, equal, and independent Power. Mr. Kidd's argument is really nothing more than this: "We are better and stronger than you, and can manage your property better than you can yourselves; therefore we shall

take it from you." This used to be called spoliation; to make it sound moral, Mr. Kidd calls it establishing a "trust for civilization."

Semitic Influence in Hellenic Mythology. By Robert Brown, Jun., F.S.A. London: Williams & Norgate. 1898.

Mr. Andrew Lang, who is himself on the other side of the house, once observed that nothing is so galling to philological mythologists, nothing injures them more in the public esteem, than the charge that their rival etymologies and discrepant interpretations are mutually destructive. Mythologists are a sensitive tribe; and the *odium mythologicum*, a special product of this century, is as bitter as any of those grammatical antipathies which we associate with the savage encounters of the Bentley period of criticism. We may, however, safely assert that in the liveliest passages of the 'Phalaris' dissertation, Bentley failed to compass the colloquialism of Mr. Brown in the work before us. As his title indicates, the author's aim is to insist on the importance of the influence of Egypt and Western Asia on Hellenic mythology; in particular instances he gives detailed evidence of Semitic sources for Greek divinities.

The rival schools of philological and anthropological mythology, as represented by Prof. Max Müller and Mr. Lang, furnish little support to the "Aryo-Semitic" theories of Mr. Brown. Max Müller, with an obstinate prepossession in favor of an Aryan Pantheon, "almost absolutely ignores the vast force and extent of Semitic influence in Hellas" (p. 30). Hence, though Mr. Brown is an enthusiastic advocate for Max Müller's linguistics as opposed to the anthropological theories of Mr. Lang, and devotes some twenty pages to his defence, his admiration is tempered by regret that the Oxford professor refuses to make more concessions than are inevitable in his recognition of Semitic influence. Mr. Brown tells the amazed reader (p. 21) that "Fifty years of strenuous and sagacious effort have placed upon Müller's brow a crown which the whirligig of time will be powerless to remove, let Carp and Pike try their best or their worst," and with that characteristic burst of rhetoric he turns to demolish Mr. Lang. Not even the surprises of the author's style—like Hudibras, he "cannot open his mouth but out there flies a trope"—can impart interest to the next sixty pages of mythological horseplay. Matthew Arnold said that on an opponent one never does make an impression. Mr. Brown's jocularly, his favorite comments—"Umpe" and "Who denies of it?"—his address to the reader "O vain man," his frequent references to himself as "R. B., Jr.," are in the worst possible taste; nor are his arguments, so far as we have been able to comprehend them, likely to make much impression on his anthropological adversary. Mr. Lang, *ondoyant et digne*, may be trusted to defend himself and his totems in the next edition of 'Custom and Myth.'

The third section of the book is more interesting. In it the author tries to support his claim for Semitic origin or affinities in the case of Heracles, whom he identifies with the Phœnician Harekhal; so Kronos is identified with the Semitic "Horned One"; Athene, Poseidon, Aphrodite, and others are furnished with a Semitic pedigree. In the matter of such Greek and Semitic equations, Max Müller, in his 'Contributions to the Science of Myth-

ology,' has lately remarked that "there is really no evidence to lay hold of and to examine." Where Max Müller fears to tread we have no desire to rush in, and content ourselves with the comment that if Mr. Brown wishes to be intelligible to those who have not access to his evidence, he must rewrite his discussion of the signs of the zodiac and the Homeric constellations; at present they convey such confusion to the mind that "two tablespoonfuls of Lethe water before breakfast" and a fresh start are what we should desire for ourselves before we again consider the question of Semitic influence.

Mr. Brown's industry and learning are undeniable. But that he rides his Semitic hobby too hard is obvious even to those whose wits are not sharpened by mythological controversy. Moreover, there are few causes that would not be damaged by poor rhetoric, confused statement, and persistent abuse of one's opponents.

Il Principe di Niccolò Machiavelli: Testo critico con introduzione e note, a cura di Giuseppe Lislò. Florence: G. C. Sansoni. 1898 [1898].

It seems odd that the classical work of an author whose life fell wholly within the practice of the art of printing should only now have its text critically established. This however, is what has happened to Machiavelli's 'The Prince,' of which the first edition appeared five years after his death. The original manuscript is undiscovered if in existence. The Roman and the Florentine editions of 1532 bear every mark of liberties, rhetorically pedantic and other, taken with the great Secretary's abrupt, tumultuous, and nervously flexible style, and exhibit many variations from each other and from the several manuscript copies preserved. The difficult task of collating all these and the great number of minor and more or less servile imprints (down to 1564 in Italy, when the papal censor prevailed) has been undertaken by Giuseppe Lislò, whose labors have been published in the 'Raccolta di opere inedite o rare di ogni secolo della letteratura italiana.'

Lislò's introduction fills nearly a third of the handsome volume, and is a fine example of discussion of material, exposition of critical principles, and scholarly judgment. He premises that 'The Prince' has suffered more than all the other works of Machiavelli from unfaithful treatment, and then passes in review the half-dozen sources which compel consideration, and constructs a tentative genealogical tree for them. The nominally first edition printed at Naples in 1532, while Machiavelli was yet living, is not one of these, except to a very limited extent, being a bold working over, in a sort of macaronic Latin. The first editions professing to present the author in his original vernacular, we have already named. What is specially interesting in their infidelities is the schoolmasterly correction of Machiavelli's dialectal forms and Latinisms, transpositions of words and phrases, and other dressings up. Thus, in the dedication to Lorenzo de' Medici, where Machiavelli wrote "*prete prezioso*," Antonio Blado (Rome, 1532) prints "*pietre*," "soggetto" for "subietto," "nondimeno" for "tamen"; interpolates in "con quello [poco] animo"; omits in "io [indignamente] sopporti"; changes "le quali" into "la quale," with the corresponding participial regimen, etc. Where Machiavelli, in Shaksperean

fashion, uses France, Spain, England for the sovereigns of the respective countries. Blado rounds out "re di Francia," etc. A like polishing was attempted in the nearly simultaneous Florentine edition of the Giunta, which appears to have relied upon a manuscript as well as upon Blado, and became in turn the basis of the numerous Venetian editions from Aldus to Domenico Giglio. The so-called Testina edition (Geneva, undated, but early in the seventeenth century), was arbitrarily eclectic from the foregoing; and, coming down to the present century, the Capolago edition of 1849 was derived from Blado, the Testina and the "Italy 1813"—strange bedfellows, as Liso remarks; yet, for some unexplainable reason, this was chosen for the text edited by L. Arthur Burd for the Clarendon Press in 1891. Finally, all the more recent popular editions have gone from bad to worse, adding fresh errors of the printing-office to those borrowed from the editors who corrupted the fountain-head.

All this, with the examination and weighing of the manuscripts, makes very interesting reading. Liso in fairness considers whether Machiavelli did not perhaps revise his work, but concludes that he would have made far more extensive changes had he made any, and in particular would have corrected some anachronisms engendered by the lapse of time. He then lays down the lines of his own reconstitution of the text, and is led into this notable characterization of the two periods of his author's prose, of which the extremes are marked by the 'Letters' and the 'Principe' on the one hand, and by the 'istorie' on the other, with the 'Discorsi' and the 'Dialoghi dell' Arte della Guerra' in the middle:

"There is a family air about them, but the individuals are not identical. In the three writings of the first group you will observe the frequent employment of Latin sentences, of Latin conjunctives—remnants of a tiresomely obsolescent court jargon; a quite appropriate number of vigorous Latinisms and idioms in words, phrases, and constructions, a greater license in graphic forms and endings; a vivacity of inversions, ellipses, thought constructions, loose references, forcible anacolutha; a more lively and bounding movement of the intellect; a recurrence of the same conceits, frequently incomplete; a cropping up of thoughts not obviously connected—marble blocks rough-hewn like Michelangelo's, not finished and polished in Canova's manner. Then if you observe with a sharp eye the latest writings, you will see still the same man, the same writer, but with a spirit (I should say) more

tranquil, with garments (I should say) less dishevelled, more orderly. It seems, in fine, that whereas formerly he was more vivaciously Italian in substance and Latin in form, he afterwards became more Italian in form, but more Latin and sometimes lumbering in substance. The streams of thought descend with greater continuity and fluidity; less frequently so-called irregularities mar the often polished surface; idioms and Latinisms, though proudly resistant and enduring to the very last—Latin conjunctives and sentences gradually disappearing—give place to the purest current Italian; and the waves of the period, less uneven, not seldom take on a sonorous amplitude, especially in the 'istorie.'"

Of no other great writer, then, could it more truthfully be maintained that the style is the man, and that the rectification of his text—above all in that work which has made Machiavelli's reputation hinge upon a personal adjective, become a universal counter of speech in an evil sense—is a pious service to letters and to history. Liso appends at the foot of every one of his critically composite pages the variants of the group he has placed under contribution; and in a lower basement, so to speak, he discusses instructively the most noticeable of them, with precious observations on Machiavelli's usage, and with constant revelation of this conscientious editor's grounds of discrimination for or against the locution in question.

Home Life in Colonial Days. By Alice Morse Earle. Macmillan. 1898.

Early in the present century a song was current, extolling the charms of life "In good old Colony times, When we lived under the King." After reading this attractive book, one begins to think that the poet, Tory though he may have been, was not altogether wrong, and that life in those days may have had a certain charm, dignity, and educational value that are wanting in these days of steam, electricity, and the insoluble servant problem. Every household was an abode of cheerful industries; and the young ladies who carded, spun, wove, dyed, knitted stockings, made "brooms of Guinea wheat," and so forth, were no whit the less ladies for that, as Nausicaa was none the less a princess when, with her maidens, she did the palace washing. Nor did it in the least seem degrading drudgery to them. When charming young Abigail Foote, in 1775, in one day, as her diary records, "carded two pounds of whole wool, and felt Nationly,"

because home manufacture of cloth was one of the steps towards independence, she had as good grounds for her patriotic glow as if she had attended a Woman's Club and signed a string of resolutions.

Every feature of domestic colonial life is here represented; the homes, furniture, and utensils of our ancestors, their occupations, and to some extent their recreations, all minutely described and copiously illustrated, largely from photographs of objects now preserved in museums. One only thing we miss, that most primitive of fire-dogs, made by the local blacksmith out of a single flat bar, split at one end, and ingeniously doubled, bent, and twisted, such as may now occasionally be seen in ancient farm-houses, where it has carried the burning logs for a century or more. The cover of the book, representing such a sampler as our great-grandmothers used to sew in their school-days, is particularly appropriate.

We recommend the study of this volume to those novelists who attempt to revive for us colonial life. He who shows us the lover "kissing Mistress Polly when the clock-reel ticked," will catch a touch of local color that he never could have evolved from his imagination.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, JANUARY 12, 1899.

The Week.

Senator Hoar's call for light on the treaty may or may not meet with a response from the President, but it is eminently proper. To ask eighty-seven Senators to take three Senators' word for it, and leap into the dark, is neither dignified nor sane. Evidently, the eighty-seven thought so, as, in spite of the protests of Senator and Commissioner Davis, they adopted Mr. Hoar's resolution calling upon the President for his instructions to the Paris Commissioners. If the Senate is to ratify a treaty intelligently, it must know all the steps leading up to its negotiation. In such a case preliminaries are as important as the final contract. Not only what the Commission got, but what they set out to get, what they were instructed to try for, in what respects and for what reasons their demands were increased, if they were increased—all this is essential knowledge for Senators really desirous of passing upon the treaty as Senators should. Senator Hoar is, therefore, standing, not simply for the Senate's rights and dignities, but for common sense and the public good. For more than a year now our great, frank, and people-trusting President has kept the country in the dark. He has not yet given us the correspondence leading up to the Spanish war. He might at least begin by giving the correspondence leading up to the treaty of peace. There is no question of delay or obstruction. Mr. McKinley is going ahead in the Philippines just as if the treaty were already ratified. His proclamation bluntly said that he regarded the signing of the treaty as transferring the Spanish sovereignty over the archipelago to us. This is a tremendous assumption—illegal and unconstitutional. But if he is determined to act as if the treaty were already law, a little deliberation, a little calling for light, on the part of the over-ridden Senate, can do no harm.

For its purpose, a vigorous reminder of the place the American republic occupied in its own estimation and in that of the world only a year ago, Senator Hoar's speech on Monday could hardly be surpassed. It was a fine description of those really "glory-crowned heights" on which we not only picnicked, but lived, for the first century of our existence as a nation; of the period when we had a soul, when we worshipped great principles, and made it our mission, for the first time in the world's history, to exalt the arts of peace and to find satisfaction in domestic happiness, in secu-

rity, equality, and justice. The transformation of the last year has been so astounding that mere contrast was eloquence. Mr. Hoar touched "the mystic chords of memory," too, as effectively as Lincoln. He must have moved the American soul of many a hardened expansionist with his pictures of that old America which did so much to raise the hopes of mankind about their possibilities. Ay de mi! as Carlyle said. Emerson has become a German corporal.

One of the most masterly summings up we have yet seen of our relation to the Philippines is that by Mr. Edmunds of Vermont in the *World* of Sunday. He may be said to complete the list of American men of light and leading who have put themselves on record as opponents of this enterprise. We think we can safely say that there is not a single American who can lay claim to authority on statecraft or political morality, whose name is not to be found among the opponents of the Philippine folly, and there are thousands of smaller men among its advocates who secretly condemn it, but have been driven over to the McKinleyites through fear of "getting left." On the 19th of April, 1775, there occurred a little affair at Lexington, Mass., which so strikingly resembles the situation in the Philippines to-day that it is worth recalling. On that day a body of British troops commanded a small force of Massachusetts militia to lay down its arms for precisely the same reason given to the Filipinos by the revered President McKinley for laying down their arms, namely, that the sovereignty of America was vested in King George, and that the Americans did not know how to govern themselves; that King George knew what was good for them better than they themselves, and, therefore, they must lay down their arms and return to their agricultural pursuits, while the King was engaged, with his cabinet, in drawing up rules and regulations for them. They refused to do so, and then the English commanding officer, whose name was Pitcairn, not Otis, determined to punish them, but not "severely," for their recalcitrancy. He, therefore, killed only eight of the militia and wounded only nine, when he might have killed them all. This remarkable moderation produced no effect, and we know what followed.

The order of December 21, 1898, sent by command of the President to Gen. Otis at Manila, inspires one to ask whether or not there is in the War Department, or in any other department at Washington, an officer, "learned in the law," who thinks and writes as good lawyers should and do. What, for

example, is the meaning in law of "practically effected," as used in the first sentence of that order? What did the draughtsman mean by "conquest" of all the Philippines, as the word was employed therein? Can there be a military "conquest," within the meaning of public law, if there is not an actual military occupation? What sort of a "conquest" is recognized by the law of nations as one "practically effected," as distinct from actually effected? How could the military occupation of Manila, and nothing else, suspend Spanish sovereignty in all the other islands of the archipelago? It could not and did not. The President declared to Gen. Otis that "with" the signature of the treaty, and "as" the result of what had been done at Manila, the Philippine archipelago has been ceded to the United States. But what will happen if the Senate shall not ratify the treaty? The President cannot by himself enlarge our boundaries. Spain has not yet ratified the treaty, any more than has the United States.

And then, too, if there has already been the occupation needed for "conquest," why does an "actual occupation" become "immediately necessary," and a military government instantly "extended" outside of Manila? The answer is that the President has not yet made, in law, a "conquest" of the Philippines. He proclaims that all the municipal laws of the Philippines respecting private rights and crimes will be maintained. If the draughtsman of the order intended exemptions, he should have expressed them. And what is meant by protecting private property "except for cause duly established"? "Duly established" by whom, by what, and where? Which "measure of individual rights and liberties" mentioned in the order "is the heritage of free peoples"? Who knows? What a blessing it would be if Mr. Choate, before going to London, could be in Washington for a few weeks, and practically put knowledge and accuracy into the law-offices of the Administration and its military orders! Or, better still, if he could for six months be the Attorney-General!

We entirely agree with ex-President Cleveland, that if the Filipinos offer any opposition to the landing of our troops on their soil, they must be slaughtered. No more daring and dangerous opposition to sound principles has ever been offered. These Filipinos have been bought by a perfectly fair sale. True, their price has not yet been paid over, but no one doubts the ability and fixed intention of the United States to pay it. They are therefore lawful property, not only under

the law of nations, but under our law. In the case of *Scott vs. Sandford* Chief Justice Taney held that, historically, men of this color had no rights that white men like us were bound to respect. To permit for one moment resistance to such a claim would unsettle the title to all property. No man would feel safe in the ownership of his horse or his cow if property like this, created by a treaty of the most solemn nature, could be set aside by a parcel of half-savages. If they persist in resisting the landing of our troops, we would open on them with our quick-firing guns, which will soon, we warrant, bring them to see the matter in its true light. President McKinley, with that goodness of heart which distinguishes him, has enjoined our troops not to treat them with "severity." We presume he means by this that our soldiers on reaching the shore should make good their landing simply by pushing, in which, owing to their superior stature, he thinks they would get the better of the natives. But is not this a perfectly chimerical idea? We ask any one who has ever landed on conquered soil in the teeth of native opposition, if he thinks a landing can be effected by pushing. No; the true remedy, the most humane for the natives themselves, is what Bismarck called "blood and iron."

It means something when a politician who cherishes an ambition for the Presidency, denounces the expansion policy of the McKinley Administration, and seeks to constitute himself a national leader against the Trusts, and a Republican rival of the Democratic Bryan in his assaults upon the courts. It signifies that one of the shrewdest judges of public sentiment to be found in the Middle West believes that, by the fall of 1900, there may be a reaction against the expansion policy, and an uprising against the Trusts that thrive under Republican rule, which will be strong enough to make its leader the next President. Gov. Pingree of Michigan may be "all off" in this view, but the fact that he holds it and acts upon it is a sign of the times that should not be overlooked by any careful observer of our politics.

One of the earliest blessings of our civilization to be extended to Hawaii is an attempt to harry the Chinese. A clause in the joint resolution annexing the islands provided that "there shall be no further immigration of Chinese into the Hawaiian Islands except upon such conditions as are now or may hereafter be allowed by the laws of the United States." Acting under this, the United States inspector of Chinese in Honolulu caused the arrest of a party of Chinese residents of Hawaii returning from a visit to China. Some of them were men of property, and all had originally come to Hawaii under the treaty with that

country allowing a restricted immigration. Their counsel sued for a writ of habeas corpus before the Hawaiian Supreme Court, and Chief Justice Judd granted it and ordered the discharge of the Chinese. He held that the act of Congress of July 7, 1898, did indeed repeal *ipso facto* all the Hawaiian legislation relating to the Chinese as respects future immigration. But he was resolute in maintaining that the law could not have a retrospective effect; that it could not destroy the validity of permits issued before its date of enactment. The Chief Justice, in fact, paid a high, unless it was a sarcastic, tribute to the humane intentions of the American Congress in its legislation concerning the Chinese. He held, against the arguments of learned counsel, that such an "obvious injustice," such a clear case of "oppression," as would be involved in deporting these Chinese residents could never have been intended by Congress. Mr. Justice Judd will learn more of Congress, in this and other capacities; but it is at least gratifying to know that the power of declaring the law in Hawaii is still in the hands of so humane a man as he, and that he was able to frustrate this particularly mean effort to persecute.

The annual raid upon the merit system was made in the House of Representatives on Friday. While that body was in committee of the whole, a Republican member from Kentucky moved to strike out the appropriation for the expenses of the Civil-Service Commission; Grosvenor of Ohio, Hepburn of Iowa, and other Republicans of some prominence made speeches in favor of this motion; and on a rising vote, with only about a third of the Representatives present, the motion was carried, 67 to 61. Nothing was settled by this, however. Moody of Massachusetts, one of the several earnest defenders of the reform, gave notice that he should demand an aye-and-no vote in the House. It has happened, over and over again, that absurd propositions were carried on a rising vote, when no record could be made of their supporters and opponents, and defeated as soon as the roll was called. This is what has since happened in this case; still, it is discouraging and disreputable that 67 out of 128 Representatives should be willing, even in this irresponsible fashion, to declare themselves in favor of "starving out" the Civil-Service Commission and restoring the spoils system.

The caucus of Republican members of the Pennsylvania Legislature to select a candidate for United States Senator was held at Harrisburg on January 3. There were present 109, as nearly as possible two-thirds of the 164 members of the party. Of these 109, all but 11 voted for Matthew S. Quay, and the leader of

those 11 moved to make the nomination unanimous, so that all 109 can be counted upon to cast their ballots for him in the Legislature. A majority of the Legislature, which is necessary to election, is 128. There are two ways of looking at this result. In one aspect it represents the lowest depth yet touched in American politics. Quay is, on the whole, the most disreputable man occupying high position in the United States. He has been open and cynical in his contempt for public morality. He has reduced corruption in politics to a fine art. He has made bargain and sale the rule of action in government. He has openly admitted that he speculated in stocks affected by his attitude as Senator at a time when he was voting upon a tariff bill which involved them. Finally, he was exposed as having tampered with State funds which he had caused to be deposited by a State Treasurer whom he owned in a bank which he controlled; he was indicted for the crime; he sought to evade a trial by raising technical objections to a prompt hearing; and he may very probably be sentenced to the penitentiary for a series of years before the term of the next Senator begins. Yet two-thirds of the Republicans in the Legislature entered a caucus and bound themselves to support him, and he needs but 19 more votes to secure an election. On the other hand, the fact that one-third of the Republican members of the Legislature resisted all these influences, is the most encouraging incident in Pennsylvania politics for many years.

Quay must stand trial in the Philadelphia court. The Supreme Court has refused to interfere in the case. This is a serious blow to the boss. It would seem as though it must prove fatal. The voting for United States Senator in the Legislature will begin next Tuesday, and it seems hardly possible that a man under trial on an indictment which may land him in the penitentiary can force his election to the Senate.

The quiet way in which the politicians at Albany and elsewhere receive Gov. Roosevelt's unpalatable views about the proper use of offices, shows that they will be very cautious about antagonizing him openly. They would be very short-sighted if they were not able to perceive the superior advantages of position which he occupies. He not only has the confidence of the people in larger measure than any Governor whom we have had in many years, but he has in office with him a Legislature which can do little to hamper him seriously because of the lack of a safe Republican majority in the Senate. The Republicans have only 27 members, and it requires 26 votes to pass a bill. There are 23 Democratic members, and a

change of three votes will give them a majority at any time, while the refusal of two Republicans to vote with their associates will prevent the passage of any partisan measure. This, it will be seen, is not a safe basis upon which to make a fight against the Governor on either appointments or legislation. There are several Republican Senators, furthermore, who will welcome an opportunity to side with the Governor in a struggle for honest government, and the machine men are fully aware of this. They will not provoke a conflict in which they would be certain of defeat.

The most important action which Gov. Roosevelt has taken since his inauguration is his appointment of Franklin D. Locke of Buffalo as his special representative in the conduct of whatever prosecution may be authorized against Aldridge and Adams, the Superintendent of Public Works and the State Engineer under whom the canal frauds were perpetrated. Republicans were responsible for these frauds, and the strongest argument in the last campaign against the continuance of Republican rule at Albany was the Democratic claim that the party guilty of such corruption could not be trusted to punish it. This argument would have been fatal against any ordinary Republican candidate for Governor. All that saved Roosevelt was public confidence in his promise that he would pursue Republican rascals with even greater rigor than Democrats. He has now redeemed this promise by turning over the prosecution of Aldridge and Adams to an eminent lawyer who is an active Democrat, and who consequently cannot be even suspected, as the ablest Republican lawyer might be, of any disposition to "go easy" on partisan grounds. The Republican professional politicians will fume over the performance, but time will show that it is as wise from the party point of view as from the public; that, to quote from Gov. Roosevelt's inaugural, "in the long run, he serves his party best who most helps to make it instantly responsive to every need of the people, and to the highest demands of that spirit which tends to drive us onward and upward."

The extra session of the Kansas Legislature which ended on Friday, furnished the most striking example of recklessness in legislation regarding railroads that the Populist agitation in the West has yet begotten. There was no necessity for any new legislation and no warrant for any. But the Populist managers resolved to pass a new law. They secured pledges from Populist members of the Legislature that they would vote for any bill which the managers should submit, and such a bill was passed by both branches of the Legislature and signed by the Governor. It

substitutes a so-called "Court of Visitation" for the present Board of Commissioners; it invites frivolous and malicious complaints against the railroads by a provision that the State will pay all costs in case the complainant loses his suit, whereas if the railroad loses its case, it must pay the costs; and it does not afford as good facilities for the redress of just grievances as the law which it supplants. It seems more than doubtful whether this outrageous measure will stand the test of the courts. Good lawyers hold that various provisions of it are unconstitutional, to say nothing of the question whether any action taken at the late session is in compliance with the Constitution.

It is impossible to avoid the belief that President McKinley, great a man as he is, has descended so low as to treat the Hon. Whitelaw Reid badly. We say unhesitatingly that, under the accepted rules of politics, Reid was entitled to the English mission. He wrote or caused to be written in his paper two articles which would have secured the mission in any State which lived under our system. We mean the article on the President's "Utterances," and the article on his "Silences." We have some small familiarity with the mode of addressing monarchs or powerful persons in Oriental countries, and we say without hesitation that Mr. Reid's mode of describing not only what his master said, but what he did not say, was a perfect model of the way of approaching great personages who had something to give away. It did Mr. Reid great credit, considering how long he had been living in a Western country. From the account given in those eloquent and courtly papers, we do not see how Mr. Reid consents to live away from his godlike chief. Were we a dispenser of great offices we should be ashamed to look Mr. Reid in the face. Were such a man to publish to the world that what we said on any subject surpassed all previous efforts of human genius, and not only this, but that what we did not say was even better than what we did say, there is no honor we should deny him. We should not think the English mission good enough for him. We should make him Governor of a province, with some such title as the Chinese Kwang-seu, or "Succession of Glory."

The *Textile Record*, the Philadelphia organ of the manufacturers of woven fabrics, quotes from the Treasury statistics to show that "while imports of manufactures have since 1880 largely declined, exports have largely increased." Imports have fallen from \$268,333,432 to \$226,212,635, while exports have risen from \$102,856,015 to \$291,208,358. The object of the writer is, he says, to warn the manufacturers that the tariff is in

danger from these figures, which will surely be produced at the next election, and in his opinion cannot be answered by the friends of the tariff. What is even worse is, that wages are declining in several of the trades protected by the Dingley tariff. The *Record* is not disposed to give up the fight. It maintains that "the home market is worth more to us than all the other markets of the world," and it denounces the "open-door policy." We do not see what course is open to the manufacturers under these circumstances, except to raise the tariff on the articles which the present commercial movement threatens. The *Record* says the manufacturers must have this or lower wages. We would try both. We would put up the tariff and put down the wages. We see clearly the dangers of the latter. The argument that the object of the tariff was to raise the wages of the poor man would have to be abandoned, in spite of the fact that it has been freely used on the stump by the revered McKinley, and the Cobden Club would have to be set to work at some of its old tricks with our politics. But we advise the *Record* not to be too much frightened by the exports to the savages of the world. It is from the rich, civilized peoples that the danger comes. The savages will have to be made to buy, which is very expensive, but the civilized rascals buy of their own accord if the goods of a friendly nation are cheap.

The French have just been giving, in Madagascar, another specimen of their capacity for colonial government. The Governor of the island is, of course, a general, and he arranges all things to suit his own notions on every subject. It appears that there are gold mines in the island, and recently the Conseil d'Administration, which assists the Governor, passed a law which "permits the Malagassies to carry on mining operations, with the permission of the governors of provinces and the approbation of the resident general." This promptly raised a tremendous uproar, as it threatened Frenchmen with the competition of cheap labor. They say that if this is permitted, it will be impossible for Frenchmen to undertake the expense of machinery and the importation of European labor, etc., particularly as the law is likely to be changed by each new Governor-General. If they cannot have a monopoly of the money-making enterprises, they will not come out. One would say that, in the interest of the colony and of its civilization, everything should be done and permitted to tempt the natives into the paths of regular industry, yet this law has been abrogated. In the number of the *Temps* which lies before us there is still news of fighting in various parts of the islands, posts cut off, houses burned, settlers assassinated, and so on, but Frenchmen must have the trade and industry.

THE OLD CONSTITUTION.

During the whole of the century which is just expiring, the reverence of Americans for their Federal Constitution has been the marvel of publicists. Its success, in fact, in securing the attachment of the people has, as is well known, much surpassed the expectations of its framers. It has long been held up to admiration as the crowning proof of the political capacity of the Anglo-Saxon race. The wonder has been, too, not solely that the American people devised it, but that they obeyed it and lived quietly under it. We have no doubt that some, at least, of the Spanish-American republics have constitutions, which seem as good as ours on paper, but the people do not respect them in practice. They revolt every now and then, when the Constitution stands in the way of some ambitious politician. In fact, ever since Tocqueville began to write about the American Constitution in the thirties, our adoration of it has puzzled Europeans. A great many Englishmen treated it as a kind of superstition. At the outbreak of the civil war, one English writer of eminence explained that one of our great difficulties was "that we had a false bottom to our political thought"—namely, the Constitution. For seventy years it furnished protection to an institution which disgraced us in the eyes of the world, and shocked the moral sense of the most intelligent portion of our own community. It was worshipped because it furnished for the first time in history an effective and enduring federal bond.

As the democratic spirit spread, and wealth increased, and we saw what was happening to private rights, even in England and in France, where there was no such institution, it was valued by the lawyers especially, because it furnished complete protection for property-holders against popular craze or greed. There have been many illustrations of this in the decisions of the Supreme Court. After the civil war, we had still enough reverence for it not to take any step which seemed seriously to violate its provisions, without amending it, so as not to disregard it. We even took the trouble to make slavery formally unconstitutional, after we had abolished it by military force. Artemus Ward's joke that "the earth revolved on her own axle-tree subject to the Constitution of the United States," was hardly an exaggerated expression of the popular feeling about it.

The first real breach in it was made by the invention of the "war power" to enable President Lincoln to abolish slavery. No one would now say that this was not at that time necessary, but it made it possible for any President practically to suspend the Constitution by getting up a war anywhere—that is, by calling into existence and activity the

most anti-social and anti-legal and most judgment-disturbing of all the influences by which men are swayed. There is no way of making a President account for what he does in time of war except by very uncertain processes which cannot be brought into play until long after the event. President McKinley, for instance, has been exercising powers during the last nine months which have been bringing the Constitution more and more into contempt, and to which some portion of the nation disputes his right, and there is no practical means of checking him; and a sort of flattery has sprung up about him which not long ago would have been thought impossible in the case of a ruler elected under a Constitution for a short term. What his career has most distinctly brought to our notice is the rapidity with which a very ordinary man, elected for a purpose to which he paid no attention, may turn opinion away from the Constitution and its necessities and its value. If any one had predicted even ten years ago that such a person by the aid of (for us) a trifling war, could in so short a time not only make the Constitution seem of small consequence, but bring the great men of our heroic age into a sort of discredit, so that he would make it easy for any "space writer" to pooh-pooh George Washington, who would have believed him?

The second great breach in the Constitution was the legal-tender decision. That so plain an intention of the Constitution with regard to the national money as it expressed with regard to State money, could be explained away so easily, was a serious revelation to the vast multitude of "have-nots" poured into the United States after the war of the rebellion. To it we soon owed the "greenback craze" and afterwards the "silver craze." In truth, it was the beginning of a whole series of attempts on property of various kinds, and it culminated in the Bryan movement, which seemed an attack on all our institutions, including the Supreme Court, and frightened us terribly.

For the last year the men who got McKinley elected under pretence of reforming the currency, have been trying to divert attention from the Bryan spectre by a war, and the war has helped them a good deal. But in so doing they have given the Constitution another tremendous kick. They have done much to destroy all respect for it among the large body who voted for Bryan in 1896, and who will doubtless vote again for somebody like him. The great McKinley, whom we are asked so glibly to accept as a better adviser than Washington, will not be with us always. Two years, we hope, and six years, we are sure, will see the end of him as a public man. He will retire, and his wisdom with him, to Canton, O., and leave us to face the mischief he has worked. That

mischief is the destruction, even among a large portion of our most intelligent class, of all sense of the value of our old Constitution as a defence of property and order, a great diminution of the sense of its value, in comparison with that of England, in placing bounds to any possible excesses of universal suffrage, of which we get plenty of specimens from our State Legislatures. Fancy the silver or greenback majority in the House and Senate in 1874 armed with the power over taxation, and currency, and wills, and legal procedure of the British Parliament; and yet that is apparently what a good many of us are driving at in order to have freer scope in climbing "glory-crowned heights" and ruling distant brown men. How long this madness will last it is impossible to say. But as long as it lasts, those are foolish who, with the example of Croker before their eyes, suppose that the Altgelds and Tanners and Debsses and Bryans will not be delighted to find that, after a century's trial of constitutional government, we have at last been willing to take off of democracy the only bridle it has ever borne with patiently.

THE GOVERNOR'S MESSAGE.

Gov. Roosevelt's first message is thoroughly characteristic, and is especially strong upon the issue which, more than any other, decided his election, that of good government. The passage devoted to the question of civil-service reform is a sufficiently notable deliverance to constitute by itself a formal declaration of the intentions of the new Executive. It is an argument in favor of good government of the kind which has appeared hitherto only in the addresses and declarations of professional civil-service reformers. Furthermore, it is an unflinching demand by an incoming Republican Governor for the repeal of a law which had been enacted under the personal inspiration and at the personal solicitation of his immediate Republican predecessor in office. Gov. Roosevelt is probably the only Republican in the State capable of an act so contrary to party amenities as this.

If this passage in his message could be placed in deadly parallel with that upon the same subject in Gov. Black's first message, it would be seen how carefully the new Governor traverses the famous reasoning of his predecessor on the question of "starch in the civil service," answering it at every point, and demanding finally the unconditional repeal of the starchless law. There is in this act alone an assurance of fearless conduct upon the part of the new Governor which could have been supplied in such large measure in no other way. The spoilsmen of his party will not fail to note the significance of this deliverance. If they will read it carefully and then compare it with the language used

by the civil-service reformers who investigated the workings of Gov. Black's starchless law after it had been in operation for six months, they will be alarmed to notice how completely Gov. Roosevelt and the "hypocritical" reformers agree in their views. They will be convinced, we are confident, that in signing petitions to the Governor, beseeching him to make a "clean sweep" in the State service, they are wasting their time.

Gov. Roosevelt's language on the situation created by the Black law is studiously plain. He says that the inquiries he has made have satisfied him that the "present law works badly from every standpoint," that the pet Black idea of a half mark for "merit" and another for "fitness" is not a competitive examination at all, but a "farce," since the "so-called fitness test represents not a competitive examination, but the individual preference of the appointing officer, or rather of the outsider who has requested the appointment." That sounds like a deliverance from an incurable Mugwump. The Governor not only favors the repeal of the Black law, but the passage of a law "introducing one uniform practice for the entire State, and providing, as required by the Constitution, for the enforcement of proper civil-service regulations in the State and its subdivisions. This law should be modelled in its essential provisions upon the old civil-service law which was repealed by the civil-service law now upon the statute-books." The need of this is imperative, for, as the Governor says, the "methods of appointment to the civil service of the State are now in utter confusion, no less than three systems being in effect—one in the city of New York, one in other cities, and one in the State at large."

Scarcely less courageous and promising is the stand which Gov. Roosevelt takes in favor of biennial sessions of the Legislature. In this, as well as in relation to the civil-service laws, he takes issue squarely with the machine. An amendment to the Constitution providing for biennial sessions had been passed by one Legislature and was to come up again this winter, after which, in case of passage, it would go to the people for adoption. At this critical point in its progress the machine, after favoring it for several years, suddenly turned its back upon it, leaving all mention of the subject out of the platform upon which Roosevelt stood. He supplies the omission now by strongly recommending the passage of the amendment this winter, as a means for checking the evil of over-legislation. What he says on this point is well said, and is in strict accordance with the teachings of experience:

"The tendency to pass laws which are utterly unnecessary, even when not pernicious, or which are enacted purely to favor certain private interests, seems to grow instead of

diminish. It is difficult to devise an efficient check for it, but strenuous efforts should be made to find out and put into operation some such check. The State suffers very much more from over-legislation than it does from lack of legislation."

Another portion of the message deserving of high commendation is that which relates to the National Guard. Probably never before have the soldiers of the State received such intelligent criticism, or had the benefit of such excellent recommendations for their improvement. First and most important of these is the Governor's announcement of his decision to place the entire responsibility for the Guard's administration and efficiency in the hands of one man, Major-Gen. Roe; and with it goes the warning, unnecessary in this case, that a failure of the commanding officer to do his duty, or to bring the troops up to their proper state of efficiency, will lead to his immediate removal from office. Gov. Roosevelt's intention to refrain from undue interference with the commander of the troops will redound to his credit far more than his recommendations for improved arms and ammunition, however necessary these may be.

What the Governor says about other matters requires little comment. He reserves canal matters for special treatment later, and intimates that he may take up specially also the subject of police legislation for this city. That is a subject he does well to approach with great deliberation, for it is an extremely difficult and dangerous one to meddle with. Yet no one will deny his peculiar qualifications for a just understanding of it.

SPAIN'S RECUPERATION.

One of Valdés's novels has a picture of a decayed Spanish grandee. The poorer he got, the fiercer the pride with which he bore himself. As long as he had a shirt to his back it seemed impossible to do anything for him, for he would have slain any man daring to offer him assistance. But finally a donkey ate his last shirt, as it was flapping in the courtyard, and this at last opened the eyes and lowered the crest of the haughty Don. He discovered that he lived in a modern world, where pride was not negotiable; and slowly pulled himself together to accept his real situation and make the best of it.

Spain has now lost her last shirt, a bigger donkey than the one of the novel having eaten it. The question is if she, too, will now begin to think clear and see straight, and set herself valiantly to the work of national recuperation. There are some gratifying signs that she means to do so. If the country could rid itself of the incubus of its political little-great men, its prospects would be thought good. The voice of Spanish business men has made itself heard, to good effect, in the Saragossa congress of cham-

bers of commerce. No better statement could be asked than they made of the reforms necessary for Spain—rigid economy, reduced expenses, especially for military purposes, cure of a disordered currency, and a severance of the demoralizing relations between the Treasury and the Bank of Spain. And too much cannot be said in praise of the thrift of the hardy Spanish peasantry. The elements of national restoration and revival are certainly present in the qualities of the people and the natural resources of the Peninsula. Will Spain's statesmen be wise enough to develop and build with them?

One of the first things they must do is to stop talking as if there were something in a Spaniard, *qua* Spaniard, which makes him superior to other mortals. It was an extraordinary fact, but it undoubtedly was a fact, that Spaniards had an implicit trust in the purity of their race and blood as the great thing that was to give them victory over the United States. Admiral Montojo announced beforehand that he was going to annihilate Dewey's ships because they were manned by mixed nationalities. How could they possibly conquer pure-blooded Spaniards? Capt. Mahan reproduces, in his latest article, an interview held with the Spanish Secretary of the Navy just before the war broke out. One of the reasons which Señor Beranger gave for his calm prediction that "we shall conquer on the sea," was that "as soon as fire is opened, the crews of the American ships will begin to desert." Why was he so sure of that? Because "we all know that among them are people of all nationalities."

This is a castle in Spain in which Spanish public men must not longer dwell if they expect to save their country from further disasters. It is somewhat discouraging, therefore, to read of Gen. Polavieja's complacent views about the necessary superiority of Spaniards to Americans as colonizers. That is the one subject on which Spaniards should be dumb, or else make a clean breast of national incompetence. No such sudden and complete crash to ruin of a great colonial power as Spain's has been was ever known, and if there is one thing on which Spaniards cannot afford to patronize Americans, or even Turks or Hottentots, it is their own assumed skill in governing colonies.

But we refer to Gen. Polavieja's silly talk mainly to say that he and his class of political generals are the very thing to be reformed. They are part and parcel of the vicious system which has brought Spain low. The chief exponents of Spanish maladministration in the colonies have been her generals at the head of it. They have typified the blind greed which exploited the colonies for the sole benefit of the mother country. Returning with suspicious wealth from their posts, they have set up as political

leaders in Spain, and have done more than any other class of men to make Spanish politics the fierce and pitiful scramble it has been. Some way must be found of eliminating or muzzling these political generals, or the work of Spanish recuperation will be slow indeed. The dread of a military dictatorship has passed away for the present, largely through Sagasta's address in striking up an alliance with Gen. Weyler; but political regeneration cannot be had at the hands of these worst of all sinners.

How desperate is the plight of Spanish finance and currency is clearly shown in an article by M. de Foville, translated for the last number of the *Journal of Political Economy*. The details are stupefying, almost incredible. Spain's metallic currency was so stupidly inflated that the royal impress on a coin actually took from instead of adding to the market price of silver. Says M. de Foville: "It would be hard to imagine, in the whole range of monetary phenomena, a more depressing and disgraceful situation than that the value of a silver coin of full fineness should fall below that of the silver bullion it contains, when silver bullion itself is at a discount of 55 per cent." As for the tremendous expansion of the note issues, under the act of 1891, it is sufficient to quote Leroy-Beaulieu on this madness, apropos of which he wrote last August that "the man who really dug the grave for Spanish greatness was Cánovas, who, in point of financial ignorance and presumption, by far surpassed the limits allowed to a modern head of the state."

For Spain to climb out of this slough will require the greatest and most heroic efforts. In her financial rehabilitation, however, she luckily will have the active aid of France. French capital to the extent of \$400,000,000 is invested in Spanish railways alone. They have been almost ruined by the depreciation of Spanish currency. Having to pay interest in gold, they have had to accept progressively depreciating money in their receipts, while by law forbidden to increase charges for freight or passengers. Here then is a very powerful interest which may be counted upon as a steady influence, and which will contribute much towards Spain's getting her currency on a sound basis.

CHANGES IN EGYPT.

Lord Salisbury declined, in his Guildhall speech, to assert a formal British protectorate over Egypt, or even over the Sudan; but he has since practically done the thing. In the address to the sheiks at Omdurman, which the British agent in Egypt, Lord Cromer, made last week, he said to the natives: "For the future you will be governed by the Queen and the Khedive." Here was no mention at all of the Sultan, whose sovereignty over

Egypt is still theoretically perfect. The order of the names is also significant—the Queen first. Lord Cromer at once added that no attempt would be made to govern the Sudan from Cairo, so where the Khedive comes in it would be hard to say. By a polite fiction, he and the Queen are supposed to have agreed on Kitchener as the man to put in supreme control of the Sudan. The Sirdar is to administer the Sudan, therefore, not as an Egyptian province, but as a country for the proper government of which he is answerable to the Queen. This is, for all practical purposes, an assertion of British sovereignty in the Sudan.

There has undoubtedly been from the first both a legal and moral ambiguity attaching to the British position in Egypt. Mr. Gladstone's promise to withdraw the English troops, when once the country was pacified, was absolute, but has remained unredeemed for nearly twenty years. He it was also who described the Dervishes as "brave men fighting for their liberty." This was an awkward expression to fall from the lips of a Prime Minister dispatching a military expedition at the very time against these very men. Yet Lord Selborne, then of Gladstone's Cabinet, and assenting to his Egyptian measures, says in his 'Memorials' that the phrase, though embarrassing, only represented the embarrassing English attitude at the moment. But the awkwardnesses and embarrassments did not end there. The present Government distinctly asserted that Kitchener's expedition was undertaken to restore to Egypt her ancient Sudanese provinces. In his correspondence with the French Foreign Minister, Lord Salisbury at first rested British claims to the Sudan on the ground that it was an Egyptian province. Afterwards, when M. Delcassé was not satisfied with that argument, he shifted his ground, and asserted the right of conquest. That is where he appears to stand now, as Lord Cromer's speech at Omdurman is tantamount to the declaration of British sovereign rights in the Sudan. These, if they exist, are born only of conquest.

At the same time, it is clear that the English Government intends to give the natives the largest measure of home rule possible. Lord Cromer said that they were not to be governed from London any more than from Cairo. The Moslem religion is to be respected. The Gordon Memorial College, named in honor of a man who carried his Christian belief to the point of fanaticism, is not to meddle with religion. Its official language is to be Arabic, it is now announced, though English will be taught to the sons of sheiks in order to make them better fitted to understand English rule, and perhaps take office under it in the future. What the English have done with the natives in the army they hope to do with them also in civil life. The fighting of the native regiments at the At-

bara and at Omdurman was magnificent. The very men who used to throw away their guns and grovel in the sand in tears before a Dervish charge, now meet its fearful onslaught with courage and coolness equal to those of the Highlanders. Discipline, training, and the prestige of success have wrought these wonders in fellaheen and negroes from the desert, and discipline and training may do as much for them in making them capable civil servants of the Queen.

In line with the enlargement of native rights and privileges in Egypt are certain changes just made in the jurisdiction of the mixed tribunals. An international commission began sittings in Cairo last spring in order to consider modifications of the powers of these anomalous courts. They have been asserting and exercising jurisdiction over all questions concerning real property, even when both parties were natives; they had allowed natives to transfer their claims to foreigners, so as to take their cases away from native courts and bring them before the mixed tribunals, and in many other ways had been extending their original and intended province as the courts with exclusive jurisdiction in all causes affecting foreigners. The international commission, at the request of the Egyptian Government, has now shorn away most of these dubious powers, and has restored to the native courts full jurisdiction in all cases affecting natives exclusively. This is an important recognition of the increasing competence of the Egyptians to manage their own affairs, and is in keeping with the promises made to the Sudanese by Lord Cromer.

HENRY CLARKE WARREN.

By the death of Henry Clarke Warren, which occurred at his home in Cambridge last week, Harvard College loses a loyal and devoted son and benefactor; the American Oriental Society, a faithful officer who had served for years as its Treasurer and as a director; and American scholarship one of its distinguished ornaments. He was born of sturdy New England stock, and was wholly unspoiled by wealth inherited from a father to whom it had come in return for substantial services to society. In his early childhood an accidental fall from a vehicle produced an injury by which he was physically disabled for life and forced to pass his days in seclusion. It was, therefore, a happy thing, not only for him, but also for the cause of science, that he became interested, already as an undergraduate at Harvard, in the study of Sanskrit, which he began with Prof. Greenough. After taking his bachelor's degree in 1879 (Prof. Taussig of Harvard and President Hyde of Bowdoin were among his classmates), he continued this study at the Johns Hopkins University, first with Prof. Lanman, and then, after the latter was called to Harvard, with his successor, Prof. Bloomfield. Later he took up Pali, the sacred language of the Southern Buddhists, and, establishing his residence at Cambridge, devoted himself to the study of the religion and literature of Buddhism.

The fruits of these labors were embodied in a volume entitled 'Buddhism in Translation' and published by Harvard University in 1896. It is based upon an exceedingly wide knowledge at first hand of the Pali scriptures in the original, and consists of more than one hundred selections therefrom done into English, and so chosen and arranged as to give a systematic account of the picturesque legend of Gotama Buddha, of the monastic life of his order, and of the philosophical conceptions which underlie the Buddhist religious system, with the doctrine of Karma and rebirth and the scheme of salvation from misery. Mr. Warren's purpose was not to reproduce what Western writers have guessed or supposed about Buddhism, but rather to make the native Buddhist speak directly for himself; and for this reason his work has an abiding value and authority. It is by all odds the best that has ever been written upon the subject in this country, and the merit of the achievement has been duly recognized not only by scholars in Europe, but also by genuine Buddhists in the Orient, among others by the King of Siam, who sent to Mr. Warren a splendid set of the royal edition of the Buddhist scriptures in thirty-nine volumes, recently published in commemoration of the twenty-fifth anniversary of his accession to the throne.

Mr. Warren next set himself to make an edition and translation of 'The Path of Purity,' or 'Visuddhi-magga.' This is an extensive and systematic treatise or cyclopædia *raisonnée* of Buddhist doctrine, composed by the famous Buddhaghosa, who flourished in the fourth century of our era and might perhaps be called the St. Augustine of India. For Mr. Warren's purpose an important Burmese manuscript was loaned him by the British Government from the library of the India Office, and others (Sinhalese) were furnished him by the eminent English scholars Rhys Davids and the late Dr. Richard Morris. The text is not far from being in a state of readiness for the printer; but the English version is done only in part. Mr. Warren saw that the critical value of his edition would be greatly increased if he could trace all of Buddhaghosa's quotations from his predecessors and from the canonical books back to their sources—as an editor of Augustine might do. This plan also has been carried out in large part.

It is hoped that the volume can be completed and issued in due course. If this proves to be the case, the work will be not only an honor to the University, and a noble memorial to the scholar who has achieved it, but also one of the greatest direct contributions that American learning has yet made to a most important chapter in the history of human thought. For it is already clear that the historians of philosophy can no longer ignore the Asiatic systems. Some of the most striking phases of European speculation have their earlier counterparts in India. And now, especially, when so many facile tongues are wagging with half-knowledge or worse about the fables of the "Land of the Rose-apple," it is indeed well that some sober-minded scholar should undertake to find out for us what the wisdom of these wise men of the East really was.

To many, the news of Mr. Warren's death will be the first knowledge that they ever had of him. Nevertheless, it is an event in the history of American learning. His was the modesty of the true scholar. In his daily life, as in his public benefactions, he shrank from notice. His good deeds were a fine ex-

ample of what his ancient Hindus called the *nirvritta* (roughly, "the disinterested"). In living and in dying he triumphed over death. And the patient and cheerful courage with which he toiled beneath the yoke of his infirmities was heroic. Some of the old Buddhist ideas about personality are almost startling in their modernness, wholly at variance with the views traditional among us, and of altogether fundamental importance as the basis of a religious system. And so it is an interesting example of the utter non-dependence of religion upon dogma, or (if you will) of the good life upon religious theory, that this man, who was so deeply impressed on the one hand by what he calls "the strangeness of the intellectual landscape" of Buddhism, and on the other by the spotless life of the gentle teacher Gotama, should himself lead a life which came so beautifully near to the best ideals of the high-minded Christian gentleman.

IMPERIALISM VS. THE CONSTITUTION.

BRUNSWICK, Me., January 5, 1899.

Among the many questions to which the discussion of "imperialism" has given rise, that of the bearing of the Federal Constitution on the new policy of territorial expansion is certainly one of the most important. That the question has not received, as yet, anything like the consideration it deserves is, indeed, a striking illustration of the present national temper. Of late, however, the constitutional aspects of the issue which more than any other in our day strikes to the foundations of our political well-being, have with some emphasis been brought to public attention. The paper of Judge Simeon E. Baldwin, read at the recent meeting of the American Historical Association at New Haven, was a forcible presentation of the legal and constitutional phases of "expansion," and a thoughtful examination of the difficulties in the way of such a policy. On the other hand, Prof. Harry Pratt Judson of the University of Chicago, in an article in the current number of the *Review of Reviews*, addresses himself with somewhat of assertiveness to the task of showing that the alleged constitutional difficulties, including those dwelt upon by Judge Baldwin, are really not difficulties at all, and that our fundamental law offers no insuperable obstacle to the acquisition and administration of any part of the earth's surface we may desire.

With writers and students of prominence occupying such opposite positions, the question would clearly seem to be open to debate. That the Constitution affords, at best, but an uncertain light to the feet of the expansionist is, doubtless, evident enough. There is, however, a way of disposing of the difficulty, in evidence even among some who ought to know better, which could be dismissed as trivial did it not contain the germ of far-reaching danger. Granted, say these advocates of imperialism, that the Federal Constitution, even by liberal construction, presents serious difficulties when sought to be applied to the present emergency; but what then? The Constitution exists for the benefit of the people of the United States, and can have support only in their approval; and if, in conformity to an unmistakable popular demand, our boundaries are now to be enlarged, and alien peoples brought under our control, the Constitution, in so far as it does not permit of such action, must give way. The Constitution cannot stand in the

way of national progress. We have disregarded it in the past, yet without harm or loss of strength. We have acquiesced in judicial interpretations of it whose chief defence was later seen to be national exigency. So may we safely do now. In other words, since the Constitution and our desires conflict, we will relegate the former to the background. As for amending the Constitution, that is difficult and uncertain; better quietly allow its scope to be "enlarged" to suit the present need. Even an unconstitutional policy, vigorously executed and sedulously adhered to, may, after all, lead us into no evil.

Such specious argument, as has been said, would be trivial if it were not dangerous; if it did not, under a semblance of historical truth, make for revolution. On the other hand, the real difficulties of the situation are not, I think, met by dwelling upon the remarkable development of the Constitution by both interpretation and usage, or upon the practical success with which its broad and general provisions have been adapted to conditions for which they were never designed, and which their framers could by no possibility have foreseen. It is true, as has often been pointed out, that the Constitution is not all-comprehensive, and that its omissions and deficiencies, though somehow "got around," have often proved extremely embarrassing. For example, the Constitution does not provide for the annexation of territory; yet we have enlarged the area of the United States to more than four times its original size. The Constitution does not provide a form of Territorial government, or define the relations between the Territories and the United States; yet we have erected Territorial organizations, and laid down the principles governing the application of Constitution and laws within their jurisdiction. The Constitution does not provide for corporations, or authorize the issue of legal-tender paper money; yet the United States has chartered corporations from the first, and the issue of legal-tender paper has been upheld by the Supreme Court. There is this difference, however, between the extra-constitutional proceedings at these and other similar points and the questions raised by the new issue of imperialism. With hardly an exception, the constitutional applications and interpretations such as have just been cited, not only have involved questions to which no other reasonable answer was to be found, but have also been in line with a national policy whose necessity, appropriateness, and consistency were, even at the time, fairly obvious; while the policy of expansion, especially as regards the Philippines, stands for a departure from our uniform historic policy, and the assumption of obligations which not only have not been laid upon us of necessity, but the reasonableness and propriety of which are widely questioned. If we bargained for Louisiana because we had to, it is also true that we have bargained for the Philippines because we wanted to.

While, however, our previous "enlargement" of the Constitution, when viewed in the light of the attendant circumstances, hardly affords a satisfactory answer to some of the constitutional questions now under discussion, certain points may, by the uniform action of Congress and the Executive and the decision of the Supreme Court, be regarded as settled. The right of the United States to acquire and retain territory on this continent, though nowhere expressly given by

the Constitution, is no longer open to judicial inquiry. Judge Baldwin points out, further, that since islands fringing a continent are properly to be considered a part of it, our right to acquire territory may, with propriety, be extended to Porto Rico, Cuba (if that shall eventually come to us), and, perhaps, to Hawaii; for the acquisition of the Philippines, however, we find no warrant save in the right to take them as spoils of war, while for their permanent retention it is difficult to find authority anywhere. Further, the right of Congress to erect Territorial governments of such form as it deems fit, and to continue the Territorial status for considerable periods, is settled, as is the right of the Executive, pending the decision of Congress, to administer annexed territory under military government.

On two or three other points, however, of grave importance in view of the character of our new possessions, the provisions of the Constitution raise serious questions on whose solution the course of judicial interpretation, notwithstanding the confidence of Prof. Judson, seems to throw an ominous shade.

The provisions of the fourteenth and fifteenth amendments, relating to citizenship and suffrage, raise two kinds of inquiries. Judge Baldwin discusses at some length the meaning and scope of the term "United States of America," and is inclined to doubt whether territory not, even in the broadest sense, a geographical part of America can become a permanent part of the United States at all. Prof. Judson, while likewise devoting much space to the question, dismisses the contention at last as not among the obstacles to expansion. Still, though the discussion over the name be set aside as merely academic, other problems raised by the two amendments remain:

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States. . . . The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude."

The first of these provisions, according to Judge Baldwin, "would seem to make every child, of whatever race, born in any of our new territorial possessions after they become a part of the United States, of parents who are among its inhabitants and subject to our jurisdiction, a citizen of the United States from the moment of birth"; while by the fifteenth amendment such of these persons as are civilized "must have the same right of suffrage which may be conceded in those Territories to white men of civilized races." A citizenship of the United States for Filipinos and Hawaiians, with the further privilege of attaining State citizenship as well, is a possibility which few of us can contemplate with satisfaction, and in regard to which our enthusiastic expansionists are silent.

A second constitutional difficulty arises over the application of certain provisions of sections 8 and 9 of art. I. Section 8 declares that "all duties, imposts, and excises shall be uniform throughout the United States"; while by section 9, "no tax or duty shall be laid on articles exported from any State," nor shall there be discrimination between different ports in the matter of trade regulations. If our new possessions are to be reck-

oned as parts of the United States, within the meaning of the Constitution, it seems impossible, without violating the whole intent and spirit of these sections, to have different rates or kinds of taxes for different localities—one tariff for continental America and another for the Philippines, export duties in one place and not in another. How we can get on with a protective system in America and an "open door" at Manila is not very clear; but Judge Baldwin does not hesitate to suggest that, under the present Constitution, the two are, in his opinion, incompatible. A fair and logical interpretation of the Constitution at this point would appear to necessitate one of two courses: either an "open door" for the present United States, Porto Rico, and Hawaii, if there is to be one for the Philippines, or else the extension to our new dominions of our own tariff system, whatever that may be.

A further question has to do with trial by jury. The provisions of the Constitution in regard to the right of jury trial are explicit, and are couched in terms not easily misunderstood. That the constitutional guarantees of personal liberty serve as limitations on the power of Congress in dealing with Territories as well as with States, and that they may be claimed by any person anywhere within the civil jurisdiction of the United States, is a doctrine supported by judicial sanction. It should not be forgotten, however, that the maintenance of the jury system in purity and efficiency presupposes a political point of view and habit of mind by no means universal as yet, and practically unknown outside of English-speaking countries. I can but feel myself in accord with those who would regard the extension of the jury system, as we have it, to the conglomerate and backward populations of our new acquisitions as a calamity only equalled, if equalled at all, by the establishment among them of universal suffrage. Yet how, again, under the Constitution, trial by jury could be denied to the people of Hawaii and the Philippine Islands, if those regions are held to be parts of the United States, does not yet appear.

Lastly, the incompatibility between a constitution and the political actions of the people who live under it need not consist solely in the defectiveness of the instrument at this point or that, or in outgrown statements of prohibition and command. It consists as often in a general lack of fitness for the work it is expected to do, a pervading want of harmony between the constitutional structure and the temper and purpose of the national life. Viewed in this light, the constitutional status of imperialism seems to me to raise many questions of grave concern, not the less important because their answer works a subtle modification in the national attitude. The sources and methods of national revenue and taxation, the extent of the war powers, the participation of the House of Representatives in the conclusion of treaties, the status of the civil service, and the lack of uniformity and continuity in foreign policy incident to frequent changes of administration, are some of these questions. To none of them is the answer easily to be read in the volume of judicial decision thus far; yet the adoption of the policy of expansion cannot fail to force them more and more upon our attention. I can but think that our present schemes of territorial enlargement, particularly that for the acquisition of the Philippines, bristle with dangers which will

increasingly appear; but of the many dangers, that of insensibly losing the distinct type of national character contemplated by the Constitution, and imagining ourselves to be what we are not, seems to me many degrees the greatest.

I have commented on these opposing views of Judge Baldwin and Prof. Judson, not for the unimportant purpose of expressing approval of the one or doubt about the other, but because, as it seems to me, they serve very well to call attention to a cardinal point in the whole expansionist position. That point is that the policy upon which we have, to all appearances, entered, is opposed to the spirit, if not to the letter, of the Federal Constitution. Even though we admit, if only for the sake of the argument, that every previous enlargement of the scope of the Constitution is defensible upon reasonable grounds of national necessity, the contention has little application to conditions in which, as has already been said, we are governed, not by our necessities, but by our desires. To the sincere imperialist, in other words, the logical accompaniment of his doctrine is an amended or revised Constitution, and it is for this that he ought forthwith, and in good faith, to strive. There are, I take it, but three courses open to us. The first is to admit the disparity between the Constitution and our wishes, and seek a revision of the Constitution in harmony with our aspirations. This is dangerous, but it is honest. The second is to uphold unconstitutional acts by arbitrary and forced interpretations of constitutional provisions. This is lawlessness in the garb of "progress." The third is to "let the Constitution go," and give the people what it is said they want. This is revolution.

WILLIAM MACDONALD.

Correspondence.

OUR DEAREST FOE.

TO THE EDITOR OF THE NATION:

SIR: In the present agitation of the question of territorial expansion, it may be of interest to your readers to recall the following passage, written fifteen years ago by one of our foremost historians. It sounds a significant note of warning. In the closing paragraph of Parkman's 'Montcalm and Wolfe' the author says:

"Those who, in the weakness of their disquisitions, needed help from England against the savage on their borders, have become a nation that may defy every foe but that most dangerous of all foes, herself; destined to a majestic future if she will shun the excess and perversion of the principles that made her great, prate less about the enemies of the past, and strive more against the enemies of the present, resist the mob and the demagogue as she resisted Parliament and King, rally her powers from the race for gold and the delirium of prosperity to make firm the foundations on which that prosperity rests, and turn some fair proportion of her vast mental forces to other objects than material progress and the game of party politics."

Very respectfully yours,

PERCY F. BICKNELL.

MALDEN, MASS., January 7, 1899.

PICTORIAL ENJOYMENT.

TO THE EDITOR OF THE NATION:

SIR: Your reviewer of 'How to Enjoy Pictures,' in the issue of December 29, seems

to me to take too scornful a view of average men and women. "People," he says, "not too uneducated to read a book, who yet need to be told that the way to enjoy a picture is to look at it more than once, . . . to try to understand . . . the character in a portrait, even the general lines of composition in a landscape or figure subject." The implication of the review seems to be that if people do not already have a thoroughly sympathetic and appreciative way of looking at pictures, they are not worth considering at all.

I believe this is a wrong attitude to take. The average intelligent American, either man or woman, has necessarily grown up with very few chances to see the original work of great painters or to hear artists discuss such work. Books on art are plenty, to be sure, but these are full of technical terms and phrases which no layman understands, and, being published for those already rich in money and opportunities, their price is usually prohibitory to people with moderate means. And what is the result? Look at the average man and woman when visiting a picture-gallery or running through the pages of a well-illustrated magazine, ninety-ninths of the pleasure they might derive from the pictures is lost because they have never had any adequate help from parents or friends or school-teachers as to the way to look at such things. They are not stupid; they are not hopeless cases. Give them a hint or two of what you yourself see to admire in the picture at which they have been gazing blankly, and they are quick to follow its lead for themselves, discovering more and more of what the artist put into his work. It is no disgrace that they did not know it all at first and by instinct. Most of us are ignorant enough in one direction or another; it is not the mark of a truly wise man to despise another's beginnings in a line where he himself may have been specially favored by fortune and circumstance.

Nor is this all. When the MS. of Miss Emery's unpretentious little volume was offered to me for publication, I at first supposed it would prove readable mainly by persons quite unused to looking at pictures:

or feeling for art is concerned. But we must think that a better book could be written for those who need it.—ED. NATION.]

TO TALK LIKE A BOOK.

TO THE EDITOR OF THE NATION:

SIR: Looking through a file of the *Nation* for 1898, I came upon the following statement (in a review of some recent Italian publications, in the issue of September 1, 1898):

"Signor Avancini, on the other hand, is a Milanese writer of both prose and verse whose earliest volume appeared in 1888, and who is therefore quite of the *fin-de-siècle* school. In fact, some of his expressions are startlingly modern, as for instance where a younger brother replies to the reproaches of an elder with a 'Tu parli come un libro stampato.'"

Permit me to say that the reviewer was needlessly startled by the phrase quoted. In the libretto of Mozart's "Don Juan," by Da Ponte, *Leporello* says of *Donna Elvira*: "Parla come un libro stampato." Da Ponte, of whom Mr. Krehbiel has recently written so entertainingly, was in his way a clever man, but not exactly what we now understand by *fin-de-siècle*.

As a matter of fact, "You talk like a book" is an old and common expression in more than one European language.

Yours truly,

J. R.

JANUARY 2, 1899.

Notes.

Thomas Y. Crowell & Co. have in press for early publication 'How Count Tolstoy Lives and Works,' by P. Sergeyenko, translated by Isabel F. Hapgood, and fully illustrated; 'Between Cæsar and Jesus,' by George D. Heron; 'Municipal Monopolies,' by M. N. Baker; John R. Commons, and others; and 'Contemporary French Novelists,' by René Doumic, translated by Mary D. Frost.

'Great Books as Life Teachers,' by the Rev. Newell Dwight Hillis, is in the press

Francis A. Walker, and 'A History of English Romanticism in the Eighteenth Century,' by Prof. Henry A. Beers of Yale.

A holiday book which arrived too late for notice before the holidays is Walter Crane's 'Floral Fantasy in an Old English Garden' (Harpers). It is in Mr. Crane's best vein of dainty fancy and delicate line and color, and when Mr. Crane is at his best he is very good indeed. The text is little more than a string of puns upon English floral names, and is not very successful in rhythm; but no one will care much about the text.

A holiday book of very different quality is 'Ten Drawings in Chinatown,' by Ernest Peixotto (San Francisco: A. M. Robertson). This is published in a limited edition with a good deal of pretension, the drawings being printed on Chinese (?) paper and mounted on loose boards, while the text (by Robert Howe Fletcher) is printed, Chinese fashion, on one side only of the paper, and each page is surrounded by a yellow line. The drawings themselves are not, however, above the average of magazine work in technical merit, and have no great interest of subject and no charm of any sort.

The story of the Sepoy Mutiny has been often told, but there is still room for the personal experience of any who were sufferers from its horrors. Col. Edward Vibert (late of the Fifteenth Bengal Cavalry) was a young lieutenant in the Fifty-fourth Native Infantry in the cantonments at Delhi when the mutineers, who had made their first outbreak at Meerut, marched over the bridge of boats across the Jumna and were fraternized with by the garrison of Delhi. Vibert was on duty in the Main Guard at the Cashmere gate, saw the troops hesitate a moment, then with crazy excitement join the mutineers and turn upon their officers. These and the civil officials, their wives, and children were nearly all massacred, but a handful of officers with a few women rallied at the Main Guard, dropped from an embrasure into the ditch, and made their way to the cantonments. But here also the mutiny had spread, and again little parties fled from their blazing quarters, shot down and sabred as they

Vibert was in a group of ten of both who managed to elude their pursuers, after some days of fearful experience, in an English garrison. The circumstantial account of all this is the basis of the book, and it is thrilling to the last degree. An appendix gives Col. Mackenzie's narrative of like personal experience of outbreak at Meerut, and a lady's of her escape to Kurnaul. The illustrations are photographs of palaces, mosques, residences, some with the visible effects of a cannonade. Charles Scribner's Sons, American publishers.

A volume of reprints from the *Journal of Education* is issued by Whittaker & Co., New York, under the title 'Essays, Mock-Essays, Character Sketches.' These pieces may be said to range "from grave to gay, from soothing to severe," and are altogether readable. Some of them are of solid value from an educational point of view, and few of them are without appreciable merit. They show that the *Journal of Education* is a publication calculated to stimulate teachers and broaden their culture.

An afterglow of 1898, or a foretaste of 1899, Mr. Lyman F. George has written an entitled 'Falling Prices and the Remedy' (Boston: George Book Publishing Co.). It tends that prosperity depends on ris-

ing prices, that rising prices are caused by inflating the currency, and concludes that the currency ought to be inflated. He contends that "the American dollar should be made of paper, and should be stamped thus: One Dollar, United States of America. This is all that a gold dollar has on it, and it is all that is necessary for a paper dollar." He informs us that the panic of 1893 was brought on by a conspiracy of twelve of the largest national banks in New York city, and that they invited all the financial institutions of the city to join them. Some other statements of equal veracity are added, and on these premises the author's argument for inflation rests.

The view of political economy which is based largely on the doctrine of "marginal" or "final" utility is presented in 'Economics,' by E. T. Devine (Macmillan). As a general account of social activity the book is not without interest, but we can hardly regard the presentation of the subject as the best "for the class-room of the college and high school."

In 'Home Economics' (The Century Co.), Miss Maria Parloa furnishes to housekeepers a veritable encyclopædia of their difficult and important art. This has now become so complex as to demand systematic study under intelligent guidance, which Miss Parloa provides. In discussing the subject of building in such a manual, however, she undertakes too much. That subject requires more detailed treatment than can be given within her limits, and general principles are of slight practical value. But in what relates to the care of the house and to the commissariat of the household, her precepts are excellent. Her ideals are, to be sure, unattainable by ordinary housekeepers, but they show them the end towards which they must struggle, and her recipes are invaluable for every-day use. The chapters on foods and on marketing and carving will be found useful by men as well as women.

The 'Concise Dictionary of Greek and Roman Antiquities,' edited by F. Warre Cornish, Vice-Provost of Eton College (Henry Holt & Co.), though derived from Sir W. Smith's larger dictionary, is no mere abridgment of that well-known work. Mr. Cornish has naturally recast, and in many cases rewritten, articles that modern research in classical archaeology had rendered in part obsolete. A great improvement in method is the grouping of articles under one head, e. g., Architecture, Coinage, etc. The addition of over 200 fresh illustrations increases the definiteness of the book. Students of Cicero and Demosthenes will be grateful for the appendices of Greek and Roman law-terms. In the article on the theatre, Mr. Cornish discusses, with a bare mention, Professor Dörpfeld's theory that the Greek stage was on the same level as the orchestra until Roman times. Though a dictionary of antiquities is not the field for archaeological controversy, we think it would have been instructive at this point, in so important a work, to give very briefly the literary evidence—or at least the titles of the plays—in support of Dr. Dörpfeld's view. Mr. Cornish's volume is likely to supersede Smith and Rich in general school and undergraduate use. The Greek, Latin, and English indices are excellent. The book has a pleasing and scholarly exterior, and, though it contains more than 800 pages, is not cumbersome.

We have received the third edition of

Mau's 'Führer durch Pompeji' (Leipzig: Engelmann), which, besides additions to the old text, contains plans of the forum, the theatre, and the streets of tombs, together with some account and a plan of the newly discovered Villa Boscoreale. The little book has long been known as the traveller's best guide through the ruins, but it is naturally too brief to be of much interest on this side of the water. All students of Roman life, however, must be looking forward with interest to the same author's new book on Pompeii, which is announced by the Macmillan Co.

In connection with the foregoing we may fitly mention an enterprise to which the libraries of this country alone might give all the support needed. We mean the publication of the copper-plate engravings of the Temple of Isis at Pompeii now in the archives of the Royal Academy of Archaeology, Letters and Arts at Naples. This body is the successor of the Herculaneum Academy, which in 1851 published a first and only Part of these ninety plates, political troubles preventing a completion. The century and a third which has elapsed since the temple was uncovered has wrought a considerable deterioration in it, and these admirable engravings are the best evidence extant of what it originally was. Their publication (entire) has been strongly recommended by Prof. Mau, and is to be superintended by A. Sogliano. Subscriptions may be sent to the Secretary of the above Royal Academy, Prof. Michele Kerbaker. The price of the large folio will be twenty dollars, and there must be thirty subscriptions to guarantee the undertaking.

It is now nearly twenty-five years since Halm edited Velleius Paterculus, and in the meantime little has been done to improve the text of that historian. The new edition by Prof. Robinson Ellis (Oxford: University Press; New York: Henry Frowde) is, therefore, a welcome contribution. It is a purely critical edition, with preface, apparatus, and commentary written in Latin. The text is based upon the Basle manuscript of Amerbach. This copy, made before the *editio princeps* appeared, was not, in Prof. Ellis's opinion, the *exemplum properanter ac infelicitate descriptum* made for Rhenanus by a careless friend. Nor was it either, as he thinks, a copy of that copy (as Fechter and Halm held); but it was written, he believes, by Amerbach for his own use, and transcribed directly from the now lost Codex Murbacensis. We cannot say that we are convinced on this point by Prof. Ellis's arguments, which, especially on page xiv, seem to us illogical; but neither is he altogether convinced himself, for two pages later he seems willing to grant that Amerbach may have worked from a copy. But we do think that Prof. Ellis has shown that the Amerbach, whatever its origin, represents the lost Murbacensis much more closely than does the *editio princeps*, added though that is by the collation of M. made by Burer. The very errors of the Amerbach are in its favor, for they are of just the sort that Rhenanus tells us he found in M., and which he smoothed away in his edition into what he thought Velleius must have said. We cannot enter into the details of Prof. Ellis's arguments: they are chiefly orthographical. The result of his work shows a great many differences between his readings of the text and those of Halm. We have noted about twenty in chapters 9-12 alone of the first book. It is

obvious that students of Velleius cannot afford to be without this new edition.

After many days we have once more an edition of Cæsar's Gallic War in which the great author is treated as a historian, and not as a medium for the study of the Latin language or the niceties of grammar. To Mr. St. George Stock we owe this boon, and to the munificence of the Oxford Clarendon Press (New York: Henry Frowde), which has presented it in a large and handsome octavo. Seven long introductory chapters precede the text, their titles being: The Commentaries, The Character of Cæsar, Wars with the Gauls; Gaul, Britain, Germany; and The Roman Army. The Latin text is that of Hoffman, which is now, it seems, the *textus receptus* at Oxford. Each of the books has prefixed to it a full summary, and the notes, at the foot of each page, are brief and helpful to one who is reading Cæsar to find out what he has to say. Several excellent indexes close the volume. Mr. Stock has here put students under a great obligation by his faithful presentation, between two covers, of the results of the best researches on Cæsar's campaigns, and on the condition, in antiquity, of the countries which he visited. The book certainly ought to be found in every good school library.

The cheaper magazine is to be tried here by the English promoter, C. Arthur Pearson, editing it in person. It will cost eight cents, against the sixpence asked for it in England.

At the opposite pole from such an enterprise is *Ercyna*, a projected periodical "devoted to the purpose of conveying to the Greek public a knowledge of Western progress and ideas," under the editorship of Platon E. Drakoules, author of 'Neohellenic Language and Literature,' favorably reviewed in these columns. The place of publication will be Oxford, and the annual subscription four shillings, or five drachma. It will for the present be published only in Greek, and will thus have an interest for scholars and instructors the world over. Yet one thousand subscribers are needful to justify beginning the issue. The editor's address is No. 148 Kingston Road, Oxford.

Petermann's *Mitteilungen*, number eleven, opens with a monograph upon the lakes of the Black Forest, with tables and sections showing area, temperature, and depth. There follows a description of the glaciers and vegetation of a little-known region in the northwestern Caucasus. Among the shorter articles is one upon the anomaly of the temperature of the surface water of the oceans, with a colored temperature and current chart.

The German Government has appointed Prof. Dr. Sachau, the well-known Syriac scholar and professor in the University, director of the Oriental Seminary in Berlin. Fully a decade ago, when the German colony scheme began to develop rapidly, the Seminary was opened as an experiment, the object being to make it primarily a practical and not a scientific (*wissenschaftlich*) institution, in which young men would acquire Oriental languages for use in their callings in the colonies as missionaries, merchants, travellers, representatives of the Government, and the like. A double course was established—one, in which the scientific principles of the languages, as also the literature, were taught by European specialists; and a practical department, entirely in charge of native teachers, in which the students learned to speak, read, and write these

languages. The average attendance at the Seminary has been continuously a hundred and more, and the authorities have determined to make it a permanent institution. Prof. Sachau has been in temporary charge from the beginning, and now has been made the permanent Rector. He does not sever his connection with the University, nor has the Seminary any special connection with the University. The Seminary is the only one of its kind in existence.

An architectural problem unprecedented in its magnitude and restrictions combined is approaching its solution at Munich. The vast new building of the National Museum is so far completed that the extensive historical collections are in part installed in their new quarters, and in part will be removed there in the near future. Its architect, Prof. Gabriel Seidl, had, in the words of Dr. Striediger (in the *Neueste Nachrichten*), to build the Museum *around* the existing collections. A large number of carved and panelled ceilings belonging to several centuries called for rooms of diverse sizes and heights; wall space, of proper dimensions, shape, and exposure to the light, had to be provided for valuable tapestries. The effective disposition of friezes, columns, capitals, doors, inlaid floors, of numerous complete apartments decorated and furnished in styles of various periods, and of many other collections and separate objects, presented extraordinary difficulties to artistic combination in the architectural designs and decorations. The successful overcoming of these is an event of great interest to architects.

The sixth annual Conference of Teachers of Chemistry of the Northwest was held at Ann Arbor, Mich., during the holidays; Prof. William McPherson of Ohio State University being temporary chairman, and Prof. A. B. Prescott of Michigan University (who, with Prof. W. W. Daniels of Wisconsin University, was responsible for the order of business), temporary secretary. The previous sessions have been held in Chicago. The Conference is unique in that it has no constitution, no dues, no permanent officers, no set papers, and in that it publishes no proceedings and sets forth no approved scheme of instruction. The entire time is spent in discussing questions left over from the preceding meeting or proposed by a committee appointed for that purpose. These questions have reference solely to instruction in chemistry in high school and college. At previous sessions the place, length, and character of the course in chemistry for the high school have received attention, especially the number and order of students' experiments; whether the work should be wholly qualitative or wholly quantitative or a mixture of the two; whether analysis, so called, should form any part of the course; and how to organize research work for high-school teachers in conjunction with the staff of the affiliated colleges. At the Ann Arbor meeting, questions pertaining to college chemistry were taken up—how to fit the instruction to high-school work; courses in physical chemistry, and courses in organic chemistry. The discussions have always been characterized by unusual freshness and vigor, and it is a pity that some permanent record of them has not been preserved and made public.

—A correspondent writes:

"Having had much experience of the difficulty of consulting the card catalogue of a large library, it has occurred to me that

it might be an advantage if the main-title cards should be colored, the cross-reference cards remaining white."

—In the *Century* for January the commander of the *Maine* brings his "personal narrative" to an end, without, however, throwing much light on the explosion; and Lieut. Hobson adds an instalment to his graphic but quiet story of the sinking of the *Merrimac*. An article on the "Advantages of the Nicaragua Canal" is contributed by another naval officer, Capt. A. S. Crowninshield, who makes the extraordinary statement that the present Nicaraguan concession "will expire" in October, 1899, "should Congress [that is, the Congress of the United States] fail to pass the bill" now pending before it. This was, of course, written before the granting of the new concession to the Cragin-Eyre syndicate, but it is strange that Capt. Crowninshield should share the politicians' delusion that the control of Nicaragua over her territory depends on the passage of any particular bill at Washington. If the matter is under our jurisdiction, we can make Nicaragua do what we please at any time. The granting of a new concession while the bill in Congress is still pending, is Nicaragua's reply to the allegation that by passing the bill we obtain the benefits of the old concession. A clever prize essay by Miss Florence Hotchkiss (a Vassar graduate) discusses Carlyle's "Dramatic Portrayal of Character," while John Patrick writes about "The Carlyles in Scotland." Much of what the former says is just; she perceives that Carlyle's character-painting belongs often to a somewhat sensational species of art. Is there not, after all, at bottom a literary connection between the French Revolution and the eternal spirit of melodrama? Do not the constant insistence upon the one carefully selected trait; the startling shifts of scene; the sweep of the whole to the climax, occasionally recall this "transpontine" stage? Why is Maillard always "shifty Maillard," why is Pétion always "virtuous Pétion," and Robespierre never anything but "sea-green" or "incorruptible"? Is it heresy to say that Carlyle's so-called characters of the 'French Revolution' are rather stagey portraits?

—The *Atlantic Monthly* has for its leading paper an article by President Eliot called "Destructive and Constructive Energies of Our Government Compared." He institutes a comparison between military and naval expenditure on the one hand and expenditure for the advancement of science, the development of technical skill, the saving of life, the improvement of industries, and the support of education on the other, without, however, suggesting that expenditures on military and naval preparation be diminished, much less stopped. He conservatively maintains that while we ought to have "the most perfect instruments and appliances of war" and "adequate bodies of men," we ought to make "much freer expenditures than our nation has ever made" in the other direction. The article intentionally avoids the questions, "How many perfect instruments and appliances of war do we need?" and "What are adequate bodies of men?" Yet it is these questions which must be answered before we know that any money will be left for "constructive energies." For it is the Imperialists, and not Mr. Eliot or his friends, who have got hold of the Treasury. Their first aim seems to be fostering destructive energies, and they are able to

determine that money shall be destructively used until they see fit to stop. Still, they will all agree enthusiastically with what he says, and will be ready enough to vote some money for his programme out of any money in the Treasury not otherwise appropriated—when the proper time comes. The article is full of curious and instructive facts, as, for instance, the table of expenditures for the improvement of Columbia River at the Cascade Gorge. The original estimate in 1877 was \$1,459,136; the amount expended has been \$5,007,742, and after twenty years' work the improvement is still unfinished, and of no use to anybody. Norman Hapgood contributes an article on "The Actor of To-day" which lovers of the stage will find worth reading. The demoralization of the theatre is summed up in the epigram, "The Phillistine who once condemned the play-houses, now chooses the plays," which may or may not be accurate, but is a fair hit at a generation of Phillistine theatre-goers more or less the descendants of a Phillistine generation of theatre-scorers. A remarkable "signed statement of a variety actor" is quoted as follows: "I think the day is not far distant when it will be a common occurrence to see 'Julius Caesar' or 'Hamlet' played by variety actors at continuous performances. I am busily engaged, at present, reconstructing Shakspeare's plays, as there are lots of lines in them that I do not like, and I think by careful pruning and rewriting I can improve on them so as to make them acceptable to a vaudeville audience." Speaking of "The School for Scandal," as brought out here, he says: "Sheridan, in giving an admirably balanced dramatic action, entirely overlooked the necessity of glorifying one actor. There was, therefore, nothing open to Mr. Daly but to supply Sheridan's oversight, which he did with astounding frankness." But adaptation is an art by itself.

—*Scribner's* contains the first instalment of Stevenson's letters, contributed by his authorized biographer, Sidney Colvin. Their interest is mainly biographical, as they were written by Stevenson to his parents in 1868 and 1869, when he was in training for an engineer. The accompanying illustrations help to make them attractive. Mr. Roosevelt begins his account of the "Rough Riders," but gets no further in this number than raising the regiment, of the composition of which he gives a minute account. "The British Army Manœuvres" is another illustrated article, contributed by Capt. W. Elliott Cairnes. For manœuvres on a large scale in a thickly settled country like England, a Manœuvre Act, to authorize the Government to move troops over a selected area, has been found necessary. By giving a few months' notice, territory can be "proclaimed," and, on proclamation, the Government acquires the right to move troops, close roads, forbid access to certain points, and to make all ordinary civilian traffic of the district subservient for the time to the military requirements of the situation. On the other hand, compensation for injury and disturbance is provided for. Without some such legislation, it would soon become necessary, in England at least, "to abandon all attempts to train an army for war." The difficulty of getting perfect training for war in time of peace has always been felt by experts, and perhaps we shall soon hear of the necessity of proclaiming parts of Greater New York for the purpose. There are large

areas of the remoter portions of the city said to be admirably adapted for it. The most ambitious literary performance in the current number of *Scribner's* is Mr. Robert Grant's first "Search-light Letter." It is addressed to the youth of both sexes in search of the ideal, and is occupied with initially jocular and finally serious reflections on life, democracy, and the ideal. For ourselves, we like Mr. Grant best when he is least serious; when he is solemn, we still like him, but find him hard to follow. He does not seem to perceive that his difficulty lies not in any opposition between democracy and the ideal, but in an inherent opposition between excellence and equality. A letter showing how to reconcile the longing for excellence with actual equality would do more to help forward Mr. Grant's philosophy than any statement of what it is.

—*Harper's* opens with the necessary illustrated naval article by Mr. S. A. Staunton, Flag Lieutenant to Admiral Sampson, who gives a straightforward account of last summer's operations in the West Indies. Journalists will be interested in what he tells of the *Squadron Bulletin*, the daily newspaper printed on a hand-press on board the *New York* during the campaign. Every evening, it seems, the chief of staff dictated to a stenographer the main facts relating to military and naval movements which had been reported during the day, and the next morning a copy of the *Bulletin* was in the hands of men and officers throughout the fleet. The tone of the *Bulletin* was satisfactory to all its readers, none of whom felt any inclination to "stop his paper." On the *Montpelier*, if we remember right, Capt. Reece served out a copy of the *Saturday Review* to every man; the idea of his creator being that there was something very ludicrous in the conception. Thus are the jokes of one generation turned into the realities of the next. There are a number of solid political articles, among which perhaps the most noticeable is Sidney Whitman's "The Sultan at Home." Mr. Whitman's view of the Turk and the Turkish Emperor is such that "Abdul the damned" will derive much satisfaction from the article. The picture drawn of the Turk is almost identical with that which used to be drawn by Englishmen fifty years ago. He is every inch a gentleman, rather humane and tolerant, and, if anything, too indulgent to Christians. It is impossible to understand why, if this view be correct, he is made to decamp from Crete. But an enthusiast like Mr. Whitman must be allowed to color his picture a little. He notes the strength of the German hold upon Turkey—German and Austrian goods pouring into the markets, a German and Austrian post open on Sunday, the Teutonia the great Constantinopolitan club, and so on. Prof. Albert Bushnell Hart writes an historical account of "Brother Jonathan's Colonies," and, by making the word "colony" cover everything he pleases, proves that we have always been a colonial power. It is curious to see a professor of history falling into the common error of identifying the little knot of politicians who forced on the war and the cession of the Philippines as "we," i. e., the American people. So far as is known, we have never been consulted at any stage of the game.

—In the *Revue des Deux Mondes* for December 1, "Th. Benton" chats to the extent of forty pages about her experiences in eastern Massachusetts in the early summer

of 1897. She was for some weeks the guest of Mrs. James T. Fields at Manchester, and appears to have been accompanied by her and Miss Jewett to such places as might be supposed to be interesting to a student of American literature. Concord and Salem have each several pages, the luxurious country-houses of the "North Shore" are described in an appreciative manner, and glimpses are given of a Harvard commencement, the inauguration of the Shaw monument, and the pure country near Miss Jewett's home on the western border of Maine. Our traveller wonders, naturally enough, what the Puritans of two centuries since would have thought of the modern denizens of Beverly. These, it seems, are so thoroughly Europeanized that, in spite of the carved wood-work from papistical conventicles, which, along with altar-cloths "ravished from convents," adorn their houses, they no sooner are settled therein than they begin preparations for returning to the Old World. Another reason why they are not contented in these parts is the inadequacy of the English language to express their ideas or emotions, and their dependence on French and Italian. Mme. Blanc's errors of fact and spelling are not more numerous than those of previous French writers, but a few of them are amusing enough to deserve mention. Thus, at Salem she is struck by the "gambrel and linfoo [lean-to] roofs," and the Harvard Glee Club is explained to be "le Club de la Jole." One would have pardoned many worse blunders in return for greater vivacity and originality of view.

—Preparations are being made to celebrate with unusual splendor the semi-millennium of Gutenberg's birth in his native city Mainz in the year 1900. The chief festivities will take place on Sunday, June 24, to be followed on Monday and Tuesday by functions of a less ambitious kind. The centre of the first day's ceremonies will be an academic convention in which some prominent specialist, yet to be selected, will deliver a formal address on Gutenberg and his invention. This will be followed by a banquet. The second day will be marked by an historical parade with special ceremonies before the Gutenberg monument, and the third day will be devoted to festivities of a more popular kind. To mark the significance of the day, the city of Mainz will publish a scientific work on Gutenberg, to which contributions from noted specialists of Germany and other lands are promised. A second and more popular work for general circulation on Gutenberg is also being prepared, which will contain a full description of the condition of education and culture in Mainz in his day. Last and not least, it has been decided to arrange for a typographical exhibition, which will illustrate in all its details the historical development of the art of printing from the days of Gutenberg to our own time, in which exhibit the publications between 1460 and 1470 will be represented in the greatest fulness. A Gutenberg endowment is also planned for the purchase of the incunabula of Mainz and of all the works pertaining to the history of the art of printing for the city library, and in connection therewith a Gutenberg Museum. The Grand Duke of Hesse has accepted the patronage of these festivities; and the selection of an advisory committee from among the noted scholars of Germany and abroad promises to give the Gutenberg semi-millennium international prominence.

HENRY DRUMMOND.

The Life of Henry Drummond. By George Adam Smith. With portrait. Doubleday & McClure Co. 1898.

The choice of Mr. Smith, the well-known expositor of Isaiah, as Drummond's biographer, is amply justified by his completed work. This is not of that kind which latterly has had the best repute—the self-effacing kind, which gives the story as much as possible in the words of the person whose biography is written, and as little as possible in the words of the biographer. Mr. Smith has used Drummond's letters but sparingly, and mostly in the form of extracts. It does not appear that Drummond had a talent for letter-writing equal to his average ability. His letters from Central Africa are given here more fully than others, but have more the interest of a remarkable experience than any purely personal. His notes of travel in the New Hebrides are mere jottings without continuity or any literary character. In reporting Drummond's addresses, Mr. Smith has sometimes given his own summaries, and in these we miss the characteristic note. What makes his biography admirable is his fairness in dealing with Drummond's intellectual product and in his loving appreciation of the man. So far as the former is concerned, there is not the least exaggeration, and full scope is given to the adverse criticisms that have been made on Drummond's "Natural Law" and "Ascent of Man." Mr. Smith's own criticism of the former is decidedly adverse. Something more of purely scientific confirmation of Drummond's "struggle for others" in his "Ascent of Man" would not have been difficult to find. As for Drummond the man, there is nothing fulsome in Mr. Smith's appreciation, but it is extremely cordial and well borne out by the facts which are in evidence. We lay down the book with the feeling that nothing that Drummond wrote is so morally inspiring as his character, and especially the simplicity with which he met more than once the temptations of a great and sudden fame.

Drummond was born in Stirling, Scotland, August 17, 1851. From his sixth or seventh till his thirteenth year he went to the Stirling High School, where he was more efficient on the playground than in the class. He was good at cricket and never lost his love of manly sports. We find the mature man rushing off from his revival meetings to see a game of football. He was rather more than less a boy as time went on, seeing that, as a boy, those of his own age did not like him so much as did the older boys and men. His love of boys was one of the most vivid characteristics of his maturity, and his attraction for them was immense. He was not himself a model boy in all respects—was generally late at meals; and the grown man was more interested in boys "without souls and without soap" than in the model kind, and watched the pranks of ragamuffins with an unflinching joy. To go a-fishing was the chief pleasure of his boyhood, and the one that persisted through his life without any compunction as to whether it was right for him.

"To mix his pleasure or his pride
With sorrow of the humblest thing that feels."

From the Stirling High School he went to an academy at Crief, leaving there in 1866 with prizes for Latin and English and for an essay on "War and Peace," and matriculat-

'ng at Edinburgh University, being at the age of fifteen, very small and with a fear of keeping so. He had a passion for chaffering and bargaining, and the Edinburgh auction rooms were the main haunt and region of such recreations. Disliking the classics, he took an erratic course in "Arts." It was Prof. Tait's course in natural philosophy that first woke him up to something more than a perfunctory performance of his duties. Yet in a class of a hundred and fifty he gained only the fourteenth place, and he left the University without a degree, a successful friend addressing him as "two thirds M.A." During his divinity career he came back to the University for botany, chemistry, and geology, and in the last won a class medal—a fact which signified much for his future in more ways than one. During his University course, and for some time after, his interest in mesmerism betrayed a certain openness of mind and his inability to confine himself to beaten tracks.

To enter the Divinity Hall of the Free Church of Scotland he must first be examined by the Presbytery of Stirling, and he got through all right, with his companions, by first hiding the Presbytery's Hebrew Bible in the coal-scuttle and so avoiding an examination in Hebrew. Strangely enough, the Divinity Hall had its chair of natural science, and upon this Drummond attended so cordially that he carried off the first prize. He wrote essays on Creation and Evolution which were significant as showing the preoccupation of his mind with these problems. He got no further than the puerility that evolution is a process to which God assigns its place and directs its operation; but it was something to hail Darwin as "also among the prophets" of Christianity. At this time his scientific studies did not affect his view of the Bible in the least degree. "He stood," says his biographer, "on the ground of the older orthodoxy, with its doctrine of literal inspiration and its blind belief in the absolutely divine character of everything in the Hebrew Scriptures." Nothing could better indicate the length of the road he travelled to reach the 'Ascent of Man' than the fact that he was, as a student, warm in his defence of Henry Rogers's 'Eclipse of Faith,' which opposed revelation to nature and reason as violently as possible. A term in Tübingen was an incident of his theological course; and this, probably, had some effect upon him.

Returning to Scotland, he resolved to postpone his fourth session at New College in order to devote himself to natural science and to regular mission work. Retaining, however, his position as President of the Theological Society, he read before it an essay on "Spiritual Diagnosis." The idea was, that personal contact with individuals is the most important element in religious instruction and persuasion. There was in this essay much forecasting of the methods that subsequently made his own mission work successful to a remarkable degree, and almost immediately the opportunity was afforded him to make a practical trial of his principles. Moody and Sankey came to Scotland and he went and joined himself with them. From Scotland he followed them to Ireland, where they were warned that "all these revivals end worse than they were before they began," and from Ireland to England, where there were tremendous meetings in Manchester, Birmingham, Liverpool, and London. Moody valued him highly and

put him in positions of great responsibility. He developed a remarkable faculty for addressing monster meetings, but it was in the class-room meetings with young men that he made full proof of his ministry. The confessional has never had a more pronounced believer in its efficacy than was he, nor one whose belief was better justified than his by sympathy and tact. Receiving thousands of confessions, he kept their secrets as inviolable as the Roman priest. He could adapt himself to the most various needs. The richest and the poorest found him equally at home, and college men not less, the class that tested most severely his ability to cope with it. His biographer devotes an elaborate chapter to "The Great Mission" of Moody and to Drummond's part in it. He deals frankly with its limitations, but is favorable to it upon the whole. For Drummond it was the greatest danger of his life. He was only twenty-three, and the wonder is that he was not spoiled by his success. On the contrary, he was not hurt at all. His simplicity was as perfect at the end of his thirteen months' campaign as at the beginning, and he went back to New College and took up again the work of a student as naturally as if he had been off on a vacation of the usual kind.

The range of Drummond's thought was never wide. His addresses at this time were afterward developed into some of his most famous publications, such as 'The Greatest Thing in the World.' He made them effective by repeating them and making them better with each repetition. After his return to college, Moody wrote him from America, begging him to come over and help him: "I think you would get a few thousand souls upon these shores if you should come." A sprained ankle and the advice of a sensible woman came timely to his aid. The advice was that an evangelist's career was generally a failure: "Perhaps a few years of enthusiasm and blessing, then carelessness, no study, no spiritual fruits; too often a sad collapse." But what to do with himself?—that was the question, and it was not an easy one to answer. Evidently the ministry, in its average form, had for him slight attraction, but for a few months he associated himself with an elderly minister. An involuntary vacation followed, after which he found that he had "really forgotten all the more important words of his ecclesiastical and theological vocabulary." In 1877 he was appointed for one year to the chair of natural science in New College, Glasgow (his theological school), and held it for nineteen. With his lectureship he soon associated the management of a mission-church in a Glasgow precinct, and gave to this for several years as much care as if it were his only charge.

In 1879 he made a geological expedition to the Rocky Mountains with Prof. Geikie. He had five days in Boston before setting sail for home, and he was invited to dine with Longfellow and Holmes, but he cut away to meet Moody and Sankey at Cleveland—a sad mistake, thinks his biographer. He found Moody "free from superstition," but, on his return to Scotland, took sides with Robertson Smith against his prosecutors, and gradually assimilated the new criticism of the Bible in its length and breadth, proposing to write a tract in which Moses should confront a certain bishop in the Elysian fields with the question, "How dared you say that I did write the Pentateuch?" Yet when Moody re-

turned to Great Britain, Drummond found that his admiration for him had increased a hundred fold, and just before his own death he said: "Moody was the biggest human I ever met."

Meantime, several chapters of 'Natural Law in the Spiritual World' had taken form in his Glasgow mission, and he sent them to one London house after another only to have them "returned with thanks"—an interesting beginning for a book of which 123,000 copies have now been sold in Great Britain, and many more than that number in the United States. Finally he got a publisher, or rather was sought out by one who had seen some of the lectures in the *Clerical World*. By the time it reached the bookseller, the author was steaming down the Red Sea, and it was in the heart of Africa that he woke up about midnight, November 22, 1883, to find himself famous in the *Spectator* and in various letters reporting the astounding success of his book. Mr. Smith subjects it to a criticism that is at once kindly and severe. It was, in fact, something very different from what Drummond himself imagined it to be—a working out inductively of certain laws common to the natural and spiritual world. Instead of being this, it was a piece of brilliant apologetics, endeavoring to bring certain scientific principles to the rescue and defence of the traditional Christian dogmas, some dubious analogies being mistaken for the existence of a single law upon the natural and spiritual plane, while the most striking feature of the book was its comparison of the unconverted soul to dead matter, with an inability, like that, to have any life without a supernatural descent upon it. But the book had qualities that went far to make up for its defects, and its popular success was very great. It left Drummond as simple and unspoiled as his success with Moody and Sankey. It brought him letters of all kinds, ranging from valuable criticism to offers of marriage from America and Australia. All the cranks and faddists hailed him as "one of themselves." This experience was renewed by the 'Ascent of Man,' one correspondent assuring him as "Heaven's Vicegerent" that "the Coming Woman was a Man," while another, a widow, thinks her one boy "promises well, and could be secured for the Kingdom if you would send him an autograph copy of your sweet hymn, 'Are they safe with Him?'"

Africa, which at first seemed to Drummond "one continual picnic," ultimately gave him some deeper apprehension of life's tragic elements, and sowed in his constitution the first seeds of the disease which brought his life to an untimely end, after two years of increasing helplessness and agonizing pain, March 7, 1897. Besides matrimonial opportunities, and the praise of orthodox theologians, hugging the Danaan who brought them such unexpected gifts of scientific confirmation, the book induced the offer of a place on the staff of the Earl of Aberdeen, then Viceroy of Ireland, and later, from Mr. Gladstone, an urgent request for Drummond to stand for a parliamentary election in Lanarkshire. There were other singular requests, but they were all modestly but firmly waived aside.

During the next few years, and for the remainder of his life, Drummond was much engrossed by "the student movement," which extended from Scotland to America and Australia. In Oxford it had the least suc-

cess, though he had good talk with Jowett, "also occasional silences." Liddell he found "very appalling," though "he thawed a little after twenty minutes over tea." He was told that it would be impossible for him to do anything at Harvard, the college being "under Unitarian auspices"; but "the work was really better than anywhere." An incident of his Australian journey was a visit to the New Hebrides, and some attention to the importation of the Kanakas into Queensland. He found the Kanakas themselves much better masters than Australian Englishmen, an omen which our expansionists should attend to, but they will not.

The 'Ascent of Man' was written for a course of Lowell lectures in Boston, but its publication was hurried by the doings of a Philadelphia publisher, who put upon the market a book made up from newspaper reports of the lectures. Drummond "had the law on him," and got his costs, leaving the publisher with his plates and an edition of 10,000 copies on his hands. The book did not please the orthodox party so well as the 'Natural Law,' and it met with much scientific opposition, but, at the same time, it made a host of friends. It certainly did something to correct the exaggeration of natural selection as a selfish and brutal struggle for existence, though it was less original in this respect than Drummond seemed to think, and it is true that he confounded the struggle of species, of which "the struggle for others" is a part, with that of individuals.

When all is said, Drummond was, first, last, and always, an evangelical Christian, much in love with Science and unable to be happy in his religious faith without her approval and consent. His work was essentially that of an apologist, endeavoring to give an appearance of scientific rationality to the doctrines of Christianity as by him apprehended. To go to him for an unbiassed search for scientific truth would be a great mistake. With more advanced methods, he was engaged in the same business as that of Hugh Miller—the reconciliation of revelation and science; but he did not feel himself, after his manhood had grown ripe, to be under Miller's necessity for reconciling science with Genesis. We should utterly fail to understand his life if we did not recognize that the Christianity he wished to maintain, as natural and scientific, was the Christianity which he had found efficient for the saving of men's characters from various diseases and defects. His "enthusiasm for humanity," not as an abstract whole but in its individual concreteness, was the consuming passion of his life, and it was marked by a naturalness and simplicity and reality that make us love the man, whatever estimate we may put upon his intellectual methods and results.

TOYNBEE'S DANTE DICTIONARY.

A Dictionary of Proper Names and Notable Matters in the Works of Dante. By Paget Toynbee, M.A. Oxford: Clarendon Press; New York: Henry Frowde. 1898. Pp. x, 616.

This attractive volume, with its beautiful typography and its double-columned pages of generous size, makes a most favorable impression. Mr. Toynbee was already known as a Dante scholar by published work of interest and value, and we were accordingly prepared to expect a useful work of reference

in this Dictionary. It contains the names of persons and places mentioned in all of Dante's works—not merely in the 'Divina Commedia'—as published in the convenient Oxford edition prepared by Dr. E. Moore. It has also a considerable number of articles on "notable matters," "such as the denominations of the several classes of sinners, etc., and of the various heavens, . . . certain personifications and titles, . . . the titles of books quoted by Dante, and so on." These appear, from the alphabetical list in table xxxv. at the end of the volume, to be somewhat over four hundred in number, after a large allowance for insertion of long titles in two or more places. Probably no one will object to the inclusion of such articles; they have a good claim to be classed with the proper names, strictly so called, which Dante has actually mentioned. After a few *addenda et corrigenda* come many useful tables, including genealogical tables of royal and noble families, a chronological table for the strife between Guelfs and Ghibellines, indices and tables intended to facilitate reference to other editions of Dante than that of Dr. Moore, and finally a few plates.

The literature of comment on Dante is so extensive that it is a comparatively easy task to get together a large amount of information and reference for the proper names, and there is not much danger of serious errors as to most matters of fact if one is reasonably careful. Of course, difficulties arise when one wishes to feel certain that all the valuable investigations and studies in small problems and matters of detail have been properly utilized, and no one can hope to avoid an occasional sin of omission. But perhaps the hardest problem is how much to put in and how much to leave out. In this matter we think Mr. Toynbee's judgment has generally been good, though some of his articles we could wish shorter and others longer. Perhaps the ideal way would be to include, either directly or through references, all that can be in any manner helpful in understanding what Dante says, and in case of varying opinions to state at least one view fully and refer to the most authoritative possible statements of other views, and not to lose sight of any possible sources of Dante's knowledge or of any literary or other influences that may have affected him. It is better to err on the side of fulness than to omit something which a modern reader might fairly wish to find.

We should like to see, under *Maometto*, some reference at least to the Mahomet legend as illustrated in Latin and Old French, and, under *Beatrice*, something more than is given in the way of reference (the reference to *Romania* xxiii., 265, guides only indirectly to Scartazzini), and further, under *Esopo*, one would like to see mention of such an article as that of Mall on the mediæval fable literature and the 'Esopo' of Marie de France in the *Zeitschrift für romanische Philologie*, vol. ix. With reference to the last sentences in the article *Esopo* it may be said that while Warnke's edition of Marie's fables was doubtless not published in time to be used in this connection, yet Mall had already indicated an Italian translation from the French of Marie. If Mr. Toynbee's understanding of Dante's reference to the fable of the mouse and the frog were correct, it could be made to appear very likely that this Italian version was his source. But is it true that the tormented sinner in the "Inferno" corresponds to the

mouse in the fable? If to the mouse and the frog correspond the two devils that quarrel and are both soused in the pitch, then there is no longer any special reason for thinking of Marie's version.

It might be wished also that the forms of proper names had been considered oftener from the etymological point of view—that, for example, the two forms *Maometto* and *Macometto*—if Dante really used both—had been spoken of, and that the first syllable of *Olapetta* (Capet) had been explained, as it might easily have been. If the author carries out his plan of treating the whole vocabulary of Dante's Italian works, the etymological side cannot be neglected, yet on this side his competence is somewhat doubtful; the origin *hoc-ille* given for the French word for "yes" under *Lingua Oïl* is not quite reassuring. Mr. Toynbee is perhaps aware of the plan of the Dante Society in this country to prepare a new edition of Blanc's 'Vocabolario Dantesco'; would it be possible for him and the American editor to combine their efforts? Such a vocabulary ought, as he plans, to cover all the works of Dante written in Italian.

A work with which one can hardly avoid comparing this is Dr. Scartazzini's 'Enciclopedia Dantesca'; but as that work is still incomplete, it is well not to go into details. Suffice it to say that a comparison of several articles in the two works does not seriously affect our generally favorable opinion of the English book, and makes even more evident the general good judgment of its author. In some articles we find one book preferable, in others the other, or we find that each supplements the other.

A few remarks on details noticed here and there may be added. P. 2, the foot-note is for a passage in the second column; as one sometimes needs in reading to find the place whence the reference is made, it is better to put the foot-note under the proper column instead of in the middle of the page. P. 17 is wrongly numbered 16. P. 44, since Dante's quotation is not in Latin, and Archemoro is not a familiar name, it would be well to mark the accent as on the *c*. P. 48, Aristotle: the reference to Par. xxvi., 38, might also be given under Dionisio² and Platone. The English form Aristotle is not included in the Index of English or Anglicized names which differ from the Italian or Latin, and the same is true of Pliny; that index is doubtless not intended to be complete except for names which in English are markedly different from the forms in the main part of the Dictionary. P. 51, if Renier's "critical text" of Dante's Provençal lines in the "Purgatorio" is given at all, attention should be called to the fact that the correctness of this text is still very doubtful at the best, and a reference to the remarks in *Romania* xxvi., 601, would be in order. In the fifth verse is printed *vi*, and in the following verse *vi*. P. 54, why is the "letter addressed by the Signoria of Florence to their allies" given in English? There seems to be some inconsistency as to this matter of translation; on page 50 is given a Provençal passage without translation, and on page 55 are quoted two others, the second of which is translated, while the first is not (though the substance of it is given just before the quotation). P. 156, the Old French line quoted refers, not to the father of Hugh Capet, but to the father of Hugh Capet's mother. P. 199, Dio: in the first paragraph

a reference to *Deus* would be appropriate. *Deus* and *Deo* already have a reference to *Deo*. But in general the matter of cross-references has received very careful attention. P. 386, Minotaurus: here we find a reference to *Pasife*, but the accent is doubtless a mistake, as a note under *Pasife* calls attention to the accent on the *i* as shown by the rhyme. P. 443, the reference should be added for the passage in Benvenuto Cellini. In the same column, some lines above, if for the form *Pluto* (as representing Latin *Pluto*) reference is made to *Juno*, *Scipio*, *Scorpio* (there is a Latin *Scorpius* as well as *Scorpio*), *Plato*, we might ask to have it noted that Dante never uses a form *Plutone*, while besides these forms in -o he says also *Junone* and *Giuno*, *Scipione*, *scorpione* (not as a proper name), *Platone*, and the ending -one is the one to be expected for a Latin name like *Pluto*. Besides the words mentioned here, *Zeno* occurs as well as *Zenone*. P. 488, the "*Livre des Créatures*," as published by Thomas Wright in his 'Popular Treatises on Science' with the halting verses here quoted, is not the proper place from which to take (without indication of page or line) the verses of Philippe de Thaulin; they should be quoted from Mall's edition of '*Li Cumpos Philippe de Thaulin*,' beginning with verse 1387. P. 545, in the second column, line 5, read *Heures*, and in the article immediately following it is hardly made clear enough that Jean de Meun's version of the '*De Re Militari*' is not in the same volume as Jean Priorat's verse rendering. The title of Jean de Meun's translation is '*L'Art de Chevalerie*.' Pp. 605-607 (the list of articles dealing with "notable matters," table xxxv.), contain a few unimportant slips. For instance, the '*Liber Alfragani de Aggregatione Scientiarum Stellarum*' is entered under the letter L in this form, and under the letter A in Italian form (very properly) as '*Aggregatione delle Stelle, Libro dell'*', but not under its author's name, nor is the other title, "*Elementa Astronomica*," of his work mentioned in this list. But the heading under which, in the body of the book, we find the desired information is *Alfergano* (there are references from the forms of the title given in this table), and a similar state of things exists for the '*Liber Ugutonis de Derivationibus Verborum*.'

It is in no captious spirit that we have indicated a certain number of flaws in this meritorious work; it is with the feeling that in a dictionary the errors in small matters need to be corrected more carefully than in most other books, and with the hope that in a later edition a close approach to the standard of perfection may be reached.

AS OTHERS SEE US.

The Land of Contrasts: A Briton's View of his American Kin. By James Fullarton Muirhead, author of Baedeker's Handbooks to Great Britain and the United States. Boston: Lamson Wolfe & Co. 1898. Pp. viii.-282.

"It may be that a long list of inconsistencies might be made out for any country, just as for any individual; but, so far as my knowledge goes, the United States stands out as preëminently the land of contrasts—the land of stark, staring, and stimulating inconsistency"—Mr. Muirhead says in explanation of his book's title: "a land which may be bounded by the aurora borealis, but which has also an undeniable acquaintance with the flames of the bottomless pit." "It seems to me that I have met in America the nearest

approaches to my ideal of a Bayard *sans peur et sans reproche*, and it is in this same America that I have met the most flagrant examples of the being wittily described as *sans père et sans proche*."

America is the paradise of women—there is no recorded instance even "of justifiable homicide of an American girl in her theatre hat"; but few things provided for a class well able to pay for comfort are more uncomfortable and indecent than the arrangements for ladies on board the sleeping-cars. "Their berths are not segregated at one end of the car, but are scattered above and below those of the male passengers; it is considered *tolerable* that they should lie with the legs of a strange, disrobing man dangling within a foot of their noses." America is the land of comfort and of the worship and power of the dollar; it is the land also of caravansaries which provide "all the discomforts which money can procure," and in which the millionaire stands meekly at the door of the dining-room till the head-waiter shall take notice of him.

"It was an American who said, 'Give us the luxuries and we will do without the necessities,' and there is more truth in this epigram as characteristic of the American point of view than its author intended or would, perhaps, allow. In private life this is seen in the preference shown for diamond earrings and Paris toilettes over neat and effective household service. The contrast between the slatternly, unkempt maid-servant who opens the door to you, and the general luxury of the house, is of the most startling, not to say appalling, description. It is not a sufficient answer to say that good servants are not so easily obtained in the United States as in England. This is true; but a slight rearrangement of expenditure would secure much better service than is now seen."

And of course the climate is remarked upon: the climate, "in which, as the Grumbler says in *Town Topics*, winter and fall, spring, summer, and all, combine to make American weather."

It must not be supposed, however, that Mr. Muirhead's pages are one repeated antithesis, or that the dominant note of the book is the critical. "Perhaps more than in any other country that I know of will what the traveller finds there [in the United States] depend on what he brings with him," the author says; and for himself he seems to have brought with him a determination to find a good word for almost everything that he discovers there. At times, even, he reveals a consciousness that the people of the United States have not commonly been supposed to possess the robust passion for amendment which relishes fault-finding. 'The Land of Contrasts' is a "record of personal impressions," but the author feels at every step that to set down such a record without offence is a task demanding infinite alertness and tact; and when the impression is disagreeable, he hastens to place beside it an English parallel or an offset. Men, he says, "of a standing and character who would not have done it in England, told me instances of their sharp practices in business with an evident expectation of my admiration for their shrewdness, and with no apparent sense of the slightest moral delinquency"; but he hastens to add: "The reproach comes with a bad grace from the natives of a country which has in its annals the outbreak of the South Sea Bubble, the railway mania of the Hudson era, and the revelations of Mr. Hooley." "The American girl allows her admirers to spend money on her much more freely than the Eng-

lish girl," and "American wives leave their husbands toiling in the sweltering city while they themselves fleet the time in Europe"; but *en revanche*: "The woman of New York and other American cities is often conspicuously superior to her husband in looks, manners, and general intelligence. This has been denied by champions of the American man, but the observation of the writer, whatever it may be worth, would deny the denial." "The small American seems to consider himself the father of the man in a way never contemplated by the poet"; and, "It is a constant source of wonder to the thoughtfully inclined how the American man is evolved from the American boy." But, confessedly, the American man falls from that lofty beginning, and "no one need desire a pleasanter companion." "For myself, I unfeignedly admire the delicacy which leads to a certain parsimony in the use of words like 'perspiration,' 'cleaning one's self,' and so on"; but "there are certain little personal habits, such as the public use of the toothpick, and what Mr. Morley Roberts calls the modern form of *κότταβος*, which I think often find themselves in better company in America than in England."

In the course, however, of all this diplomatic bowing and scraping, a number of things get themselves said of greater significance for two peoples who find it every day of more and more importance to understand each other. "Our brutal frankness, our brusqueness, and our extreme fondness for calling a spade a spade are often extremely disagreeable to our American cousins"; but

"A native of the British Isles is sometimes apt to be a little nettled when he finds a native of the United States regarding him as a 'foreigner' and talking of him accordingly. An Englishman never means the natives of the United States when he speaks of foreigners," and is "apt, in all good faith and unconsciousness, to criticise American ways to the American with much more freedom than he would criticise French ways to the Frenchman. It is as if he should say, 'You and I are brothers, or at least cousins; we are a much better sort than all those foreign Johnnies; and so there's no harm in my pointing out to you that you're wrong here and ought to change there.' . . . And who is to teach us that Brother Jonathan is able now to give us at least as many hints as we can give him, and that we must realize that the same sauce must be served with both birds?"

Or again:

"The English have reduced to a fine art the practice of a stony passivity, which on its highest plane is not devoid of a certain impressiveness. On ordinary occasions it is apt to excite either the ire or the amusement of the representatives of a more animated race." But "the Englishman seems to have learned, through countless generations, that he can express himself better and more surely in deeds than in words, and has come to distrust in others a fatal fluency of expressiveness which he feels would be exaggerated and even false in himself. . . . It requires an intimate knowledge of both countries to understand that when an Englishman congratulates you on a success by exclaiming, 'Halloo, old chap, I didn't know you had it in you,' he means just as much as your American friend, whose phrase is: 'Bravo, Billy, I always knew you could do something fine.'"

Of the total impression that he has carried away, Mr. Muirhead has a number of pleasant things to set down. Everywhere he found an unusual recognition of the claims of the defenceless, an unusual sense of justice, defined as *le droit du plus faible*. "Those who believe in man's sympathy for man must have faith that some day relative human justice will be done, which will be as far be-

yond the justice of to-day as light is from dark. And it would be hard to say where we are to look for this consummation if not in the United States." Everywhere (except in our "servility" before "such mighty potentates as railway conductors, hotel clerks, and policemen") he found in an unexpected measure the high spirit and self-respect which at its best is one of the prime elements of happiness, and one of the best fruits of the doctrine of equality: "Those may scoff who will at the idea of anything so intangible being allowed to count seriously in the estimation of a nation's or an individual's happiness, but the man of any imagination can surely conceive the stimulus of the constantly abiding sense of a fine national ideal." Everywhere our tourist found "an almost childlike confidence in human ability, and a fearlessness of both the present and the future; a wider realization of human brotherhood than has yet existed; a greater theoretical willingness to judge by the individual than by the class"; and even, in spite of the expression of public sentiment within the past few months, an attitude towards militarism which is superior to that which is common among Englishmen:

"One of the keenest dreads of the best American citizens during a recent wave of jingoism was that of 'the reflex influence of militarism upon the national character, the transformation of a peace-loving people into a nation of swaggerers ever ready to take offence, prone to create difficulties, eager to shed blood, and taking all sorts of occasions to bring the Christian religion to shame under pretence of vindicating the rights of humanity in some other country.' . . . Sympathizers with this view seem much more numerous in the United States than in England."

With Ski and Sledge over Arctic Glaciers. By Sir Martin Conway. New York: M. F. Mansfield & Co. 1898. 8vo, x, 240 pp. Maps and illustrations.

During 1897 Sir Martin Conway, accompanied by Mr. E. J. Garwood, continued the exploration of the interior of Spitzbergen, the first season of which was described, in his former book, "The First Crossing of Spitzbergen." In the present instance the party was completed by the addition of two Norwegians, one of whom proved most serviceable and efficient.

The work of 1896 was chiefly in the middle portion of the principal island near Advent and Sassen Bays, and resulted in determining the existence of an immense number of separate though adjacent glaciers, but no trace of the general "continental" ice-sheet which had been hastily assumed to cover the interior of the land. In 1897 the search for the supposed "inland ice" was continued in the more northern portion of Spitzbergen, which was also proved to bear merely glacial and mountain areas. The only large part of the archipelago which was found to carry an undifferentiated ice-sheet includes New Friesland and North-East Land. The discovery of this fact is the principal geographical result of the campaign of 1897. That it is an important fact is rightly claimed by the explorer, for the following reasons:

"The old theory, that glaciers not only polish but systematically excavate their beds, is practically abandoned. Its supporters naturally considered that the larger the mass of ice the more vigorous would be its excavating action. A great arctic ice sheet was regarded as an extraordinarily powerful excavator. We now know that moving land ice does not so operate upon its bed, but, be-

yond polishing the surface of the rock it covers, has mainly a conservative effect upon it. In the case of a country like the interior of Greenland, wholly buried under ice, the buried land surface undergoes modelling to a very slight degree except around the coast. On the other hand, in the case of a glacial region where mountains rise above the mean level and where rock faces are exposed to the rapid denudation that takes place at all snowy elevations, great developments of surface-formation are going forward. In the case of an ice sheet, the forces acting on a land surface are conservative; in the case of a glacial region, the acting forces are formative. Hence the immense importance of distinguishing between these two types of ice-bearing country.

When the great Asiatic plateau was elevated, the drainage ran off along the hollows in the line of the crinkling of the surface coinciding with the strike of the strata. Now, however, by the operation of rivers eating their way back into the plateau at right angles to the strike of the strata, all the great rivers flow at right angles to their original direction. The Indus was originally a stream no bigger than the Swat River, flowing down the edge of the elevated region. It ate its way through the Nanga Parbat range into the depression which goes on to Gilgit, and thus it stole all the waters of the upper Indus of to-day, which in the remote past, I believe, discharged themselves (over a high region since excavated into mountain ranges) into the Kunar River and before that into the Oxus. . . . It is noticeable that, in each case, the river has broken its way through a range in the immediate proximity of its highest peak—that is to say, just where the fall and gathering of snow has been greatest and the denudation most energetic.

"In the case of rivers the eating back process is well recognized and understood. It is not really the work of the river, but it is accomplished by the various forces of atmospheric denudation, by frost and thaw, by avalanches, and so forth, all taking place about the head waters of the stream. I suggest that, under the action of similar forces, glaciers likewise creep back, and that the modelling of snow-mountains out of high plateaus is largely due to this process. According to this theory, though glaciers do not excavate their beds to any great extent, they widen them by carrying away the results of atmospheric and other denudation, and similarly they eat back at their heads.

"The most striking examples I have seen of this are in Garwood Land. There, far in the interior, are a series of cliffs several hundred feet in height. What the origin of these cliffs may have been is immaterial. . . . They form the front of the remains of the old plateau, which has been and is being eaten away. . . . By the melting of the snows above the cliffs and on their ledges, and by the action of frost and thaw, the rocks are being rapidly broken up. The debris falls upon the glaciers below and is carried away. If there were no glaciers in this position, the debris would pile up, a slope would be formed, and would presently reach up to the top of the cliff and protect it from further denudation. The presence of the glaciers below prevents the debris from collecting. The cliff thus continues its existence, and merely moves backward by a steady progress, just as the cliff retreats over which Niagara falls. Where weaker rocks are encountered, or denudation is locally more energetic, the cliff eats backward more rapidly. An embayment is formed which tends both to widen and creep backwards, becoming in time a tributary valley. . . . When two neighboring embayments, reaching back from the lower level into a plateau, send arms to join one another, or meet obliquely, a nunatak is formed" (pp. 209-213).

Sir Martin concludes that the forces of denudation have been longer or more vigorously at work in the western portions of the island, as the development of the topography becomes less and less complete as one proceeds eastward, until parts of the undenuded plateau itself are encountered. The whole north coast bears evidence of a more rigorous climate than districts further south.

The book is attractively and not too profusely illustrated from photographs by Mr. Garwood, and includes an excellent map and sufficient index. There is not too much dwelling upon similar experiences to bore the reader not an arctic enthusiast. The volume is of comfortable size and weight, and in all respects shows a praiseworthy advance on the unwieldy book which preceded it. The author insists on the form of spelling Spitzbergen which has been adopted by the Royal Geographical Society as the only correct one, and it is to be hoped that it may find favor with geographers.

HOUGHTON, MIFFLIN & CO.

The Spectator.

The Proprietors who in 1861 purchased the *Spectator* have since that date conducted it themselves. They are therefore exempted from many influences which press severely on the independence of journalism, and have from the first made it their chief object to say out what they believe to be truth in theology, politics, and social questions, irrespective not only of opposition from without, but of the opinion of their own supporters. Their object is to reflect the opinion of cultivated Liberals, but in the matter of the American War they fought against the mass of the very class they are trying to represent, and were finally acknowledged by them to have been in the right.

The news of the current week is compressed into an animated narrative, which the laziest or busiest may read, without missing the life or import of the events.

The *Spectator* contains a list of all Books published during the week (not under one shilling in price), with the names of the publishers and the prices attached, a feature which will greatly increase its value to booksellers, librarians, literary institutions, and private gentlemen.

The *SPECTATOR* is on sale regularly at Messrs. Darnell & Upham's, 288 Washington St., Boston, Mass.; The International News Co., 88 and 85 Duane St., New York; Messrs. Brewster's, Union Square, New York; The Subscription News Co., 47 Dey St., New York, and 77 Clark St., Chicago, and The Harold A. Wilson Co., Ltd., 25 King St., West Toronto, Canada, where single copies can be obtained, and subscriptions are received.

SUBSCRIPTION, PAYABLE IN ADVANCE, \$7.00 A YEAR.

SPECTATOR, LTD., 1 Wellington Street, Strand, London, England.

NEW PUBLICATIONS IN GERMAN.

Der Praktische Deutsche.

By U. Jos. BILLY. Der Praktische Deutsche is arranged after the plan of Paul Bercy's *Le Français Pratique*, but it is by no means a translation of that book. The original plan has been preserved, but the exercises reconstructed and fitted to the particular needs of the student of German. The aim has been to provide the material necessary to enable the learner to converse with Germans in their own language, and to arrange it in such an order that the study will be pleasurable as well as profitable. Roman type is used throughout excepting in a few lessons, and a vocabulary is at the end of the volume.

12mo, cloth. Second Edition, entirely revised. 251 pages. Price, \$1.00.

Complete catalogue on application. For sale by all book-sellers, or postpaid on receipt of price by the publisher.

The Nation.

NEW YORK, THURSDAY, JANUARY 19, 1899.

The Week.

Mr. Dingley's death removes from the House a type of man too rarely found in its membership. He owed his place and influence there to no brilliant qualities of oratory or leadership, but to the solid and somewhat plodding characteristics of a business man devoting his time to public affairs. An absolute freedom from all demagogue's tricks, and a personal integrity which was never questioned, gave him the unfailing respect of his constituents and colleagues. Such a quiet and steady confidence as was reposed in him is, after all, a finer personal tribute than the more demonstrative admiration which a showy man often evokes. As leader of the House, Mr. Dingley was a success very much as that other business man, W. H. Smith, was a success as leader of the House of Commons; that is to say, without any fireworks, but with tact and patience, he applied himself to the business in hand and got it done. His economic ideas, such as they were, never had a fair chance to be embodied into law, as the unhappy tariff measure with which his name is unfortunately associated was notoriously forced upon him, in its more flagrant schedules, against his judgment. The ferocious warfare already afloat between the rival beneficiaries of the wool clauses of his bill is one melancholy proof more of the hopelessness of making a "satisfactory" and stable protective tariff. It was said of Burke that he studied national commerce with a zeal as great as if he were to receive a commission on each transaction. Mr. Dingley was also, in his sphere and with his limitations, a serious student of finance and trade; and the disappearance of one of the lessening number of our public men of that class cannot but be regarded, whether we agree with him or not, as a real loss.

From the military point of view, Gen. Eagan's extraordinary attack upon Gen. Miles would prove a blessing in disguise if it could arouse the President and Congress to a realization of what the real trouble with the army is. Every military text-book of any value lays down as the fundamental theory of army organization a system of accountability by which every soldier and officer is subordinate and responsible to some one else, up to the commanding officer, upon whom rests the final responsibility for the army's efficiency and value as a fighting machine. This vital principle, never fully carried out in this country, because of the peculiar position of the civilian Secretary of War, has practically been abandoned

ever since President Grant reduced the position of the Commanding General to a mere sinecure, gave the Secretary of War powers never intended for him, and made the Adjutant-General really the most influential officer of the army, instead of merely the military secretary of the Commanding General, as he should be. As a result of this we have the present situation, in which staff generals like Eagan not only pay no attention to the Commanding General, but actually declare themselves totally independent of his authority. One need only think of what would happen to any large dry-goods house which let every chief of department run his part of the business independently of the others and of the firm, to see how utterly preposterous it is to try to run a great national department, let alone a military one, upon such principles. Yet our much-vaunted expansion, with its promised increase of efficiency in all departments of the Government, has brought us no nearer to army reform than the drafting of a bill which intensifies and increases every evil in existence, and which, in view of the fact that we have European experience to draw upon, may justly be called a monumental piece of ignorant and foolish legislation.

The public has learned with great satisfaction that there is to be a trial by court-martial of Commissary-General Eagan. There is only one thing which could deepen the disgrace inflicted on the nation and the army by his conduct, and that is that it should go unpunished, or should escape with nominal punishment. It will doubtless be hard for President McKinley to be severe on one of his close coadjutors during the war, who was helping him to show that Alger had managed it well; but Eagan has left him no alternative. We do not recall any incident in the national history so well calculated to give foreigners a low idea of our morals, manners, and military discipline. When a staff officer can pass half an hour reading a paper of filthy abuse of his commanding officer, without interruption from a so-called "board of inquiry," it is no wonder that the Spanish Minister of Marine thought all our sailors would jump overboard when the fighting in the late war began. The thing to be done with Eagan, the only thing that will suffice, is to relegate him to private life, without ifs, buts, or "pulls." He cannot, or, at least, ought not to, be allowed to remain in the army. He has been there thirty years, and has apparently not learned the very rudiments of military discipline, or of civil decency.

Each day furnishes fresh evidence that

we are going to have a thorough discussion of the great issues involved in the Philippine question. For one thing, we have emerged from the period in which everybody "stood behind the President," and Mr. McKinley was encouraged to go ahead and do anything he liked because Republicans and Democrats alike were backing him up. What Mr. McKinley now does is subjected to scrutiny and criticism, as the conduct of the American Executive should be and must be if he is not to become an irresponsible dictator. It no longer suffices to say, "The President has done so and so," because people no longer believe that the President can do no wrong. On the contrary, public men do not hesitate to declare that in his recent action in regard to the Philippine situation Mr. McKinley has been guilty of usurpation of power. His supporters are forced to try to defend his action as within the prerogatives of the Executive, instead of devoting themselves to fulsome praise of his patriotism and statesmanship.

The proposed Philippine commission is, not yet formally appointed, and the scope of its duties is still undetermined. One story represents that its work "will be purely of an economic, and not of a political, nature; it will not attempt to deal with the problem of government for the islands." Another says that it "will deal solely with the political questions involved in the conquest of the Philippines by the American forces." The *Evening Post's* Washington correspondent offers what seems the most reasonable explanation, that "it is not intended to be a commission in the ordinary sense, but is designed by the President to act as a sort of advisory board, a local cabinet, as it were, to live in the Philippines and counsel him as to each new step in colonial development." Whatever the precise duties of this body may be, it is obvious that they must be most important and responsible. Nobody is fit to be a member of such a commission who is not a man of high character, of proved ability, of demonstrated discretion and judgment. Some at least of its members should, besides, possess knowledge of conditions in the East, and particularly of the Philippine archipelago, if such men can be found. Mr. McKinley's first choices for the three civilian members of the commission were President Schurman of Cornell University, who is to be its chairman, Prof. Dean C. Worcester of the University of Michigan, and Charles Denby of Indiana. It seems high praise, and yet we think it is the simple truth to say that this is an ideal commission for the object in view. It would be hard to pick out three men in the United States who are so well qualified in every

way for so responsible and delicate a mission. The question of the need, the legality, even of the motive of this commission remains open. Is it another red-herring like the military board of inquiry?

The recent appointment of a professional politician of Alabama to the consul-generalship at Singapore seems the more extraordinary and indefensible, because the Administration had just had brought home to it the importance of having an able and discreet man in that position. Singapore is near enough Manila to make the representative of our Government there always liable to be involved in the complications of the Philippine question. It appears that early in June last Mr. Pratt, our late Consul-General there, received a delegation of Filipinos, who approached him as "the legitimate representative of the great and powerful American republic," referred to "the programme arranged between you and Gen. Aguinaldo in this port of Singapore," and expressed the "hope that the United States will efficaciously second the programme and secure to us our independence under the protection of the United States." In his reply Mr. Pratt accepted the implication that he enjoyed practically absolute power in the premises, and said, among other things:

"When, six weeks ago, I learned that Gen. Aguinaldo had arrived incognito in Singapore, I immediately sought him out. An hour's interview convinced me he was the man for the occasion, and, having communicated with Admiral Dewey, I accordingly arranged for him to join the latter, which he did, at Cavité. I am thankful to have been the means, though merely the accidental means, of bringing about the arrangement between Gen. Aguinaldo and Admiral Dewey which has resulted so happily. I can only hope that the eventful outcome will be all that can be desired for the happiness and welfare of the Filipinos."

Immediately upon receiving news of this performance by our Consul-General at Singapore, Secretary Day of the State Department telegraphed a sharp rebuke, instructing him to "avoid unauthorized negotiations" with the Philippine insurgents. In a longer communication by mail, Mr. Day said plainly that there was "a feeling of disquietude and a doubt as to whether some of your acts may not have borne a significance and produced an impression which this Government would be compelled to regret." Mr. Day pointed out that the address presented to Mr. Pratt by the Filipinos disclosed an understanding on their part that the object of Admiral Dewey was to support the cause of Aguinaldo, and that the ultimate object of our action was to secure the independence of the Philippines, "under the protection of the United States"; and that Mr. Pratt's reply did not repel this implication, while it represented that Gen. Aguinaldo was "sought out" by him. The Secretary said

also: "Your further reference to Gen. Aguinaldo as 'the man for the occasion,' and to your 'bringing about' the 'arrangement' between Gen. Aguinaldo and Admiral Dewey 'which has resulted so happily,' also represents the matter in a light which causes apprehension lest your action may have laid the ground of future misunderstanding and complications." All this showed that Mr. Pratt was unfit for his place. But it also showed that his successor should be a man who was conspicuously qualified for it by ability, character, and proved discretion. Instead of selecting such a man, however, the President has treated this responsible position as a "plum," to be given to a Republican "worker" in Alabama.

Senator Hanna's ship-subsidy bill sticks unaccountably on the stocks. With his *sic* *judeo* upon it, and with the prudently arranged endorsement of it by the President in his message, one would have expected the measure not only to have been launched by this time, but to be well on its way to its desired haven. To drop nautical metaphors, several ugly obstacles have been discovered in Mr. Hanna's path. One of them is a revival of the fine idea of a bounty on agricultural exports, and a crafty plan to hitch that wagon to the star of the shipping-subsidy bill. Senator Hansbrough has already moved it as an amendment to the Hanna bill. No one could hold that it is not germane. Bounty for bounty, one on wheat exported is as fair as one on ships, and would go to far more necessitous folk than the other. There is a chance for beautiful argument on it, anyhow, and the session is slipping away. All told, therefore, in spite of the superior airs of Mr. Hanna, and notwithstanding his enlisting the services of a literary bureau and "plate-matter" to speed his bill, we do not look to see this particular form of expansion of the profits of good Republicans become law just yet.

The Governor of Vermont failed in his first effort to fill the vacancy caused by the death of Senator Morrill; the veteran lawyer whom he originally picked out being constrained by family reasons to decline the place. Gov. Smith, however, stuck to the principle which had dictated the choice of Mr. Fifield, and has now found a man of the same type who will accept the office until the Legislature shall fill it in the fall of 1900. Chief Justice Ross of the Supreme Court was born in 1826, a few months earlier than Senator Hawley, and will regard his temporary incumbency of the place as the crown of a long and honorable career, rather than as a stepping-stone to a period of permanent service as a national legislator. His appointment as Senator calls attention to the system of

a virtual life tenure of the judgeships which prevails in Vermont under elections of the whole Supreme bench by the Legislature every other year. He was chosen a justice in 1870, and has been re-elected as his term expired ever since, being promoted to the Chief Justiceship in 1890. As there is no age limit for judges in Vermont, he undoubtedly might have remained on the bench as long as health and inclination to work had continued.

The senatorial contest in Connecticut has ended in the best way for the interests of the State and for the cause of good politics. Gen. Hawley is immeasurably superior in character and standing to either of the Republicans who sought to supplant him; and his success represents the wishes of the mass of Republican voters, while a victory for either of his rivals would have represented wire-pulling and pipe-laying. Returning to the Senate for another six years, at an age when he cannot expect anything in politics beyond this term of the office, Gen. Hawley ought to develop once more the independence of thought and action which distinguished him a quarter of a century ago, when he fought the force-bill policy of the extremists in his party. The Hawley of that period has disappeared of late years, but there ought to be the possibility of reviving him, and it would be a good thing for the nation as well as the State if the end of his long political career should show him once more a spokesman of the New England intellect and conscience in the new issues which confront us.

Mr. Depew was in a very happy frame of mind when the information reached him on Thursday that he had received the Republican caucus nomination for the Senate, which accounts for his treatment of the information as news. That was his little joke. He and the Old Man have known all about it for many weeks. It pleased him to say that he was specially gratified at the unanimity of the caucus, but that was merely an outward indication of the beautiful perfection of Platt's system. If Platt had told the Republican members, a minute before the caucus assembled, to drop Depew and hand a unanimous nomination to Odell, or Payne, or Quigg, or any other man, the order would have been obeyed without hesitation or friction. If there is anything to be proud of in unanimity of that sort, Platt is the man to feel the pride. It is a fortunate thing for the State that he has been willing to exercise his power in favor of Mr. Depew, rather than of some far less competent person. Mr. Depew has sound views on the money question, as well as on many other subjects of importance, and he has the ability to express them. Whatever else he does to please Platt, he will never acquiesce in the latter's fundamen-

tal rule of legislative conduct—"Vote and don't talk." Senator Depew can be depended upon to talk.

Everything that Gov. Roosevelt has proposed to do thus far is unassailable by the politicians, because it is so obviously in line with his pre-election pledges and so directly in the interest of simple good government. He is scouring the State for the best men he can secure for all important places. He is advocating legislation in the best interest of the State, and he is also taking steps which will make all legislation so open and so strictly in accordance with legal requirements that no bad measures can be passed in ignorance of their real character. His recent action in regard to legislative methods, taken in accordance with a suggestion which was made to him by the City Club, is extremely valuable. He had a conference with the presiding officers of the two houses of the Legislature, and had an agreement reached that no bill should be considered by him which reached him without all amendments to and changes in existing laws made by it indicated plainly by italics. This is simply saying that the laws defining legislative procedure shall be obeyed, but it is none the less a deadly blow at a legislative practice which has been coming more and more steadily into use during the past few years, for the purpose of concealing the character of vicious legislation. Another equally valuable decision made at the conference was that all local, special, and private bills should be considered during the first two months of the session, and not left to be "jammed through" in the rush of the closing hours. Anybody familiar with what is known as the "legislative business," knows that in these two ways the Governor has interfered seriously with the business of legislative jobbers of all kinds, and it is not surprising, therefore, that threats of trouble should be audible from the persons who are thus afflicted.

It is a little cruel to his Mayor for Mr. Croker to assume so openly as he does, in his various addresses to the public, full responsibility for the city government. He takes upon himself the task of explaining all matters of municipal policy, taxation, improvements, higher municipal salaries, everything. The Mayor is ignored as completely as if he were of no more importance in the government than Mr. Croker's bootblack. Not only does Croker assume the powers and duties of the Mayor, but of the Board of Estimate and Apportionment, the Municipal Assembly, and of the heads of departments. He is, as Quigg would say, "the whole thing." The seat of municipal government is not in the city hall, but in the Croker Club in Fifth Avenue. This is the "larger measure of home rule" which our new charter has

secured for us. A few weeks ago the two houses of the Municipal Assembly, which were, you will remember, to be the embodiment of this larger home-rule spirit in the charter, presumed for a few sessions to delay the progress of some Tammany measures. Mr. Croker addressed a public rebuke to the members for neglect of duty. The consequence was that at the next session every one of the measures was passed with a "rush." Home rule has seldom had a more signal triumph. In view of the enormous boon which the charter has been to him, it seems ungrateful for Croker to say that our increase in taxation is due to the immense debt which consolidation heaped upon us. Where would he be to-day without the "fundamental advantages of consolidation"? He might be forced to live abroad all the time, or even to work for a living.

Frederic Harrison does not agree with Mr. Chamberlain that the best way to secure domestic reforms is to assume crushing foreign burdens. In his annual address the other day before the Positivist Society, he refused to say anything about internal politics and home affairs, because they "had come to an end." "Imperial expansion," remarked this antiquated philosopher, "meant domestic stagnation. It swallowed up the energies of Liberalism and bartered progress for glory." Mr. Harrison pointed to the deplorable condition of the Liberal party, now a rabble without leader or discipline or a flag, and asked what was the cause of the disintegration and demoralization. He replied with truth that it was imperialism which had broken up the party. On such a question it was impossible to play fast and loose—to have a party "one half Radical buff and the other half Jingo scarlet." It was not possible to ease the burdens of the masses at home as long as more square miles of tropical wilderness were added every year to their load. It was certain that their internal problems would never be solved by bubble-speculators and empire-gamblers who were teaching the people to ask, "What do we get out of Uganda and Wei-Hai-Wei?" These opinions of Mr. Harrison are not, of course, worth the attention of any American for one moment. The only Englishmen we should listen to at this hour are the men who are giving us the advice which Bismarck gave France—to go madly to colonizing; with what results we see.

Sir William Harcourt did not pound away at Romish practices in the Church of England in vain. He has succeeded in stirring up the authorities, both to a recognition of the existence of illegal ceremonies and to threats to proceed against offenders. The Archbishop of York has issued a pastoral in which he

speaks of complaints over "the introduction of services which are in no way authorized by the Prayer-Book," and which are "Roman in character." Then this prelate proceeds to specify no less than twelve ritualistic practices which he says are condemned by the episcopate—including unauthorized holy days, the use of incense, asperging, burning candles before pictures, invocation of angels or the Virgin, and "habitual confession." As the Ritualists are made of martyr stuff, there will doubtless be prosecutions. Lord Salisbury has said that it is the duty of the bishops to restrain their clergy, and that, if they do not do it, they themselves "ought to be punished." This gave Harcourt a chance for a truly Salisburian retort. Asking how the derelict bishops were to be punished, he recalled the short work which Salisbury's ancestor made of recusant ecclesiastics in Queen Elizabeth's time, but added: "Other days, milder manners. Lord Salisbury would not, like Burleigh, suspend a Romanizing prelate—he has only promoted him." This refers, of course, to Salisbury's recent appointment of a Ritualist to the see of London. All told, Sir William is justifiably complacent over the storm he has blown up. But no political consequences of moment will follow, unless, as Dr. Guinness Rogers says, Harcourt is willing to go the length of proposing Disestablishment. Then, indeed, the Nonconformists would be roused.

The French judge, M. Beaurepaire, who has torn off his gown and flung away his wig and joined the anti-Dreyfus mob, is evidently a man who has long been uneasy on the bench. He is not going to wait, as Lord Eldon did, to the end of his life to regret that he had not begun life as an agitator, but breaks off his judicial career while yet there is time. His abuse of his late colleagues seems to be only a mass of incoherent suspicion. We begin to see what kind of poison is at work in him, however, when we read that he felt "stabbed to the heart" when the judges actually dared to cross-examine the brave officers who came to swear that Dreyfus was guilty—they would swear it because they were sure of it; in fact, they thought so. This judge, haranguing and foaming at the mouth, is one of the alarming signs of the times in France. We need not flatter ourselves that we are wholly without his kind. The same judge of the United States Supreme Court who made a stump speech from the bench at the time of the income-tax decision, and who may yet have to pass judicially on Philippine annexation, discussed that question before a Washington audience on Wednesday week, and told them that "we have reached a period when we do not care what any nation on earth thinks about our politics,"

SIGNS OF A HALT.

Only yesterday we were afraid that large numbers of the Filipinos would be killed by the American forces for not obeying the perfectly arbitrary commands of William McKinley. The islands had been in revolt against the Spaniards for two centuries, and according to us, justifiably in revolt. Admiral Dewey found them in revolt, and availed himself of the services of the rebels against Spain, as far as he could. In fact, we gave them every reason to believe that one of our objects in destroying the Spanish fleet and taking possession of Manila, was to deliver the islands from Spanish rule, in the same way that we said we were delivering Cuba. Our repeated assertions that our object in seizing Cuba was to enable it to set up a stable government of its own, undoubtedly reached the Filipinos, and were read by them, particularly the declaration of the revered McKinley that any other object would be "criminal aggression." Of course, said they, if the seizure of Cuba would be "criminal aggression," so would the seizure of the Philippines, whose inhabitants are quite as fit for self-government as the Cubans, and have given as serious proofs of dislike to Spanish rule.

We may imagine, therefore, with what astonishment they must have read President McKinley's proclamation to them, a few days ago, through Gen. Otis. It took not the slightest notice of any rights on the part of the people of the islands, except what we were graciously pleased to accord them—no recognition of their long struggle against Spain, no recognition of their long sufferings under her rule, no acknowledgment of their fitness for self-government, not the slightest intimation of any desire on our part to assist them in setting one up. He declared unblushingly that by the treaty of peace between the United States and Spain—not the Filipinos—"the future control, disposition, and government of the Philippine Islands are ceded to the United States," in "fulfilment of the rights of sovereignty thus acquired," said the unconscious wag. At the time this document was sent to the Philippines the treaty had not been ratified, hence, for legal purposes, did not exist. The annexation of the islands to the United States was the act of William McKinley solely; the sovereignty, the acquisition of which he announced, was acquired by him solely; the threats of "severity" and "firmness" which he gave forth, were the threats of William McKinley solely.

There was, too, a dreadful obscurity about what they meant. Sent as they were through a military commander, it is fair to suppose that they meant slaughter and the burning of towns belonging to a people who have never injured us, who had never heard of McKinley until a few months ago, and who

would be killed simply for desiring to be free. According to the Hon. Whitelaw Reid's paper, they were to be treated as "children" after fighting for freedom for several generations. The proclamation was modelled on those which Napoleon Bonaparte used to issue to his conquered provinces, and the sole authority Mr. McKinley could show for it, except that of a military commander, was that of crowds at railway stations, and visions or dreams of his own about "Duty" and "Destiny."

It must be a great joy and relief to many to see that his policy is at last beginning to undergo discussion. The debate in the Senate appears to be a revival of the old art of government, as understood by the founders of the Republic. This question of annexation and "glory-crowned heights" is being dragged out of the puddle of sentimentality in which it has been rolling for months. The old question of the Roman military commander, "Quis jussit?"—Who ordered you to do this?—a question which should never be allowed to sleep in a constitutional state for one hour, again begins to be asked. Who has authorized President McKinley to threaten a friendly people with slaughter and devastation if they do not obey him? How did Spain come to be able to transfer islands she did not possess? How did we come to profess sympathy with and offer help to 10,000,000 of people, for their liberation from a hated yoke, while concealing from them the fact that our real intention was to conquer them for our own use and behoof? How did Spain come to have \$20,000,000 worth of islands to sell to us when we had just denied her right to them, by taking them from her by force?

One of the negotiators, Senator Gray, at Wilmington on Saturday, surrounded the whole matter with mystery. He said we "were now in a crisis," and that his "heart was full of anxiety," and that the President had enjoined on him "magnanimity towards a fallen foe." It appears, too, that we have been overtaken by "unexpected conditions." What are these conditions? Why cannot the American people be told what the trouble is? Senator Gray further said:

"Duty cannot honorably be avoided because it may bring pain or danger. Nor can responsibility always be evaded because of its burdens. That I sought in Paris by all honorable means to escape this responsibility does not matter now. It came to a point at last that we must either leave the islands to Spain, take them as we did, or break off negotiations and come home without a treaty of peace. In the last event the cruce would be broken and a state of active war would have been resumed."

But why had war to be renewed? What was the war to be about, if it had been renewed? We had got Cuba and Porto Rico, which was all we claimed at the beginning of the war. We did not need any treaty to give us possession of them. Who was to urge us to begin the war again? Surely not Spain. How was she to fight, and what about? She remained

in a normal state of war with her South American possessions for many years. Why could she not have remained in a similar state of paper war with us?

The root of all this trouble and "anxiety" is that we have been trying to make too big a thing of the whole affair, to figure as great conquerors and "destiny and duty" men in order to exalt somebody's horn, without the slightest occasion. If these great men in Paris had found out what kind of place the Philippines were before they bought them, and found out whether the Spaniards could deliver them, and then had left it to Congress to decide whether an enterprise so opposed to our habits and traditions as their annexation should be entered on at all, all this groaning and "anxiety" might have been avoided. That the President should have entered headlong on such a very Asiatic business as annexing Asiatic provinces, and issuing Asiatic proclamations to conquered peoples who had never acknowledged his rule, without consulting Congress or any representative of the American people except crowds at railway stations, we can only ascribe to the flattery he has been receiving ever since the outbreak of the war. It has not been simply ludicrous; it has been most mischievous. It has not been the flattery offered to a great man in consequence of his exploits, like a book or a victory, but the blind, unreasoning flattery offered to the Sultan or the Shah because he has unlimited power.

OMDURMAN AND HAVANA.

The first thing Kitchener had to do after marching into Omdurman was to march out again. It is a modern city, in the sense of having been entirely built within a dozen years, but the Cloaca Maxima could not have contained more filth or emitted worse stenches than this proud capital of the Khalifa. It was all very well to face a Dervish charge, but reeking Dervish streets and open sewers put the victorious army at once to flight. It had to camp outside until Omdurman could be cleaned into habitable shape. The work has been done by natives under the direction of British officers. One of these, in command of 2,100 Baggaras, recently wrote home: "I am glad to be able to say that we have now so cleansed and civilized Omdurman that we need no longer go about with scented handkerchiefs or revolvers."

There is more than a chance coincidence in the British having to do in an Arab city what we are at the same time having to do in a Spanish city. Havana is not Omdurman, yet the ideas of hygiene and of religion which made either city a pest-hole are not dissimilar. There is, in truth, a clearly marked streak of Orientalism in the Spanish character. It may have come from contact with the Moors for hundreds of years, and from

partial assimilation of Moorish blood and civilization. At any rate, it is a fact that Spaniards, more than the other Latin races, have the true Oriental fatalism which begets indifference to public cleanliness, and teaches submission to the scourge of epidemic disease as to any other chastening instrument in the hands of Allah. Experienced travellers in the East have more than once, on first visiting Spanish-American countries, expressed their surprise at seeing the Orient reproduced there in little. It was like being on the banks of the Euphrates again. Especially in this matter of public filth and public indifference to it have the Havaneese, living over their clogged and poisonous cesspools, had a not distant resemblance to the Dervishes sitting upon their muck-heaps in Khartum.

The leading Spanish historian of Cuba, Jacopo de la Pezuela, betrays the true Spanish standpoint in these affairs. In the introduction to his 'Diccionario de la Isla de Cuba' (1863) he speaks of the destructive earthquakes to which Santiago has been subject as "punishments" by Providence, though he rejoices that God "does not display his anger against that part of the island, in so terrible a form, more than two or three times in a century." As for yellow fever and intermittent fevers, Pezuela states that they increase and rage in the rainy season; yet the rains are "one of the wise means which the Creator adopts to relieve the inhabitants from the effects of a burning sun." Hence yellow fever is really only an incidental evil of a beneficent dispensation of Providence, and to resist it or complain of it would be impious.

This theological conception of disease is one which the Teutonic and Protestant world has been slow in outgrowing, if indeed it may be said yet to have outgrown it. Palmerston was thought guilty of irreverence when he told the delegation of clergy, in the terrible cholera year, that he would much rather appoint a day for general cleaning of drains than one for fasting and prayer. The idea so universal in the Middle Ages that every form of personal misfortune, including disease and insanity, was a direct proof of divine displeasure, and an invitation to mend one's morals instead of his personal habits, has by no means disappeared even in what we call progressive communities. But the important difference is that, whatever the lingering superstitions of the people, the health authorities act upon scientific notions. Pray and do penance all you please, they practically say, but first purify your water supply and build tight sewers and kill the germs of disease in clothes and houses.

In the Spanish-American world this overriding of religious theory by scientific practice has never become established. Spaniards are more consistent in their inherited Orientalism than we are

in ours. A good instance of the typical Spanish way of looking at deadly disease was recently made public in Havana. In a single room which was let on one of the main streets, nine men died one after the other of yellow fever. Then the owner stopped renting it. It began to look to him as if the displeasure of Heaven rested on that chamber of death. There was something uncanny about it, and perhaps he had better take it as a sign not to persevere in seeking tenants. He might die of the fever himself next, to bring him to his senses. He would be warned in time. It never occurred to him that there was any direct connection between infected bedding and walls and the series of deaths.

Undoubtedly it is in this mental attitude of the inhabitants of Havana that Gen. Ludlow will find his greatest obstacle to putting the city into a hygienic condition. If people think the rules of the health board are all humbug, if not positively wicked, it will be difficult to make them obey. The temptation to have a little private heap of filth, or to retain a concealed cesspool as a kind of family heirloom, will be strong. In Omdurman, it appears, the British officers went about their work of cleansing with revolvers in their hands—whether to shoot violators of the health ordinances, or to make the scavengers do their work thoroughly, does not appear. Gen. Ludlow cannot do this, nor can he get Baggaras to clean Havana. But if he is given the power and the money, he can certainly work such a transformation in Havana as the British have made in Kingston; and he may know, for the gratification of his professional pride, that he that reduceth the death-rate by 50 per cent. is greater than he that taketh a city.

THE CZAR'S DETAILS.

The Czar's peace proposals, or plans for disarmament, as they were variously called, were necessarily vague in their first outlines. A few salient facts were set forth vividly—the crushing burden of military taxes; the fierce competition of rival Powers in endeavoring first to become the stronger; the rapid supersession of existing armaments by endless new inventions of more deadly weapons and explosives; and the immense drain of war on the vitality and resources of civilized nations. The remedy for all this could not, in the beginning, be definitely laid down. The Czar's first circular letter was necessarily of the nature of a pious aspiration. War was admittedly a horrible and growing evil, and the Czar called upon Christendom to devise some effective measures to lessen it.

This very indefiniteness was promptly seized upon by open apologists or secret lovers of war, who said that disarmament, or any form of mitigating the

awfulness of war, was a beautiful dream, but only a dream. There was no way of translating the heavenly vision into the language of this practical and selfish world. Accordingly they consoled themselves, after the first few days of insincere praise of the Czar's "good intentions, by confidently predicting that nothing would ever come of them. Well, the Czar evidently means to make a good fight for peace. He has recognized the element of truth in the assertion that a Congress must have definite proposals before it, and has sent a second circular letter to the Powers suggesting definite bases for discussion. By an exchange of views on these suggestions before the Congress meets, the way will be prepared for useful diplomatic conference.

We are glad to see that the programme put forth is modest. Small beginnings are desirable in so great a movement. Thus, a thorny question is at once ruled out by the notification that "nothing touching existing political relations shall be discussed" in the coming peace congress. In this way one of the greatest difficulties brought up by the opponents of the project is met by ignoring it. How, they have asked, could you get Germany and France to discuss disarmament unless first the question of Alsace and *retanche* were settled? How could you get Great Britain to sit down and debate with Russia and Japan a plan for limiting their navies, unless the whole matter of the territorial carving up of the Orient were first disposed of? It is evident that a too ambitious programme, covering all these points, would be wrecked by fatal objections at the threshold. Let us not aspire to too great things at first, writes Count Muravieff. Passing by the enormous, the perhaps insoluble problems, let us begin with things upon which there is a probability of our usefully agreeing. His circular letter restricts itself, therefore, to various proposals for making war less savage and for keeping down the future growth of armaments, and the burdensome taxes to pay for them, even if there is no present possibility of reducing existing armies and navies.

All this sounds not at all like a dreamer; it is prosaic and practical enough. Especially strong is the appeal which the Czar makes to England, and which her rulers would have great difficulty in refusing, or in justifying themselves to the English people if they did refuse it. The avowed naval policy of Great Britain is to maintain a navy equal to any two which might be brought against it. Mr. Goschen openly explained in the House of Commons that the only reason he asked for increased naval grants was that the increase of the Russian and French fleets made it necessary for England to launch more war-ships. Very well, says the Czar, as if in direct answer to Lord Salisbury's request for a definite policy, I will agree to build no more bat-

tie-ships for a given period, if you will, and if you will meet French and German delegates with mine in Brussels or Copenhagen and get an agreement of that kind entered into by all the great Powers. That, we say, is as definite and direct and practicable a plan as could be asked. It fits known conditions exactly, and the taxpayers of England and France will want to know the reason why it cannot be adopted.

The other proposals contained in Count Muravieff's circular letter relate to new international sanctions for arbitration and to new international agreements intended to lessen the barbarities and sufferings of war. These all seem easily attainable. The terms of the Geneva convention—that is, recognizing the wounded and hospitals and surgeons and nurses as exempt from hostilities of any kind—might readily be extended, with some additions, as the Czar suggests, to naval warfare. The Brussels declarations of 1874 against the use of explosive bullets and bombardments of "open" towns could be expanded to cover other practices. There is more doubt about the Czar's suggestion that higher explosives or more deadly weapons than those now in use should be forbidden. If war must needs be, the right to put as many of the enemy as possible *hors de combat* as quickly as possible can hardly be limited. But, putting aside the more debatable matters, the details which the Czar has now advanced in furtherance of his first general proposal of last summer, show that he is in earnest, and that he is applying himself practically to the business in hand. His new circular letter brings the world distinctly nearer a practical agreement to make war a less constant preoccupation of civilized men, rarer in occurrence, and more humane when it does occur.

COLONIES AND WRITERS.

The French have just found out what is the matter with their colonies. Most of them are confessedly failures, a drain upon the nation instead of a source of strength to it, causes of endless expense and vexation and disappointment. Well, the trouble is that there has been no "literary propaganda" in connection with French colonial projects. Only consider, writes Gaston Deschamps, how inferior the French have been to the English in this respect. Kipling's songs and tales send Anglo-Saxon colonists by the hundred to British possessions every year; but what French poet has sung the glories of conquering the Malagassies, what French novelist has painted the attractions of life in Dakar or Kotonu? Luckily, a beginning of better things has been made. A man has been found who is going to change all that. Gen. Trentinian, Lieutenant-Governor of the French Sudan, has just left Paris, and on his staff he proudly announces that he has ap-

pointed a writer. Yes, and this *écrivain* is going out strictly to *écrire*. He is going not only to study but to "write up" the resources of the French Sudan, and in this way, declares the pleased Deschamps, will Gen. Trentinian "utilize for his colony the immeasurable forces which shape and lead public opinion."

It truly seems a happy inspiration. If there is anything France is "long" of, it is writers. She has no crowding population of peasants or artisans to relieve by colonization, but on the boulevards of Paris alone enough writers could be caught to fit out a thousand colonies, each with its poet or feuilletonist. But we fear they can scarcely be induced to go. They will prefer to stay and go on with their graceful raillery of those who go. M. Alfred Capus, for example, has no more frequent theme for his wit in the *Figaro* than the huge joke of French colonies, the infinite stupidity of the colonist who goes out thinking that the country's distant possessions are intended to be actually cultivated and developed instead of merely an excuse for appointing more prefects and administrators. This is much better fun, besides being easier, than fighting one's way through African swamps and jungles. And what chance would there be, in Madagascar or on the Niger, to experience that keenest of French literary delights—haranguing a mob and marching off with them to demand that somebody be spit upon?

M. Deschamps is unquestionably right, however, in emphasizing the part which English writers have played and still play in English colonization. They are, of course, an effect rather than a cause. They write because there are strong and populous and expanding English colonies; and it is not their literary propaganda which has made the colonies successful, as the French colonies are to be as soon as the proper number of *écrivains* are turned loose on them. But as a means of arousing interest in the colonies, and even of exciting enthusiasm about them, the English poets and storytellers and travellers who have produced so extensive and so excellent a colonial literature have filled a unique rôle. The note of imperialism in English poetry, for example, has been struck with increasing clearness in the past few years. Even the Laureate smites the foe with his tin sword. Mr. Newbolt and a host of lesser imitators of Kipling are all the while striking the imperialistic lyre. This literary tendency both reflects and incites a current political tendency. One has but to recall, in addition, the swarming books of exploration and adventure and description, and the accounts of military expeditions, all relating to English colonies, or to lands soon to be made English colonies, to see how much there is in Gaston Deschamps's contention as respects the English colonizing system.

It is necessary, though naturally pain-

ful to us, to make a distinction here between writers and journalists. "I beg you, my friend," said an old sea-dog of a French Admiral, to whom Deschamps broached his views, "*ne me parlez pas des journalistes!*" They have, indeed, a way of throwing all military men into a rage, which makes their task of describing the glories of shooting natives a difficult one. Kitchener agrees thoroughly with Wolseley in regarding the newspaper correspondent as a deadly enemy. The gentlemen of the press who went with him to Khartum were forced to respect him, but, oh, how they hated him. He would give them no news. He censored or suppressed their dispatches. He treated them as conspirators against the peace and safety of the army. If there was any face-slapping to do, he would attend to it. This is an old tradition in the English army. Wellington hated the slow-coach correspondents of his day. He complained bitterly to the authorities that every officer in his army in Spain who could write, or who had a friend at home who could read, was engaged in sending off letters about the strength and disposition of the army which were sure to get into the newspapers, and so into the hands of the French.

Now what we have to observe is that most of the writers we have had at work on our new colonies are journalists. We cannot see, however, that they have done much to make our colonial system pure and strong. When with the army, they spent their time showing up the incompetence of the officers; and since the peace, they have devoted themselves to blowing up every rumor of differences between military commanders into swollen and portentous stories. We suspect that most of our military authorities could as easily be thrown into a rage by the word "journalist" as was the French Admiral. As for our other writers about the war and our new possessions, it seems to us that they are slightly overdoing it, even in this iterative world. There are those who, after having read a thing first in the dispatches, then in an official report, then heard it lectured about and gossiped over for some months, will shy at the last *réchauffé* of it in a magazine. But we are assured that the sales are simply tremendous, and that is a complete answer. The real comfort, however, is that if it is writers that we need to make our colonies a howling success, we need have no fear. We back our own—either for glory or for "copy"—against the writers of "any nation on earth," as we are now taught to say in all our prayers and speeches and judicial opinions.

INDIA CONVALESCENT.

YALE UNIVERSITY, January 14, 1899.

During the last year India has rested quietly, sloughing off the mottled skin of

plague, famine, and war. After a time there will come another famine, very probably another plague, and, if the hopes of some ardent Anglo-Indians are realized, another war. Doubtless these are all beneficial to the country, and answer the same purpose in India as does the annual overflow of rivers in China, though the latter method of removing the superfluous population is less costly to the state. But from the point of view of a new year's inventory, our interest lies rather in the immediate results of these scourges as shown on the survivors. Some of these results are very curious.

Free speech and freer writing have been the boast of India since the country has become Anglicized. As may be imagined, none welcomed the novel privilege more than they who had been tongue-tied through centuries of oppression. To be allowed to attack Government through virulent speech was a rare joy to those unable to show enmity in overt acts. So, as the plague continued, and the British *Rāj* began to show signs of weakening and hesitated to continue that stringent policy which, in the first year of the Great Death, had almost overcome the disease, the recalcitrant native felt encouraged to speak. At first he did not venture to talk open treason. The Gujarati dailies, published in the vernacular and in English, praised Government in honeyed speech, and counselled submission to all the strange fads of sanitation and inspection—in English; while in parallel columns the native was urged in his own dialect, which the editors fondly believed no Englishman would read, to evade the outrageous laws newly passed, and be true to the customs of his fathers, or, in other words, to resist all police interference.

No notice was taken of this. But as month after month passed, the language against Government became stronger, till at last the climax came in the inflammatory speeches and editorials of one of the Poona agitators, who, as a warlike Mahratta, dared more than did the double-tongued Gujarati. The final word was spoken by Tilak, a man known in Europe and America as a Sanskrit scholar, in India as a dangerous malcontent. Tilak evidently thought that the time had come to fling aside the mask. In giving a laudation of the Mahratta chieftain-god Shivaji (whom the Mahrattas are just now endeavoring to turn from a dastardly human into a national divine hero), the eminent Sanskritist said in effect: "Down with the British; now is the moment to act. Our people are already inflamed with hatred. They see their social customs disregarded, their religious scruples ignored; they are ready for revolution. Let it come; strike now." He had scarcely spoken when the British were attacked in Poona: an assassin slew an English lieutenant; another officer was gravely wounded. Then the British woke up, applied their usual rule of thumb to the break in the machinery, convicted Tilak of treason, sent him to jail, passed a law that stopped free speech of that nature, and returned to polo and the suppression of plague. The Gujarati editors hastened to say that of course anything treasonable should be suppressed, and only the indomitable Mahrattas continued to snarl a little, though they muffled their tongues, for they saw that the lion had not yet become decrepit.

This, then, has been the direct result of the plague. It remains to be seen whether the new law of treasonable speech will be applied to the members of the Indian Congress, but they, though malcontent enough,

have always been more guarded in their language, and a western Mahratta will rush in where a Bengali Babu fears to tread.

Of the plague itself there is something new to relate. In the first place, few people here know that the plague is now in its third year, and that it raged last year more destructively than in 1896-97. After the first excitement, when interest in the subject began to pall, little was reported in the papers; but though no longer an attractive feature of journalism, the plague quietly persisted, and in its second year slew more than in its first, simply through covering a wider area. While not leaving Bombay, it ran across to Calcutta, and then spread south, so that the whole country has gradually become infected. This winter it seems to be slowly dying out, as did the plague in Athens in its third year. The most interesting fact brought out of late in connection with the disease is that in all probability it came from Kumaon in the Himalayas. Bubonic plague is endemic there, and it has recently been proved that some three hundred pilgrims from Kumaon visited Bombay just before the plague broke out, residing chiefly in those wards of the city afterwards most sorely smitten.

Famine has left little trace in India besides a deepening of ever-present distress. People who have absolutely nothing but their lives to lose are not much affected by famine's aftermath of poverty. This has struck hardest at the tradespeople in the great cities, and at Government, which has suffered severely from the drain on its resources. The peasants themselves, the bulk of the population, are now, with a new year of good crops, as well off as they were before—that is to say, they are diseased, heavily in debt, and generally hungry, their normal condition. Some of the charitably disposed Americans who sent corn to India may be interested to know that the Hindus of the Central Provinces were so much pleased with the new grain that they planted what they could spare, and are now raising crops of Indian maize for the first time. If this cereal can get along without rain for four or five months it may prove a success, but it is rather a pity that the experiment was not tried first in the Punjab, where there is an excellent system of irrigation.

It is somewhat remarkable that plague, famine, earthquake, and war are mentioned by Thucydides as characterizing the same period at Athens, and that these should also have characterized the late distress in India. Plague and famine arrived hand in hand; then came the worst earthquake known in recent years; and before the year 1897 was over occurred the Tirah war, where more fighting was done and more hardships endured than the army of the Sirdar in Egypt could boast of in all its long methodical campaign. But to speak only of the outcome of this expedition, the fancied punishment and consequent suppression of the border tribes have not quite answered expectation. The Mad Mulla has but lately risen again, and where all was supposed to be repressed an active antagonism has again shown itself. To subdue this will, however, be a task of no magnitude. But it is strange that the British are so long in learning their lesson. There is but one thing to do—take the land and hold it, get rid of the nation of "buffer-tribes," and treat the Afridis as the Punjabis were treated. The former too would soon make a better buffer as an integral part of the empire than as a hostile

host of blackmailers. For it is notorious that the only way the British have been able to keep a semblance of order on their north-western trade route is to allow themselves to be regularly blackmailed: so much salary annually to every Afridi blackleg who will abstain from attacking a British caravan.

The little war, as wars are reckoned there, is over; but the war-spirit has been aroused, and advices from India recount its latest manifestation. An officer of the Government has just proclaimed that it is high time to seize Thibet. This extraordinary proposal has created no little excitement. Is it only an absurd suggestion, or is it an untimely revelation, the latest instance of that new diplomacy which consists in blurring out what had better been left unsaid? Time will show. Meanwhile, the superior officers of the audacious speaker are very angry. He has already been reminded that when an officer criticized the Tirah campaign at Simla last summer he was forced to apologize, and was told that no criticism of governmental policy was permissible to a subordinate. Is there no way of stopping the mouths of these indiscreet persons? (they seem to say). But, in its manly directness, the suggestion must rouse envy in the bosom of every American forced to find a philanthropic motive for war and eager for trade. "What are we sitting here for, doing nothing?" queries the indignant official. "We ought not to let our soldiers rust out, now that the Tirah campaign is over. We ought to take Thibet. It would make a capital summer-resort; it would be a defence against possible aggression on the part of Russia; and, finally, they all drink tea up there, and it would open a first-rate market to our Indian teas." Simple, strong, and effective. No altruistic motive is urged. It is not even proposed to Christianize the Thibetans. The British are to ravage the country ("a small army of about 20,000 would suffice," says the eloquent pleader), build sanitariums, and establish a tea-market. After reading so much about our mission abroad, it is refreshing to hear some one talk business and not even mention philanthropy.

WASHBURN HOPKINS.

A MEMOIRIST OF THE SECOND EMPIRE.

PARIS, December 28, 1898.

Memoirs on the period of the Second Empire are already beginning to appear, such is the curiosity of our time; but it can be prophesied that they will some day be all the more numerous because there was no liberty of the press under the reign of Napoleon III. For the present, there are but few original documents on that period. We have the Memoirs of Gen. Fleury, who was one of the chief artisans of the *Coup d'État* of December 2; the Memoirs of M. de Maupas, the prefect of police. M. Thouvenel has published a part of the Memoirs of his father, who was Minister of Foreign Affairs. We shall probably have the Memoirs of M. Thiers and many others, which will throw some light on the most obscure portions of the second half of our century. The Marquis Philippe de Massa, brother of the present Duke de Massa, descends from Régnier, who was made by Napoleon the first Duke de Massa. He has published a volume, 'Souvenirs et Impressions, 1840-1871,' which has met with much success. Philippe de Massa was an officer in the French army, who rose to the rank of *chef*

d'escadron, and became attached to the Emperor Napoleon. He was born at the beginning of the reign of Louis-Philippe, in the paternal house which had belonged to the *grand-juge* Régnier. This hôtel, given to Régnier by the Emperor, was in the Rue de Choiseul near the Boulevard, in a quarter which, at that time, still had gardens.

The recollections of M. de Massa's youth are not without interest. He remembers seeing in the court of the hôtel the fine equipages of Marshal Suchet, of the Countess Duchâtel, of Madame Thiers (M. Thiers was related by marriage to M. de Massa's older brother); the young men of fashion made their visits on horseback or in cabriolets. "Society was divided into two camps: on the right bank of the Seine, the Court party was composed of the high bourgeoisie and the financiers, who lived chiefly in the Faubourg St. Honoré and the Chaussée d'Antin; on the left bank, the Legitimist party sulked in its hôtels in the Faubourg St. Germain." M. de Massa remembers well the return of the remains of Napoleon, brought by the Prince de Joinville from St. Helena.

"The men of my generation," he says, "have not forgotten the popularity which this mission gained for the Prince, who justified it so well afterwards before Tangier and Mogador. What I remember, also, with gratitude, is that the Prince, by a delicate attention, distributed some souvenirs of the island to the families for whom such relics were to be the object of profound veneration. My mother, who was lady-in-waiting to the Princesses, his sisters, received from his hands and bequeathed to us a stone from the imperial tomb and a branch of the willow planted over it."

Young Massa enlisted in the spahis in Africa. Each squadron of spahis is recruited in the region. The officers and non-commissioned officers are half French, half African. The soldiers are all Arabs, living near the barracks in family groups (*smalahs*), with their own tents and horses. Massa was incorporated in the squadron of Batna, which was then a small place on the border of the French occupation. Among the officers he found Paul de Molènes, who acquired afterwards some literary reputation by his military stories, and Jules Gérard, the famous lion-killer. There was also a Labédoyère, cousin of the Colonel who was shot under the Restoration. The account given by the young spahi of his life at Batna, his expeditions to Biskra and the oasis, is very interesting. Biskra was then lost in the desert; it has become a winter station nearly as much frequented as Monaco. During one of his expeditions, Massa made the acquaintance of the eldest son of Marshal Ney, the Prince de La Moskowa, a very distinguished man, who was made a peer under the government of Louis-Philippe. After 1848, he devoted himself again entirely to military life, and had come to Africa to obtain the grade of general. He had on his staff Prince Joachim Murat. The Prince de la Moskowa invited Massa to enter his regiment of Chasseurs d'Afrique, and he had to exchange his turban for a shako and his Arabian saddle for a common saddle. He entered afterwards the regiment of *guides*, formed in 1851 by Col. Fleury. These guides had to perform for Napoleon III. the service performed for Napoleon I. by his former guides, transformed in 1804 into chasseurs of the guard. The regiment did escort duty. Each morning a platoon, in full uniform, went to the Tuilleries, and remained twenty-four hours in the proximity of the château.

The Emperor had an escort in the evening to go to the theatre, and the officer was invariably asked to dinner for the next day. The Emperor was never escorted in the daytime. After the creation of five other regiments of cavalry of the guard, the regiment of guides lost its monopoly of escort duty and of the garrison of Paris.

Massa took part in the campaign in Italy. He was in one of the first regiments which crossed the frontier, and received ovations from the Italian populations. All along the Cornice, now called Côte d'Azur, there was the same enthusiasm. At Vercelli "we remarked a distinguished-looking young Italian officer, who was watching the details of our installation. We began conversation with him, and were struck by the correctness with which he spoke French, without the slightest Italian accent. One of us complimented him. 'I am a Frenchman, like you,' said he; and as we seemed astonished, he simply added: 'My name is Robert d'Orléans, Duc de Chartres.'" M. de Massa gives a very graphic account of his doings in the campaign, and one of the great charms of his souvenirs lies in the fact that he writes with great simplicity, and never attempts to speak of what did not go on under his eyes. He does not pretend to be a strategist or a tactician or a diplomatist, he is a mere witness; and his sentiments are always creditable to him. He felt some humanity even on the battlefield. I have found his account of the battle of Solferino one of the best I ever read.

Many people will be amused by what he has to say of Paris and of the official society under the Second Empire. He had, in 1862, been placed on the staff of General Feray, and he remained in Paris during the brilliant days of the Exposition, living in the society of Madame de Metternich, of the Mornys, the Walewskis, the Persignys, as one of the familiars of the court, and admitted to the select parties at Saint Cloud, at Fontainebleau and Compiègne. This life of gaiety was interrupted by the expedition to Mexico, in which country he remained during eighteen months.

The chapter on Mexico is one of the most interesting in the volume. M. de Massa makes us acquainted in it with Colonel Dupin, an old soldier, who was the commander of the Counter-Guerrillas, and who spread terror among the followers of Juárez. He calls him "a man of war and of pleasure, whose robust health made him immune in all climates." Maximilian reproached him for some rather too summary executions, but Colonel Dupin was not directly under his orders. The French army of occupation was commanded by Bazaine, "a soldier of fortune, who had risen from the ranks to the highest grade of the military hierarchy without having ever been a court-officer, and was then at the height of his military reputation." The French corps of 25,000 men, composed of two divisions of infantry and one brigade of cavalry, had to occupy and pacify a country five times as large as France. M. de Massa describes Maximilian as "by turns indecisive and bold, fair, with very expressive eyes and a pale visage." It had been decided in France in 1866, that the evacuation should take place and be ended in the spring of 1867. Maximilian could not rely on his own forces. The relations between him and Bazaine became very difficult; he reproached the French Government with abandoning him;

Bazaine was accused for a moment of aspiring himself to the empire of Mexico.

"Informed of this accusation," says M. de Massa, "he one day opened the subject with me. 'How foolish,' said he. 'When a man has started with the knapsack on his back, and has just been named Marshal of France, what other desire can he have but to return to his country with this?' showing his epaulettes adorned with five stars and a cross of two marshal's staffs."

The accusations of the Empress Charlotte against Marshal Bazaine had caused, however, doubts in the mind of Napoleon III., who sent over to Mexico one of his aides-de-camp, General Castelnau, to control the acts of the French commander and to dissuade Maximilian from abdicating. The relations of Castelnau with Bazaine were not agreeable, as may easily be understood. Maximilian saw no solution of the situation if the French troops were withdrawn; but General Miramon set before him the terrible reprisals for which his abdication would be the signal, and Maximilian resolved to remain. On the 6th of February, 1867, Bazaine left Mexico; he met near Puebla Colonel López, who commanded the regiment of the Empress's dragoons.

"The Marshal, who had known López for a long time, stopped him, and this, textually, is what he said to him before us: 'López, you were one of the first to rally to the French intervention, and you were near me at the attack of San Lorenzo. Since I have appointed you officer of the Legion of Honor, and the Emperor has covered you with favors, I hope that you will faithfully defend his cause; and, if necessary, that you will give your life for him.' 'Yes, Marshal,' answered the man, who, a few weeks afterwards, betrayed his sovereign at Querétaro, as he had before betrayed his country under the walls of Puebla."

On the 12th of March, Marshal Bazaine embarked with the rear-guard on the *Souverain*. M. de Massa tells us that the news of the battle of Sadowa, which reached Bazaine in Mexico, made him very anxious to precipitate the evacuation. Foreseeing that the French army would some day have to measure itself with the hereditary enemy which had attained such a terrific success over as brave an army as the Austrian, Bazaine said to Massa: "These people must be very strong to have swallowed so easily such a big morsel. France has not a moment to lose to place herself in a state of defence and to increase her forces." Singular and prophetic words in the mouth of one who had to play afterwards the principal part in the German war, and whose name was to become synonymous with the name of traitor.

M. de Massa was named equerry to the Emperor in February, 1870, on the very day of the plébiscite which gave the Empire 7,300,000 votes against 1,500,000. The effervescence produced by the candidacy of a Hohenzollern prince to the Spanish throne began soon afterwards. M. de Massa is convinced that, far from desiring the war for dynastic ends, the Emperor resigned himself to it under the pressure of public opinion. "Such," he says, "was the conviction also of those who had the painful honor to follow Napoleon to the Army of the Rhine, and who witnessed the physical and moral sufferings which he had to bear on that *Via Crucis* of which Metz was the first station and Sedan the Calvary." He forgets to add that on the 2d of December the Emperor assumed absolute power; that he put an end to ministerial responsibility and to the supremacy of Parliament; that he always proclaimed him-

self alone responsible to the country, and that it is no excuse for him to say that he obeyed public opinion; all the more because it is very doubtful if public opinion, taken in the widest sense, was in favor of war. The military party and the court party undoubtedly were, but the country, though it felt some alarm after Sadowa, would have preferred peace and some sort of understanding with Prussia.

M. de Massa's account of the war of 1870 is painfully interesting; it has a special value, inasmuch as he accompanied the Emperor from the beginning to the day when Napoleon surrendered at Sedan. M. de Massa represents Napoleon as a sort of victim, needing every day the special care of his surgeons, incapable of any prolonged physical effort; reduced to being one of the impediments of the army. The final chapter of M. de Massa's souvenirs is no less interesting. He made, on the staff of Gen. Bourbaki, the campaign in the east of France which ended in the retreat into Swiss territory, through the Jura Mountains.

I repeat, in closing, that these souvenirs have the merit of perfect simplicity and sincerity, and, as such, may be considered an historical document of some value, especially in what concerns the Mexican war and the Franco-German war.

Correspondence.

THE LOUISIANA AND TEXAS "PRECEDENTS."

TO THE EDITOR OF THE NATION:

SIR: The imperialists refer to the objections that were urged against the purchase of Louisiana and the annexation of Texas as proof of the fallacy of the arguments against annexing the Philippines. The application of a precedent depends upon the reasons on which it rested. The cases of Louisiana and Texas are not parallel, and furnish no rule to guide us now; they would equally justify us in sending a fleet to the Dardanelles and seizing Constantinople. It is true that we have no quarrel with the Turk; but it is easy enough to have one if we want it—our war with Spain is a case in point. The opposition of the Federalists in Congress to the Louisiana treaty was purely partisan; they had dwindled to an insignificant minority, and no doubt would have voted to ratify it if their votes had been necessary. They pretended to oppose it on constitutional grounds. The same men the year before wanted to seize New Orleans and risk a war because the right to deposit Western produce in transit at New Orleans had been suspended, and the mouth of the Mississippi closed as an outlet to our commerce. They demanded possession of the key to the Gulf. The motive was not territorial expansion, but self-preservation—to utilize what we had by securing a right of way to the sea. There were no railroads then. The West was in a state of blockade. The real object of Jefferson's negotiation was the free navigation of the Mississippi to the Gulf. He only wanted a narrow strip of land on its eastern bank as a means to this end. The purchase of the vast domain of Louisiana was not even a dream, and the minister who bought it exceeded his instructions.

Jefferson was not an expansionist *per se*. He came into power on the theory of a

strict construction of the Constitution, and did not think it gave him any authority to acquire territory. He said that the treaty made blank paper of the Constitution, and prepared an amendment confirming the purchase. Party pressure compelled him to pocket his scruples. Chief Justice Marshall very truly said that Jefferson broke up the Federal party by adopting its principles. In a letter to Tom Paine, Jefferson said:

"On the 10th inst. I wrote you on the subject of Louisiana, and mentioned the question of a supplement to the Constitution on that account. A letter rec'd yesterday renders it prudent to say nothing on that subject, but to do *sub silentio* what shall be found necessary. That part of my letter therefore be so good as to consider as confidential."

All of which meant that their consciences must sleep until the treaty was ratified. It was feared that the bargain might be lost by delay; an extra session of Congress was called to ratify the treaty and provide for executing it. In a letter to Livingston, who negotiated it, Jefferson said: "Your treaty has obtained nearly general approbation. The Federalists spoke and voted against it; but they are so reduced in their numbers as to be nothing." The Federalists taunted the Republicans with their own arguments against the use of implied powers. It is one of the revenges of history that Jefferson should have dealt the deathblow to strict construction. The irony of Fate placed Breckinridge—the reputed author of the Kentucky Resolutions of '98—and John Taylor, who had offered Madison's Resolutions of '98 in the Virginia Legislature, where they had either to sacrifice their theories or the treaty. They supported the treaty. It was a bitter pill to swallow.

I have said that the negotiation was begun to secure commercial freedom, and not the extension of territorial boundaries. The instructions to Livingston, the American Minister, contemplated nothing more. Writing to Livingston, Madison said, "The object of the most sanguine was limited to the Mississippi as our boundary"; and Livingston, writing to Madison, said, "Talleyrand asked me this day, when pressing the subject, whether we wished to have the whole of Louisiana. I told him, no; that our wishes extended only to New Orleans and the Floridas." He told Talleyrand that this territory was important to the United States only because "it contained the mouths of our rivers." Talleyrand astonished Livingston by asking, "What will you give for the whole?" This was during the peace of Amiens; Bonaparte was First Consul. He was about to declare war against England, and knew by experience that colonies were a weak point in war. After a struggle with an insurrection in San Domingo, similar to Aguinaldo's in the Philippines, he had abandoned the island to the negroes. He could not spare a sufficient force to guard Louisiana and prevent the English from capturing it; so he got rid of a burden by selling it. We propose to relieve Spain of a burden by buying it. The First Consul said to Marbois, "I renounce it with the greatest regret; to attempt obstinately to hold it would be folly." The example for us to follow as to the Philippines is Napoleon's in getting rid of colonies that were only an encumbrance. If we acquire the Philippines, the first problem for us to solve will be the same that confronted Jefferson: How shall we govern them? The first act for the government of Louisiana, as drafted

by Jefferson himself, invested the President with all the despotic power of the Spanish kings. It was to be in force three years, but Congress reduced it to one. John Randolph reported the bill. By transubstantiation the great democrat became an autocrat. The act violated every principle of civil liberty. Jefferson justified it on the ground that the Creoles were children. It will require about 3,000 years to educate the Malays up to our standard of citizenship. Thomas H. Benton, speaking of the Louisiana Act, said, "Nothing could be more incompatible with our Constitution than such a government—a mere emanation of Spanish despotism," etc. The President took the place of the King. If such an extreme measure was necessary to govern Creoles, what will be required to govern 2,000 islands 7,000 miles away inhabited by a race of barbarians?

As for Texas, those who opposed annexation did not want to annex a war, or were opposed to the extension of slavery. But the population of Texas was American.

The Senate is now in the position of the great pro-consul of Gaul when he reached the frontier stream that marked the constitutional boundary of his province. Will it cross the Rubicon and enact the rôle of the Triumvirates when they divided out the Roman world? JOHN S. MOSBY.

SAN FRANCISCO, January 10, 1899.

MISSIONARIES RATHER THAN SOLDIERS.

TO THE EDITOR OF THE NATION:

SIR: It is complained that those opposed to expansion have no programme. I am earnestly opposed to expansion. Perhaps it would be better for the Filipinos if we regulated their affairs for them. Probably the heathen within our land would profit by adoption into comfortable homes—to the discomfort of the homes. Our first duty is to our own country, and not only is the expense of the necessary increase in army and navy a menace to our comfort and works of civilization, but far graver is the menace to the character of our institutions and people, especially to those of our people who would, by contact with subject races, lose democratic habits of thought.

Therefore I suggest the following programme: Not to buy the Philippines from Spain. To spend the twenty millions so saved in sending missionaries to the islands. We should thus save money, avoid political corruption, protect the character of our young men. At the same time the spirit of philanthropy is observed. Surely missionaries are better for the heathen than soldiers. To be sure, some of the missionaries may meet death, but this must have been the prospect for some of the soldiers; and the missionaries have, probably, the advantage in preparation for such a catastrophe. We should not unwarrantably interfere with religious liberty. Our modern missionary, I am told, first makes a man of the prospective convert by education and the inculcation of the arts of civilization. After this process, the "native" is really freer, for he is more capable of deciding between the claims of his own and the missionary's belief.

Very truly yours, A. B. H.

WENTVILLE, MO., January 12, 1899.

JUDGE TANEY AND BLACK RIGHTS.

TO THE EDITOR OF THE NATION:

SIR: May I ask of the well-known fairness of the *Nation* permission to protest against a misleading (I am sure not intentionally misleading) statement in your last issue?

You say that "Justice Taney held that, historically, men of this color [negroes] had no rights that white men like us were bound to respect." The old mendacity that Taney had laid it down as the opinion of the Supreme Court that negroes had no rights which white men were bound to respect, has, I suppose, outlived its usefulness, nor do I charge the *Nation* with it. But those of your readers who have been brought up on it, will understand your phrase to mean that Taney held that history justified such a view of the relations. Whereas Taney did not go at all into the question of the right or wrong of slavery; that question was not before his court. The question before him was whether a negro slave could bring his case before a United States Court; in other words, was the plaintiff a citizen of the United States, as required by the Constitution?

To decide this he examined, as was his duty, what was the status of slaves at the time the Constitution was made, in order to discover whether they could, at the time of its framing, have been considered citizens of the United States. I cite his own words, which I beg you will reprint:

"It is difficult at this day to realize the state of public opinion, in relation to that unfortunate race, which prevailed in the civilized and enlightened portions of the world at the time of the Declaration of Independence, and when the Constitution was framed and adopted. But the public history of every European nation displays it in a manner too plain to be mistaken.

"They had for more than a century before been regarded as beings of an inferior order, and altogether unfit to associate with the white race, either in social or political relations; and so far inferior that they had no rights which the white man was bound to respect."

He then proceeds to show from colonial and early State laws, that this opinion of the inferiority of the negro race was universal at the time the Constitution was framed, nor were they anywhere considered citizens. The question what rights, legal or moral, negro slaves possessed in 1856, was not touched by him, beyond the single issue whether they could sue in a United States Circuit Court.—I am, sir, etc.,

WM. HAND BROWNE.

BALTIMORE, January 12, 1899.

[Our expression was curt, but was intended to forestall precisely this criticism.—ED. NATION.]

THE UNIVERSITY OF CALIFORNIA AND THE LEGISLATURE.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of December 22, 1898, one who signs himself "A Californian" made certain statements to the effect that "politics played an important factor" in the University of California, and reflecting on the President, professors, and Regents of that University, and the Hon. Julius Kahn, Congressman-elect from the Fourth District of California. The fact that the author chose to remain anonymous, that his letter is dated so late as December 7, 1898, the flimsiness

and falsity of most of his statements, the high character of the Regents, President, and professors of the University, and of the Hon. Julius Kahn, and his election by over 2,000 Republican majority in a district which, at the previous Congressional election, gave over 8,000 Democratic majority, and the general bitterness and plain animosity of the "Californian," all show that his letter to the *Nation* neither needs nor deserves a reply; and it would not have received one but for the fact that the publication was permitted to appear in so influential and, generally, so just a paper as the *Nation*.

Permit me, as one of the Regents of the University of California, in justice to all concerned, to state the facts:

Prior to 1887, the University of California was dependent largely on biennial appropriations by the Legislature, the annoyance of which was so great that a bill was passed in that year giving to the University the proceeds of a tax of one cent on each \$100 of the taxable wealth of the State. From 1887 to 1897 the University received no appropriations from the Legislature, while in that ten years the student body had increased five-fold, necessitating, of course, greater appropriations. The legislative committee of the Board of Regents concluded to ask the Legislature for an additional tax of one cent on each \$100.

The University of California has charge of certain commissions, also, such as those of Viticulture, Forestry, and the like, which require legislation; and sometimes measures hostile to the University's interests are introduced in the Legislature. These interests were so important, so vital to the University's existence, that it was felt by the Board of Regents that some one should be at the capital constantly, to further and protect them. Members of the legislative committee of the Board of Regents at the Legislature soon found themselves fearful of the responsibility, because of their ignorance of legislative procedure and methods, and their lack of acquaintance with the members of the Legislature, and, upon their return from Sacramento, the Regents were called together and informed of all the facts which they thought necessitated the constant presence of some one familiar with the University, and also with legislative procedure, who could remain at Sacramento during the entire session.

The Secretary of the University was too aged and too ill, and the attorney of the Regents was away. Our choice, therefore, fell on the Hon. Julius Kahn. He was not a member of the Legislature, but had been a member four years before, and had distinguished himself by coming from the Legislature with a reputation for ability and tact equal to any, and for honesty and integrity that nobody ever questioned, except the "Californian" who wrote the letter of December 7, 1898. The Governor of the State, even in the heat of a bitter campaign, never dreamed of questioning the honesty of Mr. Kahn.

Mr. Kahn remained at the Legislature during its entire session, and he succeeded, with the aid of many other friends of the University, in securing the passage of the bill granting to the affiliated colleges of the University \$250,000 for the buildings, and in passing the one-cent tax bill through the houses of the Legislature without a dissenting vote, and in obtaining the passage of the appropriation for Forestry, Viticulture, etc., and

two other bills of great importance to the University; being constantly employed from January 15 to March 16, 1897. He aided in enlisting the services of all the graduates of the University throughout this State, caused pamphlets and circulars of information concerning the University to be prepared and given publicly, and for his services, including the travelling and other expenses of himself and all those who aided him, such as telegraphing, printing, postage, telephoning, etc., and including the expenses of the Regents and the President and professors in this behalf, he was allowed \$2,500, of which sum he paid out for expenses over \$1,500, receiving thus \$1,000 for his labor. And his bills were paid without a dissenting vote in the Board of Regents, which body consists of twenty-three members, sixteen of whom are appointed by the Governor for a period of sixteen years each, and are among the best representative citizens in this State, and seven of whom are ex-officio Regents, consisting of the Governor, Lieutenant-Governor, Speaker of the Assembly, State Superintendent of Public Instruction, President of the University, President of the Mechanics' Institute of San Francisco, and the President of the State Agricultural Societies.

As to the lobbying by the President of the University, the Regents and professors, etc., this statement is simply untrue. These persons went to Sacramento only at the request of the Committees of the Legislature on Ways and Means and on Public Buildings, when they were requested to come before such committees to explain the purpose and necessity of the appropriations asked for.

As to the University being in politics, that statement is not true. The act creating the University, and now a part of the Constitution of the State, provides that the University shall be kept for ever free from political influence, and it has been so kept; and of the sixteen appointed Regents, that eight shall be Republican and eight Democratic, and no Governor of this State has ever violated this provision.

In the interest of that justice which the *Nation* has always been willing to show, I ask that you publish this letter at your earliest opportunity, in the same columns which have been abused by the publication of December 22, 1898.—Yours respectfully,

J. B. REINSTEIN.

SAN FRANCISCO, January 6, 1899.

ROSTAND'S ANACHRONISM.

TO THE EDITOR OF THE NATION:

SIR: A rather curious anachronism occurs in scene 6, act v., of "Cyrano de Bergerac";

Rageneau (à travers ses larmes). Je suis moucheur de—de—chandelles, chez Molière.

Cyrano. Molière!

Rageneau. Mais je veux le quitter, dès demain; Oui, je suis indigné! . . . Hier, on jouait Scapin, Et j'ai vu qu'il vous a pris une scène!

Le Bret.

Entière!

Rageneau. Oui, monsieur, le fameux "Que diable allait-il faire?" . . .

"Les Fourberies de Scapin," wherein occurs the famous "Que diable allait-il faire dans cette galère," was not produced until 1671, twenty-one years after the date of the fifth act of "Cyrano de Bergerac."

It isn't of any great importance. Perhaps it is too much like many of the trivialities critics make so much of in dealing especially with Shakspeare's dramas. Still, it is probably barely worth calling attention to for the purpose of asking, if I am right, how one

who has evidently bestowed so much pains upon his work, who has so elaborated, so condensed, so clarified, his delightful, picturesque, and humorous drama—for a French play, so deliciously pure withal—could have overlooked what is so obvious. That it was not done without knowledge is fairly certain.

H. M. DOAK.

NASHVILLE, TENN., January 4, 1899.

[Cyrano's death (act v., scene 5) occurred in 1655, or sixteen—not twenty—one—years before the representation of the "Fourberies de Scapin" on May 24, 1671. "Le Pédant Joué," from which Molière is said to have taken a scene, was played in 1654, though alleged to have been composed much earlier.—ED. NATION.]

Notes.

The Macmillan Co.'s spring announcements embrace a 'Life of Henry A. Wise,' by his grandson, Barton H. Wise; 'The Life and Letters of Archbishop Benson,' edited by his son; 'Cardinal Newman as Anglican and Catholic,' together with correspondence, by Edmund Sheridan Purcell; 'The Life and Remains of Rev. R. H. Quick,' by F. Storr; 'Spinoza, his Life and Philosophy,' by Sir Frederick Pollock; a 'Syllabus of European History, with bibliographies, 1600-1890,' by Prof. H. Morse Stephens of Cornell; 'The Roman History of Apollonius of Alexandria,' translated from the Greek by Horace White; 'A History of Greece,' for high schools and academies, by George Willis Botsford of Harvard; 'European History: An Outline of its Development,' by Prof. Geo. B. Adams of Yale; 'The Welsh People: Their Origin, Language, and History,' by Prof. John Rhys; 'Via Crucis,' a romance of the second crusade, by F. Marion Crawford; 'Letters from Japan,' by Mrs. Hugh Fraser; 'An Introduction to the Poetical and Prose Works of John Milton,' by Prof. Hiram Corson of Cornell; 'Three Studies in Literature,' Jeffrey, Newman, and Matthew Arnold, by Prof. Lewis Edward Gates of Harvard; 'A Selection of Poems for School Reading,' by Marcus White; 'Chaucer's Prologue and the Knight's Tale,' edited by Prof. Mark H. Liddell of the University of Texas; 'Introduction to the Study of Literature,' by Prof. Edwin Herbert Lewis of the University of Chicago; 'The Development of English Thought: A Study in the Economic Interpretation of History,' by Prof. Simon N. Patten of the University of Pennsylvania; 'A Brief Introduction to Modern Philosophy,' by Arthur Kenyon Rogers of the University of Chicago; 'Naturalism and Agnosticism,' the Gifford Lectures (Cambridge, Eng.) delivered in 1896-1898 by Prof. James Ward; 'Democracy and Empire,' by Prof. Franklin H. Giddings of Columbia; 'Democracy and the Organization of Political Parties,' from the French of M. Ostrogorski, by Frederick Clarke; 'The Distribution of Wealth,' by Prof. John B. Clark of Columbia; 'The Lesson of Popular Government,' by Gamaliel Bradford; 'The Government of Municipalities,' by Dorman B. Eaton; 'The Theory of the Leisure Class,' by Thorstein B. Veblen; an American edition of the 'Statesman's Year-book,' edited for what relates to this country by Carroll D. Wright, U. S. Commissioner of Labor; 'The Missing Link,' *Pithecanthropus erectus*, Haeckel's lecture

before the Zoölogical Congress at Cambridge in 1898; 'The Dawn of Reason: Mental Traits in the Lower Animals, with special reference to Insects,' by James Weir, Jr., M.D.; 'A History of Physics,' by Prof. Florian Cajori; and 'The Foundations of Zoölogy,' by Prof. William Keith Brooks of Johns Hopkins.

'Democracy: A Study of Government,' by Prof. James H. Hyslop of Columbia; 'The Porto Rico of To-day: Pages from a Correspondent's Note-book,' by Albert Gardner Robinson; 'A General Introduction to the Study of Holy Scripture,' by Dr. Charles A. Briggs; 'The Kingdom,' by Dr. George Dana Boardman; 'The Bases of Mystic Knowledge,' from the French, by Sara Carr Upton; and 'A Short History of Astronomy,' by Arthur Berry, will be issued directly by Charles Scribner's Sons.

The Century Co. will publish next month 'The Life and Letters of Lewis Carroll,' by his nephew, S. D. Collingwood, with 100 illustrations; 'The Maine,' a narrative of her destruction, by Capt. Sigbee; and 'Campaigning in Cuba,' the capture of Santiago, by George Kennan.

Henry Holt & Co. have nearly ready 'French Lyrics,' some 230 poems selected from more than 50 poets by Prof. Arthur G. Canfield of the University of Kansas.

The second volume of 'Christian Missions and Social Progress: A Sociological Study of Foreign Missions,' by the Rev. James S. Dennis, D.D., is promised in the spring by Fleming H. Revell Company.

Benj. H. Sanborn & Co., Boston, will publish early in February 'The Student's Book of Days and Birthdays.' It will contain, in addition to the usual blank pages for names, the birthdays of eminent men and women, Founders' days and Presidents' birthdays for the leading colleges, and brief selections in prose and poetry.

William Andrews & Co., Hull, England, will shortly publish 'Bygone Church Life in Scotland,' by the senior member of the firm.

'How to Prepare for a Civil-Service Examination' (Hinds & Noble), by Francis E. Leupp, is an exceedingly practical and direct book. After a clear exposition of what the Government classified service now is, it sets forth the qualifications required in candidates, and gives many examples of the actual papers set before applicants in recent examinations. The volume thus serves an excellent purpose, not only in the way of useful guidance to those intending to take the examinations, but also in dissipating the misleading accounts of their nature spread abroad by the opposition to the reform, and in proving once more how firm a hold the new methods now have in law and practice.

The Scribners publish the American edition of Alexander Innis Shand's 'War in the Peninsula, 1808-1814,' in a single handy volume. Mr. Shand is already known by his 'Life of General Sir Edward Hamley,' and in this new book offers what is, in the main, an abridgment of Napier's great work. The portraits of Wellington, Moore, Masséna, and Soult are on copper, after well-known paintings. The maps are few but clear. The author refers to some of the later published authorities, like Marbot, but the chief use of the book will be in its character as a synopsis of Napier, in the form of a brief current story of the Portuguese and Spanish war with France. There is occasionally a slip in the paraphrasing. At the battle of Sauroren (July 28, 1813), after

repeating the story of Wellington and Soult in near presence on opposite heights, when the Englishman, praising Soult's abilities, said he would still beat him by practising on his caution and getting time for Hill to come up, the author says, "So it proved. The French attack was only begun at noon." Soult turned the left of Wellington's principal body, but Hill, coming on the field, rolled back the assault and turned danger into victory. "It was a repetition of the stroke made by Soult at Salamanca," adds the author. Napier's words are: "It was the counterstroke of Salamanca"; but that was Wellington's own counterstroke upon Marmont. Soult, of course, was not there. But there is an error also in the time. Napier puts the scene of the two generals on the heights on the 27th, and says, "Certain it is that the French general made no serious attack that day." He describes Hill's hard march on the 27th, resumed at day-break of the 28th, coming at the nick of time, when "about midday" the French attack began. It was a delay of more than a full day that was gained, not of part of a morning, and it brought the battle, as Napier tells us, "on the fourth anniversary of the battle of Talavera." We have here an instructive example of the way errors of transcription creep into history, and of the safety in reading the sources.

We called attention on its appearance to the autobiography of the Italian Gen. E. della Rocca, an intimate personal friend of Victor Emanuel and for over seventy years a participator in or witness of the transformation of Italy into a free kingdom. He died in 1897, at the age of ninety. A few years before his death he finished dictating to his wife the second volume of his memoirs, 'Autobiografia di un Veterano' (Bologna: Zanichelli), which has just been brought out in English by Macmillan. It covers the period 1859-1893. For readers who welcome side-lights on recent Italian history, and for libraries which keep such material up to date, mention should also be made of the second volume of 'Giacomo Dina e l'Opera Sua' (Turin: Roux, Frassati & Co.), edited by that model editor, Senator Luigi Chiala. It comprises the chief work of Dina from the death of Cavour through the war of 1866; and as Dina was in the confidence of Cavour's ablest successors, his utterances in political matters have often a quasi-official importance. Senator Chiala's notes and running commentary need no bush.

M. René Doumic sends out another volume of criticism, the third of his series of "Études sur la Littérature Française" (Paris: Perrin & Cie.), in which he exhibits even more than usually the strong influence exercised on his mind and point of view by his master and editor-in-chief, M. Brunetière. The singular preference for all that is seventeenth century, to the almost total exclusion of whatever belongs to another age, is very strongly marked in the essays or articles contained in the present volume. Hugo and the Naturalistic school are equally ground to powder by Brunetière's disciple, and that with a vivacity and a fierceness of which M. Biré might almost be envious. One cannot help the reflection that M. Doumic is somewhat narrow-minded, and too uncompromising in his condemnation of theories and practices not in accord with his classical creed. But the articles are witty and well written, the reflections in many cases just, and the conclusions and judgments well put.

'L'Anarchie Littéraire,' by Charles Recoilin (Paris: Perrin & Cie.), should have been noticed earlier, but it contains papers which bear rereading and consequently late noticing. There are some good criticisms of writers and critics (for the latter are very fond nowadays of giving their impressions and opinions of each other's work), and two or three interesting attempts to analyze the peculiar power of the Russian Realists and of Ibsen, who decidedly does not gain in favor with the French. The title of the book is apt, and is justified by the author in his entertaining preface.

The recent official report of M. Édouard Petit on the condition of common-school extension in France (published by the Imprimerie Nationale) shows us the people of that country from a different and far more favorable side than that presented in the newspaper accounts of the doings of Paris politicians. The progress of the various movements for spreading popular education which are carried forward largely by private enterprise and devotion, is truly astonishing, and unequalled in any other country. Only one or two statistical data can be here given: The number of classes for adolescents and adults rose from 8,288 in 1894-95, to 30,368, with a steady attendance of nearly half a million young people, in 1897-98. In the first-mentioned year the classes for girls were less than a thousand; in the three following years there were provided, respectively, in round numbers, 1,800, 4,400, 7,400 classes. About 10,400 public lectures, illustrated or other, were given in the former year, while in 1897-98 their number had risen to nearly 118,000, with an attendance of not far from three and one-half millions. During the latter year, 18,000 sets of lantern-slides were loaned by the Musée Pédagogique alone, but there are two or three other institutions which render a similar service to the lecture committees throughout the country; and the public lectures and courses for adolescents are only two of the several provisions for the extension of popular education.

The reply of the Department of Public Instruction (Freiburg I. S.: B. Veith) to the memorial of the eight German professors whose exodus from Freiburg has been referred to in these columns, will not be the last word on the subject. The eight have prepared an answer to the reply, which is being published by the Akademischer Verlag, Munich, under the title: 'Herr Python und die Universität Freiburg in der Schweiz.'

The representations for school-children in German theatres have awakened some interest among educators in this country. We therefore call attention to a little brochure in which the experiences and results of last year's representations in Hamburg are related from various points of view, including that of the actors and actresses: 'Unsere Volksschüler im Stadttheater' (Hamburg: C. Boysen). In November last "Wilhelm Tell" was again given before 8,000 children (in three sections), to be followed during the rest of the winter by Körner's "Zriny" and Hebbel's "Nibelungen."

It is not half a dozen years since Prof. Budde of the University of Strassburg—who in recent months has been delivering a course of lectures at Union, Yale, and other American institutions—in a review of an English work, declared that the Germans had every reason to envy the English-speaking theological world for the ease and facility with which, both in Great Britain and in Ame-

rica, the results of critical scholarship could be popularized. A number of recent literary ventures in the Fatherland show that the Germans have been apt pupils of English precedents in this respect, and that they too can prevent the results of scholarly research from remaining a *terra incognita* to cultured readers. The example of the Württemberg Bible Society, in producing a critical edition of the New Testament Greek text, prepared by Prof. Nestle, but based on Westcott-Hort and Tischendorf, at the nominal price of 35 cents, is all the more commendable because this edition is evidently destined to crowd out the current but thoroughly unreliable *textus receptus* of two centuries ago still published by the British and other Bible societies, and popular only, because it is so cheap. The new move of the Württemberg Bible Society is proving to be an eminent success, and at the recent annual convention of the association it was reported that the entire first edition of the Nestle Testament of ten thousand copies had been entirely exhausted, and that a new edition was in preparation. Even the most poverty-stricken student of the New Testament can now own the very best text extant.

The *American Historical Review* for January (Macmillan) contrives to keep in touch with current interests by means of a paper, based on much research, by Frank Strong, on "The Causes of Cromwell's West Indian Expedition in 1655," and the influence which New Englanders such as John Cotton and Roger Williams had "in helping Cromwell to make up his mind in regard to it." Among the "Documents," also, we find several bearing on the expedition against Santiago de Cuba in 1741; which landed in the bay of Guantánamo. One, endorsed "Some Thoughts relating to our Conquests in America," contains this suggestive passage: "Admitting us in quiet possession of all Spanish America. To keep that possession we must do as the Spanish have done before us, we must have strong garrisons and Colonies. This will estrange our hands and treasure, and we shall soon be in a worse condition than the Spanish themselves." Of still greater moment is Prof. H. Morse Stephen's brief but clear "Administrative History of the British Dependencies in the Further East," a remarkable tale of flexible adjustment to varying conditions of colonial acquisition. A series of letters addressed from the South in 1861 to Secretary Chase, certain of them being special reports on request, will be found instructive reading.

The *National Geographic Magazine* for December contains a brief sketch of the five civilized tribes of Indian Territory, by C. H. Fitch. In it he refers to a fact, which to some will be new, that the numerous towns which have sprung up along the seven railroad lines in the Territory "are without legal existence, and have no recognized town or city government. They are without proper officers to enforce laws, have no water supply or fire departments, sidewalks, or other street improvements, no schools, except private ones, and no systems of drainage or sewerage." Other articles are on the cloud scenery of the High Plains, Kansas, with photographs, and on the Atlantic Coast tides by M. S. W. Jefferson. There is also an extract from an interesting address at Tokyo, by Dr. Alex. G. Bell, in which he said that the geographical formation of Japan—"long ranges of lofty mountains with comparatively narrow plains lying between their

feet and the coast line"—indicated that it should be the "very home of electrical enterprise." He urged the importance of educating the twenty-five thousand deaf-mutes in the country, for whom there are only two schools at present, one in Kyoto and one in Tokyo.

The Cabot celebration at Halifax in June, 1897, was the occasion of several papers which appear in the latest volume of the Proceedings and Transactions of the Royal Society of Canada. The account of the ceremonies at the unveiling of the tablet in honor of John Cabot includes addresses on Cabot's Landfall, by Archbishop O'Brien, President of the Society; on Modern Bristol, by W. Howell Davies; and on Bristol in the days of the Cabots, by W. R. Barker. There are also articles on the voyages of the Cabots—Latest Phases of the Controversy, with maps, by Dr. Samuel E. Dawson; the Cabotian Discovery, by John B. Thacher; and the Cabot Legends. Other papers are, "Canada during the Victorian Era," with numerous illustrations, by Sir J. G. Bourinot; "Monograph of the Cartography of New Brunswick," with reproductions of several ancient maps, by Dr. William F. Ganong; and "On the genus *Lepidophloeos*," by Sir J. William Dawson.

Dr. S. C. Chandler of Cambridge, Mass., by reason of "the splendor, the importance, and the variety" of his work in astronomical science, has been awarded the Lalande prize of the Academy of Sciences of the Institute of France. In the current number of the weekly *Comptes Rendus* of the Academy, the committee of award, consisting of Messrs. Faye, Wolf, Loewy, and Jannsen, briefly review Dr. Chandler's more noteworthy achievements. His name is most widely known in connection with the problem of the variation of latitude, into which he was one of the first to inquire and toward the elucidation of which he has done so much. His observations of variable stars, extending over many years, have resulted in the discovery of many variables of short period, while the series of catalogues of variable stars published by him constitute contributions of the greatest value to stellar astronomy. His investigations concerning the identity of comet 1889, V (Brooks) with Lexell's comet are mentioned as illustrating his capability in other directions. The Academy has also conferred the Damoiseau prize upon Dr. George William Hill of Washington, for his researches in mathematics and astronomy, which are, as is well known, characterized by great profundity and novelty of ideas, and have contributed powerfully to the advancement of science during the past twenty years. A third American, Dr. Charles A. Schott of Washington, has been made the recipient of the Henry Wilde prize for his researches in terrestrial magnetism.

It is announced that the competitive examinations for the fellowships of the American School of Classical Studies at Athens will be held this year on March 16, 17, and 18. Candidates are to enter their names on or before February 1 with Prof. B. I. Wheeler (Ithaca, N. Y.), chairman of fellowship committee, from whom all information as to place, subjects, etc., may be obtained. These fellowships yield \$600 each. The Hopkin fellowship, open to women only, yields \$1,000, and is assigned without examination, preference being given, however, to such persons as have already held a regular competitive fellowship.

—It is perhaps natural to look for a rampant plea for annexation of new territory from the Public Land Office, for an extension of possessions means so much land at a stated price, with wood and swamp rights. Mr. Binger Hermann, Commissioner of the General Land Office, has issued such a plea, as a public document, and disguised as an historical essay intended to correct an error in the map of the United States. This error lies in the statement of facts connected with the acquisition of the extreme northwest part of the United States. It has been assumed that it was through the Louisiana purchase that this territory was acquired. No, says Mr. Hermann; it became ours by "right of discovery in 1792"; by exploration in 1805; by the Astoria settlement of 1811; and by the Florida treaty of 1819. We cannot trace any mention of former historical labors of Mr. Hermann, and are obliged to judge him by this expansion pamphlet, issued at the public expense. His conclusions are endorsed by the Hon. C. N. Bliss, whose claims as a historian rest on his well-known biography or characterization of the Hon. T. C. Platt. There are sundry maps, and certain portraits used "by courtesy of — Magazine," though much better could have been found in the Library of Congress. Though the question turns on a question of boundaries, in which the degrees of latitude play an important part, the one map, used as a frontispiece, is without any degrees of latitude. The whole essay is marked by a dangerous ignorance, expressed in language better suited for a stump speech than for historical exposition.

—The pamphlet might be passed over were it not that these two eminent historians have carried their theory so far as to engrave it on the official Land Office map, the best and most widely distributed of maps of the United States. Wherever this map goes, there will go the ridiculous legend stamped on it by Hermann and Bliss, and every school child seeing it will obtain a false idea of our history. A mere reading of the inscription is sufficient to arouse criticism. If this territory was ours by discovery in 1790, and was actually settled on our behalf in 1811, where was the necessity for obtaining it by negotiation in 1819? Discovery alone constitutes a good title, and could not the English urge Cook's discoveries as antedating that of Gray? Spain claimed all this western region by right of discovery, and in 1790 prepared to defend her rights by force, when England landed settlers at Nootka Sound. Hermann says our claim was good against England, but not against Spain. If so, the discovery and settlement go for naught, and it was the treaty of 1819 that alone establishes our right to hold the territory. All else is irrelevant and confusing. Before making the change based upon his researches, it would have been well for Mr. Hermann to submit the matter to a recognized authority on American history, or, better still, to the American Historical Association. His own readings have been limited. He quotes Russell's and Olney's histories, and 'Chambers's Encyclopedia,' but he does not know of Bancroft (the Western) or Henry Adams. The work closes with a partisan cry for annexation and general expansion. Such work stultifies the Office in the eyes of the intelligent.

—Expansionists and anti-expansionists alike can find ammunition in the ninth volume of Paul Leicester Ford's edition of Jefferson's Writings (Putnam). The period

(1807-1815) is posterior to the acquisition of Louisiana by this imaginative continental spirit. To the Governor of that Territory the President wrote on October 29, 1808: "The truth is, that the patriots of Spain have no warmer friends than the administration of the United States, but it is our duty to say nothing and to do nothing for or against either. If they succeed, we shall be well satisfied to see Cuba and Mexico remain in their present dependence; but very unwilling to see them in that of either France or England, politically or commercially. We consider their interests and ours as the same, and that the object of both must be to exclude all European influence from this hemisphere. We wish to avoid the necessity of going to war till our revenue shall be entirely liberated from debt." On April 19, 1809, he reverts to this idea in a letter to President Madison: "I suppose the conquest of Spain will soon force a delicate question on you as to the Floridas and Cuba, which will offer themselves to you. Napoleon will certainly give his consent without difficulty to our receiving the Floridas, and with some difficulty possibly Cuba." When the war of 1812 was in progress, he thought, "The acquisition of Canada this year, as far as the neighborhood of Quebec, will be a mere matter of marching, and will give us experience for the attack of Halifax the next, and the final expulsion of England from the American continent."

—On the other hand, in his special message of February 10, 1807, he apologizes for a proposed gunboat armament as "merely for defensive operations," not fitted to protect our commerce on the high seas; "and still less can it become an excitement to engage in offensive maritime war." Writing to Thomas Paine on September 6, 1807, he believes that "gunboats are the only water defence which can be useful to us, and protect us from the ruinous folly of a navy." This without precedence of Capt. Mahan; and the following, of the Philippines (to Clement Caine, September 16, 1811): "What, in short, is the whole system of Europe towards America but an atrocious and insulting tyranny? One hemisphere of the earth, separated from the other by wide seas on both sides, having a different system of interests flowing from different climates, different soils, different productions, different modes of existence, and its own local relations and duties, is made subservient to all the petty interests of the other, to their laws, their regulations, their passions and wars, and interdicted from social intercourse, from the interchange of mutual duties and comforts with their neighbors, enjoined on all men by the laws of nature." He anticipated that the insular colonies would "soon have to take care of themselves, and to enter into the general system of independence and free intercourse with their neighboring and natural friends."

—The General Index to *Notes and Queries* has just appeared in an eighth volume of 143 pages, which, with the seven previously issued, brings the total of pages up to 1,221. The range of *Notes and Queries*, which will fill out its hundredth volume this year, or 50,000 pages, is wider than that of any encyclopedia that has ever been projected. Established in London, the most cosmopolitan of cities, its Notes, whether resulting from experience, interviews, or research, were such as to rouse cosmopolitan Queries or

criticism from the utmost corners of the English-speaking world. Week by week it has taxed for its purposes all departments of the British Museum, as well as returned and retired travellers. In America as well as in the Old World, every puzzling question arising in the conversation, games, or customs of society has led to Queries, and hence to Notes which have year by year shed new side-lights on domestic life. No literary enterprise is too grand to seek or to find a valuable auxiliary in *Notes and Queries*. The Oxford Dictionary, incomparably superior to any similar work in any language, asks and receives such assistance almost every week—indispensable minutiae which had eluded its thousand co-workers. So has the unrivalled 'Dictionary of National Biography,' now approaching its sixtieth volume, been aided in all its serial issues. When articles on any subject have become numerous they are classified, to facilitate examining them. Thus, in the eighth index alone the Shaksperiana show five columns of titles, pointing to hundreds of criticisms. This department was long ago deemed by Furness worthy of his study (see Eysell in "Hamlet," etc.), and hence cannot be neglected by any dramatic student. As to Proverbs, observing that 246 of them were treated in the first series and 335 in the last, and that these numbers indicate the average in the other four score volumes, one sees a quarry from which it would be easy to build up a better book of proverbs than has been elaborated since the days of Solomon. Similar compilations might be made of Songs, sacred and secular, Epigrams, Epitaphs, etc. The present index points to more than 400 quotations, few of them in Bartlett, but many of them worthy to stand there. The word Folk-lore was created by the first editor of *Notes and Queries*, and its first series showed 300 paragraphs, or longer remarks, on the subject. So suggestive and hence sought for are the general indexes that the earlier ones are out of print—and if one turns up it brings a fabulous price at auction. That to the second series, borrowed from an Historical Society, was all copied with a pen by one Wisconsin minister who could neither find nor purchase the master key to a dozen favorites in his choice library. The compiler of the eighth and jubilee Index cannot but recall the fact that no survivor remains of those who founded and first labored for *Notes and Queries*.

—The Journal of the Anthropological Institute for August-November, 1898, contains three papers by Dr. E. B. Tylor, the well-known professor of anthropology at Oxford, which record an epoch-making step towards the sound understanding of Totemism, a subject upon which writers of eminence have sometimes ventured without a due consideration of its intricacy, or of the likelihood that any generalizations prematurely achieved would be discredited by the subsequent accumulation of well-attested facts. Such well-attested facts Dr. Tylor presents in his first paper, where he publishes, with a plate and the outline of an interpretation, a totem-post from the Haida village of Masset (Queen Charlotte Islands). The monument itself is now set up at Fox-Warren (Weybridge). The Haidas and the Tlingit of Alaska are slightly varied branches of the same stock, and their otherwise parallel clan-groups, Raven and Eagle or Raven and Wolf, have a different arrangement of totems. Totemism has taken among the Haidas, as among the Tlingit, special forms

adapted to local circumstances, but has fully maintained its predominantly social importance. It is the basis of hospitality and asylum, has enforced exogamy, and served as a bond of social union. Its religious function among the Haldas and the Tlingit is strictly governed by the fact that neither of these tribal groups has anywhere developed the notion of lineal descent from the totem-animal. Such a belief, common though it is among American totemists, is wholly absent among the tribes under consideration, and its place is taken by certain rude notions of transmigration and reincarnation. Ultimately we reach some tale of an ancestor's adventure with the totem which takes the place of any notion of literal descent from the totem. The totem-post published and described in Dr. Tylor's first paper illustrates all these points more or less adequately so far as the Haldas go, and with the Haldas are involved the Tlingit of our own Alaska. The second paper establishes something almost identical in the case of certain Pacific Coast tribes living to the south of the Tlingit, since it interprets two British-Columbian house-posts with totemic carvings. These are in the Pitt-Rivers Museum, of which Dr. Tylor is the director.

—Professor Tylor's third paper, though by no means a long one, is rather longer than the first two, and gives some very much needed general "Remarks on Totemism." These go back to the beginning of the subject in a book of the last century by J. Long, a trader and interpreter among the North American Indians. From Long, McLennan appears to have derived, with the word totem or totem, the facts dwelt upon in his article on "The Worship of Animals and Plants" (*Fortnightly*, 1869-70). McLennan, in order to interpret the great gods of the world as evolved from the humbler rank of totem-animals, did much violence to well-known features of primitive animal worship. (1.) Such peoples as the Natchez—worshippers of the sun—he arbitrarily classed as totemists, and lost sight entirely of the fundamental idea of the totem by including the sun among totems. Nothing about the totem is more essential or indispensable than that it should always be one of a species. Thus, at the very outset, one important reach of savage religious observance which is clearly distinct from totemism was unwarrantably appropriated. (2.) Another great range of savage religion was similarly annexed by the theory that gods having their incarnation or embodiment in species of sacred animals may ultimately be identified with those animals from whom they have presumably been evolved. After scrutinizing with destructive effect Robertson Smith's whole notion of placular totem-sacrifice, and his attribution of the idea of communion in sacrifice to primitive savage observance, as well as Mr. J. G. Frazer's discovery of totemism among the Samoans, the writer concludes that the whole view deriving gods from totems depends upon accounts of Fijian and Samoan gods which are demonstrably erroneous, since totemism has not been discovered among the practices of Fiji or of Samoa. Mr. Andrew Lang having declared that he and Mr. Frazer freely allow that the evidence for sacrifice of the totem and communion in eating him "is very scanty," Dr. Tylor remarks that it "may be reasonable" to go a step further and suggest that

till the totem sacrament is vouched for by some more real proof, it had better fall out of speculative theology. Incidentally, our author also disposes of Dr. Jevons's ludicrous account of totemism as "a low form of Monotheism." The final conclusion is that "analogies, developments, or survivals of totemism into the religions of the old civilized world" should be postponed "until savage and barbaric animal-worship shall have been more strictly classified."

TAYLOR'S ENGLISH CONSTITUTION.

The Origin and Growth of the English Constitution: An Historical Treatise, in which is drawn out, by the light of the most recent researches, the gradual development of the English constitutional system, and the growth out of that system of the Federal Republic of the United States. By Hannis Taylor, LL.D. Part I. (xl and 616 pp.), 1892: Part II. (xlv and 645 pp.), 1898. Boston: Houghton, Mifflin & Co.

This is a second-rate book written by a second-hand thinker. 'The Origin and Growth of the English Constitution' is distinctly a second-rate work. But be it noted that this assertion is very far from being the same thing as the statement that Mr. Hannis Taylor has composed a treatise which under no circumstances could be of any value whatever. If 2,000 years hence it should have become as difficult to ascertain the details of English public life as it now is to understand the working of the Athenian Constitution, the discovery of Taylor's 'English Constitution' would be as important as the recent discovery of an Aristotelian account of the Athenian polity. If, again, it had happened that no one had up to the present day written a constitutional history of England, the appearance of Mr. Taylor's book would excite universal interest. Nor, even as things stand, is his treatise uninteresting. It is not so much a bad book as a book which is superfluous, because students can with ease obtain constitutional histories which are better worth reading than the two thick volumes which Mr. Taylor has seen fit to publish. For from whichever point of view you regard these volumes, they will be found to be of less value than other well-known writings.

Mr. Taylor's treatise, for example, is clearly not the result of original research. The writer has conscientiously read all the best-known books on the English Constitution which, during the last fifty years or more, have been published in England or America, or have been translated into English. The writings of Hallam, May, Stubbs, Freeman, Sir Fitzjames Stephen, Sir William Anson, or Professor Dicey, are well known to him. If we take as a specimen of his handiwork that part of his treatise which purports to deal with the growth of the modern ministerial system, we see at once that he has mastered the ordinary and best-known authorities for the period beginning with the accession of the Hanoverian dynasty; but a mere glance at Mr. Taylor's notes also proves that his reading has not deviated from the ordinary channels. Bulwer's 'Life of Lord Palmerston,' May's 'Constitutional History,' Macaulay's 'Pitt,' Sir J. F. Stephen's 'History of the Criminal Law,' the 'Rockingham Memoirs,' Lord Mahon's 'History of England,' Lecky's 'History of the Eighteenth Century,' and the like, are all writings which a man does

well to read; they are recommended, we believe, to the attention of undergraduates who seek to obtain a class in the history schools, either of Oxford or of Cambridge; and we should certainly consider that an undergraduate who had read all, or even two-thirds, of the books which Mr. Taylor refers to in his book vii., had read with industry and judgment, and, as regards one period of English history at any rate, might count upon a First Class. But the sort of work which is creditable to a student is not the kind of study which enables a man to claim credit for original research, or to stand in the same rank as, say, Stubbs, Gardiner, or Maitland.

Mr. Taylor, however, may urge, and with truth, that he makes no claim to have made original discoveries in the realm of English history. The candor, not to say the simplicity, with which he cites his authorities, disarms criticism. J. R. Green was, indeed, on some portions of English history which he had specially studied, an authoritative writer; but, at any rate as regards the later periods, he was no more than a brilliant, and not always a very judicious or accurate, essayist; he himself would have been amused to find himself treated as an authority for well-known facts or current anecdotes of the Georgian era. It is not, we may add, usual to refer in serious historical works to Whitaker. His Almanack is as useful and even as interesting a publication as can be bought for a shilling. But somehow its citation as an authority has about it to some minds something comic. However this may be, one thing is certain: original research is not the note of Mr. Taylor's work.

Let there, however, be no misunderstanding on this point. The fact that an historian relies on secondary authorities is no proof that he has not produced a history of real originality and of permanent merit. The doctrine, more or less openly inculcated in many quarters, that every man who writes an account of any period in the history of mankind, must of necessity consult for himself all the original sources of information, embodies a noxious delusion. It is an error to suppose that a man may not write much of the very highest value on the basis of information supplied to him by investigators who have themselves inspected the original authorities; and this delusion is noxious because it renders nugatory the labors of earnest investigators. If we cannot on many points take the results arrived at, for instance, by Stubbs or Gardiner as for many purposes final, it is absolutely impossible that historical knowledge should ever progress. The most ordinary common sense suggests that the fabric of historical science can never be raised to any height unless each successive generation can, subject to certain precautions, build upon the foundations laid by their predecessors. If, then, there were nothing more to be said in criticism of Mr. Taylor's workmanship than that he had not thought it necessary to test again for himself the authority for statements made, for example, by Hallam or May, it would still be perfectly possible that he should have produced a first-rate constitutional history of England. What is a more serious thing is, that, somehow or other, he has collected from his authorities only the most obvious and in many cases the most commonplace facts. But this again would be quite compatible with Mr. Taylor having achieved an

object which we suspect he aimed at. He might conceivably, without any knowledge drawn from original sources, and without having read any books but those open to every student, have given a thoroughly good summary of the conclusions arrived at by the many eminent authors who have especially studied the history and the working of English institutions. Such a masterly survey of the present condition of opinion and knowledge with regard to the English Constitution would have been of infinite value. Unfortunately this kind of general view is exactly what we cannot find in Mr. Taylor's pages, and the reasons why we cannot find it are worth noting.

The first is, that our author has, to all appearance, swallowed rather than digested the fruits of his reading. As we glance through his pages we see many references to dicta taken from other authors. Take, for example, a characteristic passage, intended, we presume, to sum up Sir Robert Walpole's system of government. We are told, as we fancy we have been told more than once before, that the great minister was determined that "the firm should be Walpole & Townshend, and not Townshend & Walpole." We are informed (on the authority, by the way, of Green's 'History of the English People') that Sir Robert said, "I will not be the Minister to enforce taxes at the expense of blood"; and Walpole's general attitude towards public affairs is summed up in words taken from Carlyle's 'Life of Frederick of Prussia': "He had one rule, that stood in place of many: To keep out of every business which it was possible for human wisdom to stave aside. 'What good will you get out of going into that? Parliamentary criticism, argument, and botheration! Leave well alone.'" Carlyle's invectives, we may remark parenthetically, of which the value, if any, was hortatory and transitory, are as unsuitable for embodiment in a calm and judicial estimate of Walpole's character as can be words uttered by any writer of eminence. But the point on which it is necessary to insist is, that Mr. Taylor's habit of collecting together scraps from the different writers whom he has read is absolutely fatal to the attempt to analyze and express the results of their speculations. It is the device of a man who does not know what analysis means, and is closely connected with the second cause of Mr. Taylor's failure to produce a sketch, so to speak, of the results obtained by other writers. He shows no signs of possessing either the command of style or the logical lucidity, both of which are necessary conditions for the production of a bird's-eye view of historical periods. For the task of summing up the essential results of much reading in a few brilliant pages is not impossible to perform. Boutmy's 'Le Développement de la Constitution et de la Société Politique en Angleterre' is not half the length of one of Mr. Taylor's ponderous volumes, yet it gives a brilliant sketch of the whole development of the British Constitution. Mr. Goldwin Smith has compressed together in 301 pages almost everything that is interesting and important in the annals of the United States. Few, however, it may be urged, are the writers who possess the exquisite lucidity of Boutmy or the epigrammatic terseness of Mr. Goldwin Smith. Let us compare Mr. Taylor with a writer who makes no claim to special gifts of style. Take Mr. Taswell Langmead's single volume; it is not a brilliant

performance; it is intended for the use of students. We venture to say that, as a summary of the ordinary facts of English constitutional history, it is a more serviceable and better book than Mr. Taylor's treatise.

Mr. Taylor is essentially a second-hand thinker. The expression "second-hand thinker" is open to legitimate criticism, but it conveys a meaning which is not as easily expressed by any other well-recognized term. A second-hand thinker is a speculatist (to revive a word used by Dr. Johnson) who repeats or reëchoes opinions which he has learned from others, and is to be contrasted with theorists who, whatever the intrinsic value of their speculations, think for themselves and look at things with their own eyes and not through spectacles lent them by their neighbors. It is, be it remarked, quite possible that a second-hand thinker may write books of real value. He may summarize with great success the opinions of his time; he may reiterate and thus impress upon the world truths which have not yet become truisms, or which are in danger of being underrated just because they have received general acceptance. A man of originality, on the other hand, who thinks for himself, may, and sometimes does, think wrong, and his writings may turn out little better than a collection of paradoxes or fallacies which have been rejected by the sound sense of mankind. Still, the difference between the theorist who does really think for himself, and the thinker who merely adopts the ideas of others, is a distinction of profound significance. What it amounts to may be seen if we put Montesquieu side by side with Blackstone. The illustrious Frenchman and the Commentator are both authors of extraordinary merit; they are both masters of style. But if a critic asks why Montesquieu is placed high among political thinkers, while Blackstone, in spite of his extraordinary gifts, can hardly claim to be more than one of the most distinguished among England's men of letters, the answer is obvious. Montesquieu, through his speculations are occasionally quite unsound, thinks for himself and generally thinks rightly. Blackstone, on the other hand, as a constitutionalist, with which aspect of him alone we are now concerned, does little more than adopt and repeat the ideas of Montesquieu, or, rather, the ideas which, under the influence of Montesquieu, had, when Blackstone wrote, become current in France and in England. The one is an inventor, the other is an imitator. Now there undoubtedly have been periods when writers on the English Constitution who repeated and propagated theories which they did not themselves originate, have rendered material service to the world. Blackstone, Hallam, even May (that very dearest of constitutionalists) made generally known facts or theories which had not yet been adequately forced upon the attention of the public. Indeed, of Hallam it may be said that, though his thoughts are commonplace, his general conception of constitutional history exhibited real originality. But there has now ceased to be any legitimate place for writers who can do no more than narrate the well-known facts of English history, or reiterate the truisms, commonplaces, or platitudes which infest the whole realm of constitutional law. True it is, as pointed out by Bagehot, that on the English Constitution "much still remains to be said," but the important things which remain to be said are new things, and not the trite thoughts which

can be picked up by your second-hand thinker.

Now the most marked characteristic of Mr. Taylor's work, to judge his book, as it may fairly be judged, by his reflections on the English Constitution since the accession of the Hanoverian dynasty, is that his writings never even by chance reveal a new way of looking at well-worn subjects. The title, it is true, of his treatise shows that when he began writing he had got hold of what is certainly a new, and might have proved in other hands a fruitful, conception, viz., the growth of the Federal Republic of the United States out of the English system of government. Unfortunately, Mr. Taylor seems incapable of turning to account an original idea. The introduction, indeed, to his first volume contains a good number of remarks taken after our author's manner from a lot of other writers on the English origin of the American Republic. But these scattered reflections tell the reader very little which is not common knowledge. What, however, is a more serious matter, Mr. Taylor, as far as we have remarked, except in his introduction, loses hold of the relation between English and American institutions. When dealing, at any rate, with the reign of George III., he writes exactly as would the most commonplace of English historians who had no special knowledge of the United States or of its institutions. His treatise, in short, as regards the reign of George III., is the work of a man who has docilely accepted, for good and bad, the received doctrines of English Liberalism.

In nothing does the commonplace character of his second-hand thinking more clearly appear than in his treatment of Parliamentary reform. He, of course, dwells on the anomalies of Parliamentary representation during the eighteenth century. He repeats for the twentieth time all the commonplaces about the rotten boroughs, the sale of seats, and the like, and he does not even incidentally add a single item to the knowledge of any readers who are acquainted with the best-known authorities for the Parliamentary history of the last century. But Mr. Taylor, while he reiterates statements which hardly bear repetition, lays little or no stress at all on two considerations which, though obvious, are constantly overlooked. The first is, that the unreformed Parliament, with all its anomalies and abuses, did, at least during the eighteenth century, reflect the sentiment of the nation, and on this very account commanded the admiration of a critic as independent and intelligent as Paley. The second is, that there were at different periods two totally different schools of reformers. The ideas of Parliamentary reform carried into effect for a moment at least by Cromwell, and more or less adopted by Chatham and by Pitt, differed essentially from the ideas embodied by the statesmen of 1832 in the great Reform Act. The wish of the earlier reformers was to transfer power from the towns to the country. The later reformers increased, and wished to increase, the power of the great towns. Both the considerations to which we have referred are, we doubt not, well known to Mr. Taylor, and may, for aught we know, be noted in some page of his lengthy volumes; but to have forced them upon the attention of his readers would have involved some slight amount of original thinking, and would have been quite foreign to the genius of a man whose nature prompts

him to repeat the truisms he has learned from the works of known and respectable writers. Why, indeed, a writer who simply repeats others should have been misguided enough to add another book to the already too long list of English constitutional histories, it is hard to say. But if Mr. Taylor has in this matter made a blunder, even his mistake is untainted by originality. There lived in the last century a gentleman mentioned, if we mistake not, by Dr. Johnson, who wrote a book to tell all the world what all the world had for the last twenty years been telling him.

THE INDIAN FAMINE.

A Tour through the Famine Districts of India. By F. H. S. Merewether, Reuter's Special Famine Commissioner. Philadelphia: J. B. Lippincott Co. 1898.

No manner of American man can have failed to learn something about the famine of 1896 in India. Readers of the *Cosmopolitan* cannot forget articles by Julian Hawthorne, who, specially commissioned by that magazine, had in the first months of 1897 travelled widely where the Indian dearth was most destructive. Hawthorne proclaims that Mr. Merewether was "the only man he met in India whose statements concerning the famine could be entirely relied on." This testimony must insure Mr. Merewether a candid hearing. It was called for to render his words as credible as his photographs.

The famine tour of our author outside of Bombay lasted sixty-seven days, during which, in traversing five thousand miles, he stopped at a score of starvation centres. His investigations were in the service of Reuter's Telegraph Company. He interviewed functionaries in every province to whom he was accredited. Besides, he independently penetrated into hospitals, poorhouses, and relief works. Whatever this looker-on learned during a day was often telegraphed across a quarter of the globe, and the next morning read in the *London Times*. More of his telegrams, and letters as well, were dispatched to Bombay gazettes, and told of his progress in melancholy research. The volume before us, growing out of this nucleus, betrays haste and a literary carelessness surprising in an Oxonian, so that it recalls the old Greek courier who ran well but arrived too much exhausted for fitly announcing his tidings. Though the famine investigator had been already five years in India, he had seen little of its interior. It was, therefore, natural that he should dilate upon the national marvels and peculiarities which were forced upon his attention. His pages of this nature (which are not few) are instructive and pleasant reading. They help to save us from supping too full of horrors. But there is less excuse for such padding as multitudinous needless native words—and those not always interpreted—as well as half a dozen pages about taking a midnight train at a flag-station, or some hours' delay where a train was off the track, etc.

The famine of 1896-7, with the diseases it engendered, as Hawthorne and others held, produced eight million deaths, and was the most destructive chronicled in the annals of British India. Such a mortality had appeared impossible in view of the safeguards against it which had been preparing for a generation—especially irrigation-wells, canals, and tanks, as well as facilities for

transportation. More than twenty famines had occurred within the century, and few of them had proved too colossal for provincial authorities to deal with. Hence rumors in 1896 of unprecedented starvation which rung in the ears of Indian magnates, long made little impression. Towards the close of that year, when such reports had startled the British public, their Oriental representatives were charged (and not without reason) with culpable incredulity, tardiness, and inefficiency. They had been hoping against hope for the early and then for at least the latter rain. The vice-regal authorities were not moved to action as they should have been by Indian physiography. Two-fifths of the country is beyond hope of irrigation. Water for storage-reservoirs is there wanting, as Pennsylvanians found it on Alleghany heights when they needed it for canal feeders. Harvests there without rainfall are as hopeless as in Egypt when the Nile floods fall. If the heaven is brass the earth will be iron. It could not long be denied that the famine had been underrated, and by a natural reaction a sort of panic set in, both in India and in England. Half the population and more of the business of Bombay vanished when plague followed in the footsteps of famine. At this crisis, when Reuter's patrons demanded the truth—nothing extenuated, nothing exaggerated—he selected Mr. Merewether from a crowd of reporters to learn the exact facts and to make them known with all possible dispatch.

His was a sadder pilgrimage than Dante's through the "Inferno." It lasted more days than the hours of the Italian's. The culmination of the one in the starvation of Ugolino and his four children was repeated a million times in the other. Shakespeare's lowest deep, that "man's life's as cheap as beast's," is nothing to the lower deep which here opens. A mother who forgot her sucking child so as to have no compassion on the son of her womb when his tongue was cleaving to the roof of his mouth, was no more the strange thing the Hebrew prophet had thought it. Nor yet were eyes that consumed away in their sockets within skeletons who still stood on their feet. Photographs from the Merewether kodak present these abhorred ingredients to the eye beyond the power of words, and beyond imagination in Dante's chambers of imagery. The investigator's credentials gave him an inside view not only of the desolations which had been wrought, but, what is more, of the manifold endeavors to stay them which were on trial. His journeys were mainly by night, and, thanks to this economy of time, he could, within sixty-seven days, furnish an eye-witness's reports regarding starvation and relief at nearly thirty points of darkest India, and those dotting an area two or three times as large as the British Islands.

His first and last discovery was what all men know and what no man really feels, that whatever was doing would have done a more perfect work had it been begun sooner. He says that in provinces equally pinched the famine "butcher's bill was no more than a tenth as large where relief came early as where it came late" (p. 292). The same truth was exemplified in individual sufferers. When taken into hospitals, it was found with surprise that many had been unawares fatally famine-struck, and were beyond hope. When at length the Indian Government clearly saw the immensity of the

task before it, its spirit mounted with the occasion. But haste sometimes hindered good speed, and, on the contrary, "monumental red-tapeism" (our author's phrase) bound relief measures in chains and fetters of iron. The truth is, that no wealth or power, no skill or good will, could now say to the famine, Thus far, no further. But relief works were forthwith established. These were on a gigantic scale. One, for its supply of small copper coin, required "an almost continuous service of an elephant train" (p. 148). Another was a camp which showed 50,000 men working in one body. "It was soon found, however, that the herding together of such a mass of human beings was flying in the face of Providence, and invoking the appearance of the dread cholera demon" (p. 261). Religious crowds, matted and massed together like a swarm of bees, are found in every sacred city of India whenever famine appears. The present writer was caught at Kumbhakomam (interpreted "mouth of the water-jar") in an army of pilgrims which filled the city, importuning the rain goddess there enshrined to grant the one thing needful for their withering crops. There was no hotel, no Government bungalow, no station lodging, and no train for escape by railway. Allowed to sit up all night in the stifling waiting-room, he heard hundreds gathered round the station for an early train praying and walling without ceasing all night long. In such throngs, Indian plagues are generated and propagated, just the same whether assemblages are sacred or secular.

Monster camps were perhaps a temporary necessity. They did great good, but their operations were attended with much immediate waste and many ultimate evils. At the end of February, 1897, 2,948,086 persons were maintained at such establishments. The water supply was often poisoned at its sources by the sewage of the neighborhood, the shelter was only what could be built by the laborers in two days allowed them for that purpose, and the clothing only the rags which they had been unable to sell. They complained much of cold to Mr. Merewether. How much they suffered can be understood by those who, like the writer, have there within twenty-four hours felt equally afraid of sunstroke and of freezing. Thermometers are no measures of feeling. The highest ideal of sanitation is to "smear a room daily all over with cow-dung."

The wages paid at relief works were variable, rising and falling with the cost of the cheapest vegetable food in local markets. Had pay been higher than the purchasing power of such a ration, the seekers for it would have been beyond arithmetic. The results of work done often turned out to be no more than one-fifth of what was common in ordinary contracts. Drones were safe. The penal ration was no deterrent. It could not be reduced much below the maximum, or starvation would follow—it did follow many times when there was no reduction. The dole dispensed by the head paymaster was more or less intercepted on its way down to the workman, and became like a sand-swallowed river which is smaller at mouth than at source. At one relief station, where the daily disbursement was four hundred and fifty rupees, it was ascertained that less than half of it was expended by the laborers for food—and nothing for luxuries. What became of the residue? In the judgment of the local treasurer it was embezzled by underling intermediaries, some

of whom were detected in the presence of Mr. Merewether.

Relief stations of the largest size were found inexpedient and were quickly broken up. They were infected with the curses of the military camps from which they often borrowed the name. Not being a necessity, they had no excuse for existence. In several, however, of considerable dimensions, Mr. Merewether found much to praise. It had been urged that wages could never be paid daily in one of them, but he says: "I saw 6,500 people paid in half an hour" (p. 282), and details the process. Again, he saw rivalry excited between competing gangs through an appeal to the native love of pomp and circumstance. The gang who during a week had yielded the greatest out-turn of work, were for the next week solemnly escorted to and from their task by the beat of a drum, and a professional *tom-tomist* had been specially engaged to relieve the monotony of the work with soul-inspiring music (p. 263).

All through Mr. Merewether's painful pilgrimage in famine districts the question what to do about it and how to do it was always before him. His conviction became firm that the system of public relief works ought to lose ground, and that of village relief ought to gain the ascendancy. He shows village relief as propping the wall of society where it is weakest in time to keep it from falling—saving villagers from selling cattle and tools, clothes and furniture, at ruinous sacrifices, from eating their seed-corn, and snapping asunder all home ties—at last selling themselves into coolie servitude beyond the sea. He shows up the grand works as disintegrating villages (which are preëminently the units of Indian life) as fatally as any band of kidnappers could. Such unwieldy works multiply the dangers of fraud and oppression; they employ villagers on improvements in which they cannot feel the interest they would in those at home. Hence they obtain only half-hearted service. They cannot lift up hands that hang down nor strengthen the feeble knees. To revive the villages which they have killed is now the hardest governmental labor.

Christian missions as humanitarian institutions in India have never come to the front as in these years of scarcity. Their praise is not only in the writings of Merewether and Hawthorne, but in the mouths of English officials who had ignored or despised them. No other whites except the missionaries are in touch with those whom famine pinches most. None are at all fit to be wardens of orphans now more numerous than ever. None can make a little money leaven so vast a mass. No class can be so safely trusted as honest and wise almoners of bounty.

Historic Towns of New England. Edited by Lyman P. Powell. Putnam. 1898. Pp. 598.

Historic Pilgrimages in New England. By Edwin M. Bacon. Boston: Silver, Burdett & Co. 1898. Pp. 472.

The present fad for patriotic and historical societies—"Sons," "Daughters," and "Descendants" of every one and everything—is doubtless responsible for the new crop of guide-books and annals. We have before us specimens of the two classes into which such books can be divided. 'Historic Pilgrimages in New England' is the work of a single writer. 'Historic Towns of New England' is

made up of sketches of Portland, by S. T. Packard; Rutland, by E. D. Mead; Salem, by G. D. Latimer; Boston, by T. W. Higginson; Cambridge, by S. A. Elliot; Concord, by F. B. Sanborn; Plymouth, by Ellen Watson; Cape Cod Towns, by Katherine L. Bates; Deerfield, by G. Sheldon; Newport, by Susan Coolidge; Providence, by W. B. Weeden; Hartford, by Mary K. Talcott; and New Haven, by F. H. Cogswell. The thirteen sketches in this latter volume are supposed to have been edited by Lyman P. Powell; and the introduction, by G. P. Morris, has the singular advantage of being so entirely disconnected from the rest of the book as to be equally serviceable hereafter as the preface to any other book. Some, at least, of the remaining contributors to this miscellany have a literary reputation, but none have added to it by their present work. We mean by this that no one of these essays shows the slightest evidence of the hand of a master, nor any sign of that complete devotion to a subject which forces the author to write because he has a story which he must tell. We have said that Mr. Powell is supposed to have edited the book; on reconsideration, we conclude that he, or some one man, has really edited it with a flowing pen and a keen pair of scissors, as otherwise a dozen individual writers could not have maintained such a placid—we had almost said dreary—uniformity of style and treatment. We can, however, cheerfully praise the illustrations, which, though not specially new in subject, are a relief to the text.

Mr. Bacon's volume is a guide-book of modern type, covering the history of various places near Boston, and of course largely devoted to that of the capital city. There is a show of information elicited under the pretence of rambles made by the author for the edification of a young companion, but the fiction is not amusing nor well maintained. Still, we prefer the guidance of Mr. Bacon, whose pen has for years been in constant use in many fields of literature, to that of the syndicate responsible for the other volume.

The trouble with such books as these is that there are too many rivals in the field. Take Boston, for example, as a subject. There is scarcely anything new to be said on the points handled in all alike. The old houses have left no traces, the few surviving portraits have been reproduced to satiety, and the quotations from a few authorities are, as Macaulay would say, familiar to every school-boy. Although the town records have been published by the liberality of the city, no compiler of these books takes the trouble to read and digest this new material, to discover and bring to light important facts. Instead, we have a rehash of the old stock pieces, Gov. Winthrop, Peter Faneuil, Benjamin Franklin, and Samuel Adams; the Beacon Hill and Faneuil Hall, the Tea-Party and the Boston Massacre. It is surely time to demand a surcease of the old, old stories, and the exercise of a little of the true spirit of historic inquiry. There is more value in the essays of Mr. C. W. Ernst on the development of municipal government in Boston, brief and disjointed though they be, than in a hundred of these beautiful volumes, the product of the camera and the engraver. The fact that the ward system began with division of the town between the various scavengers, in order to establish health regulations, becomes of stupendous importance when we consider that hence came the local militia, the fire-system, and other forms of local gov-

ernment, which so influenced the public mind that they resulted in city government and the gradual evolution of ward politics and ward bosses.

And yet, in view of the fearful degeneracy of the daily press, we may rejoice that our children are supplied with clean and attractive literature in books like these. Perhaps here and there the seed will take root, and a crop of true historians will arise.

Doctor Pascal. By Émile Zola. Translated by Mary J. Serrano. Macmillan. Pp. 491.

'Doctor Pascal' is the last of the Rougon-Macquart series to which M. Zola has devoted the greater portion of his literary labors, and contains, as is fitting, a larger measure than any of its predecessors of the author's theory of practice, his philosophy of life. Heredity has been the topic of the series from the beginning, the heredity of the Rougons and the Macquarts worked out under the conditions in France in the Second Empire; and Doctor Pascal, the son (as the student of M. Zola will recollect) of Madame Félicité, studies the family tree of the Rougon-Macquarts as M. Zola himself had studied it, and announces M. Zola's deductions. Whether those deductions were anticipated by M. Zola at the time when he began the exposition which has reached its completion in them, the critic may well doubt.

There have been from the first two persons in the unity of M. Zola's inspiration, the bard and the doctrinaire, and they have belonged always to different philosophical camps, and had different periods of predominance. In M. Zola's earlier novels the bard is predominant, and the bard is "positive," as the French say, and pessimistic. In M. Zola's trilogy the doctrinaire is predominant, and the doctrinaire is optimistic and mystical. 'Doctor Pascal' marks the transition from the earlier novels to the trilogy, and is the masterpiece neither of the bard nor of the doctrinaire, but the indispensable commentary on the masterpieces of both.

"Ah, this heredity! what a subject of endless meditation to him!" M. Zola exclaims of his hero. "The strangest, the most wonderful part of it all, was it not, that the resemblance between parents and children should not be perfect, mathematically exact? He had, in the beginning, made a genealogical tree of his family, especially traced, in which the influences from generation to generation were distributed equally—the father's part and the mother's part."

Out of evil, fatally, evil comes; there is the tragedy, done to the bard's hand, and the finished pessimism. "But the living reality contradicted the theory at almost every point. Heredity, instead of being resemblance, was an effort towards resemblance thwarted by circumstances and environment"; there is the possibility of optimism and of the infinite approach to the perfecting of man. "Atavism he doubted; it seemed to him, in spite of a remarkable instance, taken from his own family, that resemblance at the end of two or three generations must disappear by reason of accidents, of interferer, of a thousand possible combinations." It is doubtful whether any man of equal abilities, unless it was M. Zola's master, Honoré de Balzac, ever "paid himself" with scientific speculations so flimsy; between the bard and the doctrinaire there is little to choose, but the relation between them in M. Zola's mind is not obscure.

"The wisdom of God hath methodized the course of things unto the advantage of good-

ness, and thinking considerators overlook not the tract thereof," wrote Sir Thomas Browne in the seventeenth century; and M. Zola in the nineteenth has no other message to deliver, and, in spite of his parade of positivism, has no credentials to offer beyond the simple faith that is in him.

"Perhaps he, too [Doctor Pascal], had been only a dreamer, for he had dreamed the most beautiful dreams, the final belief in a better world, where science should have bestowed incalculable power upon man—to accept everything, to turn everything to our happiness, to know everything, and to foresee everything; to make nature our servant, to live in the tranquillity of intelligence satisfied. Faith in life, voluntary and regular labor, would suffice for health. Evil was only the unexplained side of things; suffering would one day assuredly be utilized."

And the book reaches its climax and its close in a scene ten months after Dr. Pascal has died, worn out with labor and devotion to his studies. Clotilde, his niece, and the mother of his posthumous child,

"glanced involuntarily at the ancestral tree spread out beside her. Yes, the menace was there—so many crimes, so much filth, side by side with so many tears and so much patient goodness. . . . And after so many terrible Rougons, so many vile Macquarts, still another had been born; life did not fear to create another of them. . . . Even at the risk of producing monsters, it must of necessity create, never wearies of creating, in the hope, no doubt, that the healthy and the good must one day prevail. . . . A mother nursing, was she [Clotilde] not the image of the world continued and saved? She bent over, she looked into the child's limpid eyes, which opened joyously, eager for the light. . . . Again came a distant burst of music. This must be the apotheosis, the moment when Grandmamma Félicité, with her silver trowel, was laying the corner-stone of the monument to the glory of the Rougons. The vast blue sky seemed gladdened by the Sunday festival; and in the warm silence of the workroom Clotilde smiled down at the child still nursing, his little arm flung straight up in the air like a banner of life."

Manila and the Philippines. By M. A. Hamm. F. T. Neely. 1898.

And now Margherita Arlina Hamm has given us the latest book on the Philippines, which makes the fourth on the same subject since the battle of Manila Bay. It is dedicated "to Rizal and Aguinaldo, the dead martyr and living hero," and the preface states that the context is based on notes made by the author while a resident and traveller in the Far East, some of which have already been used in newspaper correspondence. The volume contains a chapter on Luzon, one on Manila, several on the manners and customs of the people, architecture and shops, one each on Iloilo, Cebu, and Sulu, and a dozen on the inhabitants of the archipelago, the animal world, mines and minerals, typhoons, and the outlying islands. The author goes into many minute details about local peculiarities in custom, construction, and mode of life, which range all the way from the stitching used in making pineapple-cloth to the abuses which brought about the brotherhood of the Kapipunan and revolution of 1896. She concludes her book with a chapter on the future of the Philippines, in which we read that this depends chiefly on the great Powers of to-day. She states that the soil is rich, the climate salubrious, the harbors on the coast safe, and the archipelago capable of supporting a hundred million human beings in comfort. Miss Hamm thinks that the only things needed are justice and wisdom to make the

Filipinos develop into importers of shiploads of flour, textiles, rails, preserved meats, boots, shoes, and machinery.

The author seems to have got together a good deal of specific information about these much-discussed islands, but we do not take it for granted that she has personally examined many of the conditions of things which she describes. She has read well, talked with others who have seen more than she has, and does not doubt for a moment that, after the exercise of justice and wisdom, steel rails will flow into the country, the natives will change their diet from rice to canned goods, and suddenly take to wearing gloves and shoes, and the whole archipelago will teem with prosperity and commerce. Since the author speaks of the climate as salubrious, it is not to be supposed she has remained in the islands long enough to suffer from climatic maladies that dampen enthusiasm. While her production is purely that of a correspondent, it makes interesting reading, and its 218 pages contain both information and anecdote. It is cheaply manufactured, and contains twenty-three illustrations.

The Wild Fowl of the United States and British Possessions. By Daniel Giraud Elliot, F.R.S.E., etc. Francis P. Harper. 1898. 8vo, pp. xxii, 316, frontispiece portrait and 68 plates.

We should have more to say of this excellent work were it not that we reviewed Mr. Elliot's two previous volumes at considerable length, and all that we have said of them is equally applicable, *mutatis mutandis*, to the present case. By the "Wild Fowl" of the title Mr. Elliot means the *Anatida*, or family of the swans, geese, ducks, and mergansers, of great economic importance and of special interest to sportsmen. His previous books, to which we have referred, were respectively upon the *Limicola* or shore birds, and the *Gallina* or order which includes poultry; each of which groups is comparable with the *Anatida* in the points just said. The three together possess probably greater attractiveness to a larger number of persons than all other birds put together; and the "trilogy" now completed may be rated as one three-volume work, of uniform excellence throughout. The numerous illustrations of the Wild Fowl are mainly by the same artist, Mr. E. L. Sheppard, to whose merits and what we consider his limitations we have before referred; but in the present instance the author has collaborated to some extent in producing the plates. The frontispiece will be recognized by Mr. Elliot's many friends as the very man they know intimately—the naturalist himself, as distinguished from the man of the world and of affairs represented in the portrait which has hitherto had a wider circulation. This presentment may be held to atone for the versification with which our genial author has been tempted to open and close the present volume. *Non omnes omnia possumus*—which may be taken to mean that there is not a 'possum up every gum-tree.

Mr. Elliot shows in this instance more clearly than before his superiority to that rule of thumb of A. O. U. Code which dictates that original misspellings of generic and specific names shall be inviolate for ever, and is justly severe upon those whom he styles the advocates of illiteracy—those whom Dr. Coues calls "impurists" when they

twit him with being a purist. He has perhaps twenty departures, in this single family *Anatida*, from the supposed established nomenclature of the A. O. U. Check-list, some of the changes being merely orthographic, others affecting the status of genera and species or subspecies. We are satisfied that most of these innovations are sound, and anticipate with confidence their prompt adoption by the Committee on Nomenclature which holds the fate of all names in the hollow of its collective hand. One neat point Mr. Elliot makes is that *Horelda*, usually unexplained and supposed to be a nonsense word, is an original misprint for *Harelda*, derived from a Scandinavian or Icelandic word meaning "sea-duck." The etymology of *Brenta* from *Apator*, Greek name of some water-fowl, is also correctly given, as are the unwonted but proper spellings of *Æs* for *Ais*, *Æthyia* for *Aythya*, and *Edemia* for *Oidemia*. Perhaps we may some day discover an etymon for Leach's term *Dafila*, but it still remains a mystery, if not mere nonsense.

The Bayeux Tapestry: A History and Description, by Frank Rede Fowke. London: George Bell & Sons; New York: Macmillan. 1898.

In the little museum connected with the public library of the town of Bayeux in Normandy is preserved a very remarkable piece of embroidery. This is more than 200 feet long, and about eighteen inches wide; a piece of linen upon which a long series of designs have been worked with the needle and in worsted. It is admitted on all hands that the subject of the embroidery is the invasion of England by Duke William of Normandy, the details of the Battle of Hastings, and the conquest of the country. The only serious dispute is as to whether the work is absolutely contemporary with its chief actors, or is of a somewhat later epoch. The name commonly given to it in English, "the Bayeux Tapestry," is, of course, a mis-translation of the French *Tapisserie de Bayeux*; in no sense is it a tapestry, using that word with the common English meaning. The prefatory chapter of the volume under consideration relates the story of this monument of old time, and states the arguments for its greater or less antiquity, and for and against the old tradition that Queen Matilda directed its manufacture. The final sentences of this history (p. 23) give the reasons for the author's conviction that it was originally a church work. "I conclude," says Mr. Fowke, "the tapestry to be a contemporary work in which Queen Matilda had no part, and that it was probably ordered for his Cathedral by Bishop Odo, and made by Norman work-people at Bayeux."

The authentic documentary record of the tapestry dates back not so very far. In 1562, when the cathedral at Bayeux was pillaged by the Huguenots, the embroidery was concealed for awhile, apparently in the town hall, and afterwards restored to the church, where it was used for decoration. Being there, it was naturally disregarded as an historical monument, or as a work of art, by the people of the sixteenth, seventeenth, and eighteenth centuries, but Montfaucon's famous work contains a drawing of it, and at that time (that is to say, about 1730) papers were read about it, and discussion grew somewhat interesting. It went to Paris in revolutionary times, after having risked destruction as a thing of no consequence. In

Paris it was somewhat celebrated; it came back to Bayeux on the fall of Napoleon, and then it was adjusted, like a modern movable panorama, and relied upon two cylinders. It is only since 1843 that it has been securely placed and cared for in a serious way.

So much for the history of the piece in modern times. As to its character, its purpose, the record contained in it, the curious information it gives concerning costumes and armor—the rest of the book is devoted to it. The text from page 25 to 136 contains a description of each picture which has been selected by the author from the continuous band of decoration. Then follows an index, and then a series of seventy-nine half-tone plates, reproducing with some success, and on a scale of two-ninths of the original, the parts which, as above stated, were selected for analysis. The volume, therefore, is a piece of history of singular value to those who have not ready access to larger and fuller reproductions, or to the piece itself, and it also serves as a very faithful and fairly complete guidebook for the famous embroidery.

With Peary near the Pole. By Elvind Astrup. Philadelphia: J. B. Lippincott Co. 1898. 262 pp. 8vo. Ill'd.

Mr. Astrup will be remembered as the companion of Peary during the adventurous and successful journey to the northern border of the Inland Ice, and also as a member of the second expedition which in 1893-4 attempted to continue these explorations, but was defeated by exceptional bad weather that made it impossible to carry out Peary's plans. The present volume is a translation from the Norwegian original, by Mr. H. J. Bull, and is well illustrated from sketches and photographs by the author.

It might be supposed that the volumes already published by Mr. and Mrs. Peary must cover everything of interest connected with

the expeditions, and that the present one was, therefore, superfluous. We were agreeably disappointed to find that this was not the case. It is, of course, true that the essential facts of their work, with the fullest detail, are contained in Mr. Peary's volumes. But Astrup's story not only gives in compact form the outlines of the work done by the expeditions with which he was connected, but adds to this the details of an important exploration of the shores of Melville Bay made by him in person, and also some very fresh and entertaining observations on the natives of this desolate region. Without literary pretension or tendency to gush, the author has told his experiences very happily. His personal enthusiasm and interest in his work are conspicuous on every page, and make his book pleasant and interesting to the reader. Indeed, for the average reader, who is not an Arctic expert and does not care for minute details of travel and outfitting, we feel justified in recommending this little volume as the best and most interesting account of its subject that has yet been printed. A large proportion of it is devoted to the Eskimo of Northwest Greenland, whose good qualities are frankly recognized and heartily appreciated.

It has always been cause for regret that no trained anthropologist formed one of the members of the various expeditions which have wintered in the vicinity of Cape York since the *Polaris* expedition, and that Bensen's volume on the Eskimos of this region has never been available in translation. These Eskimos are certainly one of the most interesting groups of people known to the ethnologist, on account of the extraordinary isolation in which they have existed until very lately. Yet no monographic study of them has been made, and, until the publication of the book now under review, their social characteristics have been almost wholly ignored in the reports of explorers. The account given by Astrup is not

profound or monographic, but it does contain a great deal of welcome matter, although the work of an untrained observer.

The book is handsomely printed and well illustrated; but the map of Greenland is roughly drawn and there is no index.

HAVE JUST PUBLISHED:

Canfield's French Lyrics.

Edited by Professor ARTHUR GRAVES CANFIELD of the University of Kansas. xxii+408 pp. 16mo, \$1 net.

Over 240 of the best French lyrics since the Renaissance, with a particularly full representation of the nineteenth century. Over sixty poets are represented, among them the following (the number of poems bracketed after each): d'Orleans (5), Villon (3), Ronsard (7), Du Bellay (8), Malherbe (3), Racine (1), Rousseau (1), Ruyet de Lisle (1), Chénier (3), Arnault (1), Chénier (1), Desaugiers (1), Rodier (1), Béranger (1), Lamartine (12), de Vigny (1), Musset (13), Baudelaire (1), Leconte de Lisle (1), Lemoine (2), Verlaine (1), Daudet (2), Cazade (1), Verhaeghe (1), Bachelard (1), and biographical.

The above is a Companion Volume to
Kleuze's Deutsche Gedichte

Edited by Prof. CAMILLO KLEUZE of Chicago University. With portraits. xiv+591 pages. 16mo, 90c. net.

Over 250 of the best German ballads and lyrics (including a few student and popular songs) representing fifty poets. The introduction sketches the growth of the German ballad and lyric and touches on its relation to their English poetry and to music. The notes chiefly place the selections in the lives of the poets and smooth textual difficulties.

N.B.—Buyer of the above books may be had also at the publisher's Chicago branch, 878 Wabash Ave.

Haydn's Dictionary of Dates.

Haydn's Dictionary of Dates relating to all Ages and Nations, for Universal Reference. Comprehending Remarkable Occurrences, the Foundation, Laws, and Governments of Countries—Their Progress—Their Achievements and their Institutions. *Twenty-second Edition. Containing the History of the World to the Autumn of 1898.* By BENJAMIN VINCENT. 8vo, \$6.00.

This is the most comprehensive and reliable book of reference in this department ever published. It stands entirely by itself. "For a reference library, public or private, the first work selected should be 'Webster's International Dictionary'; the second, 'Haydn's Dictionary of Dates,'" says an eminent scholar.

"The 'Dictionary of Dates' has won a great reputation, and this new edition will sustain and extend it. The book is what it professes to be: a dated cyclopedia, a digested summary of human history, brought down to the eve of publication." "Considering the size of the work, its up-to-date-ness is something astonishing."—*London Spectator*.

Beg to announce the third large edition of Mr. Watts-Dunton's new romance. The TENTH edition is now ready in England.

"AYLWIN"

12mo, Cloth, \$1.50.

THE BOSTON TRANSCRIPT:

In this novel there has been no disappointment. The poetical thought, the light and shades of character, the picturesque quality, engage the interest from page to page, and over all there is the rarest charm of style, something so limpid, frank and cheerful, that it makes an extraordinary impression on even the *blast* reader. . . . Sinfi Lovell is a splendid creation.

THE PHILADELPHIA TELEGRAPH:

Its greatest charm is its delightful, vivid, all-absorbing romance. Its study of the tender passion has never been surpassed for fire, tenderness and heart. Sinfi Lovell is the greatest heroine of recent fiction, and one is inclined to believe that she will come to hold a place among the heroines of enduring literature.

ARTISTIC FRAMING.

The Nation.

NEW YORK, THURSDAY, JANUARY 26, 1899.

The Week.

The action of the House committee on coinage, weights, and measures in agreeing to report a radical measure for the reform of our currency system is a political event of great significance. The bill is long and elaborate, but its most important features are those which explicitly establish the gold standard by provisions that the gold dollar shall be the standard of value in the United States, that all obligations of the United States shall be payable in gold unless otherwise stipulated, and that no more silver dollars shall be coined, except from the silver bullion now held in the Treasury against the silver certificates or Treasury notes issued under the act of July 14, 1890; with other provisions for the gradual retirement and cancellation of all United States notes and Treasury notes. The most important consideration about this action of the House committee is the fact that its Republican members are united and earnest in support of the measure reported. They believe in the gold standard, and they are not afraid to say so openly. They hold that there should be no further coinage of silver dollars, and they are ready to provide by law that there shall not be. They are convinced that the greenbacks ought to be retired, and they are anxious to pass a law which will force the retirement of this currency. That this bill will pass Congress during the present session is not to be expected. Its supporters doubtless do not anticipate that it will get through even the House. Nevertheless, it is a great thing to get all the Republican members of a financial committee out in open support of so "flat-footed" a measure of currency reform. We have never secured from any representative body of the party in Congress so positive and commendable a proposition for permanent currency legislation as this.

The so-called Nicaragua Canal bill, which passed the Senate on Saturday, is really a bill to build a canal across the isthmus anywhere, at any cost, under any contract or company, at any time. It is, in other words, a huge conglomerate measure, into which all sorts of conflicting provisions were thrown. Only in that way could it be passed. Senator Morgan conquered opposition by yielding to it. It was charged that his original bill was in violation of the Clayton-Bulwer treaty; therefore he accepted an amendment requiring the President to open negotiations for the abrogation of that treaty, "or any other treaty

found to be in existence and standing in the way of the construction of the canal." Here is plenty of work for negotiators, but possibly none at all for canal-diggers. It was said that there were serious difficulties about the validity of the contract with Nicaragua, about Costa Rica's interests and rights; it was maintained that perhaps our Government could make a better bargain with the Panama Company than with any other. Never mind, just authorize the President to settle all these questions. He is a fountain of inexhaustible wisdom. The bill really "leaves it all to McKinley," just as we have been leaving everything else to him.

It is clear that the bill was passed in this hodge-podge state only in the desperate hope that the House would pass some kind of bill of its own and get the matter into conference. The present state of opinion in Congress seems to be that some canal should be constructed across the isthmus, but by whom or where or under what auspices, there is a hopeless conflict of view. In these circumstances, as we have said before, the most reasonable thing to do would be to refer the whole matter to a commission which should bring forward some practicable and self-consistent bill next December. The general desire and expectation of the country undoubtedly is that the isthmus be cut by a canal. But there is no commitment in favor of any existing project. The best canal to be had on the best terms both of construction and operation—that is the thing the country wants, and the Morgan bill is as far as possible from providing it. In fact, if that bill were to become law as it stands, we should not necessarily be any nearer having a canal than we are without any bill at all. If the aim of Congress is not to pass bills for a canal, but to get a canal, a very different measure must be devised.

Senator Hoar expresses confidence that the treaty will either be defeated altogether or amended so as to meet the contention of those who are opposed to the Administration's ideas on expansion and imperialism. It has been generally held that the treaty must be either accepted or rejected in its entirety, and the champions of expansion have argued that its rejection would mean a reopening of the war with Spain. But the Massachusetts Senator insists that there are several ways in which the treaty can be amended without causing a reopening of the state of war, or a violation of the terms of the protocol, under which we are, constructively at least, now at peace. One way which he suggests is to amend the third article of the treaty so as to

make it conform to the first, and have it provide that, instead of "ceding" the Philippines to us, Spain shall "relinquish all claim of sovereignty over and title to" them, as in the case of Cuba. "I wish," says Mr. Hoar, "to see the Philippines in identically the same position as Cuba. We must not give them back to Spain, but we must see that a good and stable government is set up there by the Filipinos. I believe that, under the guidance of this country, those people would be able to establish themselves among the nations of the earth." Mr. Hoar thinks that such an amendment of the treaty as he proposes and hopes to see the Senate adopt would not require the reconvening of the Commissioners, but might be agreed to by Spain and the United States through the French Ambassador.

Suppose war should now break out between us and the Filipinos, as it has broken out so often between us and the Indians, and the good and wise William McKinley should conclude that they must be punished with fire and sword for not submitting to his authority, and should give orders to his generals to slaughter them freely, and not to allow any news of what they were doing to reach this country, as is the case at this moment (for he has established a strict censorship of telegrams), what difference would there be between our Filipino question and our Indian question? How much should we know of what was going on among our "subject races"? What kind of place would "the glory-crowned heights" be? Is there a single politician in the United States who would, even for a brief season, give up "getting delegates" in order to devote himself to succoring and righting the desolate and oppressed? Where would the conquering Griggs be, or the conscientious Lodge? Where would that mighty host be who have so freely offered to assume all the responsibility that "Destiny" may choose to thrust upon them?

Additional proof that the expansionists are finding more and more shoals in the course which at one time seemed such smooth sailing, comes from Washington in the shape of hints that it may be impossible to pass the Hull bill for the reorganization of the army, except at a special session of Congress. Rumors that some compromise will be adopted by which the volunteers will be mustered out and the regulars maintained at a war footing of 62,000 men, and that "the powers of the President" are to be extended to "cover the emergency," are heard on every side, as well as the statement that the entire influence of the

Administration will be used to force the bill through the House when it comes up for debate this week. The recent and still present scandals in the army, the Eagan outburst, the distrust of the ability of Secretary Alger to reorganize anything properly, let alone a military body, and the weaknesses of the Hull bill itself, have all brought about a marked diminution in the demand for more soldiers for the taxpayers to support. It begins to look as if the Republican leaders would have done well to accept the suggestion of Col. Bryan to organize a temporary army of occupation from the few volunteers who wish to remain in service and from additional enlistments, instead of asking so large an increase of an institution which Washington and the founders of the republic deemed the greatest danger to free institutions—a standing army. Meanwhile, the regular troops hover between a peace and a war footing, nearly all the volunteers in Manila, Cuba, and in the South clamor to be released from the life of professional soldiers, and imperialism knows not where to look for the forces upon which all imperialism rests—the men of the sword and bayonet to spread the “blessings of civilization” by means of shot and shell.

The antiquated and hide-bound methods of the War Department are disclosed anew in the information that our troops in Manila are still receiving the rations prepared for use in this country, despite many earnest recommendations for a change from officers who served in Cuba. In answer to complaints about the food of the Colorado regiment now at Manila, one of its officers, who has just returned, has stated publicly that Gen. Otis and his officers are powerless to remedy the evil. “It would be advisable,” he said, “to purchase the food supplies for the army in some Asiatic port, and have their issuance under the supervision of Gen. Otis, who is familiar with everything affecting the army and eager for the adoption of any measure that will improve its condition. If this were done, it would secure an abundance of fresh food for the army, and would be less expensive to the Government than the shipment of food-stuffs from San Francisco. But this cannot be done without the sanction of the Secretary of War.” And still we read that large shipments of canned and frozen meats are to be made from San Francisco. Secretary Alger’s failure to issue the proper order has led Senator Hawley to introduce a bill adding to the present army ration more rice, sugar, green coffee, and other tropical foodstuffs, and we thus have the spectacle of the legislative branch of our Government interfering with the details of the management of an executive department, because of the latter’s notorious inefficiency.

The news that Havana is to be cleansed and made into a modern hygienic city seems to its long-time inhabitants almost too good to be true. The *Diario de la Marina* of January 12, commenting on the dispatch which said that the Government at Washington had approved Col. Waring’s plan, declared that no step could give more legitimate satisfaction to all residents of Havana. The *Diario* is a stiff pro-Spanish paper, and it confesses to a sorrowful feeling as it reflects that so many years of wealth and power had passed without moving the former administrators of the city to undertake “a work demanded by public opinion from time immemorial, and studied by our scientists and formulated in our press in almost exactly the same terms as those found in the brilliant report of the unfortunate Col. Waring.” We only hope the *Diario* will not be disappointed again. The cabinet at Washington has been reported to have adopted the Waring plan, but we know of no contracts let, or even advertised, to carry it into execution. Yet time is of the very essence of the affair. We may loiter, but yellow fever will not. The nymphs of sewers and sinks are having only a short vacation in Havana; in three months it will be over, and they will be filling up the hospitals with our soldiers unless the swiftest measures are taken to head them off.

“Another glorious page in the history of American seamen,” we read in a message which the President sent to Congress last week. What, more fierce fighting? More ships sunk? More enemies gloriously slaughtered? No, it is only a tame story of the rescue of imperilled whalers in Arctic waters by the officers and crew of the United States revenue cutter *Bear*. But the President does well to commend them to the grateful consideration of Congress and the people. They were engaged in a service as arduous, and displayed a heroism as conspicuous, as the crews who fought at Manila or Santiago. They encountered hardships and faced death for four months, on an expedition organized to save the lives of 275 Americans, whom they succeeded in rescuing; and such an heroic victory of peace, as Mr. McKinley says, constitutes a public service. It is at least as great as the slaughter of 4,000 Spaniards. It is well for the people, as it is for the army and navy, to be reminded that praise and reward are the just desert, in our time as in Wordsworth’s, of the happy warrior

“Who, doomed to go in company with Pain,
And Fear, and Bloodshed, miserable train!
Turns his necessity to glorious gain.”

The Legislature of the greatest State in the Union elects to the United States Senate a man who is the choice of the boss of the dominant party—as it would elect Sereno E. Payne, or anybody else, instead of Chauncey M. Depew, if Platt

but so ordered. The Legislature of the second State in the Union gives only 16 votes less than a majority to the boss of the dominant party there, while he is awaiting trial on charges which may send him to the penitentiary. The Legislature of the next largest State but one chose for Senator a year ago a typical representative of the material element in our politics, Hanna having forced his choice by the use of his great wealth and the help of the Federal patronage which, as boss of the dominant party in his commonwealth, he could promise with assurance even before his next friend entered the White House. It is encouraging to turn from such spectacles at Albany, Harrisburg, and Columbus to the very different scene presented by the choice of a United States Senator at Indianapolis, Mr. Albert J. Beveridge.

Mr. Beveridge is only thirty-six years old. He has never held public office. He lives in Indianapolis, and, as the other Senator is also a resident of that city, the “locality” argument appeared to rule him out. He had no money, and no powerful professional associations, for he has never had a law partner. He represented no great corporate interests, and he had no political machine behind him. But he had many warm friends and devoted admirers, who believed that he would make a good Senator, and resolved to see if they could not get the office for him. The struggle was warm and close, but the new-comer in politics won, and won on his merits. Mr. Beveridge is accused of being “a spread-eagle orator,” and there is no doubt that he has a tendency to “hifalutin.” But nobody can read such an address as that on “The Vitality of the American Constitution,” which he delivered before the Allegheny County (Pa.) Bar Association a year ago, without realizing that he is also a man of genuine ability, who should outgrow his youthful faults of exuberant oratory. His character is beyond criticism, his desire to render good service to the public seems deep and strong, and altogether the promise of his entrance upon a national career is great.

That Quay would “have a Governor whom I own,” if he should nominate William A. Stone and secure his election, was universally recognized throughout the campaign last fall. Nobody, therefore, can be surprised that Gov. Stone has named for Attorney-General a Quay lieutenant with a very bad record. John P. Elkin was Deputy Attorney-General under the last State administration, and he was deservedly removed from office for his share in pushing through a scheme to pay padded rolls of legislative employees by signing with others a bond to indemnify the State Treasurer if the payment from the funds of the commonwealth should be pronounced illegal

in law, as it obviously was fraudulent in intent. It is entirely characteristic that a discredited politician of this type should be "vindicated" by elevation to the head of a department from a subordinate position in which he had been removed in disgrace. The sole defence which anybody attempts to make is that the indemnity-bond affair represented a "vicious habit" of long standing, which had been employed on former occasions for like unlawful purposes, and that Mr. Elkin had only committed "an error of judgment."

A particularly pestiferous bill has been introduced at Albany by Leon Sanders, a Tammany statesman who took his first lesson in the science of government under Barney Martin, when the latter was Commissioner of Jurors. Mr. Sanders proposes to prohibit all employers of labor from working their employees more than eight hours a day, no matter whether the employees wish to do so or not, with a penalty for violating the law not less than \$50 nor more than \$100. Such a law would make it impossible for any employer to have his men work overtime in an emergency, on any terms whatever. It would thus prevent the laborers from earning extra money when opportunities to do so should arise, and would be as much of an injustice and hardship upon them as it would be upon their employers. As a matter of fact, there are thousands of workingmen who rejoice at the opportunity of working more than eight hours a day—that is, working as many hours as they feel they are able to work, and getting paid according to their merits and abilities. Mr. Sanders is a professional champion of the laborers who "work mainly with their mouths"—that is, devise schemes which will enable them to get a living by putting shackles of various kinds upon real workingmen. If he should succeed in getting his bill through the Legislature, there would be no difficulty in convincing the Governor of its true character and hence of making its death sure.

We felt sure that the Irish vote would have something to say, sooner or later, about the fiendish good understanding with England, and the new organization called the Continental League appears to offer a vent to Celtic spirit long outraged by all this billing and cooing with the oppressor. In its declared purposes, it is against imperialism, but it is especially against "entangling alliances with European Powers." No Powers are mentioned, but a glance at the names of the officers—Emmet, Quinn, O'Flaherty, and the rest—will show Great Britain who have their eyes on her. This is only one of the funny sides of the English *entente*. An Englishman who has travelled extensively in this country

reports in the *Contemporary* his discovery of the way the "ordinary American" regards the new understanding. He did not find his average man on the Atlantic seaboard, but in the great Middle States, where, he truly says, is the habitat of "the pushing, loud-tongued, boastful, illiterate, buy-you-up American." This writer's testimony is as follows:

"I talked with hundreds of men right across the States. The general idea was this: 'Yes, it would be a good thing for you English, but we've got nothing to gain. We can take care of ourselves, and you can't. You want our help. As we are at war with Spain, the English are taking advantage of the moment to force an alliance. You know we are the principal nation on the fact of this earth; we lick you in everything; we've licked you in war; and you want to keep, on the best side of us.'"

We are glad to think that there are signs of a little cooling in the English love for us, as allies and coadjutors in the work of conquering and ruling inferior races. The delay in ratifying the treaty, and the slow return of reason to the American people, are raising a suspicion in England at last that the press and the mighty men of the Conservative party were a little too hasty in presuming on the American alliance in conquests and seizures. We do not think the English press has played a more unworthy part for many years. It has been for months—when it knew we were laboring under the reason-dethroning excitement of war, and that a long and happy peace had left us in complete ignorance about the rôle we were undertaking as conquerors—urging us into adventures of every description, which would suit its own purposes and necessities, and writing all the time about our affairs as if it had any comprehension of the influences which sway our opinions and determine our political action. The reasons it supplied for our entering on a warlike career have often been ludicrous in their absurdity, but they served the purpose of flattering American vanity and gladdening the hearts of contractors, jobbers, and corrupt politicians. We do not see that all this has increased the love of England, outside the gang of politicians who find English approval of their schemes a help in getting them executed.

The manifesto recently issued by the Cobden Club is a sort of abandonment of its old policy of propagandism. It also apparently gives up the plan of influencing the American elections by money, which, according to some of our papers, it so long pursued with a certain malignity. It now apparently confesses that its missionary work among the nations in their home territory is hopeless, but it insists on the application of free-trade principles to the new countries which so many of them are seizing, and says, what is more important, that England will insist on it. The success of Lord Salisbury's attempt to enforce this

policy of an "open door" on either Russia or France has not been great enough to encourage much hope about the matter, at least during Lord Salisbury's ministry. At the end of any such policy there must be a threat of war, and this threat he will not make, at least during the Queen's lifetime. The Cobden Club offers magnanimously to let any nation seize any unoccupied territory it pleases. If it will only keep the "door open" to all the trade of the world, or, at least, to all English trade. The world has probably never been in such a mess. It was never so fierce for trade, but it is so eager also for war that it cannot trade, and yet is so eager for trade that it cannot go to war.

The policy of the Cobden Club receives great discouragement from the conduct of France, for instance. Great Britain had valuable trade rights in Madagascar. Half the trade of the island was hers. France annexed Madagascar. Since then she has been extinguishing both British trade rights and British trade. She is doing the same thing, almost, in Tunis. Now, is there any way of remedying this except by threatening war? We fear not. One result of this sort of thing is that the British public is more and more inclined to believe that it must itself own the territory it wishes to trade with, if it is to have an open door. Protection is the doctrine of the natural man, and the natural man is now so powerful that he must try his experiment, and is, therefore, Jingo.

The politicians in Spain are as tough as our own; few die and none retire to private life. Sagasta's career was thought to be completely finished. The disasters which the country had suffered under him had made, it was believed, any political future for him entirely impossible. He himself favored that view. He gave it to be understood that he was holding on only until the necessary measures of peace were perfected, when he would withdraw to indulge in grief and regrets in retirement. But later developments make it appear that he has no idea of doing anything of the kind. When the Conservatives first began to hint that it was time for him to resign, he said he must cling to office until the last humiliation had been undergone. But this did not suit Silvela, the Conservative chief. He had struck up an alliance with Gen. Polavieja, and served notice on Sagasta that it was time for him to be going. But that Liberal and wily statesman also produced his political general—none other than Gen. Weyler—and refused to budge. The combination of Weyler and Sagasta is a very strong one; and the fact that the Liberal chief had quietly arranged it and now publishes it, is sufficient notification that he means to hold his position as long as possible.

"THE MANNERS OF LIBERTY."

M. Lavissee, the distinguished French historian, talking the other day of the French troubles, "the leagues, the reunions, the speeches," the uproar and tumults, says he only hopes there will be more of them; that they will continue and survive their "sorrowful cause," because these are "the manners of liberty." If the President will only take these words to heart, he may find some consolation in them for the delays in the Senate of which he complains. The Senate procedure is full of delay; the minority exercises an influence out of proportion to its numerical strength; the procrastination is wearisome and annoying to the Executive, who longs to put things through and begin in earnest the work of governing "subject races."

The answer to all this is that that is the way in which our Government was meant to work. The Executive was not allowed to make treaties of itself, simply in order that the Senate might pass upon them also. The framers were not willing to allow any one man to bind the country to anything, no matter how wise and good he was. Then the Senate, being composed of many persons with different points of view, can reach conclusions only through debate, colloquy, and deliberation. A two-thirds majority is required to confirm a treaty, for the express purpose of giving the minority of a certain size power to hinder its confirmation. When any one says, "You are a minority; why do you delay business when you know the majority are against you?" the answer is, "My rights under the Constitution have precisely the same origin as those of the majority. Theirs do not come from their being a majority; they come from being constitutional." If only one man had the power to hinder the confirmation of a treaty, his right to hinder and delay it would be of exactly the same force, vigor, and effect as the President's to make it. Nobody under the Constitution has any authority better than any one else. All modern constitutions are made for the express purpose of preventing majorities from having absolute sway. If it were right that majorities should thus rule, in America, we should have a totally different kind of government from that under which we have lived and flourished and excited the admiration of mankind for one hundred years. If it were considered wise that whatever the President offered to the Senate should go through at once, on his mere recommendation, the power of considering and assenting to or vetoing his recommendations would not have been lodged in the Senate. You cannot strike at the Senate's privileges without striking at the President's also.

These things appear commonplace enough to most Americans, and yet they seem to need repeating every now and then to the whole official class, or, at

least, that portion of it which is given over to "expansion" and "empire." They have grown visibly impatient of discussion. From the day, a few years ago, when Speaker Reed, in the interest of the tariff, "thanked God that the House of Representatives was not a deliberative body," down to the present moment, when the President, in the interest of the treaty, wishes the Senate were not so deliberate, there has been a visible tendency towards government by the "sic voleo, sic jubeo" system. Deliberation has been becoming distinctly more contemptible; rapidity of legislation has been becoming more prized than its wisdom or permanence. The boss has been becoming the leading power in the state, and the boss "votes but does not talk." And yet we have little doubt that a political philosopher would pronounce about half the legislation of civilized countries useless or mischievous. Possibly the treaty is not a good thing. Possibly it is for the best interests of the American people that it should not be confirmed. Why should any Senator who thinks so not oppose it with all his might, by every agency which the Constitution puts into his hands?

The trouble with the President and his fellow-expansionists is that they did not consider all these things soon enough. Would it not have been well, before building great fleets and raising great armies, to have weighed maturely whether our Constitution, as it stood, was suited to a nation entering on a career of conquest and dominion; whether our frequent changes of Executive, our frequent elections, our rapid and uncontrollable vagaries of public opinion on all sorts of subjects, the precarious condition of our finances, the furious influence of irresponsible editors, fitted us for the rule of distant and barbarous regions? Unquestionably, our present Constitution was not intended for a conquering nation with several different classes of citizens. A man with one eye can see that. The expansionists all see it themselves. They are, therefore, in order to get over the difficulty, engaged busily in pooh-poohing and evading the Constitution, like Tim Sullivan, as a "little thing between friends," and announcing that it is no longer suited to the American people.

And yet the madness of all this lies in the fact that it is based on the supposition that Mr. McKinley, with his wisdom, will always be in power, doing "the best thing" for the nation; that the legislation, both State and Federal, will always be wise and moderate; that there will be no more Debsses stopping railroad-trains, no more Tanners passing laws themselves and executing them before the Legislature meets, and no more Congresses voting millions to the President to be expended in his discretion. The day may come any year when we shall not be able to ward off a Bryan by lavish outlay of money, and when

these "glory-crowned" expansionists will wish they had thought more of the wisdom of the old fogies of the last century and of the "hymns" which, one learned man says, were sung at the cradle of the Republic, but are too childish for the giants of these days.

SAMOA AS AN EXAMPLE.

It is a thousand pities that Robert Louis Stevenson did not live to write the later acts of the Samoan drama—farce or tragedy, one scarcely knows which to call it. What a Valilima Letter he could have made out of the occurrences confusedly reported in the latest news from the Samoan Islands. In his 'Footnote to History,' Stevenson employed his picturesque pen to convey to the civilized world some idea of the overriding of native preferences and rights which was going on under the benevolent protectorate of three great Christian Powers; but nothing which he ever witnessed could have quite equalled the events of the past fortnight, of which we are now getting such astonishing accounts.

There is a disputed succession. Rival claimants to the throne take the field in the good old way. But the Chief Justice decides in favor of Malletoa Tanus. Who is the Chief Justice? One Chambers of Alabama, U. S. A. No wonder that Mataafa and his followers think that gentleman's opinions of small account. They number five thousand good fighting men; Malletoa has but a thousand; what can be clearer than that the court has made a wrong decision? Besides, there is a gentleman from Germany to agree with them. The German Consul overrules the American Chief Justice. He does it by breaking into the court-room, and then putting private locks of his own on the doors, to keep out all dissenting judges. Meanwhile, the President of the Municipal Council, also a gentleman from Germany, goes into the balcony and screams out, "I am the Supreme Court. I am the Chief Justice!" It is to the marines that he appropriately tells this whopper, and at last accounts the American and British marines were gallantly joining "hands all round" and throwing the Germans into the street.

Is this farce or tragedy? We cannot decide before the final curtain. The warships are hurrying, the German press is muttering, the English papers are chuckling and saying that America is in no mood to be snubbed by Germany, and the dénouement is some days off. But whatever the result as affecting the relations of the three countries caught in this "miserable tangle," as one of the London papers calls it (and we have no doubt there will be a peaceful adjustment), the whole thing is a capital illustration of the beauties of long-range and arbitrary government of natives

who do not want to be governed. Samoa is a convenient example of the sort of thing we are preparing for ourselves on an immensely greater scale in the Philippines. We must have a coaling-station at Pago-Pago, we are told, because it is a half-way house on the road to Manila. Well, if these things occur in the half-way house, what may we expect when we get still further away, and have 2,000 islands to deal with instead of 20, and 8,000,000 natives instead of 35,000? If it does not turn out a case of going further and faring worse, then all signs fail.

Secretary Gresham, in his long report to Congress in 1894, traversed the whole history of our relations to the Samoan Islands, and asked pertinently at the end, "What have we gained beyond the expenses, the responsibilities, and the entanglements?" Of the Berlin agreement under which we had been acting, he truthfully said that it "has utterly failed to correct, if indeed it has not aggravated, the very evils which it was designed to prevent." This might have been foreseen. The Treaty of Berlin professed to grant to the Samoans an "autonomous government." Yet it vested all real power in foreigners. The Chief Justice is a foreigner and appointed by foreigners; yet he has an enormous jurisdiction, and his decisions are final. He not only determines who is rightfully King, but what powers the King may exercise; he recommends as well as interprets laws; he has exclusive jurisdiction over all cases affecting real property and all cases whatever affecting foreigners. The Municipal Council, composed of six members and a president, is the supposed organ of local autonomy; but its president is always a foreigner, and its orders "have no effect till approved by the three foreign councils, or, if they fail to agree, by the Chief Justice." Such is the pretence of autonomous government granted the Islanders. As for the aim of the Berlin Treaty to prevent Germany, England, and the United States from squabbling over their several rights in Samoa, it has been no better attained. Friction has always existed and seems to-day worse than ever.

Such a thing it is for a country to depart from its "established policy." We do not now refer to the mere acquisition of distant territory, but to the question of governing it. Now it was Mr. Blaine himself, an expansionist before the expansionists, who, on April 11, 1889, pointed out, in his instructions to our negotiators at Berlin, that the plan of governing natives without their consent was "not in harmony with the established policy of this government." It is not. Vice-kings and judges and councils forced upon a people half-round the globe are no more an American institution than they would be in darkest Pennsylvania. Samoa is giving us a foretaste of what awaits us in the Philippines. It

would be a warning to Congress if Congress were in a mood to see a warning in anything. A man does not break his leg twice over the same stone; but Congress has a way of doing it not twice, but twenty times. Having scourged us with Samoan whips, it is anxious to try the effect of Philippine scorpions.

EXPANSIONIST DREAMS.

When Gen. Grant was in London many years ago, he had an attendant in the person of Adam Badeau, a newspaper reporter who had turned warrior for a brief season, and signed his notes in London as "Brigadier-General in attendance." Badeau, who accompanied his chief to many scenes of gayety and splendor, was struck on these occasions by the fact that every foreign general was covered with orders and decorations, and it made him feel small that Gen. Grant, who had conducted a great war, had none, just as the imperialists feel about the great William McKinley having no colonies and the great New Jersey Griggs having no "subject races" to rule. So he determined that this state of things should not last, that he would provide his general with orders himself if there was no one else to do it. He accordingly composed or constructed a decoration made up of army-corps badges, all stuck together, which, in the matter of size, value, and conspicuousness, made the European notabilities hang their heads. Gen. Grant wore it, it is said, at one dinner, where it excited intense interest and curiosity. The proudest European nobles felt that if they could find out what potentate bestowed the decoration, they must have one, even if it should require a declaration of war. Unhappily, the American Minister of that day was not equally impressed. He heard some of the more knowing laugh over it; saw that poor Gen. Grant was being made ridiculous; gave him the wink, and the decoration, in the twinkling of an eye, became old gold simply.

At present the rich men who elected and surround William McKinley are of all things desirous to make him a *de facto* sovereign, like the Queen of England, with a full set of colonies and "subjects." So they wish to keep out of sight, as well as they can, the fact that he is the creature of a written constitution, that he has no power except what the Constitution gives him, that without it he would be plain William McKinley of Canton, Ohio. So they pretend as well as they can that he is the head of a government just like hers; that, like her, he has not only constitutional powers, but prerogatives inherent in his sacred person, and that he can of his own motion put fleets and armies on the ocean and extend his sway to any place in which the resistance will not be too vigorous. So they run around saying,

"Did any one ever hear of a nation the size of ours which had no foreign possessions? Look at England—see how many she has. Look at her new conquest in the Sudan. How is it to be governed? Have you not read in the papers that Lord Cromer said it was to be governed by the Queen? Why then do you object to having our foreign possessions governed by the wise and good McKinley? What is the matter with you? Why are you always growling? Whoop-la!"

On Sunday last there was a diverting passage in this line in the Hon. Whitelaw Reid's paper, which is the more significant as the Hon. Whitelaw will undoubtedly be one of the proudest nobles at the new court. Speaking of Lord Cromer's declaration to the Dervishes in the Sudan about their new future, it says:

"Of course, it may be objected that this action of the British is criminal aggression, rank imperialism, et cetera, and that it is a shameful thing to set up a government at Omdurman without a favorable plebiscite in Dem Bekir. But we doubt whether such considerations will undo or defeat the convention which has been made, or will turn back the rising tide of civilization in the dark continent."

We see here how, under cover of a withering bit of sarcasm, the reader is given to understand that there is no difference between the Queen's government and that of William McKinley, and how probable it is that persons who call William McKinley's conquests "criminal aggression" would call Queen Victoria's the same thing. There is a certain discredit for William McKinley in living under a constitution, and we are not surprised, therefore, that his followers keep it out of sight as far as possible, and show that William's conquests are just the same as Victoria's. And, as a matter of fact, they are, except that Victoria's are authorized by descent and immemorial tradition, while William's are authorized by "growth." There was undoubtedly a time when Victoria's right to conquer and annex was disputed by turbulent nobles. William's right is disputed to-day by a very inferior class of persons, but his nobles are all with him, and the opposition of the vulgar sort will undoubtedly die out before long. The spirit of criticism about the acts of our Government is completely unknown at the English court. Nobody in good society finds fault with the Queen's Ministers. See how they go on here about the way the President thinks fit to deal with a few millions of barbarians.

THE REMARKABLE FINANCIAL SITUATION.

The extraordinary change in the financial relations between the United States and Europe, by which, whether temporarily or permanently, this country has been transformed from a continuous borrower on the foreign markets into the most im-

portant lender on the same markets, is commonly described as a new and sudden development. The change, however, really dates back a year or more. It was as long ago as the autumn of 1897 that the financial public began to hear of operations in foreign exchange which amounted to borrowing at New York for the purpose of deferring settlement of Europe's trade obligations to this country. Since then, the transaction has become even more distinct. Not only is New York capital loaned for the purpose of deferring European payments, but capital actually paid by foreigners to American creditors is left, in very large amounts, on deposit in the foreign cities, and is there used by our banking agents for loaning-out to European borrowers. The situation familiar to American finance from the beginning of our history until the close of 1896 is thus exactly reversed. Where our money markets have for a series of generations been accustomed, in seasons of active trade and high discount rates, to look to European capital for relief, Europe is now, and has been for twelve months, depending on American capital to meet the urgent needs of England and the Continent.

Nor does the series of contrasts stop here. During practically all of our previous history, the average rate for money in New York has ruled above the average rate at London and Berlin; the familiar explanation being that England was an old country, with immense accumulations of capital, whereas the United States is a new country, with its own accumulated capital still inadequate for the development of its home resources. But nearly throughout the last six months, the London money rate has held 1 per cent. or more above that at New York, and the Berlin rate nearly twice as high as ours.

Two months ago there occurred what bankers call a "squeeze" in most of the leading European money markets, in the course of which German rates advanced to the highest figure in eighteen years, while London and Paris were seriously disturbed. At any time prior to 1896, the result of such a foreign situation would have been instant recall of European capital from the American money centres, with resultant demoralization at New York and perhaps (as in November, 1890) a panicky overturn of our speculative markets. But in November, 1898, instead of recall of European capital to London and Berlin, there were witnessed very heavy advances of American capital to those markets. Such transfers moreover, instead of embarrassing the New York market, produced not a ripple of disturbance. Eventually, the needs of England and the Continent were satisfied by the American advances, and the course of our own markets proved that we had sent abroad only what could be readily spared from use at home.

Here was sufficient proof of a radical change, on the very largest scale, in the financial relations between the United States and Europe. What was perhaps an even more striking demonstration of the change occurred eight months before. We must first recall what happened in the American money market after the "Venezuela message" of December, 1895. The bare possibility of a diplomatic breach between Great Britain and the United States caused withdrawal of English capital from our markets, instantly and by wholesale. Sterling exchange ran up to panic prices; \$26,000,000 gold was shipped in a single month; the rate for demand loans in New York rose to 50 per cent., and the security markets went to pieces. With this may be contrasted the action of the markets last March, when the Spanish-American war became inevitable. The New York money market tightened; but, with the first sign of stringency, recall of American capital from the foreign markets followed. Sterling exchange fell to the lowest figure, the local money rate eased off, and within two months \$60,000,000 gold had been imported from Europe to the United States.

Most people are aware of the chief causes for this extraordinary reversal of position. Current statements of foreign trade point out the most essential factor. The recent returns for the full year 1898 show that during the last three years this country has shipped abroad \$800,000,000 more merchandise than in the three years preceding. About two-thirds of this increase came from heavier shipments of products of the farm; at least a third, however, was in the form of non-agricultural and manufactured exports. But if the United States was thus enlarging its export of manufactured goods, it followed logically that foreign manufactures could in great part be dispensed with by our consumers. Therefore a decrease of some \$200,000,000 in the imports of the last three years, as compared with the three years preceding, need astonish nobody. But the result, of course, is a merchandise trade balance in this country's favor for the period, greater by nearly a billion dollars than in the three preceding years.

It will not be imagined that this enormous mass of trade obligations was settled out of hand in the form of money. Such settlements are very rare in commerce. Part of it has been thus paid; our net gold import for 1898 alone was \$141,000,000. But a very much larger part of the trade indebtedness was discharged by Europe's sales of its holdings of American securities—a natural transaction, certainly, since surrender of the capital with which these investments had been bought and carried placed the foreign community in a position where it could no longer carry all of them. But it should also be observed that this European realization, representing as it did

redemption of its foreign debt by the United States, necessarily reduced by wholesale first the interest charges which were annually paid by us to Europe, and second, the total credit fund available for sale by Europe as a further offset to heavy trade balances. It is now a question of very curious interest and conjecture how much of this fund is left to-day in foreign investors' hands.

The question as to the permanency of this remarkable financial situation is the problem of deepest interest for the current year. We can see three possible events by which existing conditions might be positively altered—American harvest failure, which would at once curtail our agricultural export trade; a speculative rise in domestic staple prices, such as in other years has quickly arrested exports and abnormally inflated imports; or, finally, such blowing of bubbles in stock-market speculation as should derange the entire movement of capital. The last-mentioned possibility is on the whole the most dangerous of the three; of the others it must be said that neither farming advices nor market prices have as yet given serious warning.

THE ENGLISH POLITICAL MUDDLE.

In England, France, and America, both political parties have become so determinedly humanitarian that without the excitement of foreign politics one of them would go out of existence. In fact, it may be said that one of them has gone out of existence. The Liberal party in England has shared the fate of the Democratic party in this country. It exists only in name. It is just now supposed to be in a helpless condition for want of a leader, and violent quarrels are going on in its ranks—if it can be said to have ranks—over the question why it has no leader. There are various explanations of this. One is that Mr. Gladstone can have no successor, which is in a measure true. He was such an overpowering personality that, it is held, there must be a prolonged void after his departure, for some time at least. Another is that Lord Rosebery, who for some mysterious reason was selected for the post by somebody, some say by Mr. Gladstone himself, was not Liberal enough for the rank and file of the Liberals, and not Home-Rule enough for the Irish, and suffered too much from Sir William Harcourt's hostility. Sir William Harcourt says himself that the trouble is due to intestine quarrels and intrigues, though what they are about and who carries them on, does not appear. He also hints that they are due to "imperialism," or jingoism. Nearly every English magazine, in fact, contains a diagnosis of the Liberal case, but no two of the doctors agree as to the nature of the symptoms. The convulsions they describe, however, seem to go on mainly at the clubs and in the House

of Commons; the country Liberals look on in apparent puzzle.

But no one can have read much of the Liberal literature during the last few years without feeling that the complaint was one with which all parties are more or less afflicted, with which the Republican party among us was near being brought to death's door, but for the war. In home politics all the parties are the victims of anæmia—that is, want of vitality. Parties derive life and strength from the desire of some sect or set of people for something or other that they can define. One of the signs of party disease or decay is always difficulty in finding a leader or programme. In the days of party growth or strength one never hears of the difficulty of getting some one to lead or some cause to advocate. In the days of the anti-slavery or of the anti-corn law struggle, any one who spent his time inquiring for a leader or a platform would have excited much amusement. Events made both the leader and the platform. It was so when the Liberal party undertook the passage of the Reform Bill. Leaders, even acceptable leaders, could be had by the half-dozen. Any one could lead who really loved the cause. In like manner here, the Republican party did not lack generals at the period of its formation.

When the Conservative party in England had something to conserve, it too was also very strong; that is, when it was defending the corn laws, or restricted suffrage, or the Irish Union. But, since the passage of the Reform Bill, having nothing to save, it has never been able to supply leaders of its own party. Sir Robert Peel was its last. Ever since his time it has had to hire mercenaries, renegade Liberals like Disraeli and Chamberlain, who were willing to fight under any flag which gave them titles and decorations. It is really, therefore, little better off than the Liberals, except that it has that great party bond, the offices. If it had to fight now for mere existence, like the Liberals, it would be as badly off as the Liberals. It has only one first-class fighting man, Mr. Chamberlain, and it would never have had him without the best pickings.

The trouble everywhere is not so much about parties and programmes as about principles. Both parties, as we have said, have done the work of preserving or reforming. The political institutions have been brought down to the democratic level. Neither can well go any lower. Both proclaim the welfare of the masses to be their leading concern, both propose the same remedies, and each doubts the sincerity of the other. Exactly the same thing has happened here. Our politicians on both sides are crazy about the physical comfort of the people, and want to promote it in the same way; so that, except an extremely slight difference of character, there

is no reason for wishing one to be in office more than the other. In this extremity war is the resource always of the party in power. Both the Republicans and Conservatives are now getting out of their domestic difficulties in the same way—that is, by going the other side “one better,” by undertaking to “thrash somebody”; a programme which most delights the people, and makes the other side appear poorest and most miserable.

We do not believe that there will be any revival of the Liberal party in England without the coming up of some stimulating and exciting question, and that may not be for years. But the question we ourselves think most likely to play that rôle is the disestablishment of the Church. No question lies anywhere so near the popular heart, or furnishes every day better weapons for agitators. The resistance, too, will be feeble. Large numbers of the clergy themselves would join in the assault on the church battlements. The agitation this year is only the rumbling of the storm. How to cut the church loose from the state without sacrificing the beauties of its services and edifices, and curtailing the religious instruction of the people, will be the problem, and no more serious one has ever engaged the attention of a statesman; but it will hardly come to the front until everybody has been “licked” and people are tired of conquest.

LICENSE IN ENGLISH RHYME.—I.

STANFORD UNIVERSITY.

December 30, 1898.

“The poet’s eye” has very properly been the central theme of appraisers of poetry from Shakspeare to John Ruskin and George Henry Lewes; and much that is luminous, with not a little that is obscure, has been written about imagination and vision and sincerity. That the poet’s ear has received somewhat less than its fair share of attention may be due to a natural delicacy about dragging that organ into prominence. But it is not right that the vital element of harmony—how vital we may learn from the case of men (like Emerson) to whose transcendent faculties of vision this adjunct has been in any measure denied—should be thrust so far back into the critical consciousness. Nor is it right that we should hear more about that “other harmony” of prose than about the primal harmony of poetry. The subject is confessedly a difficult one. Every critic holds himself competent to judge whether or not the poet has seen true—the appeal to patent facts is so easy; but to sit in judgment upon his musical faculty is a different matter. A few have attempted it, and we remember with gratitude the appreciations of critics like De Quincey and the late Mr. Symonds. But these critics have for the most part confined their observations to the subject of rhythm, the most obvious as well as the fundamental and indispensable feature of English verse. Upon the minor, adventitious feature of rhyme, it would be difficult to point to any adequate word.

It is not the purpose of the present paper to attempt to supply that word. Sidney

Lanier might have done it had he not been hopelessly committed to impractical theories which grew out of his confusion of the poet’s with the musician’s art. Mr. Stedman or Professor Corson might do it, and, indeed, the contributions which the latter has already made to the subject cannot be overlooked. Our present purpose, however, is much less ambitious, being merely to set forth certain aspects of a practice common to all English poets; to contribute, if may be, something definite to the vexed subject of license in English rhyme. Random notes and queries and an occasional half-hearted protest betray an uneasiness of conscience on this subject on the part of the verse-reading public, which it seems worth while to try to set at rest.*

Let it be understood at the outset that the question is not purely nor chiefly an historical or scientific one. It lies more properly within the field of æsthetics. We must therefore beware of dogmatism. The spirit must be one of open inquiry, or, where that will no further avail, of a hesitating appeal to personal taste. It has been the mistake of nearly all writers on poetics that they have tried to lay down laws; but any attempt at legislation in the technique of English poetry must give offence to a people who rejoice in the possession of a Shakspeare and no Academy. We may safely hold that the laws of rhyme, like the laws of language, will take care of themselves. Certainly the professor is not the poet’s keeper. And the present writer desires it clearly understood that no matter how often he shall find a poet’s practice failing to square with a prosodist’s rules, he will give himself no uneasiness.

The question is this: Should any license in English rhyme be recognized? Should a poet permit himself to use imperfect or so-called “allowable” rhymes—pairs of words whose sounds through the rhyming portion do not exactly correspond, as *love, prove; gaze, face; see, liberty?*

The question has been somewhat obscured by a secondary one that seems not very relevant—the question, namely, whether we should recognize such a thing as a “rhyme to the eye.” Of course, the appeal of poetry is to the ear; rhyme is fundamentally a matter of sound, and the question is on the face of it something of an absurdity. We are not aware that any one has ever pleaded for or defended rhymes to the eye that are not in some measure rhymes to the ear, as *indict and afflict, though and enough*. Possibly there have been those who would debar rhymes to the ear that are not also rhymes to the eye, as *fine and sign*. A critic in *Literature*, writing in approval of the view of this subject taken by Mr. Brander Matthews in the late September number of *Longman’s Magazine*, rather amusingly assumes that Dr. Holmes was of these, for he (the critic) writes: “Rhyme is a matter of pronunciation solely, not of orthography.

... Oliver Wendell Holmes’s contempt for the rhyme of *morn* and *dawn* was quite unjustifiable.” Severe as Dr. Holmes was upon aspiring poets, this is surely a hardship he never meant to inflict, namely, that two words may not be rhymed simply because they are spelled differently. The Bri-

* We are familiar with the reader of poetry who feels obliged to perpetuate a “poetic” pronunciation of the noun *wind* because he finds it rhymed with *kind*. And some one, in the ‘Standard Dictionary,’ is responsible for citing Mrs. Browning as authority for pronouncing *idyl* with short *i*, presumably because she rhymes it with *middle* in a poem in which she also rhymes *either* with *nature*!

tish critic does not know that there are tracts and provinces of earth where *dawn* and *morn* are poorer rhymes to the ear than *farm* and *warm*, poorer because the difference is not vocalic alone, but semi-consonantal—the difference, that is to say, of a distinctly pronounced or even trilled *r*. The narrowness of Dr. Holmes's view lay only in his regarding the suppressed *r* as Yankee or Cockney, therefore provincial, therefore outcast. If *morn* and *dawn* are perfect rhymes to the Londoner's ear (and Mr. Matthews even, a New Yorker, declares that any pronunciation of the words which does not make them quite impeccable as a rhyme seems to him stilted), there is no more to say. Londoners and Mr. Matthews's New Yorkers will use them, and there is no longer any hypercritical Dr. Holmes to object.

But something is still to be said for this rhyme to the eye, and we do not feel like dismissing the matter with a fling at the palpable absurdity of pairing *though* with *enough*. If the ear derives pleasure from a repetition of sounds, so also does the eye derive pleasure from a repetition of forms. The pleasure in this case is undeniably subordinate, for form as exhibited by collocation of printed letters can make but a low æsthetic appeal. But symmetry is symmetry, and the appeal is there. To-day we get our poetry mostly by reading it in silence, and while true lovers of poetry do not fail to realize the music of the verse to the inner ear, the fact remains that the ear is reached through the eye. Therefore, it does not seem wholly absurd to assume that the eye has now some shadow of a claim in this controversy. Many readers are conscious of a slight shock when they see *stuff* rhymed with *enough*. Spenser, with his fine artistic sense, recognized this when he used the large orthographic license of his day to bring into literal conformity the great majority of his rhyme-words; as, *knight*, *quight* (which he otherwise spells *quite*); *ayd*, *dis-mayd*; *world*, *horld*, and hundreds of others. And if similarity of spelling adds to perfection of rhyme, may it not be held also to detract from imperfection, to atone (as it were) for a fault of sound? Will not the eye assist in the illusion and make the imperfection seem less glaring? As a matter of fact, poets, and presumably their readers with them, have looked with a greater degree of favor upon the rhyming of *come* with *home* than with *roam*, or of *home* with *come* than with *succumb*. As a matter of principle and reason, have they not been right? So far as pleasure in rhyme rests upon a perception of the fitness of things, that pleasure may be enhanced by formal symmetry. But, of course, no poet will ever hold that a lack of such symmetry presents any serious obstacle to rhyme.

To come now to the main question—the question of license in rhyme considered as sound only. Those who argue against "allowable" rhymes and in favor of absolute perfection fail to take into consideration two fundamental conditions. The first is the elusive and unstable character of pronunciation. It seems to be assumed that pronunciation is a fixed quantity, and that we can say positively that two given words make a perfect rhyme and that two others do not. Now perhaps no two sets of vocal organs can produce quite the same sound. Of course this objection would be futile, for, while you may not pronounce *remember* just as I do, yet you are consistent with yourself in pronouncing

it like *ember*, *November*, etc. But when we come to pairing words of slightly different composition, it is hard even for the individual to tell what words he does or should pronounce as rhymes. Will he rhyme *airy* with *Mary* or with *marry* or with *merry*, or only with *fairy* and *chary*? He cannot let dictionaries decide the matter for him—they could not well register all subtle distinctions even if there were uniformity among speakers in making the distinctions. By many dictionaries the letter *o* is marked alike in the words *not*, *dog*, *loss*, *on*. Yet a pronunciation of the three latter words which should make the *o* as open as in *not* would be held affected. Although neither you nor I would dare to say *daug*, *lawas*, *awn*, neither presumably do we say *dög*, *lōsa*, *ōn*. The common pronunciation of *on* is probably somewhere between *don* and *dawn*, tending among careful speakers to approximate to or coalesce with the former.

Besides this individual divergence of pronunciation there is the provincial disagreement, which is a far more serious obstacle. It has been declared that an Ohioan's pronunciation of *pen* is not always distinguishable on the one hand from a New Yorker's pronunciation of *pan*, nor on the other hand from a Tennessean's pronunciation of *pin*. And sometimes this disagreement is found in words containing the same vowel. In London, *been* prevails with *seen*, and *rather* with *father*; in San Francisco, *been* rhymes with *sin*, and *rather* with *gather*. Clearly here is a difficulty in the way of this theory of perfect rhymes. Either the Londoner's poetry must be kept sacred to London ears or I, a San Franciscan, must give up my habitual pronunciation for the moment and say *fäther* and *räther*, and *dawn* and *mawn*. And what if *rather* and *morn* happen to come first in the pairs of rhymes? Can I in decency say *fäther* and *dorn*?

The second fact which the supporters of the perfect-rhyme theory seem not sufficiently to consider is the nature of rhyme itself. Our definition of rhyme has always been somewhat elastic like our usage; of course, usage has given the definition. Rhyme means recurrence of the same sounds. But of how many sounds, and in what position? We have beginning-rhyme (alliteration), middle-rhyme (assonance), and end rhyme; or we have all combined—identical rhyme (sometimes confusingly called perfect rhyme). Since the present discussion has to do with end-rhyme alone, the others may be dismissed. Now end-rhyme, or simply "rhyme" as we are in the habit of calling it, consists in the recurrence of how many sounds? Of all sounds, we say, from the vowel of the last stressed syllable to the end of the word, with at the same time a dissimilarity of the sounds or sound groups, if any, just preceding that vowel. If the words end with a vowel sound, we have end-rhyme pure and simple; if they end with a consonant, we go back and include the vowel sounds, making a combination of assonance and simple end-rhyme. This represents our ordinary understanding of the matter and affords a fair working definition. But this definition having been derived merely from the prevailing and fairly consistent practice of poets, there is manifestly no warrant for turning round and applying it as an iron-clad rule.

The question of legitimate rhyme is precisely a question of how far we shall carry uniformity of sound, and whether we must

always carry it to the same length. Now the quantity of uniformity, so to speak, varies much with different rhymes. *Length* and *strength* yield a fuller rhyme, fuller by a nasal, than *breath* and *satth*; *moan* and *sown* are fuller than *mob* and *sob*. We use such rhymes in succession; we do not object even when a single rhyme like *mob* and *sob* is followed by a double one like *ember* and *remember*. We accept very light rhymes and very heavy rhymes. Why, then, should we insist that in a single pair of rhyming words, no matter how heavy the rhyming portion may already be, that portion shall always extend back to and include the vowel of the accented syllable? Why not rhyme *amber* with *chamber* and *forest* with *soreset*, seeing that, although the stressed vowels differ, so much yet remains to constitute a rhyme? It is true, the stressed vowel carries great weight—it is the most distinctive element of the word; and that is doubtless why, in the great majority of cases, it is included in the rhyme. But that is not a sufficient reason why it should always be included, nor is it any reason why every sound following it should invariably be included. The principle of harmony amid diversity which we have seen to underlie our theory of rhyme, can be as legitimately applied here as elsewhere.

Let us see now what the actual practice of our poets has been. We are not concerned with the difficult question of the origin of end-rhyme, nor with its rise to recognition in English poetry. We know that at certain periods, even after its use by Chaucer, it was regarded by scholarly poets or "makers" as unworthy of their art and fit only for use in popular jingles. Whether the composers of these rude jingles were to be more trusted for exactness in rhyming than the poets who were conscious artists, is an open question. Mr. A. J. Ellis ('Early English Pronunciation') holds that they were. "When few people can read, rhymes to be intelligible must be perfect. . . . Licenses always produce a disagreeable effect upon children and unlettered adults." But it seems unlikely that rude rhymers of an early day would be very different from unskilled rhymers of the present day, who persist in mating such words as *rain*, *samc*; *keep*, *street*; *whether*, *coer*; *market*, *carpet*. Mr. Ellis's statement can be held true only so far as to be taken to mean that there must be perfect correspondence in some one sound, vowel or consonant. *Up*, *luck*; *home*, *Joan*; *fishes*, *ditches* were always good enough for nursery rhymes. But to turn to the poets, the practice of Chaucer and Gower is clear. They aimed to use only perfect rhymes as we understand the term to-day, with the difference that, under the influence of foreign models, they did not insist upon a dissimilarity of the consonants preceding the vowels, using very freely identical or "rich" rhymes. They admit a few rhymes which we cannot consider absolutely exact on any theory of pronunciation (as *were*, *beere*; *found*, *hond*; *remember*, *tender*), but such are clearly conscious departures from their ideal, forced upon them by the poverty of rhymes of which Chaucer somewhere complains. Wyatt, on the other hand, with a few other versifiers, went to the opposite extreme of sometimes ignoring the entire stressed syllable and rhyming upon unstressed suffixes; as *coming*, *parting* (the metre shows that the accent is penultimate); *uncertain*, *mountain*; *remember*, *measure*; *then*, *seldome*. Such are the extremes of practice

before Spenser. It is interesting to note that the oldest known Anglo-Saxon poem employing end-rhyme throughout (Conybeare's Rhyming Poem, Exeter MS.) contains just about the proportion of divergences from exact rhyme that we may expect to find in any poem to-day.

Beginning with Spenser, though the problem of pronunciation remains always a vexing one, we can make out a tendency toward greater definiteness in one direction with less exactness in another. The tendency is to restrict the limits of the license, but to extend the resort to license within those limits. The full, identical rhymes, though still used (*descent, per cent.*—Pope; *ray, array*—Shelley; *sea, sea*—Swinburne), are exceptional. Cases of mere assonance or vowel-rhyme (*broken, open*—Shakespeare; *win, him*—Rossetti), except where deliberately adopted, as in several poems by Mrs. Browning and George Eliot, are also of rare occurrence. Rhymes like Wyatt's upon unstressed syllables are scarcely to be found at all. The limits are practically narrowed to our present definition of end-rhyme as given some distance back. On the other hand, the practice of substituting for identical sounds (within the rhyming portion of the words) merely approximate sounds, whether vowel or consonant or both, has been freely adopted and extended. Spenser himself was still much inclined to cling to the Chaucerian ideal in this respect and allow no mere approximations, as is evident from his resort to violent distortion of words and to all sorts of dialectal forms to secure exactness of rhyme: *swim, clim (climb); jaws, waves (vases); rift, clift; grieffe, clieffe*. But there remains a very large number of positively imperfect rhymes which he allowed to stand, some of them mere assonances; *deckt, set; cherisht, florisht; mourne, learne*, etc. Since the end of the sixteenth century, poets have frankly adopted many imperfect rhymes, of which the following are types:

Shakespeare: *Noon, son; love, prove; feast, feast*.

Pope: *Toast, lost; devil, civil; remained, leand*.

Keats: *Essences, lees; woodlander, spur; honor, donor; innumerable, tell*.

Tennyson: *Curse, horse; gaze, face; Christ, mist*.

Rossetti: *Veterans, France; strong, flung; inkred, opened, fire-footed*.

ALPHONSO G. NEWCOMER.

THE COLLECTED WORKS OF EDWARD BURNE-JONES.

LONDON, January 2, 1899.

So much was written about Burne-Jones a few months ago, at the time of his death, that it would seem useless to attempt any further criticism, to offer any new estimate, if it were not that the two exhibitions of his work just opened in London are far too important to be passed in silence. One is at the New Gallery, the other at the Burlington Fine Arts Club. Of the two, the collection at the New Gallery is the more fully representative. The paintings shown begin with the water-colors of the early sixties, and end only with the large "Arthur at Avalon" upon which he was still working at the time of his death. His beautiful tapestries have been brought from Stanmore Hall. Innumerable drawings complete the collection. A famous series like the "Briar-Rose" may be missing, or single pictures like the

"Star of Bethlehem." You will look in vain for his stained glass; and, indeed, much of his work, having been done for definite decorative ends, must necessarily be omitted from such an exhibition. At the Burlington Fine Arts Club the collection is smaller and limited to his drawings, but for this very reason it seems to me more perfect and complete in itself, for I think Burne-Jones is always most interesting in his studies and sketches. The managers of each show have published an excellent catalogue which will relieve the Morells of the future of a large part of their labors where Burne-Jones is concerned; while in the introduction to the catalogue of the New Gallery, Mr. Comyns Carr quotes a few lines from a letter in which Burne-Jones has made for himself the record which it has taken an army of critics, in a whole library of books, to invent or imagine for the Florentine or Venetian painter of the past. So long as these lines survive, there can be no question of the origin and development of his art, of the masters he accepted, and the influences he came under at the most critical stages of his career—in a word, no chance for his psychological reconstruction. If few artists have been so successful in their lifetime, few have left such exact data about their work for posterity.

The passage in the letter to which I refer deserves to be quoted in full. It is, in the slang of a few years back, a human document of the utmost value. It explains Burne-Jones better than he could be explained by the eloquence of any one else:

"I think Morris's friendship began everything for me—everything that I afterwards cared for. We were freshmen together at Exeter. When I left Oxford I got to know Rossetti, whose friendship I sought and obtained. He is, you know, the most generous of men to the young. I couldn't bear with a young man's dreadful sensitiveness and conceit as he bore with mine. He taught me practically all I ever learnt; afterwards I made a method for myself to suit my nature. He gave me courage to commit myself to imagination without shame—a thing both bad and good for me. It was Watts much later who compelled me to try and draw better. I quarrel now with Morris about art. He journeys to Iceland, and I to Italy—which is a symbol—and I quarrel too with Rossetti. If I could travel backwards I think my heart's desire would take me to Florence in the time of Botticelli."

As you walk through the rooms hung with his pictures, you feel that the history of his art could not be more admirably summed up. Chronological order is fairly well followed, so that you come in the first room of all to the water-colors he painted when the spell of Rossetti was strong upon him—"Clara von Bork," "Sidonia von Bork," "Green Summer," "The Forge of Cupid," and too many others to mention, little gems of rich, warm, glowing color. You see in them often enough how much he stood in need of the counsels of Mr. Watts. The drawing is primitive to the last degree. His large, opulent ladies are opulent in one dimension only, I have heard it said of them. But there is a splendor, a vitality, an ardor in his work of this date that helps you to forget its shortcomings. "It was Watts much later who compelled me to try and draw better"—with some of the beautiful pictures of the seventies as a result; pictures painted when he had gained in knowledge what it must be confessed he had lost in ardor and vitality. The splendor of color had not yet faded, however, and the "Chant d'Amour," standing

midway between his early Rossetti manner and his later entirely Burne-Jones manner, is perhaps his masterpiece. I was a little afraid that 'seeing it again might destroy my old illusions; for the "Laus Veneris," on a second inspection, I found terribly crude and raw in color, and not to be redeemed even by the really exquisite design of the background. But the "Chant d'Amour" holds its own, to-day as in the past; and though without claim to originality, though you can trace throughout the influence of Rossetti, though you seem to see now Giorgione, now Botticelli struggling with him for supremacy, its beauty is unquestionable, and it is probably one of the pictures by which Burne-Jones will be best remembered. "Afterwards I made a method for myself to suit my nature"—the method, now accepted as characteristically Burne-Jones, which in the eighties and nineties mastered and overpowered him. Need I say what I mean by this? Does not the artist's very name suggest the strange, pale, gray-blue land, where weary heroes and anæmic maidens wander sad and heavy-laden with the burden of life? Weariness may have its pictorial quality, and I quite agree with Mr. Comyns Carr that an artist cannot always be in the mood to pose as an athlete. But I think that in many of the later pictures the new ideals had so taken possession of the artist as to come near destroying his feeling for beauty. There are designs in which his men and women as symbols of sadness become almost clumsy and grotesque; while the method that suited his nature sometimes made him forget the method that better suited the painter. Never, in his more mature years, though he had trained himself as a draughtsman, did he work with the same freedom and breadth as in the little water-colors. It is curious to contrast the beautifully indicated landscapes in several of these with the labored, tortured foliage in "The Beguiling of Merlin," for instance.

The full rein he gave to his imagination was, as he admitted, bad as well as good for him, and often caused him to lose a just sense of proportion. The strong absorbed him, was everything to him, and yet it is the strong that counts least in many of his compositions. If you take as an example the "Mirror of Venus," one of his most popular pictures, thanks to the engravings after it, you will find that the "painted poem" he always sought to produce is in the wonderful, the romantic landscape of the background, and not in the group of figures in which he intended the interest to be concentrated. I look at Venus and her maidens only to wish they were not standing there, on the edge of the pool, to break so fine a harmony; and I question, too, if Burne-Jones, had he not vowed himself to mysticism, might not have become one of our great modern landscape painters.

Of course, when Burne-Jones used the term "painted poem," and when his "poetic intention" was praised by Rossetti, we understand what was meant. Mr. Comyns Carr, in his introduction, explains it clearly by his reference to Rossetti's "endeavor to rescue from the traditions of the past, and to refashion according to present needs, a language that might aptly render the visions of legend and romance." But the true painter's poetry is quite a different thing, and lovely and picturesque as was their conception of many an old story or myth, both Rossetti and Burne-Jones were often serious-

ly handicapped by the medium with which they sought to give it expression. Burne-Jones, of the two, was the more accomplished technician, it is true, but he was not so inspired a poet, and unfortunately he cultivated the idea, the poetic intention, much to the neglect of purely technical qualities. At least, this is how I account to myself for the disappointment that mingled with my pleasure as I passed from one to another of the long series of pictures at the New Gallery. But in his drawings he was never so restricted by his medium, probably because, as a rule, he did not try to express so much with it. Pencil and chalk and crayon served him only for preliminary sketches and studies, frequently elaborate enough, but still notes and memoranda of designs and compositions to be carried out on quite a different scale and with quite different materials. For this reason, there is less to disturb or interrupt one's pleasure in his drawings, and as the collection at the Burlington Fine Arts Club is limited to them, it has proved, to me certainly, more wholly delightful than the larger and fuller collection at the New Gallery.

It is as impossible to enter into detail about each separate drawing as it was in the case of the paintings. I can merely explain the general character of the show and the impression one receives from it. Perhaps nothing more interesting is exhibited than the very early pen-and-ink drawings, dating from 1856 to about 1863. Like the early water-colors, they reveal the influence of Rossetti. Their amazing elaboration would seem a fault, for wash would have given the same effect far more directly and simply, if it were not that the results are so amusing. The catalogue does not explain whether they were designed for any definite purpose, but, as far as I can remember, none was ever reproduced and published at the time. Burne-Jones was one of the group of illustrators of the sixties, and he has contributed to *Good Words* and the other publications that have lately become so famous. But his illustrations of that period, all told, were very few, and no wonder, if he always presented the wood-engraver with such an impossible task as the engraving of these drawings would have been. Nothing could be more minutely finished, no design more intricate. There are as many as seventy figures in the largest, "Buondelmonte's Wedding," and the incident is varied in proportion. The subjects are usually mediæval or Biblical—the subjects, that is, which Millais and Holman Hunt and Rossetti and Sandys were treating in their illustrations; and not even Mr. Sandys ever "packed" a drawing more ingeniously and arranged it more decoratively. The manner is Rossetti's—so much so that when you look at two of the drawings, "The Waxen Image" and "Going to the Battle," you could almost be sure of the two Rossettis he had before him while he worked, if only the date in the case of the former did not show that the pupil really must have anticipated his master. His more recent illustrations, with one exception, are not here at all, though there are two or three series of designs for books and manuscripts which he and William Morris undertook together; schemes which ultimately fell through. It so happens that some of the Kelmscott drawings have been sent to a show of black-and-white in South London, but their absence is less to be regretted, since, as is well known, Burne-Jones left it

to his assistants to make the final designs for the wood-engraver, and his sketches can hardly be said to represent him as an illustrator of books.

Most of the other drawings at the Burlington Fine Arts Club are much more familiar and have been far oftener seen than his pen-and-ink work. There are the pencil drawings, entirely finished as far as design goes, and delicate and tender as silver points; the careful studies of drapery, of hands and feet, of plumage and foliage, proofs of the conscientious study and hard work he brought to the painting of every one of his pictures; dainty little sketches in washes or chalk on a ground of color, notes of harmonies and arrangements to be used later; the large, melancholy heads he drew so frequently in recent years, which he himself valued so highly that it was by them he chose to be represented in almost all the great international shows on the Continent. In some of his drawings there is a tendency to the same over-elaboration that mars his paintings; in others, especially the chalk studies on tinted paper, simply and freely put in, there is something of the bigness and stateliness of the Old Masters.

He is least satisfactory in his portraits done in chalk or pencil. A number hang in a room apart, as if to call attention to their weakness. They represent varying phases of one unalterable type; never, no matter how they are labelled, sitters or models of distinct character and individuality. I must say one word about his drawings for children, though they were never intended for exhibition. Apparently, he made them solely to amuse his own or his friend's children, and they are intentionally as primitive and childlike as possible. But they are full of real fun, as gay as his pictures are sad. A grotesque study of a cat and a delicious Noah's Ark are models of what such things should be, and one envies the children who possessed them.

That the two exhibitions are of immense interest, that they give an unequalled opportunity to study the life's work of Burne-Jones, I hope I have proved in pointing out the ground each covers. But, unfortunately, this opportunity, which may never occur again, has come too soon for a final decision as to the rank he holds as an artist. It will be some time before his work can be analyzed and judged dispassionately. He still lives for us in the glamour of romance through which we now see the Pre-Raphaelites and their followers. Though he was not one of the original group, he speedily became, in the eyes of the public, the central personage in the picturesque episode of Pre-Raphaelitism. He may have had his critics; Mr. Comyns Carr seems to take them so seriously as to resent their hostility. But without critics, there would not have been the same picturesqueness in his attitude, in his isolation, as it were, from the common herd of artists. It took many years for Frenchmen to believe that some of the giants of 1830 were but pygmies after all, while how often, on the other hand, do the pygmies of one generation become the giants of the next? It is probable that Burne-Jones will always remain one of the most striking and individual figures in the history of English art during the second half of the nineteenth century; whether he will seem one of the greatest artists is another question. But a certain fact is that his influence, never more than superficial, dies with him. With

him, there is an end to the movement which began as Pre-Raphaelitism, and which, though its fundamental doctrine was a return to nature, led to the mediævalism, the mysticism—the Neo-Gothic school, as it was called—of which the old Grosvenor Gallery was the Temple and Burne-Jones the High Priest. *E. R. Sennell* N. N.

Correspondence.

"DESTINY" LEGALIZED.

TO THE EDITOR OF THE NATION:

SIR: You anti-expansion fanatics keep up such a bitter war that peaceful waiters upon "destiny" who would be content to sit still and see things come their way, are perforce dragged into the fight. I ask you, as a liberal adversary, to give this aid and comfort to your enemy. The argument seems conclusive:

"Tous les usurpateurs veulent conserver par les lois ce qu'ils ont envahi par les armes; sans cet intérêt naturel de jour paisiblement de ce qu'on a volé, il n'y aurait de société sur la terre."

The rôle of prophet was the last the universal old Frenchman would have aspired to; but he was a seer, and his wonderful foresight seems to have reached far into our age and time.

COLUMBIA, PA., January 23, 1899.

THE CALIFORNIA LEGISLATIVE INSTRUCTIONS.

TO THE EDITOR OF THE NATION:

SIR: Was there ever a more palpable case of going back on one's own principles than the recent action of the California Legislature in instructing the California Senators to vote for Philippine extension and for imperialism? Their State has been fighting bitterly for years against Chinese cheap labor, and involving the country in all manner of stringent laws to shut it out, and now it turns around and asks, not only to have its ports open to similar labor, but that twelve millions of it be added bodily to the country itself! What can the workingmen of California and of the nation generally be thinking of in favoring such a movement? Is it said that the Filipinos are too poor and too ignorant ever to leave their own islands to come into competition with the workingmen of America? Doubtless that is true of them if left to their own initiative. But how inevitable it is that the same thing will be done with them that has been done in the past with the Chinese—great companies be organized, and steamships employed to bring them here by the thousands and to flood with them the American labor market. The Illinois coal-miners have been thrown into convulsions lately by having a few hundred negroes brought from a neighboring State to take the miners' places. But how will it be when swarms of their dusky brethren are brought here to be their competitors in every kind of work, and when, with them made their fellow-citizens, there will be no possibility under our Constitution of making laws against them, as we now have made them against the Chinese? And of all places in the country, to think that California, which will be the first State to be flooded with such labor, should instruct its representatives to prepare its way!

I have no prejudice against either Chinese

or Filipinos as human beings. I should like to see them all happy and prosperous. But it is nature's method, in bringing about happiness, to have each race of people and each type of civilization, the same as each species of animals and of plants, developed true first of all to its own type, rather than to have them mixed up in a common mush, where each, instead of helping the other, tends only to degrade the whole stock; and then, when they are thus separately developed, its method is to unite them in a larger organism where each, because of its very distinctness from the others, can best do its part. It is evidently to promote this separate type development that nature has placed races and nations in their separate localities and endowed them with their mutual antipathies. The hostility of Californians to Chinese, though brutal and wicked in some of its manifestations, is at its core the offspring of a divine instinct, and in its final result will be for the interest of a larger humanitarianism than any mingling with them now would be—a blessedness in which alike Californians and Chinese will share. To work out the problem of a free government in the midst of the ignorance and lower type of material we already have among ourselves, is the utmost we are likely to be successful in; and to weight the problem with millions more belonging to the same ignorant classes is almost sure to make its solution a failure, and a failure which will be the whole world's misfortune.

Instead, therefore, of instructing their legislators to vote for this enormous additional burden, ought not our California citizens, and our workmen the whole country over, to rise up and demand with one imperative voice that the vote shall be America for Americans and the Philippines for Filipinos?

JOHN C. KIMBALL.

HARTFORD, CONN., January 23, 1899.

THE TRUE SPAIN.

TO THE EDITOR OF THE NATION:

SIR: I have been a careful reader of your paper for the last year or so, and could not help noticing how unjust you are to Spain. You pick out a spread-eagle utterance of a Spanish general, as in your last number, and then, taking it as a text, you begin preaching to the Spaniards. If you will look at Prof. Altamira's article, "El Patriotismo y la Universidad," in the current numbers of the *Boletín de la Institución Libre de Enseñanza*, you will see that what he has to fight against is pessimism, not spread-eagle talk. His reference to the late war is in very measured terms (issue of October 31). The University has to struggle against the accursed greed to which are equally subject the superior nations (England) and the inferior nations (Turkey), old nations (Spain), and young nations (United States). The young nation has walked in crooked paths, falling into the same errors for which it despised the old nations. While advocating a closer union with the Spanish-American republics, he says they confessed their faults without rebuke. When did the people of the United States ever confess without rebuke?

Many years ago, while calling on Echegaray, I was ushered into a room all adorned with laurel wreaths and oakleaf garlands, testimonies of the esteem in which he was held by his people; and that man, instead of glorying in what he had achieved as a dramatic writer, felt rather humiliated because

he had not pushed his mathematical researches as far as he might have done.

Yours respectfully,

P.

January 15, 1899.

"INTERLOCK."

TO THE EDITOR OF THE NATION:

SIR: The geographical features of North America are such that the sources of two or more streams are often so close together that, at certain seasons, as in times of freshet, they flow into one another; and the sources of rivers which fall into the Atlantic are said to "interlock" with those which find their way to the Pacific, or Gulf of Mexico, or Hudson Bay. More than two centuries ago, the Rev. J. Clayton, in a paper read before the Royal Society, called attention to this phenomenon in the following passage:

"The Heads of the Branches of the Rivers interfere and lock one within another, which I think is best expressed after the manner that an Indian explained himself once to me, when I enquired how high the Rivers of Carolina, Virginia and Maryland arise out of the Mountains, from those that ran Westerly on the other side of the Mountains, he clapt the Fingers of one Hand 'twixt those of the other, crying, they meet thus; the Branches of different Rivers rising not past a hundred Paces distant one from another: So that no Country in the World can be more curiously watered." *Philosophical Transactions*, 1693, xvii, 701.

Clayton wrote presumably in 1688; but it was not, so far as the present writer is aware, until the middle of the eighteenth century that allusions to this phenomenon became common; and then the word *lock*, employed by Clayton, gave way to *interlock*. This meaning of the latter word, which has received little or no recognition from lexicographers, is illustrated by the following extracts:

"The town of Shamokin . . . contains eight cabins near the river's bank right opposite the mouth of the west branch that interlocks with the branches of *Allegheny*." 1743, July 8, J. Bartram, *Observations* (1751), 14.

"From the Head [of the Ohio River], which interlocks with the Cayuga Branch of Susquehanna, to Canawaga, I have little knowledge." 1765, L. Evans, *Middle British Colonies*, 25.

"About five miles from the Vine Creek comes in a very large creek to the eastward, called by the Indians Cut Creek. . . . It extends, according to the Indians' account, a great way, and interlocks with the branches of Split-Island Creek." 1770, G. Washington, *Writings* (1889), ii., 295.

"At Kishwaukee (about 16 miles up) are two branches of this Creek, which spread opposite ways; one interlocks with French Creek and Cherdge,—the other with the Muskingum and Cayahoga." 1773, T. Hutchins, *Topographical Description of Virginia, &c.*, 30.

"In some future state of population, I think it possible, that its [the James River] navigation may also be made to interlock with that of the Potawmac, and through that to communicate by a short portage with the Ohio." 1783, T. Jefferson, *Notes on Virginia, Writings* (1894), iii., 90.

"Nearly one-third of this vast plain is what the inhabitants call swamps, which are the sources of numerous small rivers and their branches: these they call salt rivers, because the tides flow near to their sources, and generally carry a good depth and breadth of water for small craft, twenty or thirty miles upwards from the sea, when they branch and spread abroad like an open hand, interlocking with each other, and forming a chain of swamps across the Carolinas and Georgia, se-

veral hundred miles parallel with the sea coast." 1791, W. Bartram, *Travels*, 99.

"At five o'clock arrived at the dividing ridge, between the waters of the Osage and Arkansas (alias White river), the dry branches of which interlock within 20 yards of each other." 1806, Z. M. Pike, *Sources of the Mississippi* (1810), 126.

"The Arkansas river penetrates far into the Rocky Mountains, its ramifications interlocking with some of the waters of the Missouri, Columbia, San Buenaventura, Colorado of the West, and Rio de Norte." 1844, J. Gregg, *Commerce of the Prairies*, ii., 195.

"The headwater of the Penobscot in freshets actually become intermingled with those of the Allegash, Aroostook and St. Croix; and the geographical marvel is many times repeated within our limits of rivers interlocking at their source and flowing off in different directions upon different slopes." 1861, G. J. Varney, *Gazetteer of Maine*, 11.

"What the Jesuit did believe seems to have been in a general way that the Missouri, somewhere in its springs, did interlock with other waters which sought towards the west an unknown sea near which were white men." 1894, J. Winsor, *Mississippi Basin*, 138.

ALBERT MATTHEWS.

Boston, January 22, 1899

Notes.

Henry T. Coates & Co., Philadelphia, have in press 'The History of the Pennsylvania Railroad Company,' by William Bender Wilson, in two octavo volumes with 273 illustrations.

D. C. Heath & Co., Boston, announce 'The Young Citizen's Reader,' by Charles F. Dole. Ginn & Co. have in preparation 'A Laboratory Manual in Astronomy,' by Mary E. Byrd, Director of the Observatory, Smith College.

D. Appleton & Co. will publish during the present month 'General Sherman,' by Gen. M. F. Force; 'The Cruise of the *Cachalot*,' or, Round the World after Sperm Whales,' by Frank T. Bullen, First Mate; 'The Story of the Cotton Plant,' by F. Wilkinson; 'The Story of Geographical Discovery,' by Joseph Jacobs; 'A History of Japanese Literature,' by W. G. Aston; and 'A Writer of Books,' by George Paston.

Further announcements by Macmillan Co. are 'Don Quixote,' edited for use in homes and schools by Clifton Johnson, with Cruikshank's illustrations; and 'The Development of Thrift,' by Mary Wilcox Brown, General Secretary of the Henry Watson Children's Aid Society of Baltimore.

R. H. Russell will publish immediately a profusely illustrated edition of A. W. Pinero's comedietta, 'Trelawny of the Wells,' and Mr. Whistler's 'The Baronet and the Butterfly.'

Mr. Frederick A. Ober is an old West Indian traveller, and his book on 'Puerto Rico and its Resources,' which the Appletons have just published, is therefore not an extemporized affair. Mr. Ober also knows his Spanish authorities and how to make good use of them. After a rather unnecessary placating of the expansionists in the introductory chapter, he proceeds to an orderly and intelligent account of the island, with full details as to the climate, agricultural products, cities and towns, routes of travel, government and people, etc. A series of illustrations add value to a book which, for being both timely and trustworthy, should be much in demand.

Considerable enlargement within and with.

out previously existing departments characterizes Mr. Douglas Sladen's happy thought, 'Who's Who,' for 1899 (London: A. & C. Black; New York: Macmillan). This country has been catered to by a list of American ladies bearing English titles, another of "great American newspapers of the rank of the great London dailies and weeklies," and by numerous additions to the American biographies. Though the editor refers in his preface to recent events as drawing England and the United States closer together, as the ground of this last extension, we find none of the heroes of the late war, military or naval, to have thrust their way into the columns of the élite (Mr. Roosevelt was in last year's issue). Some editors, including the *Tribune's*, have been included, but not the yellow journalists; our new Senator from New York, but not Platt or Quay. Mr. Choate will go to St. James's unheralded by 'Who's Who.' Mr. John Flake is rightly admitted; his neighbor, President Eliot, is still outside, though Presidents Harper and Gilman now first come in. A want of proper perspective is visible in some of these instances, but it shall not make us anything but glad to have this annual, with all its inevitable defects.

Almost a novel idea is that of an illustrated edition of 'Sartor Resartus' (London: George Bell & Sons; New York: Macmillan), and it has been freshly and interestingly carried out. The artist, Mr. Edmund J. Sullivan, has generally avoided the narrative and more obviously illustratable passages, and has embroidered a sort of emblematic and pictorial commentary upon the doctrine of the book. One may not always know certainly what he means, but one is always interested, and generally the connection between picture and text is clear enough. The drawings themselves, which affect a German archaism of style that recalls Dürer and Holbein with an occasional touch of the simpler manner of Rembrandt, are always able and sometimes remarkably powerful. It is seldom indeed that one sees modern book-illustration of so much merit.

R. H. Russell publishes a series of prints by Pamela Colman Smith "colored by hand in water-color and retouched by an artist" in the old manner. The art is, perhaps, worthy of revival, but in the present instance the prints are not specially fine in composition or drawing, and the color does not seem better than much that is produced to-day by mechanical means. A whole bookful of designs by Boutet de Monvel or Walter Crane costs no more than one of these prints, and almost any page of 'Joan of Arc' or 'A Floral Fantasy' is better as a work of art.

The late war with Spain is by far the most conspicuous theme in the May-October volume of the *Century Magazine* for 1898. What is noticeable, too, the new hostilities tend to revive the memory of the old, and there is a not insignificant series of chapters on our civil war. For the rest, the volume possesses the usual variety of article and illustration. Most curious, to the initiated, is the paper on the island of Naushton, whose noble owner was among the lamented dead of last year, with so much respect for privacy that his name is nowhere mentioned or suggested. Several engravings after female portraits by Gilbert Stuart contrast with as many by T. Cole after Romney and Hopper.

Of the two bound volumes of Scribner's

for the year 1898 the first has no trace of trouble in the West Indies. The series of articles on undergraduate life at women's colleges goes on; Senator Lodge's 'Story of the Revolution' begins and proceeds; Capt. Mahan is occupied with the naval campaign on Lake Champlain in 1776. With the July number, the first in volume two, the exigencies of premature manufacture of popular magazines yield to current events, and Mr. Richard Harding Davis makes his bow with "The First Shot of the [Spanish] War." After that, there is no lack of this subject, nor of the Anglo-American alliance as expounded by the Rt. Hon. Joseph Chamberlain, nor of "Imperialism and Industrialism" coming into "The Point of View." Mr. Wyckoff concludes his "Workers—the West."

The same demarcation is observable in *St. Nicholas's* two volumes for 1898; and in the later as crows the old, so crows the young, with guns and gun-foundries, voyage of the *Oregon*, flying squadron, man-of-war etiquette, etc. But the militant proportion is more modest.

A semi-monthly Latin journal, called *Vox Urbis*, is now being published in Rome. Its purpose is to discuss archaeological, literary, and art problems, and also to encourage the writing of Latin poetry. In a recent number there is an ode on the bicycle by Maurus Ricci, which is termed "birota velocissima." It is said that the periodical is proving popular and is on a paying basis.

The *Deutsche Rundschau* easily holds its place in the front rank of German monthlies with instalments of fiction from such writers as Helene Böhlau, Paul Heyse, and Hans Hoffmann in a single issue (January, 1899), besides the usual number of articles by eminent workers in the fields of literature, science, art, philosophy, and history. Prof. Stein (Bern) expounds with clearness and vigor the nature of the tragic conflict between society, as the arena of individualism, of social variability, on the one hand, and the state, as the representative of the race-interests, of social constancy, on the other. Optimistic philosopher as he is known to be, he does not consider the dilemma, individual versus genus, as insoluble. The Rembrandt exhibition furnishes to Otto Seeck the warp for a very complete picture of the painter's artistic activity, ingeniously interwoven with interesting details of his life. The usefulness of this essay (running through the December and January issues) is enhanced by the frequent references, in footnotes, to inexpensive, easily accessible reproductions of the widely scattered works of Rembrandt.

On the occasion of the festivities in memory of the Reformation, Prof. Dr. Gertz delivered in the University of Copenhagen an address which has caused a sensation among the schoolmen of Europe. Though himself the representative of classical philology in the University, he expressed in positive terms his opinion that the ancient languages, the Greek entirely and the Latin in part, are bound to lose their position in the secondary school, which "has to provide, above all things, for what is indispensable to the understanding of modern life and to an active participation in the same." Dr. Gertz does not anticipate a decline of classical philology in consequence of relegating the Greek, like Sanskrit, Hebrew, and certain other languages, entirely to the university—a view shared, as is well known, by Prof. Willamowitz-Möllendorf. The address is pub-

lished in the December number of the Danish review *Tilskueren* (Copenhagen), and, in its leading passages, in No. 4, 1898, of the *Zeitschrift für die Reform der höheren Schulen* (Berlin).

M. Alfred Fouillée, that staunch defender of classical studies, also advocates the dropping of Greek from the regular secondary school programme in his new volume, 'Les Études Classiques et la Démocratie' (Paris: Armand Colin et Cie.). The time and energy thus saved he would in part devote to the strengthening of the course in Latin. All these men are agreed in the judgment that the study of Greek in secondary schools does not yield results commensurate with the efforts.

Of the hundreds of papyri finds made in the winter of 1896-'97 in the ruins of the ancient Oxyrhynchos, the modern Behnesa, in Central Egypt, the discoverers, Messrs. Grenfell and Hunt, have published, together with translations and notes and eight facsimile plates, only 207. It was seemingly the purpose of the lucky finders to issue in this first part specimens of the various kinds of documents found. The first six are called "theological" texts and belong directly to Biblical literature, two of them being of special value, namely, a small collection of extra-canonical Sayings of Jesus, and several verses from the beginning of Matthew in an uncial manuscript of the close of the third century; this being actually the oldest specimen of a New Testament manuscript extant. Nos. 7 to 15 are called "new classical" pieces, and Nos. 16-29 fragments of known authors. The names here represented are Sappho, Alcman (uncertain), Aristoxenus, Thucydides, Herodotus, Homer, Sophocles, Plato, Demosthenes, Isocrates, Xenophon, Euclid, and Virgil. From No. 33 to No. 124 we have a vast variety of Greek documents dealing with the details of public and private life. The philological gain from these new documents does not promise to be especially large, although, in connection with the Fayum papyri and some other new specimens of the Greek of that period, it will be now necessary to discard the unhistorical and uncritical myth of a peculiar "Biblical" Greek for the Septuagint and the New Testament.

The widespread interest taken in this papyri find is attested by the fact that, at the recent annual meeting of the Egypt Exploration Fund, it was reported that, of the separate edition of the Logia brought out soon after its discovery, 25,800 copies had been sold. At this same meeting Sir E. Maunde Thompson declared that it would not be surprising if entire books of the New Testament dating from the second century should yet be found among the papyri. New finds are constantly reported, and systematic investigations have been begun in Denderah, where not even a beginning of diggings had heretofore been made, as also in Sakkarah, in the tombs of Sheikh Said, and elsewhere. Prof. Petrie made the somewhat surprising statement that the British occupation of Egypt was not favoring scientific investigations. New restrictive rules hinder the diggings, while those who destroy the remains of the older civilizations are allowed free scope and are but rarely punished.

The welcome and significant service of photography to astronomy was never more aptly demonstrated, than during the last few weeks, by Messrs. Pickering and Chandler, in the prosecution of research on the orbit of that anomalous new planet D Q. The

peculiarities of its path rendering an accurate acquaintance with it necessary, search has been made among the library of photographic plates accumulating for many years past at the Harvard observatory; and Mrs. Fleming, after overcoming many discouraging circumstances and vexatious sources of confusion, has at last discovered six independent images of the planet on plates taken between December 19, 1893, and April 18, 1894. How accurate an orbit is possible from these chance photographs may be inferred from the fact that, during their interval, D Q travelled over a full quadrant of its path round the sun, and for two months of this time its distance from the earth did not exceed $18\frac{1}{2}$ million miles, or about half the distance of Mars at his nearest. Many astronomers have a sense of almost personal satisfaction in the reconciliation and renewed coöperation of these eminent astronomers, whose differences are now, it is hoped, forgotten and buried in the interests of a science too engrossing for personalities. One of them has ventured the name Pluto for the new planet. Why not Eireneka?

The *Consular Reports* for January contains an account of trade conditions in Japan, from which it appears that in 1895 we exported to that country, in round numbers, \$5,000 worth of dynamo-electric machinery, in 1897 \$241,000; of locomotives in the former year to the value of \$142,000, in 1897 \$1,192,000. Our largest import from Japan was of raw silk, valued at \$16,000,000. There are also interesting notices of the rubber industry in Pará, of which the most serious difficulty is insufficient labor, and upon the raising of poultry in Belgium, where great progress has been made recently in the improvement of the breeds and the care of the yards. The announcement that our Government is preparing to open at the Paris Exposition of 1900 a "kitchen for the preparation and gratuitous distribution of bread and other forms of food prepared from maize," has caused some apprehension among the German farmers, lest its introduction should diminish the consumption of home-raised wheat and rye. The exports of corn from this country to Germany, where it is fed to cattle only, in 1897 amounted to nearly one million metric tons, valued at \$12,709,200, or nearly 50 per cent. more than in 1896.

The British Trade Returns for 1897 show a decided innovation for the better over previous issues. Under the able management of Mr. T. J. Pittar, the Statistical Office has prepared a statement giving in parallel columns the returns of import and export for each article during the last five years. The convenience of such an arrangement in aiding the study of comparative movements of trade is obvious, and the compilation pictures at a glance the distribution of each enumerated article among the countries of supply or sale for a period of high commercial interest. The Treasury Bureau of Statistics issued a similar volume during the last year, and in these two volumes may be found the trade record of the two great commercial nations of the world for five years.

The Maryland Geological Survey has issued its second volume, containing several scientific papers which add largely to the economic and historical knowledge of the State. To the "Report on the Building and Decorative Stones of Maryland," Prof. George P. Merrill contributes a chapter on the physical, chemical, and economic properties of

building-stones which will be of value to quarriers and contractors. A more detailed study of the character and distribution of Maryland building-stones, together with a history of the quarrying industry, by Dr. E. B. Mathews, embodies the results of careful investigations in the field and in the laboratory. This paper is illustrated by numerous colored heliotypes which reproduce very vividly the characteristic appearance of the more important stones. The "Report on the Cartography of Maryland" consists of two sections. That on the aims and methods of cartography, by Henry Gannett, comprises a complete digest of topographic methods. Dr. Mathews's paper on the maps and map-makers of Maryland contains reproductions of some of the early maps, and reveals many interesting facts regarding physiographic changes which have occurred in historic times along the Chesapeake and Atlantic coastline. All the illustrations and maps are of a high order of excellence, and the book as a whole makes a most attractive appearance.

The Geological Survey of Canada has recently published its Annual Report for 1896, which opens with a summary of operations during the year by the Director, George M. Dawson, LL.D. The announcement is made that the general classified index to the publications of the Survey, including some 31,000 references, is approaching completion. Mr. J. Burr Tyrrell contributes a special report on the geology and natural resources of the vast wilderness which lies north of the 59th parallel and extends from Hudson Bay to Lake Athabasca, comprising an area of about 200,000 square miles. His explorations included an examination of the north shore of Lake Athabasca, the Doobaunt, Kasan, and Ferguson Rivers, the northwest coast of Hudson Bay, and two overland routes between Churchill and Nelson Rivers. Numerous half-tones, giving a good idea of the characteristic features of the country, and a map accompany this paper. Other special reports are on the geology of the French River, including the country around the north end of Georgian Bay, by Dr. Robert Bell; on a traverse of the northern part of the Labrador Peninsula from Richmond Gulf to Ungava Bay, by Mr. A. P. Low; and on the geology of southwest Nova Scotia, by Dr. L. W. Bailey. In his account of mineral statistics and mining, Mr. Elfric D. Ingall states that Canada's mineral product has increased 125 per cent. during ten years, while in the United States the increase has been only about 40 per cent. The total product of the former country, however, is but 3.5 per cent. of that of the United States.

—Under the editorship of Mr. William G. Stanard the *Virginia Historical Magazine* is not likely to be wanting in varied contents. The January number contains a contemporary translation of the capitulation of Fort Necessity, known hitherto only through the French version. That Washington should have deliberately signed a document describing himself as a murderer is incredible, and the question has been whether the one person present among the Virginian troops who knew French misunderstood the reading, or the published French articles had been garbled. Mr. Stanard points out that this contemporary translation, found among the Virginia archives, contained in the preamble the word "assault," for which the word "killing" has been substituted. The French term was "venger l'assassin"—not a very acceptable expression, for "assas-

sinat" would have been better. What is overlooked by Mr. Stanard is the phraseology of the seventh article, in which the French version uses "assassinat" and the translator "attack"—a bad translation, and not in keeping with the rest of the paper. It might be assumed that a careless copyist confused the French *s* as written, and so made "attaque" into "assassin," but such a supposition will not account for the occurrence of assassin in at least two contemporary copies of the capitulation in French, and the published *Précis des Faits*. This Virginia paper seems to obscure rather than explain the incident, but offers ground for some interesting conjectures.

—The accounts of some of the experiences in the educational and missionary field in Alaska, which the Commissioner of Education has included in his latest volume of Reports (vol. II., for 1896-97), are not without the fascination peculiar to stories of pioneer life. At Circle City, on the upper Yukon, so the schoolmistress tells us in her report, the people want to hibernate during three winter months: "They cannot help it, for there seems to be something in the air tending to that result." Still, the children would "straggle sleepily in," and by noon all would be in the school. In May the weather began to moderate and the birds slowly came, and "it seemed almost a sin" to keep the children in-doors. Kind nature came to the relief of the compassionate teacher: the weather suddenly grew intensely hot, and out of the moss filling the chinks between the logs of the school-house there came crawling, as they awakened from their winter's sleep, "all kinds of bugs and worms, . . . bees, hornets, and our terrible pest, mosquitoes; . . . so before long we had to stop school." Since then, we learn from Commissioner Harris himself (vol. I., p. xxxvi), the inhabitants of Circle City have removed to the Klondike, and the school has not been opened again. The school reports from several places in Alaska are more or less encouraging, but they all go to show the Sisyphean labor of bringing barbarous or semi-barbarous people within the pale of civilization. One teacher, on St. Lawrence Island, tells the sad story of a whaler bringing with him a woman who taught the people to make whiskey out of molasses and flour by means of an apparatus consisting of a coal-oil can and an old gun-barrel, and several families were making it all winter. According to another, at Karluk, of all the children born there during the last two years but one remained alive. "Still," he continues unconcernedly, "there is hope for the children in that they are rapidly learning the English language."

—This Report for 1896-97 of the Commissioner of Education to the Secretary of the Interior is dated October 1, 1897 (vol. I., p. iii). The second volume, however, has only just been sent out, and it is possible, therefore, that the more recent dealings with the Metlakatla reservation on Annette Island have led to the insertion of the interesting "Statement with regard to Mr. Duncan's Work among the Taimpachean Indians of British America and Alaska" (pp. 1626-28). This supposition is supported by the otherwise uncalled-for insertion in the "Statement" of section 15 of the act of March 3, 1891 (reserving Annette Island for Mr. Duncan's colony) which begins: "Until otherwise provided by law, etc." It appears that Mr. Duncan, who founded an Episcopalian mission at Fort Simpson, British Columbia,

as early as 1857, was induced to emigrate with his whole prosperous colony across the border, partly in consequence of the arrival, in 1880, of a bishop from England—so that he, the founder of the mission, would have had to take a second place, "which he could not very well afford to do," and partly by the surveyors of the Canadian Pacific Railway, who persisted in unceremoniously driving stakes over the lands.

—President Elliot's essays and addresses on educational problems are always practical and suggestive. There are, no doubt, many who will be glad to meet, in a convenient form, eighteen addresses which have been collected in a volume entitled 'Educational Reform' (The Century Co.). It is interesting to observe that, thirty years ago, in his inaugural address as President of Harvard, President Elliot's ideals of educational principles and methods were practically those that he holds to-day. In this, the earliest of the collected addresses, we find already outlined the principles which have been gradually turned into practice at Harvard, notably freedom of election in University studies. We fancy that we trace in these addresses, which range in date from 1869 to 1897, a modification of the optimism implied in the statement in the inaugural address that, "with good methods, we may confidently hope to give young men of twenty to twenty-five an accurate general knowledge of all the main subjects of human interest, besides a minute and thorough knowledge of the one subject which each may select as his principal occupation in life. To think this impossible is to despair of mankind" (p. 4). Does the President of Harvard really think that "a general acquaintance with many branches of knowledge, good so far as it goes," has proved attainable by "great numbers of men"? We wish there were any sign of the intelligent public opinion that such wide and accurate knowledge might create. On page 386 is a good suggestion for a sort of coöperative college entrance examination system by which the preparation of the entrance papers would be intrusted to a group of men taken from various institutions. By this plan, one college might demand more subjects than another, but, subject by subject, the requirements would be the same. The desirability of a uniform method is obvious. President Elliot's belief in the value of uniformity is made prominent in every address; and his insistence that, while we ought to aim at variety in education, it should be a variety of equal things, is a wholesome doctrine in a country in which the prevailing system of a general education is too apt to give a student the impression that he has been pursuing severe studies through courses in English Literature and Pedagogy.

—President Gilman's 'University Problems' (The Century Co.) resembles President Elliot's book in being a collection of addresses delivered from his inauguration as President of Johns Hopkins, in 1876, to the present day. Mr. Gilman is decidedly more conservative in tone than Mr. Elliot, and his addresses contain fewer suggestions. They are, in fact, in the main, a series of optimistic reviews of the progress of education in the nineteenth century, and call for slight comment. The 'Open Letter on the Proposals for a National University in Washington' has already been printed in the *Century*. President Gilman is naturally

averse to the establishment of a rival institution within an hour's ride of Johns Hopkins; his apprehension that political interference would hamper a national university controlled by Congress seems well grounded. His aversion to coeducation is plainly expressed. He is ready to admit women without restriction of age or qualification to the advantages of the learned university extension branch of the Smithsonian Institution which he proposes in place of a national university, where, however, there will be no degree to make it worth while for women to intrude. In 1876, curiously enough, he hoped that an institution similar to Girton College might arise in Baltimore; this was to overlook the fact that, through the presence of Girton and Newnham, coeducation flourishes in Cambridge in fact if not in name.

—Vol. xxxi. of the *Jesuit Relations* (Cleveland: Burrows Brothers Co.) is wholly occupied with Lalemant's Relation for 1647, without containing either the beginning or end of it. Although a single document thus absorbs the space, a large range of topics is considered by the writer; and that, moreover, without any reference to the Huron mission. Among them the most interesting are the story of Jogues's death (with estimate of his character), a long chapter on Druliettes's mission to the Abenakis, and a description of the Attikamégues, who inhabit the Laurentian hills at a considerable distance from the river. Besides mentioning some circumstances connected with Jogues's return to France after his first experience with the Iroquois, Lalemant describes how he returned in September, 1646, to the scene of his previous tortures. While nothing could be gained by repeating here the well-known story of his fate, it is observable that death at last came to him by a sudden blow rather than after a protracted agony. Much greater value attaches to the glimpses which are given of this remarkable man's character. Lalemant says that he was not physically brave; indeed, that he was by nature timorous. His first thought always took in the difficulties which might involve a question, and, recognizing this quality of temperament, he became deeply humble and always said that he was a coward. "Yet the Superiors who knew him depended on him as firmly as on a rock. . . . 'Go' was enough for him—there is no monster, there is no demon that he would not have confronted with that word." He was quick-tempered beneath his habitual self-restraint, but so charitable towards the cruelty and treachery of the Indians that he entertained no aversion towards them. "He looked at them with an eye of compassion as a mother looks at a child of two, stricken with a raging disease." The worst offence which can be ascribed to him is that he felt some complacency at the sight of death, "believing himself by this means delivered from the sufferings of this life." His swiftness of foot was such that he might have escaped from captivity at almost any time. He remained among the Iroquois chiefly to perform surreptitious baptism, and he is given credit by our author with having thus saved more than sixty souls. Once, by a piece of rare good luck, "he found in a cabin five little children who were all in danger of death; he baptized them at his ease, and without noise, every one having gone out to see the public rejoicings." The principal feature of Druliettes's sojourn among the Abenakis is that

he was thereby brought into contact with the Capuchins at Castine, and also with the English. His work even received approval at Plymouth and Boston. As for the Attikamégues, they are mentioned as a pleasant contrast to the Iroquois. They make war only on animals and readily accept Christianity. So "if God strikes us with one hand, he sustains us with the other; if he afflicts us, he consoles us; if we are persecuted by some savages at the south, we are sought after by those of the north."

—Vol. xxxi. comprises a variety of documents. In the first place, we have the conclusion of the report for 1647; then a letter in Latin from Brébeuf to Caraffa, the general of the order at Rome; thirdly, the *Journal des Jésuites* for 1648; and finally, the first eight chapters of Lalemant's contribution to the Relation for the same year. Lalemant's staple subjects are the Iroquois raids and a glorification, in anecdotal vein, of the good spirit manifested by Christian Indians. As both these matters have been copiously illustrated in your previous notes, we pass on to Brébeuf's brief letter and to the diary which is styled *Journal des Jésuites*. The former of these is only a little more than three octavo pages in length, but possesses considerable significance. Its aim is to secure for Paul Ragueneau a longer tenure of office at the head of the Huron mission than was permitted by existing rules of the order. He is credited with every executive and personal virtue which such an onerous post demands, and the plea is further urged that a continuity of leadership is desirable. However, the most striking feature of Brébeuf's letter is his consciousness of the doom which is hanging over the Huron nation. After enumerating the causes of thankfulness which the Jesuits in Western Canada have, he thus proceeds: "But, on the other hand, there are, altogether, many and considerable influences which not only hinder our work, but seem even to threaten the ruin of the whole mission. Some of these, indeed, are common to us with all the Hurons—especially the enemy whom we call by the name of Iroquois; they, on one hand, close the roads and obstruct trade, and, on the other, devastate this region by frequent massacre; in short, they fill every place with fear." These words, written in the year before the final catastrophe which overwhelmed Hurons and Jesuits alike, show that Brébeuf and his companions were by no means blind to the tendency of events. In styling the *Journal des Jésuites* "a rich quarry for the student of the economic and social history of New France," Mr. Thwaites by no means claims too much for it. A great many details which the Black Robes constantly make note of, but which would have seemed somewhat trivial or secular in annual reports intended for purposes of edification, are recorded here. Thus, a list of the New Year's presents for 1648 is given; the number of turkeys and capons which the Governors sent the Fathers on Epiphany; the price charged by a blacksmith for mending an arquebus; the state of the game, fish, and fur markets; the day on which the first snow fell, and a description of the manner in which the principal feasts of the Church were celebrated by clergy and people.

THE ZENO VOYAGES.

The Annals of the Voyages of the Brothers Nicolò and Antonio Zeno in the North At-

lantic about the end of the Fourteenth Century, and the Claim founded thereon to a Venetian Discovery of America: A Criticism and an Indictment. By Fred. W. Lucas. London: Henry Stevens, Son & Stiles. 1898. Royal 4to, pp. 233 and 13 facsimile maps.

The family of the Zeni, from the fourteenth to the sixteenth century, occupied a position of considerable consequence in the commercial, social, and political life of the Venetian republic. Members of the family reached the highest official positions in the state, became merchant princes, and allied themselves with foreign families of royal rank. It was a period during which Venice had a conspicuous part in the commercial annals of the civilized world. Each year between 1317 and 1533, it is recorded that a fleet of Venetian vessels, under the authorization and protection of the state, sailed to Flanders and England with glass and sugar, wines, and silk, which were exchanged for wood, tin, hides, and broadcloth. Other fleets traded to Greece and Constantinople with bales of English and Flanders cloths, while still others went on to the Black Sea for skins, to the Syrian ports for gums and spices, to Egypt and to the caravan ports along the northern coast of Africa. On one of these voyages, that of 1386 to the north of Europe, Nicolò Zeno commanded the galleys bound for Flanders. A little less than a century later, when the expanding power of the Turk had begun to cut off some of the most profitable of these trading routes, another member of the family, M. Caterino Zeno, undertook the dangerous mission of carrying to the Persian King an appeal for an alliance against the common enemy which was threatening to overpower all its neighbors East and West.

In 1558 a small volume was published in Venice purporting to contain an account of the Persian mission of Caterino Zeno, and also of the adventures of two other members of the family, the brothers Antonio and Nicolò (there were three Zeni with this name in Venice in 1579), during the last two decades of the fourteenth century. The volume was issued anonymously, but it seems probable that it was compiled by a Nicolò Zeno, called the younger, who was great-grandson of the Persian Ambassador, who was in turn the grandson of Antonio, the brother of Nicolò. There is not the least evidence, if we may except the opinion of Mr. Lucas, that the publisher of the volume, Marcolini, was in any way responsible for the contents of the book printed at his house.

The contents of this Zeno volume were regarded as trustworthy by contemporaries and by fellow-citizens of the compiler, some of whom were well versed in affairs and in the records of European expansion. Since their time, a fair majority of students of Atlantic exploration have held the opinion that the volume was based upon documents contemporary with the events which it professes to describe. Many of the statements in the second, or North Atlantic, narrative, however, are manifestly improbable as they are related. The result has been that many students have looked upon this narrative with suspicion, and not a few have declared that it was a fabrication devised for the purpose of heightening the glory of the Zeno family, and perchance also of detracting from the fame of the Genoese Columbus. Those who have suggested these motives have perhaps not given proper considera-

tion to the fact, evident to any one who will examine the volume in question, that it does not contain a single expression of the satisfaction which the compiler might very naturally have felt in his kinship with the first Venetian Ambassador to Persia, nor is there any phrase which can be construed into a claim that his ancestors reached distant lands which were in any way connected with those discovered by Columbus, to whose name and exploit there is not the slightest reference.

Mr. Richard Henry Major, in 1873, translated for the Hakluyt Society that portion of the 1558 Zeno volume which describes the adventures of the brothers Nicolò and Antonio. An elaborate introduction contained Mr. Major's reasons for believing in the essential truth of his narrative, together with his efforts to identify the modern names of the localities mentioned in the Italian text. Mr. Fiske and others have adopted his conclusions without serious question, but there has been, nevertheless, an increasing disposition during recent years, among students who have had occasion to look into the subject, to doubt the accuracy of Mr. Major's identifications. This has led inevitably to a feeling of doubt as to the amount of reliance which could safely be placed on the whole narrative. It was manifestly desirable that the subject should be examined anew, in the light of the many recent cartographic discoveries, and that a fresh effort should be made to establish definitely the falsity of the entire narrative, or to determine what portions of it are deserving of credit.

This task has been assumed by Mr. F. W. Lucas. The result of his researches is a noteworthy contribution to the literature of American discovery. With the assistance of his publishers, the firm which has done so much during two generations to throw light on the dark places in our history, Mr. Lucas has produced a magnificent volume, a model for the setting forth of any serious work in cartographic history. The text is illuminated by facsimiles, made by the most trustworthy processes of reproduction, of the maps to which the larger part of this investigation has been devoted, and of the original volumes in which the Zeno narrative first appeared in Italian and in English. The appendices bear ample testimony to many hours of careful study of ancient volumes and maps, deciphering, copying, collating, comparing, classifying and tabulating names and legends and cartographic outlines. There is a bibliography which will prove of the greatest assistance to any one who desires acquaintance with the literature of European expansion into the Atlantic. There can be no doubt that Mr. Lucas has succeeded in producing a volume which will determine the treatment of the Zeno voyages by future writers of text-books and of popular history. The certainty and the clearness of his concluding summary, the generous fashion in which his theory is presented, the difficulty in discovering the precise grounds upon which the several steps of his argument are based, alike assure the acceptance of his dicta by those who will popularize his conclusions.

Mr. Lucas states frankly that he desires to say "the last word on this great and mischievous imposture," and he sums up his work with the declaration that he has proved "that Zeno's work has been one of the most ingenious, most successful, and most enduring literary impostures which have ever gull-

ed a confiding public." In the face of this utterance, Mr. Lucas will not take it amiss if he is met with equally clear and decided statements of opinion by those who continue to believe that the true and ultimate end of historical investigation is not mere negation—even in matters connected with the early exploration of America—and that the insinuation of dishonorable motives and the denial of personal honesty are not the safest and wisest, although they may be the easiest, method of dealing with the puzzling problems of history.

The difficulty in following Mr. Lucas to his conclusions begins with the very first of his assumptions, which is that the two divisions of the Zeno book—the account of the Persian Embassy and that of the Atlantic voyages—are entirely distinct in their character. A most careful examination of the original volume reveals not the slightest grounds for any such supposition. Even a superficial reading of the Hakluyt Society translation of the Persian narrative would suffice to show that the method of its compilation, the documents from which it claims to be derived, the style and the contents, are of exactly the same sort as the rest of the volume of 1558. Both, according to the compiler, are based upon his family archives. Both contain references to lost material of the greatest value. The story of the death of Archimedes finds its way into the Persian narrative in exactly the same manner as the myth of Dædalus and a North Atlantic Icaria into the other. Each illustrates a psychologic phenomenon which is familiar to most readers of mediæval voyagers. As a basis for historical criticism, the arguments taken from the Icarian story are on a par with those (to which Mr. Lucas returns more than once) based upon the fact that no one in the nineteenth century has been able to find the manuscripts of which the Zeno book purports to give the substance. The discovery of specific fourteenth (or sixteenth) century manuscripts is not easy, nor is the hunt for them ordinarily successful. If Mr. Lucas will try to lay his hands upon almost any one of the original manuscripts of the documents printed in Ramusio's great collection, he will learn much concerning the chances of survival of historical material. A similar search for the manuscripts copied by Richard Hakluyt would doubtless be instructive. In brief, the method of criticism adopted by Mr. Lucas would destroy the value of the Zeno Persian narrative just as completely as it assumes to do when applied to the account of the Atlantic voyages. The argument amounts to this, that if there is a statement in the text which can be found in print or in manuscript at an earlier date than that of the volume of 1558, then such a statement may have been taken from the earlier work; if no such earlier authority can be unearthed, then the statement may have been a creation of the compiler's brain. The transition from "may have been," when frequently enough repeated, to "was," is another psychologic phenomenon of frequent recurrence in historical literature.

The story told in the Zeno volume can be briefly outlined. The compiler states that when he was a boy, he got hold of a manuscript book which contained an account of the adventures of an ancestor who had made a voyage to the north of Europe. In childish fashion, he tore that book to pieces. Many years later, he discovered among the family archives, of which he would have become possessed through the death of his fa-

ther in the year preceding that of the publication of the 1558 volume, certain letters in which these same adventures were described. From these he endeavored to construct a narrative which should replace the one destroyed by his childish heedlessness. The resulting pages contain the substance of two letters written from the north by the elder Nicolò Zeno to his brother Antonio, a third presumably addressed to some other member of the family, and three letters written by Antonio, after he had joined Nicolò, to a third brother, Carlo. The compiler, the younger Nicolò, joins these together by connecting paragraphs. This, as Mr. Lucas remarks, is a well-known device of fictionists; it is also the method most naturally adopted by an intelligent honest person who desires to set forth facts in his family history from documents found in his family archives.

These letters relate how Nicolò the elder sailed from Venice around to the north of Europe, where he was caught in a storm and driven out of his course, until he was wrecked on an island. Rescued from the plundering natives by a powerful chief or "Prince" who chanced to be near, Nicolò's nautical skill was quickly recognized, and he was given a position of authority in the fleet of his rescuer. This position Nicolò soon improved by his success in several expeditions undertaken against the neighboring islands. Finding the life and its opportunities agreeable, Nicolò wrote urging his brother Antonio to join him. After the arrival of Antonio, they engaged in various expeditions, one of which took them a long distance into the western ocean, to a country which is described under a name that can be made to suggest that of Greenland, but in terms which apply, not to Greenland, but very aptly to Iceland. Returning from this place, where the cold had broken Nicolò's health so that he soon died, Antonio and his chief determined upon a voyage of exploration into the remoter west. They were persuaded to this, according to the narrative, by certain fishermen's tales, the interpretation of which presents the real crux of the Zeno problem. The voyage was undertaken, and, after various mishaps among the nearer islands, the ship started west before a fair wind for six days, "but, the wind changing to the southwest, the sea therefore becoming rough, the fleet ran before the wind for four days, and at last land was discovered." No one who has dissected the reports of early voyages of exploration would for a moment imagine from this passage that the discovery was necessarily made at the end of the tenth day. In returning from this country, Zeno sailed steadily eastward for twenty days, and for five days towards the southeast, before he hit upon land, which luckily lay within the range of his earlier adventures. There is not the least reason why this discovered land, upon which Zeno left his chief to found a city and conduct further explorations, may not have been Greenland. There is nothing in the description of the country to render this improbable.

There is little need of examining in detail all the points raised by Mr. Lucas in his indictment of the Zeno book. Even the treatment of the Frisland fisherman's story is amenable to the same sort of criticism as has already been discussed. So far as the text of Mr. Lucas's work is concerned, his evidently honest efforts to set forth the facts as they really are, have apparently prevented him from presenting any convincing proof

of the falsity or the improbability of the story which has been outlined in the preceding paragraphs. His efforts, indeed, have not been entirely negative, and he has offered two or three very suggestive hints which afford important assistance towards distinguishing between the true and the immaterial in the Zeno narrative, and in discovering the most probable identification of the localities associated with the northern career of the Zeni brothers. The most valuable of these contributions is the suggestion that the chief (or Prince) Zichmni, whose identification with the historical Earl Sinclair of the Orkneys has long been recognized as presenting many perplexing difficulties, may more probably have been the Vitalian pirate Wichmannus—the Italian language has no letter W—who was the leader of a very powerful band which conducted successful depredations in the Baltic and North Seas between 1388 and 1401. What little is told us of this leader and his doings renders this identification thoroughly plausible, making possible the explanation of many details which have been a source of much trouble to the defenders of the Zeno story. As regards the spelling of this and other names in the book of 1558, few things in Mr. Lucas's book are harder to understand than his insistence upon the difficulty of reconciling these names as spelled by Nicolò the younger with those of any known individuals and places. Even in this present enlightened age and land, it may be doubted whether many members of the United States Senate, even among such as possess ancestors five generations back, would be able to transcribe correctly any large proportion of unfamiliar proper names written in the course of a family correspondence by those ancestors. The handwriting of the fourteenth century was not more easily read by a man of affairs in the sixteenth than that of our seventeenth-century ancestors is to-day. Even among our own contemporaries, there are some who find difficulty in writing proper names so that they will be entirely legible. Add the fact that, in Mr. Lucas's opinion, these names in the Zeno book were copied from manuscripts which had been preserved for a full generation after having been torn to pieces by a boy, and some amazement may be pardonable at his surprise because these names of places in the least-known portion of Europe, written in 1400, were not transcribed in 1558 in a way to render them perfectly intelligible in 1898.

The few lines which are left for a reference to the material upon which Mr. Lucas bases the main portion of his indictment are perhaps not unfairly proportionate to its real importance. The Zeno volume of 1558 contains a map illustrating the narrative of the Atlantic voyages. According to the compiler, this map was redrawn by him from an old navigation chart found among the family archives, "all rotten and many years old." If any one will compare the photographic facsimiles of such well-preserved maps as the 1500 *La Cosa* or the 1544 Cabot with any half-dozen sketches or pseudo-facsimiles of these maps such as have appeared in scientific historical treatises within the last twenty-five years, he will be prepared to understand why the younger Nicolò may not have succeeded in producing an accurate reproduction of his model. Nicolò junior must have been familiar with the current notions about the North Atlantic lands as they were represented in the maps of his own time.

He would have been culpably negligent in his duties as an editor, according to the very proper standards of his age, if he had not endeavored to restore what he could not decipher in his model, in the light of what were for him the latest results of exploration and cartographic science. Mr. Lucas applies to this map the same critical method as to the narrative text. It is not easy to account for the adoption of such a method of cartographic investigation by one who understands as thoroughly as does Mr. Lucas the state of the navigating and cartographic sciences in the fifteenth century. In his researches he has succeeded in discovering a prototype for every feature on the Zeno map, with two exceptions. These two he assumes to be forgeries, hatched in the brain of the compiler of the map. It is hardly necessary to discuss this theory in detail; it should be sufficient to point out that in order to reconstruct the Zeno chart as it was published in 1558, Mr. Lucas has had to bring together facsimiles of more than a dozen maps drawn before that date, many of which exist only in manuscript at places remote from Venice. Had all of these maps been seen and examined, for whatever purpose, by any one man in 1558, it may safely be assumed that the result would have been very different from the map and booklet published for Nicolò Zeno in that year. Mr. Lucas has, however, now brought together in his volume admirable facsimiles of the pertinent portions of most of these, and of more than as many other maps of the same period, making the satisfactory study of them possible in hundreds of places far removed from the Old World storehouses where alone the originals may be consulted.

For his contribution to our facilities for historical and cartographic knowledge, no praise or gratitude can be too strong. If his methods and his results have been subjected to still further criticism and indictment, it is because the truth, even in such a matter as the Zeni voyages, can be reached only through the clash of intelligent opinion vigorously expressed. Mr. Lucas has set a most creditable example of vigor and intelligence. It would be unfair to him not to reply with equal earnestness and honesty of opinion, and with whatever intelligence can be gained through a diligent study of material inaccessible to the majority of students prior to the appearance of his volume.

THE CHILD IN EDUCATION.

A Study of a Child. By Louise E. Hogan. Illustrated with over 500 original drawings by the child. Harpers. 1898. Pp. 320.

The Study of the Child. A Brief Treatise on the Psychology of the Child, with Suggestions for Teachers, Students, and Parents. By A. R. Taylor, Ph.D., President of the State Normal School, Emporia, Kansas. [International Education Series.] D. Appleton & Co. 1898. Pp. 215.

The Development of the Child. By Nathan Oppenheim, Attending Physician to the Children's Department of Mount Sinai Hospital Dispensary. Macmillan. 1898. Pp. 296.

Not the least important of the results of the doctrine of evolution has been the emphasis placed incidentally on the study of the development of individual children. Darwin studied his own child. Earlier pioneers in such study were Tiedemann and Sigismund in Germany. The most systematic investi-

gation of this kind was made by the late Prof. Preyer, as reported in his classic work, *The Mind of the Child*. Since Preyer's study, similar investigations have been made by Paola Lombroso, daughter of the famous Italian alienist; Miss Shinn, Mrs. Moore, and others. *The Study of a Child* before us is another attempt to follow Preyer's example. It is a record of the first seven years of a boy's life made by a mother apparently with no special psychological training. It has many of the merits as well as the defects of a record by an untrained observer. Among the former are the simple and straightforward style, the evidence of freedom from psychological prejudice, and the absence of any attempt to make the facts support philosophical theories. Of the defects, one notes especially the scrappy notes on the psychologically interesting activities of the first year, the meagre record of the child's motor activities, apart from talking and drawing, the frequent gaps in the record throughout, and, on the other hand, the occasional lapse into unimportant details.

The book is a simple story of the ordinary activities of an ordinary healthy child who spent his time in eating, sleeping, and playing; in sleeping, playing, and eating; and, at a later period, in sleeping, eating, playing, and talking—a child who loved "choo-choos" and rabbits, was interested in drawing and mechanical activities, sang songs, held dialogues with his pussy, puzzled over the idiosyncrasies of the English language and the mysteries of the human body, and sometimes broached problems of ethics and ontology. There is nothing in the volume that is sensational, few records of precocious activities, and nothing that will appear to be either a great contribution or a stumbling-block to psychologists; and while much of it will be foolishness to practical fathers and mothers, still many homes would be quieter and pleasanter and many children healthier and happier if parents would apply the suggestions for the training of children contained in this simple story; and every such record is a welcome contribution, however small, to the psychology of development.

The *Treatise on the Psychology of the Child* is introduced to the public by Dr. William T. Harris, Commissioner of Education, as a "sound and wholesome book on child study," and Dr. Harris contributes a preface discussing the symbolic and functional stages of mind in childhood. That the book is wholesome and, for the most part, sound, is not to be denied, and we shall not quarrel with the preface; but it is milk for babes in child study rather than strong meat for mature students in psychology. The author states that the book is "intended simply to serve as an introduction to child nature and child problems," and such should have been the title. It would serve its purpose as an introduction better, however, if the writer had a deeper conception of the real significance of child study. He does not even give the results of many important investigations made in recent years, such as those by Garbini, G. Stanley Hall, Sully, Russell, and Barnes—names which, by the way, do not appear at all (unless in the bibliography) in the pages of his book. Instead of this, seeing that the results in child study already obtained are imperfect, he has attempted to systematize what is necessarily incomplete by filling the gaps in child psychology with the old con-

venient dogmas of adult psychology. Thus, practically, the author does the very thing which the whole spirit of the child-study movement forbids. He fails to recognize that what may be true of the mature mind is not necessarily true of the developing mind.

Dr. Taylor's style is not always clear, and some statements are unfortunate. For example, he says (page 60), "The bridge over from the physical to the mental is found in consciousness." To the psychologist this sentence is as luminous as the statement that the bridge over from Brooklyn to New York is found in Manhattan. How will it be understood by the beginner? Again, on page 42, quoting Compayré, the writer states that all young children are myopic. Now the functional myopia referred to by Compayré is a very different thing from what is usually called myopia. In fact, hyperopia is so common in young children that many authorities regard it as the normal condition of the eye in infancy. Apart, however, from such minor defects, the book is usually clearly written. No one will question the need of a work on this subject in the International Education Series. However commonplace some of its teachings, it contains much of practical importance; and especially the parts relating to hygiene should be read and remembered by teachers. And now that Mr. Taylor has given us an "Introduction," it may be hoped that the editor will find some one to write the "Treatise."

A praiseworthy contribution to such a treatise has been made by Dr. Oppenheim in *The Development of the Child*. His thesis is that a child is a different creature from an adult, and his insistence is upon the educational and hygienic significance of this fact. His data indicate that, so far as salient physiological and psychological factors are concerned, the child and the adult are almost totally different. "Multiply the proportions of the infant to those of the adult, and you will have a being whose large head and dwarfed lower face, whose apex-like thorax, whose short arms and legs give a grotesque appearance. The two do not breathe alike, their pulse rates are not alike, the composition of their bodies is not alike." The proportion of the different parts of the body is not the same; for example, according to Vierordt, the muscles form 23.4 per cent. of the total weight of the body in the newborn child, 43.09 per cent. in the adult. The brain forms 14.34 per cent. of the total body weight in the new-born, only 2.37 per cent. in the adult. The chemical constituents of the tissues are different in childhood and in maturity. The various organs differ. The heart and other viscera are different. There is a great difference in the relation of the heart to the arterial system. Oppenheim puts this graphically by saying: "In infancy the relation of the volume of the heart to the width of the ascending aorta is as 25 to 20, before puberty as 140 to 56, and after puberty as 290 to 61." There are corresponding differences in blood pressure, nutrition, secretion, excretion, and other functions. Such are some of the more obvious. Still more interesting are the differences in the nervous tissue, the greater part of the central nervous system being "unripe" at birth; and equally important are the psychological differences between the child and the adult. In a word, the organism in childhood is uneven, unstable, provisional, and a valuable service has been rendered in bringing to-

gether the evidence that the child is not the father of the man.

The meagreness of our knowledge of development is apparent from the limitations of this book. The author hardly attempts to show that at different stages the child differs from the adult. In fact, our present knowledge does not permit us to form any complete picture of the child in the various stages of development from infancy to maturity. Yet such knowledge lies at the very foundation of any true system of education. A German writer, Dr. Stimpff, has recently said that, after 2,000 years of talk, pedagogy is still in about the same stage of development as physics at the time of Galileo. Whether or not he puts this too strongly, he is certainly right when he adds that if biological research shall contribute a pedagogical physiology and psychology and a pedagogical hygiene in accordance with the laws of development, then pedagogy will undoubtedly acquire the status of an actual science.

Problems of Modern Industry. By Sidney and Beatrice Webb. Longmans, Green, & Co. 1898.

The authors of this volume are probably, on the whole, the best exponents of "collectivism" in its modern form. Of their sincerity there can be no question; it is established by internal evidence as well as by that *attitude*. The most conclusive test of it is to be found in the careful reasoning with which they support their theories and attack those of their opponents. They recognize the existence of difficulties, and struggle seriously to meet them. Whether their reasoning appears fallacious to others is a different matter; they, at least, are heartily convinced that it is sound. For the fullest statement of their economic theories their *'History of Trade-Unionism'* should be consulted; but in some of the essays reprinted in this volume readers will find everything essential. A few papers are mere padding, but most of them are substantial and relevant to the issue.

The views of these agitators are the only views of socialism that can logically be held. According to these views, the present system is unjust in that the people who work for wages do not and cannot get as much wages as their employers can afford to pay them. Hence the wage-earners must get hold of the Government and compel the employers to pay more. They must fix a minimum rate of wages and a maximum labor day; and if employers decline to carry on business on these terms, the Government will step in and carry it on for the public account. To the objection that profits will be reduced, it is replied that they have been much reduced in the past and can be still more in the future; and it is even maintained that this can be done without injury to foreign trade. Moreover, in the confiscation of the "unearned increment," there is an infinite possibility of revenue. In the attainment of these ends it is indispensable that all wage-earners co-operate; hence they must be forced into trade-unions and be prevented from becoming capitalists. Instead of rising in the economic world by prudence and by competition, they must retain their status, unless chosen by their rulers for positions of authority.

Such, in brief, is the logical basis of collectivism, which we need not here criti-

dise. Those who think the authors' reasoning sound will certainly enjoy these essays; those who think it fallacious will at least get the enjoyment which is derived from analyzing ingenious and plausible fallacies.

The Great Salt Lake Trail. By Col. Henry Inman and Col. William F. Cody. Macmillan. 1898. 8vo, pp. xii, 529, pl. 8 and other illustrations.

This book has no more to do with its title than had Inman's 'Old Santa Fé Trail' to do with its ostensible subject; both deal with any part of the West in a reprehensible and factitious manner. Neither is devoid of a certain readability for the unwary, which makes them both pernicious. Col. Inman's offence in the present instance is greater than in the other. The book opens, after a few pointless words, with an account of the overland Astorian expedition (pp. 3-31), with a footnote at the end of the chapter, "See Astoria, by Washington Irving"—acknowledgment enough for some specific statement on one page, perhaps; certainly not for the misappropriation of a whole chapter. The next chapter (pp. 32-62) is lifted from Coyner's 'Lost Trappers'—an apocryphal book, now happily so rare and little known that Col. Inman may have thought he could with impunity serve over the old fables concerning Ezekiel Williams. Chap. iii., pp. 63-80, is similarly derived from the Autobiography of James P. Beckwourth, without a word of acknowledgment. Chap. iv., pp. 81-96, has on its opening page a footnote, "See Washington Irving's Astoria," which settles that. Chap. v., pp. 97-109, is mainly quoted from some source not named. Chaps. vi., vii., pp. 110-162, on the Mormon emigration of 1847 and the Mountain Meadow massacre, are apparently thrown together from several sources, but mainly from Bancroft's History of Utah, as the word "Bancroft" constitutes a footnote on p. 120. Chap. viii., pp. 164-210, on the pony express, is said to be given "as related to the author of the book by Col. Alexander Majors"; but it includes some of "Buffalo Bill's" own yarns, and a rehash of the rubbish about Slade and Jules which Mark Twain made famous in 'Roughing It,' and N. P. Langford discredited in his 'Vigilante Days and Ways.'

So we might go through the several chapters, finding nothing new that is true, nothing true that is new, and all the pickings singularly botched in their transfer to these pages, till we come to chaps. xvi., xvii., pp. 382-461. These are Col. Cody's contribution to the volume, apparently genuine, inasmuch as they are what the writer chose to say of his adventures and of the Custer massacre; but not now original, as they are all in quotation marks, and so, we suppose, transferred from some previous book by "Buffalo Bill." But chap. xviii., pp. 462-476, contains the story of "Old Hatcher's" fit of delirium tremens, of which Col. Inman says it is "presented just as he used to tell it." The English of this statement is, that Col. Inman abstracted it in full from chap. xix., pp. 236-265, of Lewis H. Garrard's 'Wah-to-yah' (12mo, Cincinnati, 1850)—without the slightest reference to Garrard. What magnifies the offence is, that the whole is placed in quotation marks, yet persistently misquoted, as we find by comparing the two publications. The last chapter in the book, professing to

give the "Story of the Union Pacific Railroad" in twenty pages (!), is extracted with due acknowledgment from the address of Gen. G. M. Dodge before the Army of the Tennessee at Toledo, September 15, 1880.

Modern Political Institutions. By Simeon E. Baldwin. Boston: Little, Brown & Co. 1898.

Although this book is made up largely of addresses delivered before various associations, it has a sufficient unity of purpose. According to the author's use of the term, modern political institutions are those "which became such by the recognition and approval of our own century, or are contending for that of the twentieth." Chief among these he reckons the foundation of all government on the consent of a majority of the people, religious liberty, the written constitution as the supreme law, the combination of political absolutism with democracy, the regulation of succession to the dead in the interest of the state, international arbitration, and the Monroe Doctrine. To these are added some institutions of a legal rather than political character, and certain general propositions which have a rather remote connection with institutions of any kind. It is at least doubtful if the Monroe Doctrine can be properly described as a political institution; it might now, perhaps, be properly considered in the essay on "The Decadence of the Legal Fiction." Nor is it apparent why the assertion by the Government of a claim to share in the property of decedents should be regarded as anything modern; and the combination of political absolutism with democracy was familiar to Aristotle.

We must confess that we find a certain inconsistency in proclaiming this political absolutism and in calling the written constitution the supreme law. It is unnecessary to say that the framers of our Constitution intended to limit the power of the Executive. Many of them dreaded this power extremely, and they took great pains to hedge it about with constitutional restrictions. Nevertheless, this author describes, almost in terms of exultation, the vast extent of the powers now exercised by the President, which he puts on the same level as those of the Czar of Russia. "The President, during half the year, is the United States more truly than ever Louis XIV. was France." We will not stop to discuss the correctness of this view; but we cannot read without amazement that there is no danger to the liberties of a people in the rule of a despot. "The most impetuous man is held back if a hasty word or act of his might put the peace or welfare of a nation in peril. It is his very absolutism that has made the President, in respect to all matters of foreign policy—and there he is most powerful—the great conservative force in our constitutional system." We are tempted to recall the episode of Venezuela; but that episode, we find, the author regards with much complacency.

In his examination of some departments of legal procedure, the author's scholarship is well employed. The paper on "Freedom of Incorporation" contains a careful account of the achievements of the Roman lawyers in the creation and development of corporations of all kinds, the renewal of the process in Europe after the Middle Ages, its course in England, and the main lines which it has followed in the United States. This is the most elaborate essay in the book; but there are others, such as that on legal fictions, and

the exemption of the accused from examination in criminal proceedings, which are of especial interest to lawyers.

The True Benjamin Franklin. By Sydney George Fisher. Philadelphia: J. B. Lippincott Co. [1898.] 1899. 12mo, pp. 269.

The word "True" in Mr. Fisher's title is clearly intended to refer to the book, and not to the man, for his pen-portrait leaves an impression of a being far better described by its opposite, false. There is a story current in literary circles that a Philadelphian was employed to prepare, for a series, a life of Franklin, and that the MS. as first submitted was returned to him by the publisher with the comment, "If he was no more than this, he does not deserve a place in our series." Of this curiously persistent Philadelphia prejudice against its greatest citizen, the present book is a good expression. Without any iconoclastic intention, by an entire disregard of proportion, Franklin is made so ignoble and so repulsive that one marvels that the most cultivated classes of both Great Britain and France could ever for a moment have tolerated his friendship, much less have held him in veneration. It is Cromwell with the wart, and the wart so magnified by the depicter that it has become in truth a mask rather than a blemish. Scarcely a merit which Franklin possessed but is belittled into obscurity, while each fault is so accented that it is fairly thrust in one's face. Defects he had, known chiefly through his own honest confession of them in his Autobiography; but in that very book, which Mr. Fisher has so largely quoted from and so openly paraphrased, the author should have learned the proper ratio of space to give to the well and evil-doing of the man. That a runaway apprentice thoughtlessly and youthfully sinned is no reason for writing a life of him, but there is reason when we find that this 'prentice, step by step, atoned for every slip so far as lay within his power, and advanced himself to the foremost rank. To his own generation Franklin was a man of morality and honor whose aid could always be counted upon for good, and whose friendship was a privilege. Is this judgment of his contemporaries, is a life given to the public weal, to count for nothing?

But we have a more special bone of contention. Poor Richard remarked that "One mend-fault is better than two find-faults, but that two find-faults are better than one make-fault," and it seems to us that the epigram applies. Although Mr. Fisher notes in two places that women correspondents, in writing to Franklin, called him father, and signed themselves "your daughter," and though a little more research would have shown him letters of Franklin couched in the same parental terms, on an allusion in a letter of John Foxcroft to "your Daughter," and on three equally vague messages in Franklin's letters to "my daughter," he founds the positive statement that he had "an illegitimate daughter." As a lawyer, Mr. Fisher should know the true value of such testimony, the more that elsewhere he practically acknowledges that "speculations" over this newly discovered child "are mere guesses unsupported by evidence," leading us to conclude that the author is one of those described by Franklin when he declared that "historians relate, not so much what is done, as what they would have believed." Fortunately, a little light can be shed on Mrs. Foxcroft, which will go far to show the

value of Mr. Fisher's historical methods, both in research and in conclusion. John Foxcroft was married in London on August 2, 1770, by the Rev. Thomas Coombe, at St. James's Church, Westminster, to Judith Osgood of "this parish," resident in King Street. The groom was deputy postmaster under, and an old friend of, Franklin, and the latter was present at the marriage as one of the witnesses. If, after a due consideration of the dates of Franklin's English sojourns, Mr. Fisher wishes further knowledge on this subject for "speculation," we recommend him to read Franklin's letter to Foxcroft of September 7, 1774.

Space has been given to this matter because it is announced as a startling discovery, and it is best that the bane should have its antidote; but otherwise it is not possible to take the book seriously. It is written in a hopelessly slipshod manner as to form; errors of quotations abound, and still more errors of fact; indeed, it seems as if the author went out of his way to err. He looks into the Autobiography, and, finding that Franklin had the pleurisy, and that his friend Dunbar died of "I forget what distemper," he promptly kills the latter with the pleurisy. Franklin's statement that he "burnt" his "wicked tract" becomes "tore up." "\$1,000 Pennsylvania currency" is transmuted into \$5,000—an exchange that would have delighted any one possessed of the depreciated paper money of the time, but not one for a writer to make in these days. The long-sought-for "first appearance" of the "Speech of Polly Baker" is nonchalantly dated and placed in the *Pennsylvania Gazette*, but with a lack of preciseness that leads us to conclude that the author has

been no more successful than his predecessors, and we cannot advise a waste of even Mr. Fisher's time in following up the clue he has so temptingly evolved. In the same manner he decides the moot point as to the approximate date of the birth of William Franklin, but unfortunately neglects to give us better authority than his own statement. Collectors of Frankliniana will be interested to learn that "Poor Richard" had, previous to Franklin's arrival in France in 1776, been the "delight for years" of the French, for it has generally been supposed that the first French edition was issued in 1777. Bradford, the printer, we are told, had come to New York "recently," though he had been a resident for twenty-nine years. England is engaged in preparations for war with Spain in 1743, which raises a question as to the status of the expeditions against Porto Bello, Carthage, etc., of the previous years. Worse still is the assertion that the Seven Years' War began with Braddock's defeat. A commoner error is the statement that Burgoyne surrendered, though the General would have indignantly denied it, with the dictionary and all military men in his support. Finally, the author has made a dead brother executor for a living one—something difficult even for a lawyer—by mixing William and Thomas Whately. Such are types of the errors strewn as thickly through the pages as the author has strewn the "errata" of Franklin's life, but, unlike his, without counterbalancing virtues or attempted atonement.

BOOKS OF THE WEEK.

Bailey, L. H. *The Principles of Agriculture*. Macmillan. \$1.25.

HENRY HOLT & CO., 29 WEST 23D STREET, NEW YORK,

HAVE JUST PUBLISHED: WALKER'S DISCUSSIONS IN EDUCATION.

By the late FRANCIS A. WALKER, President of the Massachusetts Institute of Technology. Edited by JAMES P. MURPHY. 8vo, \$2.00 net.

The author had hoped himself to collect these papers in a volume. Though dealing with professional problems they are never technical, but so fresh, incisive, and broad in treatment that they will be of interest to most general readers.

BEERS'S ENGLISH ROMANTICISM IN THE EIGHTEENTH CENTURY.

By Prof. HENRY A. BEERS. With gilt top. 12mo, \$2.00.

A book that happily combines scholarship with fresh and engaging literary style. The author's pictures of the various romances are human and sympathetic.

OXENHAM'S GOD'S PRISONER. A Story. 12mo, \$1.25.

The theme of this novel, that of a man's redemption through his courage and self-sacrifice, is an inspiring one. To escape the consequences of an unpremeditated crime, the hero throws himself in the way of an astounding series of adventures. The story is laid chiefly in England and the Southern Seas.

EIGHTEENTH CENTURY LETTERS.

Under the general editorship of R. BRIMLEY JOHNSON. With gravure Portraits. Half vellum, gilt top. 12mo, \$1.75 net per volume.

Letters by Swift, Addison, and Steele. (Poole.) One volume.

Letters by Johnson and Lord Chesterfield. (Birkbeck Hill.) One volume.

They have Recently Published: GODFREY'S POOR HUMAN NATURE.

A Musical Novel. 2d Impression. 12mo, \$1.50.

Bookman: "It is peculiarly convincing. The characters, too, are peculiarly real. . . . Each and every one stands out with vivid distinction, and is not soon to be forgotten. . . . The portrayal of local life, particularly that appertaining to operative circles, is full of freshness and interest. . . . It is well written, it is nobly told, it is altogether an admirable work."

Bookman Transcript: "We have nothing but praise to say of this fine, strong tale, and can recommend it heartily and without qualification."

Literary World: "There is a distinctly original touch in this story. . . . Full of interest."

A Revised Edition of a Book for Young and Old. LUCAS'S A BOOK OF VERSES FOR CHILDREN.

Over 800 poems from 80 authors. With illustrated title-page and cover-hinges in color by F. D. Benson, two other illustrations, and elaborate binding. 12mo, \$1.00. (Description circular free.)

Over: "We know of no other anthology for children so complete and well arranged."

A Company Engaged in Suburban Development

near a large city, wishes suggestions for the name of a new subdivision now being platted, and for the names of the roads therein.

A PRIZE OF FIFTY DOLLARS

will be given for the name accepted for the subdivision, and Five Dollars each for names accepted for the roads. For particulars, address WM. M. COYLE, 145 Nassau St., New York City.

Burton's Arabian Nights.

THE BURTON SOCIETY will print, for private circulation among its members, a facsimile of the original edition of BURTON'S ARABIAN NIGHTS.

Full particulars on application.

BOOKS.—All out-of-print Books supplied, no matter on what subject. Acknowledged the world over as the most expert book ender agent. Please send waste. BAKER'S GREAT BOOKSHOP, 14-16 John Bright Street, Birmingham, England.

A DIFFERENCE OF OPINION.

Historic Towns of New England.

Edited by LYMAN P. POWELL. With introduction by GEORGE P. MORRIS.
With 160 illustrations. Second impression. 8vo, gilt top (in a box), \$3.50.

CONTENTS: Portland, by Samuel T. Pickard; Rutland, by Edwin D. Mead; Salem, by George D. Latimer; Boston, by Thomas Wentworth Higginson and Edward Everett Hale; Cambridge, by Samuel A. Eliot; Concord, by Frank A. Sanborn; Plymouth, by Ellen Watson; Cape Cod Towns, by Katharine Lee Bates; Deerfield, by George Sheldon; Newport, by Susan Coolidge; Providence, by William B. Woodson; Hartford, by Mary K. Talcott; New Haven, by Frederick Hull Cogswell.

*What The
Evening Post
says:*

"Mr. Powell is supposed to have edited the book: the EDITORIAL POST: ing must really have been done 'with a flowing pen and a keen pair of scissors.' . . . In no other way could a dozen individual writers have maintained such a dreary uniformity of style and treatment."

*What Other
Critics say:*

"The authors of the Boston NEW YORK TIMES: papers have succeeded in presenting a wonderfully interesting account in which none of the more important events have been omitted. . . . The quaint Cape Cod towns that have clung tenaciously to their old-fashioned ways are described with a characteristic vividness by Miss Bates. . . . The other papers are presented in a delightfully attractive manner that will serve to make more deeply cherished the memory of the places described."

"Mr. Powell's contributors NEW YORK TRIBUNE: have prepared a most interesting collection of papers on important New England landmarks. The writers enter into the history of their respective towns with much elaborateness."

"This very charming JOURNAL OF EDUCATION: volume is so exquisitely gotten up, the scheme is so perfect, the fifteen writers have done their work with such historical accuracy, and with such literary skill, the illustrations are so abundant and so artistic, that all must rejoice that Mr. Powell ever attempted to make the historical pilgrimages."

"Mr. Powell has rendered THE REVIEW a most important service to the cause of American history. . . . The present volume is a unique and valuable contribution to the literature of our national origins."

G.P. PUTNAM'S SONS, 27 & 29 W. 23d St., N. Y.

14 West 23d St., New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 2, 1899.

The Week.

Congress finds itself in something more than its usual condition of congested legislation, only five weeks from the end of the session. The appropriation bills are in a backward state, and as for the sea of legislative troubles which expansion has brought upon us, both houses seem to be floundering in the waters helplessly. There is the army bill but just passed the House; there is the Nicaragua Canal bill still stuck in committee; there is the Hawaiian bill, dangling somewhere between heaven and earth; there is the shipping-subsidies bill, not yet discussed in Senate or House. That all these measures can be acted upon intelligently before the 4th of March is impossible. This is not saying that they will not be acted upon. They may be squeezed through and into conference in some rough-hewn condition, or Congress may conclude to throw up its hands in despair, and follow the new fashion of "leaving it all to McKinley." If Congressmen find a bill to dig a canal too much for them, it seems simplicity itself to "authorize the President" to go ahead and dig it. So of raising an army. Solemn Mr. Marsh of Illinois told the House on Thursday that he "violated no confidence" in saying that the President would not enlist one man more than necessary. How easy and natural to turn the whole matter over to such an Executive. If Congress is at its wits' end—no long journey—there is always the President to call upon to do its work, and he, if we know him, has wisdom to spare for all.

The President has at last sent to the Senate copies of the instructions which he gave the Paris Peace Commissioners. The documents were confided to the Senate under seal of strictest secrecy; therefore, their contents were at once known all over Washington. It appears that Mr. McKinley did not instruct his Commissioners to demand the entire Philippine archipelago. The island of Luzon alone was the extent of his original instructions. It was the Commissioners themselves who found, in discussion with the Spaniards, and after consultation with our army and navy officers, that it would be necessary to adopt the policy of all or none. Being the men they were, it is needless to say that they decided for all. They so informed the President, and he acquiesced, "reluctantly," as usual. Without pinning our faith to the accuracy of all these details, as they come from the sacred secrecy of the Senate, it is suf-

ficient for the present to say that they are inherently probable, and that they are supported by independent evidence. But if the treaty is the Commissioners' and not the President's, if, as Senator Davis has boasted, they got more at Paris than they went for, what becomes of the theory of the strong silent man in the White House, foreseeing everything and settling everything? It was because he made the treaty that we are to trust everything else to him; but if he didn't make it, if it was forced upon him, we shall have to look elsewhere for a supernatural being to save the country from the necessity of thought and work.

The pending treaty has this unusual stipulation:

"The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress."

The command is peremptory. Only Congress is vested with the authority, not the President and Senate, nor the Cubans, nor the Porto Ricans, nor the Filipinos. When Congress must determine is not stipulated. The treaties with France, Spain, and Mexico, ceding to us land and peoples, stipulated that the ceded inhabitants "shall" be admitted as soon as possible, "according to the principles of the Federal Constitution," to all the rights, advantages, and immunities of citizens. That with Russia also stipulated for citizenship of all (excepting uncivilized Indian tribes) who preferred to remain in Alaska. Why the new departure in the pending treaty? Spain had naturally little interest in the sold and quitclaimed natives, and she did not promote the stipulation. Why did the President and his Commissioners at Paris exclude the usual phrase, "according to the principles of the Federal Constitution," which Senator Teller now insists have nothing to do with Territories till Congress shall so ordain? A treaty is the "supreme law of the land," and, therefore, if the treaty shall be ratified, then the present or the next Congress can dictate the political status of the dozen and more millions of ceded people. If the fourteenth article of amendment of the Constitution cannot expand over those millions, then Congress can declare that their children, as well as the existing natives, shall never be citizens. No President can veto anything that Congressmen may do in that relation. Will Congress determine those "civil rights and political status" before the treaty has been made and exchanged? If the Senate shall advise that the treaty be made in its present form, and if the Constitution will not, *proprio rigore*, expand over the new acquisitions, then Congress can, if it has the physical force, constitutionally reduce all the Cu-

bans, Porto Ricans, and Filipinos to slavery, or any other form of involuntary servitude such as exists in Zanzibar. That Congress will not do that, but will only reduce them to subjection as subjects, and not elevate them to be citizens, is inconsequential so far as concerns the wisdom or unwisdom of the treaty.

Senator Davis's willingness to have the treaty brought to a vote on February 6 doubtless means that he and the President are confident it will then be ratified. The opponents of the treaty, or of the dangers which they see lurking in the treaty, have been at a great tactical disadvantage. Ardent friends of peace, they have had to appear in the ungracious rôle of antagonists of a treaty of peace. It is as a treaty of peace that the instrument will be ratified, if at all. Merely as a charter of conquest, as a justification of government forcibly imposed on distant races, as a document embodying grave departures from the established policy of this Government, it is evident that the treaty would be repugnant to the moral sense and the political instincts of the people, and would be doomed in Senate and nation alike. But garbed in the livery of a treaty of peace, it may have to be accepted. Several Senators who are reckoned against it, and who are against it, *per se*, will doubtless say that, under the circumstances, they do not feel justified in refusing to put an end to the anomalous and critical situation in which the country is placed as a result of the war with Spain. The demands of the business interests of the country that a possible menace to the present prosperity be removed by ratifying the treaty, have already made themselves heard, and would speak in more imperative tones if the treaty were thought in serious danger of falling. Then there is the undoubted fact that the treaty would certainly be ratified after March 4 if defeated now. This takes the heart out of Senators who fight for victory, not for principle.

One of President McKinley's nobles says in his paper, the *Tribune*, apropos of the Senate's delay in ratifying his treaty:

"It is for the President to judge whether, in the light of all information at his command, the time has come to put an end to uncertainty in the Philippine Islands about the intention of the Government. Perhaps the most merciful thing for the stupidly guided natives, and the wisest for those who are more or less consciously the tools of foreign Powers, would be without further delay to smash up the shadow of opposition, scatter their forces, and take into custody some of their leaders who send insulting missives to Washington. Certainly such behavior on the part of Cubans, who do at all events show a better disposition towards responsible self-government, would not have been tolerated at any time."

We could hardly have desired a better

illustration than the foregoing of Prof. Sumner's thesis produced the other day at New Haven, that it was the Spaniards who had conquered us, not we the Spaniards. Could there be anything more thoroughly Spanish than the above suggestion that, being disgusted with the slowness of constitutional processes, the President should take the matter out of the hands of the Legislature by military force, execute the treaty in his own way, and lay violent hands on foreigners who owe him no allegiance, and over whom he has not one particle of legal authority, because they do not obey his orders?

We hope the professors of political science in the colleges are taking note of these things. They could not have a better example of the way in which public liberties have perished in all preceding republics. First you get up a war; then you make the people drunk with conquest; then you make your conqueror your great man; then you get more and more to admire the swiftness and efficacy of military processes; then you are struck by the additions he has made to the national glory and fame and importance; then you conclude that a man whose military undertakings have ended so well must be a good and wise man; then you get furious with the legislators and advocates and editors for debating or gainsaying his plans; then you think he, as commander of the army, is really in possession of the power he has asked for; then you advise him "to take away that bauble," the mace, to stop all gabble and lock the gabblers up, and you say that it is intolerable to have a great man's plans impeded by such people. The whole process is as familiar to students of history as the public highroad. One of the most effective of its arguments is that criticism encourages foreigners and domestic "kickers" to resist the great man's arrangements for their welfare. "See," the nobles say, "you infernal grumblers, if it were not for you these darned greasers, yellow bellies, or dagoes would have submitted long ago. Your talk about the Constitution makes us sick; what do you want with a Constitution when you have good men like Alger and Hanna and Eagan and McKinley on deck? What is the matter with you, anyhow? You are always grumbling."

Senator Lodge seldom sheds tears (except in political conventions where, as is well known, "strong men weep" at certain crises), but he was near the melting point in his speech in the Senate on Tuesday week. This was especially the case in that part of his oration where he contemplated a possible "humiliation of the United States in the eyes of civilized mankind," with a brand fixed upon us as "incapable of great affairs or of taking rank where we belong as one of

the greatest of the great world Powers." At this point his voice broke, and he took refuge in poetry:

"One more devil's triumph and sorrow for angels." Now, what is this threatened humiliation of the country before which Lodge blanches? Why, it is simply the demonstration that we are not a swashbuckling nation desiring or fitted for a career of vulgar conquest. What is it that is to make us "incapable" of setting up as one of the greatest of the great world Powers? Why, our Constitution, our laws, the habits and temper of our people. We are incapacitated from becoming an empire by the fact that our government is republican. We cannot rule subject races because our system contemplates only the self-government of men free and equal. Our Executive cannot go about the world annexing and governing according to his good pleasure, because our Executive is a creature of law, a man of limited powers if of unlimited wisdom. If these are the facts, where is the disgrace of taking action to reassert the nature and purpose of our government "in the eyes of civilized mankind"? The real disgrace, the real humiliation, attaches to the President and his advisers, and to Senators and Peace Commissioners who have attempted to depart from the established policy and the settled laws of the country, and are now whimpering when they find themselves in a scrape.

Mr. Lodge has formulated and proclaimed his Philippine creed. He believes that the United States has the right and power to acquire, hold, and govern foreign lands and peoples for "constitutional purposes," but Congress is the sole judge of the constitutionality. His creed makes no mention of Constitutional methods, nor of the President and Senate, the treaty-making power, as having to do with either. He believes that Congress has "absolute" power to make a petit jury in the Philippines consist of only one man or of two men; to establish there the Mormon or any other religion, and empower a Government officer to seize the private papers of a citizen. He condemns a modification of the treaty so that it will deal with the Philippines as with Cuba. He confesses that he has no plan respecting the Philippines, knows not what it is expedient to do with them; avers that nobody knows, but believes "that we shall have the wisdom not to attempt to incorporate those islands with our body politic, or make their inhabitants part of our citizenship, or set their labor alongside of ours and within our tariff to compete in any industry with American workmen"—which belief presents the precise condition of things set forth in the Vest resolution as condemning the constitutionality of the acquisition. He fancies that if the treaty falls, the protocol will fall, Cuba, Porto

Rico, and Manila will go back to Spain, the war will begin again, and McKinley's war power will have no more likelihood of end than it now has. Senator Lodge should have privately submitted his creed, before promulgation, to a good lawyer like Mr. Justice Gray of the Supreme Court.

The "friends of the Hawaiian bill" are reported from Washington to be exceedingly anxious lest their measure fail of enactment in this crowded and distraught session of Congress. We should think they would be. But if their work creates another such muddle in the islands as was brought about by the hasty annexation resolutions of last July, the longer it is delayed and the more carefully it is studied the better. An extraordinary judicial situation has been disclosed by a recent decision of the Hawaiian Supreme Court. We referred some time ago to the habeas-corpus proceedings before Chief-Justice Judd, in the case of returning Chinese. He held that, having certificates of residence in the islands, issued before annexation, they were entitled to return. Appeal was taken to the full Bench, which has now reversed Justice Judd's decision, on the ground that the annexation resolution destroyed the jurisdiction of the Hawaiian courts in all questions "arising under the laws of the United States." Congress destroyed, but it did not create. Until it acts to establish such courts as may be necessary to pass upon questions of Chinese exclusion, cases in admiralty, suits between citizens of Hawaii and citizens of California, no causes of that description can be tried in the Hawaiian Islands at all. This is the decision of the Hawaiian Supreme Court, which has naturally excited something very like consternation in Honolulu.

One of the quiet little changes in legislative practice which nobody notices, which the press barely reports, but which are of far-reaching importance, was effected in the Senate on Monday week. It was, the determination to take away from the committee on appropriations control of seven of the great appropriation bills. This change has been urged, and has been fought, for years. It is a change which took place long ago in the House, with the result, as Mr. Cannon has openly confessed, of increasing extravagance. Of the thirteen annual appropriation bills, the House committee on appropriations has long had charge of only six. To increase the power and prestige of other committees, the right to frame their own appropriations has been intrusted to them. This breaking down of a centralized control over expenditures is undoubtedly one of the chief causes of swollen appropriations. It has been steadily resisted in the Senate by Mr. Allison. He has stood for

the need of a central and coördinating authority presiding over all annual expenditures. Two years ago a strong movement was made to break up and distribute the appropriation bills among several Senate committees. Senator Allison was able to defeat it then, though with difficulty. Now he has surrendered. The small men of the smaller committees have proved too numerous for him, and have got their way. They will now be able not only to deliberate on agriculture and the army and navy and the post-office and the Indians, but to draw up money bills. What the sure result of this disintegration will be there is no doubt. Responsibility will be destroyed, and so will the surplus.

The very judicial processes of the army, the attempts of its officers to keep the honor of their ranks unsullied and to punish and expel black sheep, are meddled with and thwarted by the politician at the head of the War Office. The Secretary allows a court-martial, but the verdicts he hangs up or reverses, according to the underground political influences which the accused can bring to bear upon him. We say nothing of the pending Egan court-martial; when we see an honest verdict in that case enforced without fear or favor, we shall believe in it. But the court-martial of Capt. Carter has already become a public scandal, so outrageously have the President and Secretary Alger, in connection with it, interfered with the regular course of military justice. That officer was tried by court-martial in December, 1897; he was found guilty of corruption in engineering contracts, was sentenced to dismissal from the army, the court also recommending that criminal proceedings be brought against him. What has been the result? The President and Secretary of War have kept the papers in their possession all these months, and have been straining every nerve to find some way of letting the inculpated officer escape full punishment. Reason? Political and social "pull." Capt. Carter is an Ohio man to start with; he is rich and has rich relatives; he has powerful political friends, including Senator Platt. In a desperate hope to save so well-connected an offender, the President employed Mr. Edmunds to review the proceedings, to see if some legal flaws might not be found. Mr. Edmunds's bill of \$5,400 the President then had the effrontery to order paid out of the National Defence Fund! This was too much even for a friendly Comptroller of the Treasury, who said he was unable to see what Capt. Carter's case had to do with the war with Spain. Yet people wonder that under such a President and such a Secretary and such debauching and dishonoring methods, regular army officers should not think everything for the best in the best possible of worlds.

The average active stock on the New York market has already risen 30 to 50 per cent. in price within nine months. Many stocks have nearly or quite doubled in market value. Moreover, the last few weeks of almost unrestrained outside demand have not been wasted by the expert "promoter" of Wall Street. Such periods are his harvest seasons. A recent careful compilation by the *Financial Chronicle* shows that new corporations of the so-called "industrial" type, organized during 1898, reported aggregate share capital of no less than \$916,000,000. A good part of these shares is now being rapidly floated on the sea of Wall Street speculation. No doubt much of this mass of capital stock is intrinsically worthless—a mere bundle of paper certificates given away to the incorporators as a "bonus" on their moderate investment of real capital. But when, as has happened, the quoted price of even these shares on the Stock Exchange is doubled or trebled, and when they freely pass current at such a valuation, it must be evident that the void in the supply of investment issues, good or bad, is being filled with great rapidity. In other words, supply is overtaking demand. We do not profess to know when it will fully overtake it, or whether it has already done so. But what every experienced man does know is, that a season of excited stock speculation creates factitious values; that sooner or later the bubbles must be punctured and prices forced back to their proper level, and that when this happens, a large part of this "outside public" will be left with securities in their hands, some of them intrinsically worthless, others bought at a valuation which may not be reached again in years, if ever.

The Memphis authorities have lately sought the permission of the Legislature for the issue of the bonds needed in their city to extend the waterworks system, and had a bill passed, general in its nature but really applicable to their case, authorizing the taxing of districts, cities, and towns with a population of at least 60,000 to build or buy water-works, and to issue therefor bonds not exceeding \$2,000,000 for any place, which "shall be payable in such money as the legislative council or other governing agency of the said taxing district, city, or town may determine." This would, of course, authorize gold bonds, which the Memphis authorities would have issued. But, unfortunately, Benton McMillin, the new Executive, has always been a great "friend of silver," and he could not consent to see any discrimination against the metal of his love. He urged that the inevitable effect of the authorization sought would be to permit the payment of the proposed bonds in gold, and that experience had shown that this privilege would be improved. He declared that

he had never believed in the single gold standard, or monometallism, and that he could not be a party to any scheme which "is intended, so far as it does anything, to break down the bimetallic principle and advance the principles of the single standard." Accordingly he vetoed the bill, which kills it. The result is, that the taxpayers of Memphis must pay a higher rate of interest on their water-works bonds than they would have to do, did not consistency require the statesman who is Governor of Tennessee to stand up on all occasions for "the bimetallic principle."

It is probably from abundance of caution, solely, that the French Government have adopted the bill to bring the Dreyfus revision before the full Court of Cassation, civil as well as criminal department. Premier Dupuy is keenly aware of the difficulty of getting the country to acquiesce in any verdict favorable to Dreyfus; and he seems to have resolved to omit no measure which could satisfy even the most querulous of the perfect integrity of the court. The suspicions thrown upon some of the criminal judges by the clamorous ex-Judge Beaurepaire are but so many trifles light as air—M. Dupuy himself called them in the Chamber foolish and disgusting—yet, in the present inflammable state of public opinion in France, it is well to anticipate and disprove in advance even the most ridiculous charges. On the whole, we cannot but think that the situation is clearing. The Government steadily get in the Chamber large majorities in favor of orderly proceedings; and if the Court of Cassation is able in the end to present a harmonious and legally overwhelming report in favor of revising the Dreyfus trial, there is good reason to think it will be quietly received by the French people.

Tariff wars are almost as disastrous in their ravages as those waged in real earnest. The one that has been raging between France and Italy for ten years was of the most foolish and reciprocally harmful character. France clapped extra duties upon Italian imports, and cut them down from \$62,000,000 in 1887 to \$26,000,000 in 1897. But Italy was not idle meanwhile. Her customs taxes were levelled at the enemy, and reduced the value of French goods sold in Italy from \$65,000,000 in 1887 to \$32,000,000 in 1897. What could be a more perfect demonstration? How could silly legislation and bad policy be writ larger? Yet it has taken eight years of persistent negotiation, as the ex-Ambassador to Rome, M. Billot, shows in the *Revue des Deux Mondes*, to bring either nation to its senses, and to end this unnatural commercial struggle, as it now has been happily ended. In tariff wars, like others, the difficult thing is, not to begin, but to stop.

WHAT IF THE TREATY IS NOT RATIFIED?

The consequences of the failure of the Senate to ratify the treaty would undoubtedly be unpleasant. The first and most serious would be the increased difficulty and expense of "getting delegates" at the convention for the revered McKinley, and the consequent revelation to mankind of our ingratitude to one of our greatest men. It would be like a failure to reëlect Abraham Lincoln in 1864. But there would be something which his nobles would feel even more acutely than this—that is, the failure of a tremendous money-making scheme for which they are now all ready. Distance from home, a fertile soil, a subject population, strong military and naval support, complete power over taxation, and great sympathy in the Executive mansion and in the War Department—all are there. To miss them is to miss the finest chance ever offered to speculators in America. These are consequences not openly spoken of.

The consequences which are spoken of and dwelt upon are, the loss of the national dignity, the renewal of the war, the awful anarchy that would ensue in the Philippines, and the failure of any real "expansion." Two months ago we all thought we had expansion, at least, by the tail; we now find it is in danger. We ask ourselves, Can we bear it? Can we dispense, at this time, with the innumerable blessings which many local prophets have assured us would flow from expansion? Frankly, in our opinion, we shall find it hard. We find it hard already to wait for the report of the President's commission, which we shall probably now have to do. The conduct of the natives in compelling our revered ruler to send out a commission, instead of submitting themselves at once to that proclamation, will meet with no apology from us. We have always been on the side of authority, and we shall so continue. A greater set of rascals we have not often heard of, except George Washington, who defied several similar proclamations in a most unseemly manner. Let us say, *en passant*, that the way this old fossil has been puffed and belauded strikes us as very silly. It was, of course, easy enough to preach peace and isolation to us when we were so small a people that we could not rob or bully any one; but the "cheek" of preaching peace and honesty to a nation of 70,000,000, which can rob and bully anybody it pleases, as some of the anti-annexationists are doing, strikes us as colossal.

Now let us examine the dangers to expansion seriously. Of the dangers to the McKinley delegates we say nothing—that is too serious a subject for us to meddle with. But what about our having to begin the war again if the treaty be not ratified? We were sorry to see as sensible a man as Senator Gray lend-

ing his countenance to so fantastic a supposition. In the first place, Spain is used to remaining at war for indefinite periods, on paper. She was for many years at war, on paper, with her South American dominions before she made a treaty of peace with them, after she had stopped fighting. Then who would bring on the war? Every war needs two parties, so that both we and the Spaniards should have to fight. What would the Spaniards fight with? They have no longer any navy, and their army is now beyond the sea and in a very dilapidated condition. They have no ships to carry it to fight us either here or in Asia. We, on the contrary, have both an army and a navy, but we are without something just as important—something to fight about. We have got Cuba and Porto Rico without question or dispute. No one is meddling with us in either island, and we know of no one who desires to do so. Spain cannot and will not fight us in the Philippines, for the same reason for which she will not fight us in Cuba and Porto Rico—want of ships, men, guns, ammunition, and money. So with whom is the fight to be, and what is it to be about? The only way to bring it on is to invade Spain, when the Spaniards would probably defend their homes; but there are no "glory-crowned heights" in Spain, as the elder Napoleon proved to his cost.

The "loss of dignity" is next to be considered. To this also we are used. Gen. Grant was seized with the same desire for "subject population" as the revered McKinley, and, like the revered McKinley, he sent out the gifted Babcock to negotiate a treaty for the acquisition of the island of San Domingo, and he contracted for it. But the Senate refused to ratify the treaty. All the friends of the Administration said we had "lost our dignity," but the country decided to go without dignity for a few years until we had accumulated a fresh stock, and all was soon quiet again.

It is not for the likes of us to advise the Senate what to do with the treaty, but we are able to assure them solemnly that a renewal of the war is not one of the consequences that will follow their refusal to ratify it. Nothing will happen if they refuse. We may have to continue a war with the Filipinos, but we shall probably have to do that anyhow. And should we not have a nice war in Asia? Think how many wars with subject races the British have had. They had one only last winter in India, and we have not had one since our last war with the Western Indians. Is it not high time to make a "subject race" or two feel the valor of our young men? It seems to us it is. So the thing now is to hurry on a good war with the Filipinos.

The impudence of the rascals in claiming independence when their skin

is brown as copper pan, strikes us, as it does, doubtless, most true-hearted Americans, as the height of brass. As usual, too, there are certain black-hearted villains at work among us encouraging them in their resistance by advising the Senate not to ratify the treaty, when they have been distinctly told by our excellent President, more than once, that it is a good treaty. Many of them are probably encouraged by the example set in the San Domingo affair, but they forget that there was no war accompaniment to that. As Senator Teller said the other day, if American blood be shed by these rascals in resisting the great McKinley, everything will be forgotten except the sacred duty of slaughtering more Filipinos than they slaughter of us, and of inflicting more misery on them than they inflict on us. Then we must remember that for fully a century certain unutterable traitors have been constantly at work, trying by some scheme to prevent the other party in American politics from winning an election, and, our word for it, they are at it still. The dogs little know that the eyes of the other party are on them, and that they may be locked up for treason any day.

MORE TANNERISM.

The country was startled or shocked, two or three months ago, by the proposal of Gov. Tanner of Illinois to make laws himself for the State, and execute them in advance of the meeting of the Legislature, which he proceeded to do by prohibiting the entrance of certain colored citizens into the State in search of work, and threatening them with death in case of disobedience. The doctrine as laid down by himself was as follows:

"It sometimes becomes necessary for an executive to enforce the law in advance of its enactment. Public sentiment crystallizes into law. I am thoroughly satisfied that the public sentiment of the good, patriotic citizens of our State is overwhelmingly opposed to this system; that if the operators import this labor they do it at their peril, and receive no aid from this State while I am Governor."

The fact that but few of the newspapers and no public man, not even the President, took any notice of it, did not, in our minds, in any degree diminish the importance of the occurrence. On the contrary, it increased it. A distinguished English jurist who happened to be in the country at that time and thought the matter astounding, ran about, with somewhat diverting diligence, in search of explanations of this disregard of the Constitution, but never got any, and, we presume, is pondering over the matter to this day.

As we expected, Tanner's action has been full of suggestion to the party who wish to rule without constitutional restrictions. The second article of the Constitution says, defining the President's powers: "He shall have power,

by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." Nothing can be plainer than this provision. It has been acted on without question for 110 years. It has been explained and expounded by a large number of publicists, native and foreign. We have never heard of any hostile or doubtful comment on it, at home or abroad. It has exactly the same force and authority as any other provision of the organic law. The President has no more right to disregard it than to declare himself entitled to a second term, Spanish-American fashion, without an election. Nevertheless, our good William McKinley began to disregard it, without the least hesitation, on the 21st of December last, by his proclamation to the Filipinos. To these ignorant people he made the following extraordinary announcement:

"With the signature of the treaty of peace between the United States and Spain, by their respective plenipotentiaries, at Paris, on the 10th inst., and as the result of the victories of American arms, the future control, disposition, and government of the Philippine Islands are ceded to the United States. In fulfillment of the rights of sovereignty thus acquired and the responsible obligations of government thus assumed, the actual occupation and administration of the entire group of the Philippine Islands becomes immediately necessary, and the military government heretofore maintained by the United States in the city, harbor, and bay of Manila is to be extended with all possible dispatch to the whole of the ceded territory."

There was in this statement hardly one word of truth. The signature of the draft of a treaty of peace by Commissioners appointed by the President no more made a treaty than the resolution of a nominating convention. The "future control, disposition, and government of the Philippine Islands" were not thereby "ceded" by Spain to the United States any more than they would have been "ceded" by a contract for "spot cash" with Mark Hanna. The whole proclamation was not simply unconstitutional, it was what is called "bogue"—that is, it was an attempt to impose on ignorant or helpless people.

As there was little or no protest against this bold usurpation of power, we felt sure it would not long lie fruitless. Sure enough, it is being promptly followed up. The people who have been sure that expansion would do no injury to our own institutions, have not been kept waiting very long to see lawlessness "expand" in every direction. The Constitution was undoubtedly intended for civilized human use, and the requirement that the Senate shall advise and consent therefore means that, with a view to advice and consent, it shall deliberate and take its own time. It is to decide, without help or interference, when the time to advise and consent, or to refuse to do so, has come. But to lovers of arbitrary power this is an exceedingly inconvenient arrangement. All military men like prompt action and fret under legislative delays.

The state papers of European monarchs between 1820 and 1860 are full of demonstrations of the folly and inexpediency of granting constitutions to turbulent peoples, on the very ground now put forward by one of the McKinley noblemen. The King of Prussia, the Emperor of Austria, the King of Naples, all withdrew constitutions after having once granted them, on the express ground that they caused delay and confusion in executive action, besides throwing impudent doubts on royal wisdom. Our own William knew perfectly well when he took office that he took it as the creature of a constitution over 100 years old. He knew when he went to war with Spain that the war would end in peace, he knew that the Senate would have to share in making the peace, and he knew the manners and customs of the Senate. More important still, he must have felt, when Dewey's victory, joined with the suggestions of Satan, tempted him into converting a war of humanity into a war of conquest, and issuing Windischgrätz proclamations to a people fighting for their liberty, that there was much danger that both the Senate and the public might take a good while to make up their minds before entering on this new rôle, or that at all events he would have to submit to the law to which he owed his own political existence. But a more excellent way is evidently stealing into the heads of the lawless gang who surround him. Persigny and St. Arnaud were not more fertile and daring in expedients. Listen to this delightful Tanner suggestion from one of the great men who negotiated the treaty, produced in his *Tribune* on January 25:

"Under these circumstances, notwithstanding the fact that a vote twelve days hence has been ordered, it may be necessary to consider whether the hands of the Administration are really and necessarily tied up by the delays of the Senate. Spain having thrown up her hands, the United States is morally responsible for the protection of life and property in the archipelago. Can it be morally justified in standing much longer on a technicality about the actual ratification of a treaty to which both nations are committed, with the certainty that this delay increases tenfold the inevitable destruction of both?"

Not a bit, your Highness. We would go right ahead and execute whatever treaty we thought best, both for the Filipinos and the Americans. This tiresome deliberation of legislators has lasted long enough.

THE NEXT STEP.

Does it not seem as if it were time for somebody who is interested in this expansion business, to do something besides discuss the powers of the Supreme Court, of Congress, and of the President, and the vigor of the Constitution, and the behavior of Jefferson? To this there seems to be no end. Everybody is taking a hand in it, in and out of Congress. The country is literally swarming with people who happen to

know how short-sighted Washington was, and how antiquated his opinions have become, and how well it will be to stop minding the Farewell Address. In fact, it looks at times as if the whole colonial question were about to be turned into one of those debauches of constitutional interpretation in which it was so common to indulge in the old days of the anti-slavery agitation, and which are so apt to occur at monthly meetings of clubs. It sometimes seems as if the expansion movement were about to fade into a piece of constitutional construction, leaving the great McKinley in possession of the field and Dewey of Manila harbor. We learn through a morning paper that a nephew of the Admiral, who lives up the Hudson River, is in favor of the annexation of the Philippines, and that the whole Dewey family are of the same mind. Surely this ought to settle the matter. Why go on arguing?

But we used to hear last summer, when the expansion movement first began, that we would promptly organize a colonial civil service for the administration of these new possessions, on the model of that of Great Britain. Those who feared that the result of these annexations would be simply a descent of our old political class on the islands, were for a time in a pitiable position, and kept out of sight as well as their private business would permit. The old régime was to pass away promptly, and a new order was to arise in a conquering notion. Did you doubt it? Had you not seen the readiness with which our wealthiest young men rushed to the war? Could you question that on the return of peace the same young men would engage vigorously in organizing colonial services, and supplying the unhappy islanders with a pure, lofty, and skilful administration?

It may be said that there is no use in doing anything about this until the treaty is ratified; but, as we have been given to understand, we are certain, treaty or no treaty, to "keep what we have got"—that is, to do what we have undertaken to do. We are going to keep the islands, no matter what anybody says, and should rather like on the whole to have somebody question our right or ability to do so. Consequently, the signing of the treaty or its ratification really makes no difference. We are bound to prepare a system of government for the islands, especially for the Philippines, which, we are told, we are to keep as a conquest. Now this cannot be done in a day. It will take months or years to get such a system organized. We cannot begin to prepare it too soon. We cannot govern and educate and civilize indefinitely through a few military officers, however good they may be, whose experience is limited and whose health is made precarious by the climate. Have we anybody to-day ready to take their places when they drop off,

except the old heelers who had or controlled votes in the last nominating convention? Absolutely nobody; when vacancies begin to occur in Cuba or Porto Rico or the Philippines, it looks, at present, as if the good and wise McKinley would fill them promptly by old heelers such as the Consul-General whom he sent the other day to Singapore, and of whom there is an unlimited supply now awaiting his orders.

War is an exciting pastime for young people. It sets all the maidens weeping for joy and excitement, and makes the young men drunk with martial ardor, but it does not prepare for the dry drudgery and details of a government service. Conquering is great fun, but administering in any way except the Spanish way is tiresome in the extreme. Who would not sooner discuss the constitutional authority of Congress or of the President, or the extent of the "war power," than draw up rules for a civil service?

The result is that, eagerly as our young men rushed to the war, we hear of nobody who says a word now about the organized colonial government. Millions to-day "refuse to despair of their country"; tens of millions feel that "all will come out right in the end"; but we do not hear of a single patriot buckling down to the work of providing any better system than that of the Spaniards, for the rule of our subject races. We could not give a better idea of what that rule must be, if it is to do us any credit, and of the kind of men who must carry it on, than a description of the duties of one of the British Commissioners in British India, where the climate, the population, and the degree of civilization are very similar to those of the Philippines. They are exactly the kind of duties which the agents of our authority in those islands will have to perform if we are to do any civilizing or any educating, or, in fact, do anything but "keep what we have got." Is the conquering Griggs, who "assumed responsibility" so readily, doing anything about this matter? Here is the official account of the work a district commissioner in India has to do, and, inferentially, of the kind of man he is to be:

"Alike in regulation and in non-regulation territory, the unit of administration is the district—a word of very definite meaning in official phraseology. The district officer, whether known as collector-magistrate, or as deputy commissioner, is the responsible head of his jurisdiction. Upon his energy and personal character depends ultimately the efficiency of our Indian government. His own special duties are so numerous and so various as to bewilder the outsider; and the work of his subordinates, European and native, largely depends upon the stimulus of his personal example. As the name of collector-magistrate implies, his main functions are two-fold. He is a fiscal officer, charged with the collection of the revenue from the land and other sources; he is also a civil and criminal judge, both of first instance and in appeal. But his title by no means exhausts his multifarious duties. He does in his smaller local sphere all that the Home Secretary superintends in England, and a great deal more; for he is the representative of a

paternal, and not of a constitutional, government. Police, jails, education, municipalities, roads, sanitation, dispensaries, the local taxation, and the imperial revenues of his district, are to him matters of daily concern. He is expected to make himself acquainted with every phase of the social life of the natives, and with each natural aspect of the country. He should be a lawyer, an accountant, a surveyor, and a ready writer of state papers. He ought also to possess no mean knowledge of agriculture, political economy, and engineering."

MADE IN SPAIN.

Considering our cultivated dislike of foreign-made goods, and especially just now our contempt for all things Spanish, we are importing a surprising amount of political ideas from Spain at present. To say nothing of our sudden fondness for militarism just as Spain is finding it a burden too grievous to be borne; waiving the question whether we are not in a fair way to pay Spanish methods of colonization the sincere compliment of imitating them; we beg to ask if the debates and proposals in Congress do not show a marked tendency to Hispanicize our institutions.

We refer especially to the readiness displayed in Washington to evade or suspend Constitutional guarantees, and to load upon the Executive duties and responsibilities not his by Constitutional provision. Spain is the true home of this way of treating a constitution like a nose of wax, and of exalting the executive power. It is "rancidly" Spanish, as the Spanish phrase is. No country can boast of a finer line of constitutions than Spain. There is the Constitution of 1812, another one of 1833, another of 1845, and so on. They are all beautiful pieces of work. The division of governmental powers, the rights and guarantees of the citizen—all are there. But the trouble has been that if any constitutional provision ever got in the way of a dictator or prime minister, it had to go. Out came a "royal decree" urging a "reason of state" or a "case of necessity," and lo! the inviolable Constitution was violated, the indefeasible liberties of the Spaniard suspended. We have seen the process illustrated again and again during the past few years. Cánovas and Sagasta vied with each other in snapping their fingers at Cortes and Constitution and doing the most unheard-of things by "royal decree." At this very moment the government of Spain is being carried on by a delegation of practically absolute power. The poor Constitution is lost in the shuffle.

Even more conspicuously has this political habit been displayed in Spanish America. The case has been more glaring there because all the Spanish-American constitutions are notoriously modelled on our own. The severe division of legislative from executive, and these from judicial, powers; the familiar "checks and balances"; the strict limitations imposed upon the President—

the Spanish-Americans have them all. But having also Spanish political instincts in their blood, they make ducks and drakes of their written constitutions. A convenient method of reducing the Constitution to waste paper has been displayed again and again in Mexico. We speak of President Diaz as if he were an absolute ruler, and so he is; but the Mexican Constitution limits his powers very much as ours does the powers of our President. And the Mexicans appear to be as devoted to their Constitution as we are to ours. Officials address each other as "citizen" (*ciudadano*), and always append to their public letters, as a kind of pious whoop, "Liberty in the Constitution." But all that does not hinder them from driving right through the sacred document—worse than with the proverbial coach and four, they go through it with a diligence and twelve mules. Bill after bill has been passed by the Mexican Congress, in the years during which Don Porfirio has been building up his autocratic government, of which the general tenor is about as follows:

"Section 1. All powers devolved by the Constitution upon Congress are hereby and till further notice conferred upon the President of the Republic.

"Section 2. This act shall take effect immediately. Liberty in the Constitution."

How far the American Congress is now treading, or preparing to tread, in the footsteps of the Spanish Cortes and the Mexican Congress, every attentive reader of its proceedings can judge for himself. The "discretion" of the President, the "wisdom" of the Executive, these are now the great watchwords of debate. It may be said that this is all a part of the "war power," and so it is; but the war is over and yet the power remains. Is it under the "war power" that the Senate shirks passing a Nicaragua Canal bill and "authorizes and directs" the President to see that the job is properly done? Is it a military operation to govern Hawaii, as it is proposed to, largely by executive order? Is it because we are or have been in a state of war that the President is to be given power to say what ships and what lines shall have subsidies? If all this is not heading straight towards the Mexicanization of our government, then sign-posts are erected in vain.

Do we then dare to say that the good William McKinley is a wicked usurper? Would we compare him with Espartero or Marshal Prim or Gen. Diaz? Far from it, and that is the worst of it all. As usurper he would be a ridiculous figure. No one who so assiduously holds his ear to the ground to hear what the back-country districts are saying, can ever be a successful man on horseback. The very children would laugh at his pasteboard helmet and tin spurs and sword of lath. The hardest thing to be said is not that he is a dictator, but a dictatee; not a usurper, but a tool. To a really strong President the

party leaders and political speculators would not venture to give such extraordinary powers. They give them because they know he will exercise them as they direct. They find it a wearisome task to get Congress to assent to their schemes, and so they take the short cut of getting Congress to put everything in the President's hands. This button pressed, they do the rest. Thus it is that our Constitution is subverted and our institutions Hispanicized, not in the interest of personal rule by one strong will, but in the interest of a group, of a vulgar oligarchy, who make the President their stalking-horse. The result is what a Spanish statesman once called a "bastard system"—neither the directness and force of absolute rule, nor the free play of a constitutional regimen, but a crass and feeble imitation of arbitrary power without either the dignity or the efficiency of a frankly monarchical government.

A GLIMPSE INSIDE.

We have many times pointed out that the text-books on government which are in use in our schools and colleges are grossly defective in that they relate entirely to a form of government which has ceased to exist among us. The methods which they explain, in regard to nominations, to legislative functions, and to the general business of government, are all out of date in all our large cities and in a great many of our States. We have done away with all that, and have substituted a very simple system of autocratic rule by a single man—the boss who carries on the government through his machine. Sometimes one boss does this, sometimes another. When one gets in a tight place, the other helps him out, as when Boss Platt helped Boss Croker to gain possession of the city by running Gen. Tracy as a decoy candidate.

But while there is a very accurate general impression of the real workings of the boss machine, it is only at rare intervals that we get exact information as to details. We are getting some of this now through a case which is in progress before Justice Fursman in the Supreme Court. A member of the celebrated machine family, Hess, is suing a member of another and scarcely less celebrated machine family, Einstein, for libel in making some unpleasant charges against him as a candidate for Congress a few years ago. In support of his charges, Einstein is relating his own experience, and is fortifying it with that of some of the ablest Republican machinists we have, and together they are giving testimony which is of the highest educational value. It appears from the testimony of three of these experts that it is the regular practice to refuse to nominate a candidate for office until he has first given satisfactory assurance of

his ability to "put up" a handsome sum for expenses. The sum demanded in the case of Hess ranges from \$2,500 to \$5,000. The experts appear to have had doubts of the good faith of Hess, for they insisted upon having the cash in hand before the nomination was made. This is a method of procedure in our nominating system which is not even referred to in our current text-books on government, but see how exact and scientific it is! No cash, no nomination.

The witness who explains this method most lucidly is the defendant Einstein himself. He testifies that he had doubts of Hess in various ways—first, doubts as to his party loyalty, Hess having been first a Republican, then a Democrat, then a Republican again; second, doubts as to his eligibility, since he believed Hess to be a resident of New Jersey; third, doubts as to his fitness, since Hess "had been mixed up in lobbying to prevent importers from paying the duties that they ought to pay under the law," and it was suspected that he wished to get into Congress to continue this kind of service. These objections were laid before Mr. Lauterbach, who at the time was the executive head of the Republican machine. Now see how easily Lauterbach disposed of them. We quote from the court testimony:

"Q. What did Mr. Lauterbach say in answer to that? A. He said it was awful hard to get a decent candidate to run on their side in that district, and that he was depending on Scannell to elect him [Hess], and that Hess had given him \$5,000.

"Q. Please state your reasons for objecting to Mr. Hess's nomination. A. First, that he had bought the nomination away from Luther Little, to whom it had been promised by Mr. Platt. That was one reason. The other reason was that he was a Democrat masquerading as a Republican. There were several other reasons that I am not allowed to state.

"Q. Did the suggestion that he was to be elected through the help of Scannell have anything to do with it? A. I thought it was a disgraceful way of being elected.

"Q. Did you know who Scannell was? A. I knew he was a Democrat and a Tammany Hall man.

"Q. Did you know that Scannell had at one time been tried for murder in this city? A. Yes.

"Q. Did you have any conversation with Mr. Lauterbach about the expenses of the campaign? A. Mr. Lauterbach told me that the county committee had got tired of putting up impecunious candidates, and I am pretty certain he gave me that as the reason for not putting up Luther Little—that he could not pay his campaign expenses.

"Q. Did Mr. Lauterbach tell you that Hess had put up money? A. He told me that he had given him \$5,000."

There is the whole system in a nutshell. The man who can put up the cash gets the nomination. "You cannot run a machine on wind," is the usual formula, but Lauterbach, being a man of more than the usual machine erudition, puts it more elegantly: "I am tired of putting up impecunious candidates." If Luther Little had had the money, he would have been as sure of the nomination as Hess, but even the Old Man's promise was not sufficient without the cash. The aid of Scannell of Tammany Hall is not unusual in matters of this kind. You will

remember that in the critical days of 1896, when Cornelius Bliss and other good Republicans were assailing the machine as such a disreputable band of political rascals, led by a boss who was so bad that "self-respecting men could not be allied with him even for a good purpose," it was shown that the boss and Lauterbach had saved the machine from destruction through the aid of Tammany men in the primaries. It is a part of the system and must be set forth in all future text-books. Scannell, who took the stand after Einstein, denied all personal knowledge of Lauterbach, or of this or similar transactions, swearing that he had no relations with Republican machinists, merely knowing Lauterbach well enough to say "How do you do?" to him three or four times in his life. This also is part of the system. Croker and Platt never meet, might not recognize each other if they did, yet they "get together" easily and work harmoniously in a "deal" when occasion requires.

The trial in which these revelations have been made is still in progress. Hess himself has taken the stand, and it is much to be hoped that he will give us the whole story, for, taken all in all, the Hess experts, including Jake of the Police Board, are the best examples we have of what can be done with machine executive government when it gets into the hands of really first-rate ability.

LICENSE IN ENGLISH RHYME—II.

STANFORD UNIVERSITY,

December 30, 1898.

Thus far, then, we are led to the conclusion that the attempt to set up the rule in English that "no rhyme but a perfect rhyme is ever worth a poet's while" is both impractical and without historical warrant. It is impractical from the very nature of language. Doubtless a poet could, with sufficient painstaking, be consistent in his own practice; but if he is going to train his ear to demand absolute perfection of rhyme, he will soon be reduced, for unalloyed pleasure, to the reading of his own verses. It is without historical warrant, because few poets seem to have regarded exactness of rhyme as a desirable ideal, and scarcely one since Chaucer has come measurably near to consistency in practice. This license of "allowable rhymes" regarded as a departure from some definite rule has been mostly a fiction of writers on poetics and makers of rhyming dictionaries, from King James down. It is the system-makers, carried away by their passion for reducing everything to uniformity, who have tried to dictate to the poets, whose verses, to be sure, if they observed uniformity, would have inestimable value as a criterion of old pronunciation to philologists a thousand years hence. We may not convert the system-makers; men who, like Dr. Guest, talk solemnly of this or that poet's "sinning," and declare that "the blunders of no writer, however eminent, should weigh with us as authority," are scarcely open to conversion. But the question may be safely left with the lay reader: Shall we take Spenser and

Milton and Shelley and Browning and Tennyson and Poe as our authorities, or George Puttenham and Dr. Guest and Prof. Matthews?

The most important consideration—the æsthetic value of “imperfect” rhymes—remains. It might seem to be already settled. When a prosodist in search of “pure rhymes” is forced to point to “the learned Sir William Jones,” the heretical doubt is suggested whether a pure rhymer be a dispenser of unadulterated æsthetic delights. If Poe and Tennyson liked the echo of *floods* and *woods*, of *unholy* and *melancholy*, I take it that the sooner I can cultivate a similar liking, the better for me. It is idle to say that the poets have not employed such rhymes with full approval. It may be admitted that the most musical poets have sometimes, in straits, written rhymes which they would not commend for imitation. But that will not account for the numberless recurrences of certain imperfect rhymes. It may be admitted, too, that certain rhymes, once good, have now and then, after a change of pronunciation, continued to lead a conventional existence for a time on the supposed suffrage of earlier poets. But that will not account for the steady growth in favor of certain rhymes, nor for the continuation of some to the exclusion of others. If *blood* and *wood* and *have* and *grave* live on, why have *take* and *speck*, *desert* and *heart*, *find* and *joined*, also at certain times or in certain localities perfect rhymes, been abandoned? There is but one answer: certain dissonances have approved themselves to the poet's ear, while others have not.

Imperfect rhymes may be in themselves musical. There is a degree of positive pleasure in all rhymes. Many of the happiest effects of both poetry and prose are due to the conscious or subconscious presence of subtle rhymes. Take this passage from Swinburne's “Triumph of Time”:

The low downs lean to the sea, the stream,
One loose, thin, pulseless, tremulous vein,
Rapid and vivid and dumb as a dream,
Works downward, sick of the sun and the rain.

A susceptible ear must find a keen delight in the delicate rhyme of *downs* and *lean*, *sea* and *stream*, *loose* and *pulseless*, *rapid* and *vivid*, *dumb* and *dream*. Why then must end-rhymes have always a certain fullness in order to yield pleasure?

Indeed, a most serious objection to the requirement would lie in its sweeping uniformity, its levelling tendency. Variety in poetry, as in all things, means life, and monotony means death. A slight divergence or disagreement of vowel-color in a rhyme may give it a new zest. Even granting that such a divergence constituted a positive discord, the poet might still defend his use of it as comparable to the musician's introduction of discord for the sake of heightening the effect of the perfect harmony to come. The spirit of English poetry, except in its most barren, rule-bound periods, has led it to seek variety. The terrible monotony of the metres and coupled rhymes of Pope's day is a standing warning. Inversion of feet, substitution, slurring, have been employed by masters of rhythm from Marlowe and Milton to Rossetti and Swinburne. And these same poets have avoided monotony of rhyme as they have avoided monotony of rhythm. Almost totally discarding identical rhyme to begin with, which renders French and Italian poetry so often distasteful to English ears, they have ended by frankly re-

cognising the principle of approximate assonantal or consonantal rhyme, with a frequent felicity of effect that justifies the liberty.

Of course we must recognize degrees and observe due bounds in our license. Reason in all things, says the old proverb. Mr. Brander Matthews, in the article cited above, failing to remember that he himself had been willing to admit such slight imperfection as *Devon* and *Heaven*, is disposed to argue that our rule must be hard and fast because the admission of one imperfection will lead to others, and there is no stopping this side of *hear* and *wood-pecker*, *Picnades* and *slides*. We may dismiss the argument with the smile it was intended to provoke. It is of a piece with his argument against eye-rhymes as forcing our acceptance of *clean* and *ocean*, *plague* and *ague*. Such absurd extensions were never contemplated. Mr. Matthews refuses to distinguish between degrees, and intimates that a miss is as good as a mile. But we know better; and even those who feel these things to be imperfections forced upon poets by the paucity of our rhymes, might well overlook them rather than cool the ardor or check the onward rush of a Shelley in the fever of composition. Your inelastic man is likely to be most uncomfortable, in ethics as in poetics, whether he be a preacher who insists that to steal a cocky is as bad as to rob a bank, or a school-teacher who does not know when it is politic to wink at the peccadilloes of a mischievous charge. The mischievous charge may be allowed to titillate now and then without any certainty that he will end on the gallows. Because I rhyme *come* with *home*, and *river* with *ever*, is no reason why I shall some day find music in the wedding of *Mamelukes* and *parallax*.

What bounds shall we set to the license? It is difficult to say. There seems to be no reason for setting definite bounds. The matter may be safely left to take care of itself. There is a system of checks and balances at work in the realm of art as in the realm of nature. The poet must find the golden mean between rule and license, and by his success in that we measure his artistic triumph. Tastes will, of course, differ greatly, and while it seems worth while to add here in conclusion a somewhat definite demarcation of the bounds of the license, it must be regarded as an observed demarcation and in no sense a prescribed one. If personal preference creeps in, it is offered only for what it is worth.

Cases of extremely imperfect rhymes, like the forced double and triple rhymes of Byron's “Don Juan” (*appendix*, *index*; *laureate*, *Tory at*, *are ye at*) or Browning's “Pied Piper” or “Flight of the Duchess” (*office*, *trophies*; *from mice*, *promise*; *ins-and-outs*, *thin sand doubts*), need not be considered. They are mainly *lours de force*, most properly used in humorous or grotesque poetry, since their chief merit is their difficulty and they serve to amuse rather than to please. Restricting consideration only to those imperfect rhymes that have been more or less freely employed by all poets, we may divide them into three classes—rhymes in which the consonants are not identical, rhymes in which the vowels are not identical, and light rhymes, or rhymes upon a syllable having only a light or secondary stress. The first class—rhymes in which the consonants following the rhyming vowels are not identical—are the least common, which may be

taken as evidence of general disfavor. Perhaps there is dislike of having the rhyme interrupted after it is begun. Perhaps, too, no one will tolerate a wide divergence of consonant sounds. Even the nasals, which are so close together that every unpractised versifier insists on rhyming *time* and *rhine*, are rarely thus linked by poets; Spenser's *stiraine*, *became*, and Rossetti's *win*, *him*, being quite exceptional. The only different consonants commonly mated are voiced and voiceless fricatives: *s*, *z*; *th*, *th*; and more rarely *f*, *v*; thus, *sees*, *peace*; *breathes*, *wreath*; *love*, *enough*. Greater licenses are sometimes taken in double and triple rhymes, as in Spenser's *shepherd*, *better'd*; Shakspeare's *broken*, *open*; Swinburne's *linger*, *singer*; or Mrs. Browning's *Eden*, *heeding*; *silence*, *islands*; *panther*, *saunter*; *trident*, *silent*; *know from*, *snow-storm*; *angels*, *candles*. Here, however, we are getting into the region of mere assonance or mere consonance.

The second class—rhymes in which only the vowel sounds differ—comprises a large number of almost universally used rhymes, of which *love* and *prove*, *charm* and *warm* may be taken as types. It is certain that many ears find these both in themselves satisfying rhymes and further welcome as a relief from the monotony of regular rhymes. That vowel-difference does not constitute so marked a departure from exact rhyme as consonant-difference seems to be due to the fact that all vowel sounds have a similarity of utterance, so that any two vowels do in a sense rhyme, of which the old alliterative practice in regard to vowels is strong evidence. Further, given two vowels that are nearly alike, and follow them up with a semi-vocalic *r* or a nasal or any consonant whose sound can be prolonged, and you have a combination that is musical and satisfying. There is more real rhyme in *mourn* and *burn* than in the more exactly corresponding but shorter and weaker *sip* and *lip*. And if the poet considers the effect of vowel-gradation, the consequent cadence is often more beautiful than any exact similarity could possibly be. In several lines cited above to show the musical effect of subtle half-rhymes, there is another exquisite musical effect which is to be traced to a felicitous gradation of vowels: *ā I ū ē, ow I ū ā—*

Rapid and vivid and dumb as a dream
Works downward, sick of the sun and the rain.

In like manner the gradation of vowel sounds in rhyme-words may be extremely euphonious. We must content ourselves with two or three examples:

Oh yet we trust that somehow good
Will be the final goal of ill,
To pang of nature, sins of will,
Defects of doubt, and taints of blood.

Her care is not to part and prove;
She takes, when harsher moods remit,
What slender shade of doubt may flit,
And makes it vassal unto love.

Outside it must be winter among men;
For at the gold bars of the gates again
I heard all night and all the hours of it
The wind's wet wings and fingers drip with rain.

The last example suggests that there is a situation in which this imperfect rhyme is peculiarly effective—that is, where more than two words rhyme; where, there being a sufficiency of rhyme already, another perfect rhyme is not called for or might even seem excessive. A striking example is Swinburne's “Faustine,” a poem of forty-one quatrains, each ending with the word *Faustine*. After half a dozen rhyme-words like *lean*, *queen*, *clean*, *sheen*, we welcome a change

to *this, his, sin*, etc. Or take another case of three rhyme-words:

From too much love of living,
From hope and fear set free,
We thank with brief thanksgiving
Whatever gods may be
That no life lives *forever*;
That dead men rise up *never*;
That even the weariest river
Winds somewhere safe to sea.

The third class is that in which light syllables rhyme, or are rhymed with fully stressed syllables. These too have generally approved themselves to poets, who even venture upon a slight wrenching of accents to secure this kind of rhyme, as in *sing, tha'nks-giv'ng; her, ha'rp-playe'r*. But there are limitations. In the matter of wrenching accents, we scarcely find *giv'ng, flowe'r*, though we find *tha'nks-giv'ng, su'nflowe'r*. In the latter case, it is a change of a secondary accent only that is at stake, a change which in such compounds is made easy by the natural tendency in our language to avoid two successive stressed syllables. One may rather like to have a poet compel him to pronounce *mermaidens mer-maidens*. So, too, if we can follow Keats and Rossetti and Swinburne in their liking for the rhyme *dwell, desirable*, we will follow still more gladly when, by the interpolation of another light syllable, the rhyme is *dwell, memorable; sea, amorously*; and one may very much dislike the rhyme *stable, memorable*. In short, the shifting of secondary accents is a light matter.

But apart from this there are still limitations to the effective use of light rhymes. It should be noted first that there are some final syllables getting but a secondary stress that are yet so heavy in themselves as scarcely to come within the definition of light syllables. Such are the final syllables of words like *Minotaur, widowhood, portraiture*. It would be a pity to deprive poets of such rhymes as *Mim, cherubim; sent, Mendisment*. If objection arise at all, it must arise in the case of weaker syllables. But some of these are essentially musical. The word *musical* itself, for example, or *coronal, or festival*, pairs easily with *fall or call*, especially if we allow a fuller articulation to be forced upon the words by such rhyming. Not that we should make them exact rhymes by pronouncing *festiva'l*, but there can be no harm in giving words a somewhat fuller sound in poetry for rhyme's sake than they would ordinarily have. So with final *ed; head, tenanted*. Of course the poet must not forego the requirements of art; he must see that the word be vital and organic enough to bear the enforcement of such pronunciation and of any rhyme at all. The pairing of two such words (as *festiva'l, Bacchanal*) is in questionable taste. And when the syllables are still weaker, as when Tennyson pairs *philosophy and Arcady*, the case becomes worse. Such weak endings are better paired with stressed syllables only, and even then, when the endings are so weak as the suffixes *ness* or *ly*, they are very ineffective if they precede the word they rhyme with. They do not make good rhyme-givers. But when they stand in the second place they may be effective, because of the cadence, the dying fall they give to the verse. This will be felt still more if two full rhyme-words precede. Mark the cadence of such a triplet as this by Whittier:

Ah, cruel fate, that closed to thee,
Oh sleeper by the northern sea,
The gates of opportunity.

Let it be repeated, in closing, that the

whole subject is a delicate one, lying in the field of aesthetics, and not to be treated in a positive or dogmatic spirit. The poets themselves are the only legislators, and while a poet may sometimes give us offense by thrusting upon us an ancient rhyme like *eye, liberty*, or a Hudibrastic one like *false, tails*, we must content ourselves with a smile rather than a frown.

ALPHONSO G. NEWCOMER.

AN AMERICAN IN LONDON IN 1835.

SIR: When recently engaged in writing the life of Edward Gibbon Wakefield, founder of the colonies of South Australia and New Zealand, the advantage I derived from the correspondence of Francis Place, the celebrated political tailor and disciple of Jeremy Bentham, induced me to look into some of the numerous folio scrap-books, full of cuttings from newspapers and other printed matter illustrative of the social condition of the people, which he bequeathed to the British Museum. On taking one of them down, the paper of which I enclose a transcript fell out. I forward it to you for publication if you see fit, hoping that you may be as much interested as myself in the nocturnal adventures of an impulsive, good-hearted American, too devoid of the historical sense to admire Westminster Abbey, but chivalrous as a Knight of the Round Table, and emphatically one of Nature's gentlemen. His narrative has, moreover, genuine literary worth from the picture it conveys of a wet night in London, and the glimpse it affords of the condition of the London poor. It is exceedingly to be regretted that all his other notes of a residence in England, extending over nine months, should have been destroyed by him. If as racy and graphic as this estray, they would have formed a volume of singular interest.

The writer's name would have been unknown but for Mr. Place's endorsement on the MS., which appears to have been sent to him some months after it was written, together with a list of books borrowed and returned, and the note I have transcribed for publication, which is written on a blank leaf. I read the name Robert Hunnesley Blak, but "Robert" might be "Roberts," "Moberts," or "Shoberts," "Hunnesley" might be "Hannesley," and "Blak" must be an error for "Black," or less probably "Blake." It would appear that Dr. Black must have remained in England for some time after February, 1835, but the books would probably be returned on the eve of his departure. As the State to which he belonged is mentioned, it should not be impossible to trace him.

The election of Mr. Abercromby as Speaker, mentioned at the beginning of Dr. Black's narrative, was a highly important event, being the first test of the strength of parties in the new Parliament.

I remain, dear sir, yours very truly,

R. GARNETT.

BRITISH MUSEUM, January 9, 1899.

By DR. ROBERT HUNNESLEY BLAK
from Kentucky
Some time after his arrival in London.

Some time since I kept a diary of such matters as suited not my intended book on England. Two months ago I made up my mind to burn them and did so—except, as I now

find, this one of the night of Feb'y 19th last which being in a blue book escaped.

Feb'y 19th 1835. London.

At 7 o'k to M. [orning] N. [ews] Office. [344, Strand.]

Abercromby elected! — maj. 10 votes. Saw several conservatives dispirited, petulant, some morose and silent.

I laughed at them—they bore it. To two of them I had predicted the result of the election. To them I prophesied again (for I had twice before deliv'd it) that this session would bring great excitement and give rise to political discussions wholly new to the general community—excitement differing from that of any previous time in having in it far more intelligence and less passion. They thought otherwise, indeed, laughed at what I said—I laughed at their blindness. A few months will shew which was right—they or I. One of them, a very young man, connected with the newspaper press said—"The people are mad—there is, I really think, more excitement about the election of Speaker, than there was about the passage of the Reform bill." I said . . . you yourself furnish proof of what I predict!

When I got into the street I found it crowded with people, (where I was being in the neighborhood of the Newspaper offices) although it rained very hard and blew harder than on any day since my arrival in England in May last.

As I entered my door in Leicester square, I found standing under the portico—or stoop, a female who had stooped there for protection from the rain. My American thought, was to ask her in; but that would not do in London. I spoke to her, and soon perceived from her countenance, voice, and language that she was not a pad—but some poor melancholy being. I enquired if she lived far off?—"In Westminster." I asked, in tones which I suppose communicated what I felt, if she had a family—a child. How old?—four years. Is any one with it?—*I do not know, perhaps not*. If you will wait a moment I will bring out my umbrella, and see you a part at least of y' way home. Thank you Sir, said the poor woman, in a voice that I will swear came from an honest heart. We may play false with every thing else, but not with the voice—we are too unconscious of its elements and their combinations to play the hypocrite to any perfection with it.

I got my umbrella (which is very large), took her arm and saw her home. The wind blew so fiercely that it was sometimes impossible to carry the U^a stretch'd, and the rain fell—or flew rapidly upon the pavement and upon all in the streets.

Our way led us through Haymarket past the splendid club houses—and by the Palace—like Terraces between which stands the monument to one of England's greatest rascals,* down the steps from this monument into St. James's Park through which we past. Here the gay lights dispersed around this beautiful place—shone like mere dots in the dark and dreary expanse over which the wind blew so excessively hard as to make our walking difficult. Few persons were passing—the military centres were all in their boxes—against one tree, whose branches like those of all the trees, whistled in the wind, stood an old man in a cloak, and before him a young woman whom he was sheltering from the wind and rain. We past close to them and by the light of a lamp near could distinguish their features. The inclemency of the night made them and my companion totally unheeded of each other. We soon left the Park surrounded with its magnificent dwellings and after a while reached — Street—blazing in light from the shops lit up by gas. Busy and cheerful trade, unmindful of wind or rain, kept its accustomed display. From this we turned two or three times, through small and darker streets (for in London all streets are well lighted) until we reached her abode. On our way we had scarcely spoken to each other. The fierce wind—the pelting rain, the wet

*H. R. H. the Duke of York.

ground and pavements gave our thoughts too much employment notwithstanding, she, poor thing, had doubtless enough of misery—and I an abundance of speculation to indulge.

At her door I said—'Shall I go in?' *Do come in a moment*—perhaps the rain will abate—for you must be very wet. I was not for I had thick shoes and a big coat on. But I went in—perhaps more from curiosity than proper feelings—for my pockets were almost as empty as hers. She took me into a little back room on the first floor. There burned—and hardly burned a small coal fire—by it sat on the floor her child playing with pieces of rags and bits of broken crockery arranged on a chair without a back.

The moment the mother entered it sprang to meet her—but seeing me, put on its little wondering look and stood silent and close to its mother. 'This is a sad place, Sir, said the woman, to bring you into—but by your kindness and your behaviour to me I know you can make allowances.' I told her that was all nothing and took a chair. The little ragged baby whispered its conversation to its mother, while I surveyed the room. Near the fire was an old square deal table—another half-round on which stood a tin cup, a sort of Glass case stood near one wall, in one corner was a low bed, covered with a faded print quilt or spread; in another corner was a small trunk, on which lay a frock, in different parts of the room were four or five chairs, in various states of dilapidation, over the mantle piece was pasted and hung up twenty or thirty small pictures, chiefly coloured prints—some bad—some pretty good; on the hearth lay a frying pan, a piece of tin which evidently served for a shovel and a rod of iron for a poker. There was a closet, which I supposed, contained some things—but little did the poor woman's room offer to the eyes.

'Come here, dear,' said I to the child, and it came instantly to me. It was a beautiful little creature—but nearly all young children are. I talked to it and played with its graceful little hands—and it readily began to move the joints of my fingers. The poor little thing saw that I was its friend and was at once assured. I gave it two pennies. The moment it clasped them, it darted to its mother, but just as it reached her lap, it drew back, and said poutingly—'you shan't have it'—'Don't be a saucy girl.' 'Yes you shall have it,' said the little creature, 'and I'll go and ask Mary to buy you some gin with it—shan't I?' She drew the child to her and gave her a slap that brought tears and sobs.

The two things I hate most in man or woman, but especially in woman, was this poor woman guilty of—drinking and of beating children—in a moment my sympathy was changed into pity and disgust—and I left the house.

Returning by Westminster Abbey, I thought of all the foolery, all the robbery, and all the rascality connected with that ugly and venerated pile of barbarism.

In Parliament Street I met quite a genteel looking young female, alone and without an umbrella, she was hastening along at a tremendously rapid pace. I got a glimpse of her face which appeared to be very pretty. I turned—overtook her—held my umbrella over her, and then asked her to allow me to protect her with it from the rain. She seemed quite at a loss what to do and scarcely answered me. I took her manner for assent and kept on by her side—talking as much as the wind and rain and wet pavements would allow. She crossed Westminster bridge. The wind here blew furiously, and once we were compelled to stop in a recess till the blow passed by. At last her tongue began and went rapidly and sensibly. Just as we got over the bridge she said, 'You are going Sir, perhaps, far out of your way.' 'Exactly in it, if I am in the slightest degree serviceable to you.' 'You are'—and she stopt speaking evidently not knowing whether to turn me back or not. I said—'will you allow me to be very candid and tell you why I put my umbrella over you and why I still

keep it above your head?' 'Yes.' 'The truth is that I was going beyond Charing Cross when I met you, but a glimpse of your face caused to flash upon me the thought that some accident had placed alone in this inclement night, a young lady who deserved protection from rain and from insult too, and that I would at least offer that protection as politely and as gently as I knew how whether it were accepted or not.' 'You are—very kind and I thank you very much indeed.' I asked her for her arm which she rather reluctantly gave me. But we got into chat and notwithstanding the night of wind and rain she talked as wittily as any one I ever heard—sorry am I that I can not now three hours after, put down any part of it with the slightest hope of success. We travelled on some distance and took the right hand street from the bridge.

[Here a diagram.]

She had undergone a chapter of accidents—and had ventured alone through that night lest her parents should be uneasy about her. She would not tell me her name, her residence, or any one particular about herself. She said she hoped that we might meet by some accident, because altogether I had behaved strangely but so respectfully and kindly that she was bound to wish to see me hereafter to shew me that she really thanked me for my politeness—but that she would not tell me any thing about herself nor hear my name or residence (which I offered to tell her) because that would be making an acquaintance contrary not only to rules of propriety but to her parents' feelings. I told her that she was a good girl—to remain so—and to tell her parents what had past (that I will say she)—

At length she said 'now you must go no further with me—because indeed you must not know where I live.' 'Indeed,' said I, 'I do not desire it under existing circumstances, for pretty, and witty, and good tempered as I am sure you are, I esteem your respect for your parents' instructions and feelings far more—so good bye.' And away she tripped.

I returned over Waterloo bridge. The wind increased—the rain increased, the pavements swam in water—and I reached home at ten o'clock like a drowned rat.

A TRIBUTARY OF THE SEINE.

PARIS, January 12, 1899.

M. Huysmans was one of the early friends of Zola, and a contributor to the *'Soirées de Médan'*, a collection of stories which made a great noise at the time of its appearance on account of its scandalous impropriety. M. Huysmans was then one of the apostles of the realistic school; he was coarse *con amore*; he had a studied vulgarity of thought and expression. Of late years he must have experienced grace; a great change had come over him. He wrote first a novel called *'En Route'*; he was on the way to conversion. It was, however, difficult to make out whether the author was sincere or not. Here again the imitation of Zola was apparent, and if Zola had not written his *'Lourdes'*, very likely *'En Route'* would never have been written. The doubt which this last book left in the mind was dispelled by a new work called *'La Cathédrale'*. Here the disciple had evidently gone further than the master. If *'The Cathedral'* was meant to deceive its readers, the attempt was really successful; but we would rather believe that there is no attempt to deceive in it—that the author's conversion is now complete. His journey has brought him to the Church, and there he has found complete rest.

Huysmans, in his *'Cathedral'*, still follows the method of his master. When Zola undertakes a subject, he surrounds himself with

all the technical works which belong to it; he introduces in his story all these details, often without having quite mastered their character. He likes to appear encyclopædic, to know the names of all the parts of an engine, of a locomotive, of a mine, of all farm implements; all the locations of the market and the shop; all the slang of the Bourse, etc. This method helps him give an air of reality to his characters. Huysmans, following this same method, must have surrounded himself with volumes of mediæval architecture before beginning his cathedral. He must have read all the *'bestiaires'* which explain the sense of the figures found in the Gothic churches. But, more than this, he studied carefully the history of all the monastic orders, convents, and nunneries; and in this way he prepared the elements of a work which as a novel is very uninteresting, but which will be read with curiosity by those who make the development of religious ideas a concern.

I would now only call attention to a volume which has interested me, I confess, infinitely more than the symbolism of *'The Cathedral'* or the theology of *'En Route'*. It has for its title *'La Bièvre et Saint-Séverin'*, and may be added to the collection of works on old Paris. There is already a large number of documents on the ancient streets, quarters, monuments of the old city, which was confined at first to an island of the Seine, and which, throwing bridges across the river from time to time, expanded by degrees to its present limits. The heart of old *'Lutetia'* is still in that part of the valley where you can admire Notre Dame, the Sainte-Chapelle, the towers of the Conciergerie, the Louvre, and the Tuilleries. Saint-Séverin belongs to that old part of the city; Saint-Séverin, the old church, dear to the Jansenists, marks nearly the place where the Bièvre, a small affluent of the Seine, joins the great river.

It is not easy to translate the affected style of Huysmans. I must, however, give his own words on the Bièvre:

"The Bièvre represents in our day the most perfect symbol of feminine need exploited by a great city. Born in the pond of Saint-Quentin, near Trappes, it runs, slenderly, in the valley which bears its name; and mythologically you can figure it to yourself incarnated in a very young girl, in a small naiad, still playing under the willows. Like many country-girls, the Bièvre, as soon as it arrives in Paris, falls into the industrial snares. Stripped of her grassy vesture, of her rural ornaments, she has been obliged to go to work at once, and has exhausted herself in horrible tasks. Surrounded by hard men, she has to go from one to the other, but they all keep her in turn in prison; day and night, she has to wash the dirt from the skin of dead animals, to take care of the wool, of the leather; she has to bear the biting of alum, of chalk, of caustics. How often, behind the Gobelins, in the pestilential smells of ooze, she may be seen, trudging along in the mire, beneath the rays of the moon, crying, stupefied with fatigue, under the tiny arch of a little bridge."

This is not exactly the style of the ordinary guide-book, yet Huysmans's volume is really nothing but a picturesque guide to the valley of the Bièvre. The head of the valley, not far from Versailles, is still in the most rural state; thickly wooded, very solitary, so that you feel in it as if you were a hundred miles from Paris. Port Royal was in that region, and a few remains of it are still to be seen. The place inhabited by the *'solitaires'* will always be dear to many. The water of the Bièvre was so pure that Oberkampf established on it the first manu-

factory of cotton prints at Jouy-en-Josas. Napoleon visited it with all his court, wishing to encourage an industry which rivalled that of England. The "toiles de Jouy" became the fashion, and are even now sought after by many people for their pretty designs.

Victor Hugo inhabited for some time the neighborhood of Bièvre, a little place which takes its name from the rivulet. In the "Feuilles d'Automne" you will find a piece entitled "Bièvre":

"Où, c'est bien le valloir! le valloir calme et sombre!"

Then comes a charming description of the valley, in Victor Hugo's best style and his early manner, with changing rhythm. I will cite only two passages:

"Et dans ce charmant paysage
Où l'esprit flotte, où l'œil s'enfuit,
Le buisson, l'oiseau de passage,
L'herbe qui tremble et qui renaît,
Le vieil arbre que l'âge ploie,
Le donjon qu'un moulin couloie,
Le ruisseau de moire et de soie,
Le champ où dorment les aïeux,
Ce qu'on voit pleurer et sourire,
Ce qui chante et ce qui soupire,
Ce qui parle et ce qui respire,
Tout fait un bruit harmonieux!"

The second, which ends the piece, is very characteristic of Hugo:

"Et l'on ne songe plus, tant notre âme saïe,
Se perd dans la nature et dans la poésie,
Que tout près, par les bois et les ravins caché,
Derrière le ruban de ces collines bleues,
À quatre de ces pas que nous nommons des lieues,
Le géant Paris est couché!"

The giant Paris is all that interests the less poetical Huysmans. He takes the Bièvre only when it ceases to be "a riband of moire and silk" and becomes a filthy current, is hidden by houses and factories, runs invisible under vaults and bridges, along dark streets which bear strange names, between high walls, through long tanneries, and finally loses itself in sewers.

"Following, in old times, the walls and towers of Paris, which it did not enter, the Bièvre played, here and there on its road, with little mills where it turned wheels; then it amused itself by mirroring the abbey spire in the trembling azure of its waters, and accompanied with its murmur the offices and the hymns, echoing the talk of the monks who walked on its grassy borders. All has disappeared under the action of ages—the convent of the Cordelières, the abbey of St. Victor, the mills and the trees."

Every Parisian or lover of Paris will read with some pleasure, even in Huysmans's strange style, what concerns the quarters of the capital which surround the Bièvre—the parish of Saint-Séverin, the Rue de la Harpe, the Rue de la Hachette, the Rue de la Bûcherie, the Place Maubert, the abreuvoir Maçon, now replaced by the Place St.-Michel, by the Boulevard St.-Germain. Great as have been the changes in those quarters, some parts still remain to testify of them. The churches especially have been respected. The Church of Saint-Julien-le-Pauvre is one of the oldest in Paris. It existed as early as 507; it was ruined in 886 by the Normans, and rebuilt, in the last part of the twelfth century, by the monks of Longpont. Nothing remains now of their cloister; the priory and the chapter were attached in the seventeenth century to the Hôtel Dieu, and the sanctuary where, during the Middle Ages, were held the general assemblies of the University, was abandoned to all sorts of corporations. During the Revolution, the church became a salt-depot. In 1806 Napoleon gave it back to the Hôtel Dieu, and it became the chapel of the dead. The Augustine Sisters, who still care for the sick in the Hôtel Dieu, used

to take the veil and to pronounce their vows in it. It was finally, about ten years ago, given to the United Greek Church. M. Huysmans gives a very accurate and detailed account of this poor little church, which, from the outside, looks like a small country chapel; he also describes the Greek service, which is after the liturgy of Saint John Chrysostom. I had never read such an elaborate comparison of the Greek and the Roman mass. Huysmans evidently thinks that this intrusion of the East into the parish of St.-Séverin is an absurdity; he would like to see the chapel given back to the popular order, such as the Franciscans, whose mission is to take care of the people. The inhabitants of this poor quarter never enter the church of St.-Julien-le-Pauvre; and, if they do by chance, they do not understand the service.

St.-Julien-le-Pauvre is unknown even to Parisians. St.-Séverin, though it is almost concealed by new houses, is still often visited, and it deserves to be. Nothing remains of the oratory dedicated to St.-Séverin in the sixth century. It was burned by the Normans; it was rebuilt in the eleventh century, and again destroyed; the existing church was built piecemeal from the thirteenth to the seventeenth century. During the Revolution, it became a depot of saltpetre and powder; the nineteenth century saved it, and added to it a delicate door, taken from the church of St.-Pierre-aux-Bœufs, demolished in 1837, as well as stained-glass windows coming from St.-Germain-des-Prés. The church itself, the nave, the apse, are very good and delicate specimens of architecture; some of the chapels have an exquisite ornamentation. The church was once very rich, and is now very poor. Huysmans cites curious customs of the Middle Ages attached to this church. It was the habit of women who had been confined to hear their first mass in it when they were able to go out, and a great mantle was kept in the church to be thrown over their shoulders. Travelers starting on a journey used also to go and pray in St.-Séverin to St. Martin, the patron of travellers on horseback. The students who came on horseback to Paris from the provinces were expected to make a visit to St.-Séverin.

St.-Séverin became one of the centres of Jansenism, but Huysmans, who has become intensely orthodox, as is natural in all converts, tells us very little about the Jansenists who lived in its cloister and were buried in its vaults. He seems surprised at the persistence of heresy in St.-Séverin, where the worship of the Virgin Mary had long been very ardent; even after the Revolution, in 1807, when St.-Séverin became again a church, the Jansenists succeeded in having Joseph Baillet, a fervent disciple of Port Royal, appointed its curate. Jansenism survived there till 1869, but there is no trace of it left at this time.

Correspondence.

A CITIZEN TO THE SENATE.

SENATORS: The pinch of the war with Spain will begin to be felt within two years. When that pinch comes, there will be no ninety men in the United States, excepting the President, who will be regarded as so accountable for its consequences as yourselves. A large part of the American

people believe now, and a great many more will believe then, that the sequences of the war ought to be no greater than the necessity of the case requires. To the end that there may be a clear record for future reference of what you may do, and of what they want you not to do, we now formulate their chief objections:

First. They object to a large standing army. They believe that a standing army in time of peace is a poor place for the American citizen. They object to a man being taken from the field of industry and thrift and usefulness and set to doing nothing, and five other men being set to work to furnish him with food and clothes and lodging and transportation and arms and ammunition, and his proportionate cost of a great military establishment. In time of war Americans will volunteer to fight, and will uncomplainingly endure hardship and suffering and neglect and injustice such as would be submitted to by no other soldiers in the world. In time of peace the American loathes the idleness and monotony and constraint and confinement of a fort or barracks. As you are aware, desertions during recent years of peace have been so numerous as to cause serious solicitude in military circles; and it has not been an easy task to keep our little army supplied with good recruits. When it comes to an army five times as large, and for service in what we now consider foreign lands, where the men will be practically imprisoned in unhealthy climates, it may be reasonably assumed either that the pay of the army and the cost of the military establishment will be vastly increased, or that we must come down to the source of supply of those foreign governments which some of you are desirous of emulating—*conscription*. Still more will they object to a great standing army of foreign mercenaries. In these days of Mauser rifles and smokeless powder and dynamite shells and long-range artillery and range-finders, a standing army is a fearful machine to be moved by the hand of one man. Such a machine is intrinsically a menace to liberty. We must recognize the fact that the day of "the embattled farmers" has passed.

Second. They object to the introduction into this commonwealth of semi-civilized millions of the inferior races. The inferior races have been the bane of the American people since the beginning—the source of all their national troubles. If the negroes of the South had been white slaves, as were the slaves of the Roman Empire, slavery would have died of itself before the century began and there would be now no antagonistic classes in the South. If the Indians had been Caucasians, they would have made peace long ago, and, like our brethren of the South, would have melted into the body-politic and become stanch and patriotic citizens. If the Chinese were of our own blood, they would have acquired our habits and thoughts and ideas, and would now be useful citizens. And the negroes of the South, the Dakotas, the Cheyennes, the Navajos, and the Chinese were incomparably better material for American citizenship, for industry and civilization, than the hordes of treacherous and indolent Malays and Mohammedans that you now contemplate bringing within the responsibilities of the Republic. Americans do not want these people—as to that all men are agreed. They do not want, if you persist in bringing them in, the ugly problem of what their status

shall be. They do not want to admit them to citizenship; they do not want to exclude them; they do not want to govern them; they do not want to misgovern them. What they want is that all Americans shall be equal before the law, and that the American flag shall be the symbol of American citizenship.

Third. They object to your trying to ride two horses and serve two masters. The Constitution was framed and adopted by our fathers, "To form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." "Ourselves and our posterity"! Have you never read those words before? We grant that the cession and acquisition of territory is an inherent power of government; we concede that there is no clause in the Constitution which prohibits you from doing this thing; but, taking up the Constitution where our fathers laid it down, we insist that the only trust confided to you is to legislate and to make treaties for the welfare of "ourselves and our posterity." Will it be a blessing to the people who now dwell within the United States and their children if the whole world be ruled from Washington, and the Senate consists of two hundred Senators and the House of a thousand members? If your duty, as you understand it, bids you to confer the hard-won blessings of our liberty upon alien peoples, the path of your duty leads straight across the boundaries of the United States. You may go as missionaries or as soldiers, or in whatever character you please, but so long as you sit in our national capital as a part of our Government, your one official business is to act for the welfare of "ourselves and our posterity."

Fourth. They protest against the false pretence that the Federal Government can extend to distant colonies the blessings of liberty and good government. One of two things is certain, either that you intend to bring these semi-civilized countries into the Union as States, or that the Federal Government will do in these distant colonies what it has never yet done at home. You know that our growth and greatness and advancement and intelligence are due to our American system of general and local government. You know that the Federal Government is only the half of our governmental system, and that it has never more than half-governed when it has governed alone. Look, we beg of you, at the "Century of Dishonor" and the great territory where it is said that every square mile has been needlessly stained with blood. Call to mind the treaties negotiated by the executive branch of the Government and broken by the imbecile procrastination of the legislative. Remember how the Indians were abandoned year after year and decade after decade to the tender mercies of our border ruffians, and how our white women and children were abandoned to the Indians; how the Indians, maddened by hunger and threatened by starvation, rushed upon the settlements while appropriation bills were sleeping in committee-rooms. You have not forgotten how the buffalo were exterminated from the face of the earth in four years, and how, in consequence, we had to spend millions in fighting and feeding the Indians because there was not government enough in Washington to stop the ruthless butchery which tainted

the air and made the plains black with rotting carcasses. And now, to-day, in this year of political regard for humanity, is there not the San Carlos Indian Reservation, one of the infernal spots of the earth, a sage-brush desert without a tree, without a blade of grass, with insufficient streams for irrigation, where the thermometer stands at 120° in such shade as can be found, and where dust-storms blow from the arid plains? Have we not, at this time, imprisoned there men bred in the free air of the mountains, men who fought faithfully in our ranks and guarded our public property without a single theft and aided us in subduing their own race, relying upon promises which were to be broken by the Government? Siberia contains no such scene of human wretchedness. A pretty set are we to be sending our knight-errant Government around the world to right the wrongs of those who suffer through misgovernment! Why, the Czar might come over any day and give our rulers lessons in justice and humanity! And then, too, there are the Freedmen. Is it forgotten how they were fooled by the assurances of the National Government into bringing the first earnings of their freedom to Washington and depositing their money in the Freedmen's Bank, and how they were robbed of it within the sight and hearing of Congress by a corporation which seemed to have been chartered by Congress expressly for that purpose? And the unhappy people of the South during the atrocious years of the reconstruction period! The South had no just cause for rebellion in 1861, but between the close of the civil war and the close of the Grant Administration there were wrongs, and cruelties, and indignities enough to justify a dozen rebellions. Civilization itself was overturned by the Federal Government when the most ignorant and degraded and incompetent class of each community was put in charge of the State and allowed to rule and govern the others. "Was it not good enough treatment for rebels?" There were at that time eight women and children to one man in the South. Was it good enough treatment for them?

Fifth. Especially do all true Americans object to and resent the imputation that the American people, under the guidance of Washington, have not heretofore been one of the nations of the earth, and that it is now their duty to take part in the strife and complications of the European political world—which means, as we understand the situation, that our official and political classes, with their usual contingent of lobbyists and contractors, are to take part with the official and political classes of European governments, and that our industrial classes are to pay for it. We believe, as our fathers believed, that the American name has been honorably known in all lands; that American ideas have influenced all peoples; that our great army of industry, if it could be let alone, would compel the disarmament of Europe; that our national progress has been without precedent or parallel; that our national life has been, among international forces, the great moral power of the world; that our national sentiments have been in favor of peace and arbitration and industry and education, of little government, and that little devoted to the welfare of the governed. This example and these sentiments are not to be flung away by those to whom we have intrusted the responsibility of government. We believe, moreover, that there

are few things for which we owe more unceasing gratitude to the Father of his Country than for his farewell words bidding us as a nation to pursue our own quiet way. Under the teaching of Washington, the American flag was borne by merchantmen to every port on every sea; under the teaching which seems to greatly influence your action, it is to be borne by subsidized steamers and ships of war, for both of which the industrial classes are to pay. We do not hold the influence of brute force, or (if you prefer it) of military force, an honor. We hold fast to our American ideas, to our American foreign policy, to simplicity of government, to all of those great principles which have made the American nation, without a great army or navy, a commanding power in the troubled and misgoverned world.

A large majority of the American people so think and believe, and will in due time make their thoughts known. When that time comes, there will be no ninety men in the United States, always excepting the President, who will be held to so strict an accountability as yourselves. A CITIZEN.

THE BALANCE-SHEET.

TO THE EDITOR OF THE NATION:

SIR: It is often said of late that the recent war with Spain was worth all it cost in cementing the North and South closer together and in making our relations with England more friendly. In making this contrast, it is evidently intended to compare moral effects with money cost. Probably few out of the masses of people perceive that there are moral losses as well as gains connected with the war. It seems worth while to enumerate some of these, if for no other reason than to get a juster view of the situation.

International arbitration received a severe blow, and the Czar's disarmament proposals a setback, when the peace-loving United States thought it necessary to fight Spain. The war has left us as a heritage the hatred of all Spaniards, the hardly concealed ill-will of the Continental nations of Europe, and the rapid growth of the hated *militarism* among large numbers of our people.

If our new colonial policy is carried out, it will involve us in the wars and rumors of wars of European diplomacy; it will put us in the position of going back on the Declaration of Independence, with its doctrine that government should always be conducted with the consent of the governed; it will remove the strongest ground for maintaining the Monroe Doctrine; it will raise the question as to the sincerity of our *humanitarianism*, and will even cause us to confuse two of our Lord's beatitudes, making one read, Blessed are the *peacemakers*, for they shall inherit the earth.

Other questions are involved, as the increase of the standing army, and the diffusion of the evils of our civilization, such as the greed for gain, intemperance, and spoils politics, among the conquered races where these evils would be likely to take strong root. The introduction of the drinking habits of this country into Cuba, Porto Rico, and the Philippines might with justice be compared to the forcing of the opium traffic on China.

Fortunately, by retracing our steps as rapidly as possible, giving in the meantime order and good government to the conquered

provinces, we may avoid much of the evil described. But it is going to cost a vigorous and persistent discussion to secure this result.

JOS. V. COLLINS.

STATE NORMAL SCHOOL, STEVENS POINT, WIS.

WAR AND PEACE.

TO THE EDITOR OF THE NATION:

SIR: In Charles A. Dana's 'Recollections of the Civil War,' p. 167, I have just found a letter from Gen. W. T. Sherman to Mr. Dana, which is so interesting that I beg leave to call your attention to it. It has both literary and historical value. A business letter written by a general from his military headquarters in time of war, it nevertheless rises to literary excellence. It is also a commentary on this same General's famous remark that "War is hell."

The circumstances can be briefly stated. Sherman was trying to feed a large army and accumulate supplies for an important forward movement. But people who desired to reach the front for various laudable reasons, and who brought letters from Washington, were making such demands upon his transportation facilities as seriously to interfere with his military operations. He wrote a letter of earnest remonstrance to Mr. Dana, Assistant Secretary of War, then at Washington, and closed with these words:

"In peace there is a beautiful harmony in all the departments of life—they all fit together like the Chinese puzzle; but in war all is ajar, nothing fits, and it is the struggle between the stronger and weaker; and the latter, however it may appeal to the better feelings of our nature, must kick the beam. To make war, we must and will harden our hearts. Therefore, when preachers clamor and the sanitaries wall, don't join in, but know that war, like the thunderbolt, follows its laws, and turns not aside even if the beautiful, the virtuous and charitable stand in its path. When the day and hour comes, I'll strike Joe Johnston, be the result what it may; but in the time allotted to me for preparation, I must and will be selfish in making those preparations which I know to be necessary."

FREDERICK W. MOORE.

VANDERBILT UNIVERSITY, January 26, 1899.

A TEMPERED LIFE TENURE.

TO THE EDITOR OF THE NATION:

SIR: Referring to a paragraph in the *Nation* of January 19, 1899, wherein the "virtual life tenure of judgeships" in Vermont is favorably noticed, it may be well to qualify the compliment by the proviso that judges who do not decide questions favorably to railroad companies are excepted from life tenure. Compare the case of Judge Barrett.

F. J. P.

MR. STILLMAN AND THE "CRISPIANS."

TO THE EDITOR OF THE NATION:

SIR: I must, in justice to Signor Crispi as well as to myself, disclaim the honor which your friendly reviewer of 'The Union of Italy' puts on me, of being the exponent of the party of which Crispi is supposed to be the head, or of his views of Italian politics. In the first place, there is no such party. Crispi was, many years ago, the effective head of the "party of action"; but since I have known him he has never had a following for his personal views, so far as I know them, of half a score of Deputies. His strength has been in the popular voice and vote, but what his views are on other topics than that of

the relations between England and Italy and the Abyssinian policy (as to which I disagree with him), I do not know. I have never been intimate with him or in his confidence, except in momentary crises, like that of the affair of the French consulate at Florence, the tentative reconciliation by the Pope through Padre Tosti, and the convention for the Kassala frontier in 1890, in which instances he desired the support of the *Times*. Crispi is extremely reticent and taciturn, and, so far from admitting me generally into his confidence, he has repeatedly refused to be interviewed by me; and what I know of his policy, except in the cases I have mentioned, I have gathered from his acts and public declarations. Above all, it is necessary that I should declare that I have never discussed with him the statesmen or the policy of the past—I don't think I ever heard him mention the name of Cavour, hardly of Garibaldi; nor did I ever talk with him of the revolution of 1860 in Sicily and Naples. And so far as I had any party sympathies in Italian affairs, they were with the Right; and the man with whom I have the most sympathy is Sonnino. To suppose, then, that I represent in any way the political tendencies of any party, and especially those of Crispi, is to make him responsible for the view taken in my book and do him the greatest injustice. The "Bill of Grievances," of which your reviewer speaks as "drawn by the Crispians against France," was not that of the "Crispians," but of all Italy; and, with the exception of the intrigues in Abyssinia, they were all in evidence before Crispi came to power or had any leading influence. The true father of the Triple Alliance was Gen. Robilant, who was of the Right and a true statesman.

So far as there were any "views" expressed in my book (and I tried to limit myself to the narration of facts and their logical consequences) they are my own, and, so far as I know, they do not agree with those of any of the Italian publicists or historians, certainly not with those of Villari, Chiala, Bersezio, La Farina, or Signora Marlo, who are the main authorities on Italian history. With regard to the facts, I am, of course, indebted to them and others, especially to Tivaroni; for the opinions based on those facts I am personally and entirely responsible. I am nobody's advocate, and nobody's defender or antagonist except where I believe that I correct misrepresentation, as in Crispi's case, in which, from purely partisan motives, misrepresentation has been so great as to pervert the history of the time. In fact, the most common objection to 'The Union of Italy' made by the English critics has been that it lacks warmth and color. But how could I give it warmth and color without departing from the severe impartiality which I had imposed on myself? I began my study of the epoch with the warmest sympathy for Carlo Alberto, but the facts dispelled it. I still retain the highest admiration for Cavour, but it does not prevent me from seeing that he made mistakes; and the enthusiasm I felt for Mazzini in my days of participation in conspiracy did not resist the evidence which accumulated that he was a dreamer whose influence in Italian affairs was disastrous from beginning to the end, and that he had no judgment or political foresight.

I wish that your reviewer had quoted the passage on which he founded his assertion

that I "imply that the Italians inherited from Cavour their much-deplored subservience to France." The exiles, including most of the men who in later times have controlled popular feeling, and all the republicans and revolutionaries, refused to follow Cavour in his alliance with France under Napoleon III., and the "subservience to France" dates from the time of Depretis, Mancini, and Cairoli. I have said (p. 364) "the immemorial predisposition of the Italian people to regard the French as a friendly Power"—an expression which distinctly excludes any such hypothesis as that this predisposition was an inheritance from Cavour; and (p. 393), "The Italy to which Cavour aspired was an enlarged Piedmont, and, so far as the differences of nature permitted, he desired to make it a new England." So long as Napoleon III. was on the throne there was no "subservience," but hostility, ill concealed.

But in that passage of the review in which Cavour and Crispi are put in contrast there is a distortion of what I have said which has no excuse. As to my judgment that Cavour was a poor judge of men, I have the authority of some who knew him personally, which I never did; the case of Crispi and Garibaldi was only a case in point. What I criticised was not a question of "refusal to hand Sicily and Naples over to Crispi in 1860," but of driving Garibaldi by intrigues out of the kingdom which he had conquered for Victor Emmanuel, and over which Cavour had not the slightest moral right of control—it was sheer usurpation of the fruits of other men's labors. It was unjust, it was impolitic, and the event has shown that it was ruinous to the completion of Italy, and that Garibaldi had a prevision which Cavour had not. No one would compare Garibaldi or Crispi with Cavour as statesman; and Crispi is even a worse judge of men than was Cavour; but we must remember that Cavour had with him the mass of the patriotic men who made Italy, and a strong King who knew his duty to the country, though, of the list of men quoted by your reviewer, Ricca, Farini, and Minghetti are the only ones fit to be placed in the same rank as Crispi. Supported by all the moral influence of a generation of patriots, and governing the least turbulent half of Italy, Cavour could well dispense with martial law, while Crispi, in 1893, being refused the assistance of all the heads of groups (for there were no more parties or chiefs) except Sonnino, had to fight, not only a growing insurrection, but secret attacks from Court, Church, and the revolutionary element, united in personal hostility to him, with nothing but public opinion and the army to depend on. And the army, to its honor be it said, has always been true to Italy, for it has been educated in the traditions of the old Piedmont. To understand the politics of Italy to-day or to pronounce judgment on Crispi's "administrative ability," one must have lived in Rome when he was in power and understand the partisan rancor which is tearing the state into fragments, for such is the present fury of factional antagonism that ministries strike hands with the Vatican, or with the revolution, to keep in power. And when, in 1893, the whole country was calling on Crispi as the only strong man, and (I speak of what I saw and heard) many of the most conservative Italians united with the moderates in the call, and he was urged to assume dictatorial powers even by some of his own ministry,

the King himself (so I was assured by a conservative Deputy fresh from a royal audience) being ready to grant them, he refused, saying that "he was an old man with few years to live, but he would not set an example of violation of the Constitution." But neither Crispi, nor Cavour with Victor Emmanuel to back him, could have governed Italy in 1893 without martial law and the state of siege, and even with them there were days when the issue seemed doubtful. It is all very well to belittle the dangers past, but I do not forget, and Italy ought not, that to Crispi's iron will we then owed the speedy solution of the question, "to be or not to be," for the House of Savoy. Cavour was a great parliamentary statesman, Crispi a great revolutionary statesman; each was past master in his line.—Yours truly,

W. J. STILLMAN.

W. BOURNEMOUTH, ENG., January 16, 1899.

Notes.

Houghton, Mifflin & Co. will publish in the near future Carlyle's letters to his younger sister, Mrs. Jane Hadding; a Life of Thaddeus Stevens, by Samuel W. McCall; a Life of Edwin M. Stanton, by George C. Gorham; 'Fields, Factories, and Workshops,' by Prince Peter Kropotkin; 'A Federation of the World,' by Dr. Benjamin F. Trueblood; 'Papias: A Study of the Second Century,' by the Rev. Edward H. Hall; 'Every-day Butterflies,' by Samuel H. Scudder; and 'Corn Plants,' by F. L. Sargent.

'A Primary History of the United States,' by Allen C. Thomas, is shortly to be published by D. C. Heath & Co., Boston.

A text-book on New York's history is in preparation for high schools and colleges by Charles H. Rammelkamp, instructor at Cornell.

The Helman-Taylor Co., Cleveland, will publish 'An Anglican Study of Christian Symbolism,' by Miss Elizabeth Clifford Neff.

The Macmillan Co. will bring out an entirely new edition of the 'Development and Character of Gothic Architecture,' by Prof. Charles Herbert Moore of Harvard University, with many fresh illustrations.

In mere luxury of edition Lieut. W. Nephew King's 'Story of the War of 1898' (New York: Peter F. Collier) leaves nothing to be desired. It is a great oblong folio, printed in large type on heavy paper, and overflowing with illustrations, mostly half-tones from nature. The author is a naval officer, and has secured Capt. Robley D. Evans to write an introduction for the navy, while Gen. O. O. Howard supplies one for the army. Capt. Evans's summary review is a criticism of Congress for forcing the navy to do its thorough work with such poor tools. Gen. Howard opens his with a praise of the preparation of the navy of late years, "as if in anticipation of a conflict." He intimates a criticism of the War Department for shelving Miles in favor of Shafter, permitting the latter to complete Miles's work "and receive the credit for it." The "story" proper need not be examined. It is not meant to be read in such a shape as this, being but a sort of obligato to the illustrations. These are mostly of a high degree of excellence, if more or less familiar. The lurid colored plates could well have been dispensed with; and what is the riddle of the allegory, "Her Consolation," a widow seated near her hus-

band's military portrait, with the legend, "Gettysburg, 1863—Santiago, 1898"? Was the lamented gentleman slain by Lee avenged by shooting Spaniards?

Similar in shape, and possibly superior in the number of colored prints of imaginary war scenes, but otherwise inferior to the foregoing, is the volume, 'Lest We Forget,' published by E. R. Herrick & Co. There are some good portraits of naval commanders and heroes, but the rest, with rare exceptions, is rubbish. There is no text.

Few historical characters have been more thoroughly itemized than Washington, thanks to his journals, letters, military orders, public documents, and a cloud of witnesses among his contemporaries. For almost every day of his adult life we can follow him in his lying down and in his rising up. We know what books he owned, read and didn't read; we know his two favorite "familiar quotations," both from Addison's "Cato." These last form a natural introduction to the latest publication of the Dunlap Society, 'Washington and the Theatre,' by Paul Leicester Ford. We learn here when he went to the play, what he paid for the tickets, when he treated others; and his private account (surely not as juicy as old Pepys's) is supplemented by the press advertisement of the performance, or by a facsimile of the title of the published play, or a copy of an old print representing a scene, together with other invincible documents, including a whole play reproduced. Incidentally light is thrown on the dawn of the drama in the colonies, and Mr. Ford records other shows than the theatre, of which the record pure and simple is rather meagre unsupported.

Mr. John Thomson, librarian of the Free Library of Philadelphia, issues as its first Bulletin a Descriptive Catalogue of the Writings of Sir Walter Scott, which must prove very useful for reference, as the annotations are very full. The whole serves as a summary life of Sir Walter, while the index is to a certain limited extent an index to Scott's characters. The plan of extending such catalogues to other collected works is much to be commended. The Bulletin may be procured for twelve cents, post free. No. 2 will analyze the "Library of Old Authors"; No. 3, 150 volumes of the Rolla Series, as catalogued by Mr. Thomson. The enterprise may be said to emanate from the library of the late Jay Gould.

Mr. Foster's *Monthly Bulletin* of the Providence Public Library for 1898, in a handsome bound volume, is rich in lists and catalogues on a great variety of topics, mostly of monthly current interest. Washington, Gladstone, Bismarck, Egypt, China, Spain and Spanish America, Cuba, the Philippines, are illustrated in a careful array of titles with annotations; as are California, Florence, Thackeray, Photography, Latin Hymnody, Domestic Science, etc. All these bibliographical directories are good for the frequenters of any large public library. We regret that this feature of the Bulletin has come to a close for lack of funds, and that hereafter the Bulletin will be little more than a record of additions. The loss to the Providence public schools is palpable.

G. P. Putnam's Sons announce the publication of a new quarterly journal under the auspices of Section H of the American Association for the Advancement of Science. It will bear the title of the *American Anthro-*

pologist (new series), and will be addressed to the general reader as well as to the specialist in the study of man. The board of editors is a distinguished body of American (including Canadian) authorities. The managing editor is F. W. Hodge, No. 1333 "F" Street, N. W., Washington, D. C.

A handsome quarterly magazine, the *Technology Review*, aims to do, in part at least, for the Massachusetts Institute of Technology what the *Harvard Graduates' Magazine* does for the neighboring university. A feature in common is the reports from the various class secretaries, who, in fact, together constitute the committee in charge of the *Review*. Another is the General Institute News. The introductory paper is very properly a biographical sketch of President Crafts, with a portrait. No doubt this publication will tend to hold together the alumni of the prosperous school in which it originates.

Mr. Henry F. Waters's shrewd and almost "detective" face in the January number of the *New England Historical and Genealogical Register* will be welcome to the thousand readers of his "Genealogical Gleanings in England." The current instalment of these deals with Bromfield, Quinby (Quimby), Haskett (and Derby), Hedge, and other well-known New England connections. Mr. Hodges's notes on Roger Williams, endeavoring to fix the dates of his birth and death and the name of his wife, are good workmanship. The pedigrees of the namesake benefactor of Yale College, of the Hoar family, and of the Plymouth Brewsters in the early generations, are also among the unusually substantial contents of this number.

The *Geographical Journal* for January opens with Sir Clements Markham's address before the Royal Geographical Society on the progress of geographical work, in which he dwells especially on the proposed exploration of the Antarctic regions. Next follows a description of Christmas Island, in the Indian Ocean, about 190 miles south of Java, by Mr. C. W. Andrews of the British Museum. Separated from other lands by seas of enormous depths, and uninhabited until the last ten years, this island has developed an interesting fauna and flora without the interference of man. Apparently an upraised coral-reef, it also affords an excellent opportunity of studying the nature and composition of such formations. Major S. Paterson gives an interesting account of an expedition into the unexplored region in the valley of the Orinoco in southern Venezuela. He characterizes the up-country Venezuelans, or "rationales," as they call themselves in contradistinction to the "Indigenos," or Indians, as "avaricious, thriftless, independent, faithless, untruthful, lazy, capable of hard work, quick-tempered, vindictive, changeful, and full of laughter." In a land of great natural resources, which he is convinced "will one day develop into one of the richest commercial centres in the West," they "daily live on the verge of starvation, frequently for lack of energy to hunt for food." They were most friendly to the English, and were "disposed to view the boundary difficulty as merely a question of brag, out of which their own politicians, whom they distrust, hope to aggrandize themselves in some unexplained way." Some of the results, geographical and historical, of the Pamir Boundary Commission are briefly shown from a recently published report. In addition to maps accom-

panying these articles is one of the Shire Highland District in British Central Africa.

The *Scottish Geographical Magazine* for January opens with a lively paper on the "New Seismology," by Prof. C. G. Knott, based on Prof. Milne's recently published work, but containing references to personal observations of earthquakes in Japan. The most startling result established by the new science is the fact "that the earth's surface is in a continuous state of movement." The delicate instruments now used "have brought to light quick tremors, gentle pulsations, and slow tiltings, not merely in so-called earthquake countries, but in every country under the sun." In regard to true earthquakes, the writer thinks there is some evidence of a tendency to increased frequency at times of new moon and full moon. He devotes himself mainly to a discussion of the problem of determining the velocities of the various waves of disturbance. There is also a useful summary of a report to the British Foreign Office on the trade of Central and Southern China, in which considerable information is given in regard to the important places in the Yangtse valley, the products and natural resources of the country, trade routes, and taxes.

That most excellent scientific compend the *Annuaire du Bureau des Longitudes* for 1899 keeps well up to the high standard of previous years. There is much, of course, besides astronomy; M. Cornu contributing on weights and measures, optics and electricity, M. Moureaux on terrestrial magnetism, and M. Levasseur on geography and statistics. The special committee of the Bureau on the preparation of the *Annuaire* is composed of MM. Janssen (who recites the progress of his high-level work on the summit of Mont Blanc), Cornu, and Loewy, the last of whom is now director of the Paris Observatory. The appendixes to the *Annuaire* occupy rather less space than usual, and embody several papers of interest—"Sur les ballons-sondes," by M. Bouquet de la Grye; "La Géodésie moderne en France," by M. Bassot; and, most important of all, a paper by M. Gautier on the great siderostatic telescope he is now building for next year's Exposition. It has an object-glass of nearly fifty inches diameter set up on edge in a fixed position, its focal length being nearly 200 feet. This is the largest glass ever constructed, being nearly one-quarter larger in diameter than the Yerkes glass, and collecting about one-half more light. But, being fed by an enormous mirror or siderostat, which must occasion a large loss, it remains to be seen whether its performance will equal that of the Lick and Yerkes telescopes, even supposing the objective to have reached the high standards set and maintained by the Clarks.

Minerva, the so-called (Italian) review of reviews—rather, an eclectic magazine, translating or abridging notable articles from periodicals in many languages—enters on its ninth year as a weekly, instead of a monthly, and introduces illustrations (even comic pickings) for the first time. In this country the change would, to the expert, signify a want of prosperity; but we will hope otherwise. The publication office is in Rome, Corso, No. 219.

A significant article on Armenia is published in No. 289 of the Berlin *Rundschau*, the editor assuring his readers that the author is a recognized Oriental scholar and traveller, and that the inside information here

given is based on the best of authority. The article states that the Turkish Government does not wish a repetition of the massacres of 1895 and 1896, but that it is not able to carry out this resolution as against the Kurds. This explains the recurrence on a small scale of these atrocities, as recently at Bitlis. The writer states that "the last Oriental war of 1877-78 did not cost the Turkish Government as much as the events in Armenia in 1895-96." In round numbers, about 250,000 persons were killed in these massacres; and still worse was the thorough spoliation of the entire people. As a result, agriculture and cattle-raising, as well as taxes, are out of the question. "The order came from Constantinople to decimate the Armenians, in the sense that everywhere those who were conspicuous for their property, education, or influence should be killed, and in general the younger element should be put to the sword." "To attain this end, three methods were chosen, namely (1), the Turkish population were informed beforehand and were armed; (2) the irregular troops were employed, especially the Kurds; (3) the regular troops were also used." In some cities even the artillery were employed.

A number of prominent gentlemen in France have organized themselves into an Association Historique pour l'Étude de l'Afrique, the object of the society being to send exploring expeditions into the desert of Sahara for the purpose of finding remains of former cities and to prosecute studies in reference to their early condition. Among the members of this society are found such influential men as the Prince of Arenberg, Prince Bonaparte, Count de Blizemont, Baron Hultot, Count Greffable, General Larchey, Marquis de Vogüé, and others. Sufficient funds have already been secured to send out an expedition during the current year, which will operate in Morocco, Tunis, South Algiers, and Tripolis.

During the current winter semester of 1898-99 the twenty-one universities of the German Empire, including the Academy of Münster, have been attended by 32,597 matriculated students, of whom the nine Prussian universities had 16,416. The number of foreigners is 2,092, of whom the greater proportion are in Berlin (504), Leipzig (305), and Munich (202). If we include in these statistics the schools of technology, veterinary science, mining, forestry, and agriculture, the whole number of students in Germany would be 44,333 matriculates and 8,918 hearers. Without entering into details, we may add that the technical schools have 9,380 matriculates and 2,536 hearers, and 1,598 foreigners, of whom 540 are Russians; the veterinary schools have 1,206 matriculates and 160 hearers, and 54 foreigners, of whom 24 are Russians; schools of mining, 602 matriculates, 45 hearers, and 201 foreigners, of whom 96 are Russians; forestry, 201 matriculates, 7 hearers, and 85 foreigners, of whom 43 are Russians; agriculture, 347 matriculates and 66 hearers, and 26 foreigners, of whom 18 are Russians. This preponderance of Russians is a remarkable phenomenon, and the fear has been expressed that, with the opening of the new Institute of technology at Danzig, the Russian may outnumber the German students.

A unique book has been prepared and published by a special committee appointed by the German Stenographical Association, namely, a 'Häufigkeitwörterbuch,' a dictionary of which the object is to determine

statistically the relative frequency of occurrence of the more common words in the German language. No fewer than eleven million words were counted. It appears that the three words most frequently used were "die," "der," and "und." The first-mentioned occurred 358,054 times; the second, 354,526; the third, 320,985 times; so that these three little words figure nearly one-tenth in the actual use made of the German tongue.

The Presidential appointment of the late John Russell Young to the headship of the National Library was an historical event, not to say scandal; consequently the curiosity of posterity as to Mr. Young's personality deserved to be satisfied. Mr. F. Gutekunst, Philadelphia, has done his part in an imperial panel photographic likeness belonging to his notable gallery of public characters. It bears the usual marks of his expertness in his art.

—We record with regret the death, on January 28, at Westborough, Mass., of the Rev. H. Warren Fay, a voluminous contributor to the *Nation* for a long period in the department of Notes and Reviews. Mr. Fay was a classmate at Harvard (class of 1862) of the late John Richard Dennett, who in 1874 passed away under his friendly roof. He was afterwards for a time settled in Nantucket, but returned to his old home, with health fatally impaired. For several years he had been completely bedridden, and his suffering was constant and periodically intense. His spirit, however, was indomitable, and he was a standing lesson in courage and endurance to all his acquaintance. He was an omnivorous reader, and kept himself abreast of French literature in particular. The private notes, latterly written in pencil, which issued from his sick-chamber, were admirable for lightness and good cheer. He had a great capacity for friendship, a warm and generous disposition. His unabated interest in the intellectual movement of the time, while racked by his malady, was truly remarkable.

—The issue of Mr. R. L. Poole's great Historical Atlas by the Clarendon Press (New York: Henry Frowde) goes steadily on, with none of the vexatious delays so apt to occur in the production of such a monumental work. Part xx. is already at hand, and the remaining ten parts, it is expected, will appear during 1899. The later numbers (xiii.-xx.) on the whole maintain the standard of the earlier issues. With their appearance the series of maps illustrating the history of the British Isles is enriched by Mr. G. G. Smith's Scotland, c. 1600; Mr. W. H. Stevenson's England and Wales before the Norman Conquest; the Editor's England and Wales after the accession of the Tudors; and Mr. R. Dunlop's Ireland (1541-1643). Miss Ewart continues her series of Italian maps with the House of Savoy in Italy, and Italia Sacra; while Mr. Rhodes adds to his French series France in the thirteenth century, and Gallia Sacra, besides Europe in the eighteenth century prior to the French Revolution. Prof. Bury contributes two maps of the Eastern Roman Empire, one in the tenth century (two plates), the other 1025-1472, and Mr. Stanley Lane-Poole has three maps of Western Asia—under the Mohammedans (c. 970 and c. 1070); under Saladin (1190); and under the Mongols (1330). The series of ecclesiastical maps is further enlarged by the Editor's map of the ecclesiastical organization of the Spanish Peninsula, and the gene-

ral European series by Prof. Prothero's Europe, 1814-1863; Mr. Oman's Europe in 1360, and the Editor's Europe at the time of Otto (963). Mr. Poole further contributes two maps of Germany, one under the Hohenstaufen (1138-1254) and one in the later Middle Ages (1273-1492). The promise of the title of the Atlas to comprise parts of the New World connected with European history sees a partial fulfilment in three maps by Mr. H. E. Egerton—European Explorations and Colonies from the fifteenth to the seventeenth century, European Colonies and Dependencies 1763, and European Colonies, Dependencies, and States Independent of European Powers (1815-1897). Unfortunately, these (in particular the maps relating to the United States) by no means equal the European maps in accuracy or execution. It is matter for regret that this part of the work could not have been assigned to a competent specialist in American cartography. In that case, to take three examples of many, Oregon, the Louisiana Purchase, and Texas (plate 89) might have been more than mere conventional spaces on a map without form (correct form, at least) and void; and the city of Baltimore would not have dated her foundation from 1632 (plate 85).

—In his elaborate and painstaking work on 'L'Ouvrier Américain' (Paris: L. Larose), E. Levasseur offers a good antidote to social unrest. Believing that a high rate of wages is a consequence of high productive ability, he sees much in the condition of the laborer in the United States to suggest a continued and even greater advance in material advantage. If wages fall, it will be due to an excess of labor available through the failure of agriculture to absorb its contingent of immigrants. Any influence of the protective tariff in increasing or even maintaining wages is denied, and our author adopts to the full the opinion that the rate of wages is not determined by the price of the article produced, citing the rise in agricultural wages in the face of a great fall in the prices of agricultural products. Nor does he favor the intervention of the state save for the health and safety of the laborers. Individualism and state agency are the two often opposing principles controlling the development of industry, and upon the preservation of a proper balance between them must depend the freedom or subjection of the workingman. Profit-sharing and coöperation have played but little part in the United States, while socialism is regarded as an unimportant factor. Trades unions are good so far as they aid the sick and the needy, and so far as they enable the laborer to withstand the undue pressure of organized capital; but a strike is a condition of war. The danger lies in the widening breach between employer and employed, considered as belonging to two distinct classes of beings. Materially and mentally, they may seem to differ from one another, but morally their interests are the same.

—Although M. Levasseur's volumes were printed in 1898, he would be obliged to modify some of his opinions in the light of recent events. The increasing weight of the debt due to Europe, paid for in exports the prices of which were falling, would hardly be considered to-day as affecting the general economy of the country. The question of restricting immigration, which M. Levasseur believed would be determined in a few years in favor of more stringent regulations, ap-

pears to have been settled in a very different manner by the policy of expansion. If the competition of the blacks is to be feared in home industries, what would he have said to the competition of Cubans or Tagals in agricultural production, such as sugar and tropical fruits? Finally, M. Levasseur holds that the Americans enjoy a considerable advantage over Europeans in having no standing army, or costly marine, or war expenses demanding heavy sacrifices. If the estimates of Mr. Gage are accepted, this advantage must soon be in a measure neutralized. For the future of American enterprise M. Levasseur is very hopeful, having an unbounded faith in the good sense and conservatism of the people. Some of his criticisms of labor agitators might be well applied to our political leaders, if leaders they can be called; and the wage-earner has more to fear from their irresponsible schemes than from the concentration of large industries. We could wish that this work might reach those with whose interests it deals. The selection and arrangement of details prove the ability of the writer, while the philosophic treatment of the subject could have come only from one who has passed a lifetime in studying social statistics.

—A cheap and approximately complete translation of the 'Thousand and One Nights' has long been lacking. This want is now being filled—at least for readers of German—by a version at present appearing in the excellent little *Universal-Bibliothek* of Reclam in Leipzig. It is by a certain Max Henning, who is unknown to us as an Arabist, but who seems to be fairly equal to the task which he has undertaken. In ten *Doppel-Bändchen* of about 200 pages each and costing each 40 pfennigs, his version has reached Night 606, and we may therefore expect its completion in seven or eight parts more. At that rate, the whole book will not cost more than eight marks—a phenomenal price for a complete 'Arabian Nights.' There is a short three-page preface with some bibliographical details, not always very accurate, as to former translations, a statement that the present translation is based on the *Bülâq* edition (evidently meaning the second), and a promise of a supplement taken from other editions and of an appendix examining the large question of origin, authorship, etc. Besides the second *Bülâq* edition, the translator has used largely that of Breslau, and has also drawn a good deal from Burton. Thus, it is only through Burton that the Calcutta edition of the first two hundred Nights has been accessible to him, and, apparently, the same is the case with the Macnaghten edition; otherwise it is hard to see why he did not take it as a base. The existence of the first *Bülâq* edition, which Lane used, seems to have been unknown to him. The translation is good, and more complete than any other that has been published except Torrens's most unfortunately uncompleted version of the first fifty Nights, and the Burton edited by L. C. Smithers. About half of the verse has been omitted, and what is left, except a few specimens of the translator's ability to turn out *Knüttel-vers*, is rendered into prose after the fashion of Lane. Of rhymed prose only one specimen so far is given, though, after Rückert's masterly imitation of the 'Maqâmât' of al-Hariri, a German might have been expected to again essay the impossible. The notes are few and inadequate; for a commentary on the Nights we must still go to Lane. And so, in a com-

bination of Lane and this version, the ordinary reader will probably find his most satisfactory access at a moderate price to the great Saga-book of Islam.

—There is a great difference of opinion among experts on the possibilities of China's foreign commerce. The great province of Yunnan, with a population of 8,000,000 souls, has been studied by an English consul, and by the mission of French merchants sent out by the Chamber of Commerce of Lyons. As the trade of this province may be turned into an English route by way of Burmah, or into French territory by way of Tonkin, each investigator had an interest in showing that the trade was worth making an effort to secure. The French commission reports that this trade is now \$3,600,000 a year. The exports are chiefly opium and metals, copper and tin. Owing to rebellion and governmental interference, the mining of these metals has decreased until it now amounts to less than one-fourth the interest worked at the beginning of this century. The mandarins have the right to purchase the metal mined, and they resell at a profit, made larger by the difference between a pound in buying and in selling, the difference varying according to the mandarin. Tea from the hills, tin, and opium are used as currency, and barter is the general rule. Four-fifths of the imports consists of cotton yarn, and this comes from India and Japan. Apart from that item, the "import trade is of no importance."

—The English report is no less certain in tone, and speaks of the rumors of actual and potential trade, vast mineral resources, and "innumerable impossible schemes" for railways and developing the country. The obstacles to working the mines are so many and great as must certainly debar capital from profit, while, apart from the minerals, the province has few resources, and the inhabitants are lazy to a degree. As to a railroad to Burmah, an engineer says that "by piercing half-a-dozen Mount Cenit tunnels and erecting a few Menal bridges" the road could be built. The entire trade in the province is in the hands of peddlers, and the movement of merchandise is in consequence small. Sūmao, the most southerly town of any importance in China, possesses no shops of any kind, and street stalls suffice for conducting all traffic. The staples dealt in are tea and raw cotton; the latter being distributed among the country people, who spin and weave it in their homes. The total import of foreign cottons and woollens is only \$3,700 a year. As to the people, "they are entirely at a loss to account for the presence of foreign officials. It is useless to explain that we are here for the purpose of fostering trade, as the obvious retort is that there is no trade worth fostering." This is one of the provinces nearest to the Philippines, and which is to be exploited commercially through those islands—according to the programme of the imperialists.

RECOLLECTIONS AND THE RECORD.

Personal Recollections of Abraham Lincoln and the Civil War. By James R. Gilmore (Edmund Kirke). Illustrated. Boston: L. C. Page & Co. 8vo, pp. 338.

In historical studies few things are so difficult as to estimate the value of personal recollections. After a lapse of many years, they are so likely to be amended and enlarg-

ed by the injection of material drawn from later events and experiences, that not a few of the more cautious investigators accept the rule that such recollections are of value only as they are supported by contemporaneous memoranda.

Mr. Gilmore tells us in general that he was in the habit of making notes of his conversations with Mr. Lincoln, and it is to be hoped that the original notes are preserved and may some day be given to the world in their authentic shape. It is a little hard to believe that a young man, as yet quite unknown to fame, lectured Mr. Lincoln upon the mischievous effect of his having Mr. Seward in his cabinet when as yet the cabinet was hardly a month old and Sumter had not fallen. Yet our author tells us that in that first interview he gravely informed the President that, if the Southern leaders had not thought Mr. Seward a coward, they probably would not have opened the cannonade upon Fort Sumter which was then going on; and that if he listened "to the timid advice which Mr. Seward, from his extreme caution, is sure to give him, he will run the country upon the rocks, where no earthly power can save it from going to pieces." He tells us that he broadly intimated that Mr. Robert J. Walker of Mississippi, who was present, was, since Andrew Jackson was dead, the proper person to replace Mr. Seward. We also learn that he opened to the President a plan of military operations for subduing the rebellion, which he thinks was essentially that to which we finally had to come. This, however, was so often done by other people. First and last, that it is of comparatively little importance.

A little later we are given at second hand, through Mr. Walker, an intimation that Mr. Lincoln followed up the suggestion of his young visitor, by offering the State Department to the gentleman named, who disinterestedly replied that he thought a change would not then be wise. The difficulty, of course, is in reconciling this with the fact, known from a thousand sources, that Mr. Seward's optimism not only did no harm in itself, but was consistent with so cheerful a readiness to carry out faithfully the President's views when they overruled his own, that Mr. Lincoln stuck to him to the day of his death, and did not yield even to the formal request of a committee of the Senate to remove him.

A curious episode is Mr. Gilmore's visit, as a representative of Mr. Greeley, to Gen. Rosecrans, in the summer of 1863, with overtures to the General to become a candidate for the Presidency. The author professes penitence for his part in this intrigue to supplant Mr. Lincoln, which came to nothing; but other incidents of his visit help us form a judgment of the accuracy of his memory, for we are now on ground covered by the Official Records.

We are told that "soon after the battle of Stone's River the Secretary [Mr. Stanton] had written the General a personal letter, saying that he had made up his mind to offer a major-generalship in the regular army to the brigadier who first won an important victory." Rosecrans's indignation is dramatically told. "Does he suppose I will sacrifice the lives of my men to serve my personal ambition?" But

"Stanton was a good hater. He took mortal offence at the attitude of Rosecrans, and then began to make a series of demands upon him that were impossible of execution; his last being a peremptory order for a forward

movement upon Chattanooga. This order Rosecrans had refused to obey, on the ground that it would imperil his army—a truth demonstrated four months later by the slaughter at Chickamauga; and now he asked me to lay before Mr. Lincoln his reasons for disobeying the Secretary's demands."

The sequel was that Mr. Gilmore went to Washington "near the close of May," represented to Mr. Lincoln that Rosecrans and every one of his general officers thought a forward movement would be suicidal and end in defeat, and gave his own advice to the President to "retire Stanton to a clerical position and give Rosecrans full command of all the armies." He reports further that, upon his presentation of the case, the President told him he might say to Rosecrans that the order would be countermanded, and that it would not be renewed till the General was supplied with all the men and horses he wanted; finally, that he persuaded Mr. Lincoln to telegraph at once to Rosecrans that the order was countermanded, by saying "it would be a salve to a good many of Stanton's wounds."

It would be difficult to put more errors into the same space. The letter concerning the Major-Generalship was not a personal one of Stanton, but an official one of Halleck. An "important and decisive victory" does not imply a sacrifice to a general's personal ambition. Stanton could not himself make such an offer, but it implied action by the President. It was not soon after the battle of Stone's River, but two months afterward. No series of demands was made by Stanton; the demands were constantly made by Rosecrans, and Stanton and all his subordinates showed marvellous patience and good will in dealing with them. No peremptory order for a forward movement on Chattanooga was made by Stanton or any one else. No order was countermanded. Gilmore could not have carried to Washington reasons for Rosecrans's disobedience. Rosecrans collected the opinions of his general officers on the subject of a forward movement by a circular inquiry dated June 8, two weeks after Gilmore had left the army. On the 12th, Garfield, as Chief of Staff, analyzed the replies, and, notwithstanding them, showed such cogent reasons for an advance that Rosecrans yielded to them.

The circumstances which led to this incident all occurred after Gilmore left the army. It was well known in Washington, as it was at the front, that Breckinridge, with ten thousand men, had been sent from Bragg's army to reinforce Johnston, who was trying to raise the siege of Vicksburg. Rosecrans's force was now 50 per cent. greater than Bragg's, and it was summer. Mr. Lincoln personally telegraphed Rosecrans on the 28th of May: "I would not push you to any rashness, but I am very anxious that you do your utmost, short of rashness, to keep Bragg from getting off to help Johnston against Grant." Rosecrans's answer was the offensively curt one: "Dispatch received. I will attend to it," and he did nothing. On the 11th of June Halleck telegraphed: "I deem it my duty to repeat to you the great dissatisfaction that is felt here at your inactivity. There seems to be no doubt that a part of Bragg's force has gone to Johnston." In reply, Rosecrans told of his circular and his subordinates' answers, with the astonishing proposition that "no one thinks an advance advisable until Vicksburg's fate is determined!" He coolly counselled "caution and patience at head-

quarters." Halleck answered at once, patiently controverting his reasons, explicitly saying the authorities would not order him to fight Bragg, but, having given him all the forces they could, the responsibility must rest with him. Then came Garfield's unanswerable review of the situation and advice to his chief to march against the enemy. It was, of course, reinforced by personal discussion. Rosecrans was convinced that he ought to march, but said nothing to allay the anxiety at Washington, and on the 16th Halleck telegraphed the question, "Is it your intention to make an immediate movement forward? A definite answer, yes, or no, is required." Rosecrans answered pettishly: "If immediate means to-night or tomorrow, No. If it means as soon as all things are ready, say five days, Yes." He began the movement on Tullahoma on the 24th, and Bragg's consequent retreat beyond the Tennessee River is regarded by Rosecrans's admirers as one of his chief claims to renown. Meanwhile, to give Grant help in place of that which would have been more effectively given by the advance of Rosecrans and Burnside in conjunction, Burnside was ordered to send the Ninth Corps direct to Vicksburg, and his own movement into East Tennessee was delayed. Grant won the Major-Generalship. Comparing this brief summary of the record with Mr. Gilmore's narrative of his interview with Lincoln in the latter part of May, it becomes evident that his recollection plays queer pranks with him.

We do not need to conclude that these Recollections will have no value to the historian. Some of them are better supported by contemporaneous evidence. An expert investigator will judge sagaciously as to the parts which may be antecedently probable. As a direct contribution to history, however, the book will need to be sifted as to every page, and it will be of more use in helping to give "local color" to incidents of the civil war than as proof of any important facts.

EMIN PASHA.

Emin Pasha: his Life and Work. Compiled from his journals, letters, scientific notes, and from official documents, by Georg Schweitzer. With an introduction by R. W. Felkin, M.D. 2 vols. Westminster: A. Constable & Co.; New York: Hurdley & Mathews. 1898. Portrait, map. 8vo.

Recent events in the Sudan, the capture of Khartum and the occupation of Fashoda by the French, have given a timely interest to this biography. Emin Pasha, next to Gordon, was the most striking figure in the early history of the Mahdist revolt. Had he fallen, like his leader, in the defence of his province, he would have ranked with him among the world's heroes. But in the strong light which the Stanley rescue expedition cast upon him, the world was disillusioned. It discovered that he was a man brought into prominence by circumstance, and not by his force of character or by his heroic deeds. The impression made by the present biography, which, consisting almost wholly of extracts from his letters and diaries, is practically an autobiography, is the same as that made by the accounts of Stanley, Jephson, and his companion in his last expedition, Stuhlmann. He appears to have been a man thoroughly conscientious in the discharge of his duty, anxious for the material welfare of

the people whom he ruled, but lacking strong moral or religious convictions; a man, in a word, who became a Turk in nearly everything but his passionate love of nature. This is not surprising, if we remember that he lived for years in an enervating climate and deprived of any stimulating companionship. He himself was conscious of this deterioration, for he refers in a letter, half-humorously, of course, to the fact that "my mental acclimatisation, i. e., my degeneration into the negro and the egoist, has proceeded apace, and so satisfactorily that at times I am quite alarmed." So, when the time for decisive action came, he was found wanting. Had he been what the world imagined him to be, when both England and Germany sent out costly expeditions for his succor, he would have founded an enduring state at the headwaters of the Nile, and advanced the civilisation of Central Africa by half a century.

Beyond a brief sketch of his early years and the facts contained in Dr. Felkin's introduction, these volumes, compiled with much discretion by a near relative, contain little new material which is worthy of note. Emin was born in Oppeln, Prussian Silesia, in 1840, studied medicine at the University of Berlin, and entered the Turkish service as medical officer at Antivari in 1865. At this time he discarded his real name, Edward Schnitzer, for a Turkish one, though he did not assume the name of Emin until he joined Gen. Gordon in 1874 at Lado, on the White Nile. The next two years were spent mainly in missions to Mtesa and Kabarega, Kings of Uganda and Unyoro respectively. Emin's account of these missions and of some official tours through Equatoria, which succeeded them, constitutes by far the pleasantest part of the biography. They show him at his best—a keen observer, with unusual descriptive powers, and possessing infinite patience and remarkable tact in dealing with the natives. At one village a unique entertainment was provided for him:

"No sooner was it dusk than dancing began. At four different places drums resounded, and choruses, accompanied by energetic hand-clapping, responded to the recitative of a bard, who seized upon all sorts of subjects as themes for his improvised song. One of Rionga's people gave a very amusing imitation of myself inquiring for, and jotting down, the names of mountains, streams, plants, etc.—not even forgetting to mimic my taking bearings with the compass. 'What is the name of that village in front of us?' asked the impersonator. He himself gave the answer, 'Kijaja,' whereupon the chorus took up the word 'Kijaja,' and repeated it about ten times."

In 1878 Gordon, with some hesitation, appointed him governor of the Equatorial Province, and for several years he devoted himself with untiring energy and considerable success to developing its resources. Dr. Junker, the Russian explorer, gives an attractive picture of its condition soon after the rising of the Mahdi. As he approached Lado he went

"through uninterrupted cultivated fields in the Bari country. What a contrast to the native tillage we had left behind! Here, even the negro's holding is secure; everywhere browsing herds, and the inhabitants of the many Bari hamlets, so far from being scared away by our approach, go on quietly with their work. My boys opened their eyes wide on seeing that here the strong does not rob the weak, and that the mighty government of the Turk leaves the negro's property inviolate."

The station itself was "changed almost beyond recognition," with its wide, regular

streets and brick houses surrounded by lemon trees.

From this time, however, Emin was forced to give up his civilising work and to devote himself wholly to the task of maintaining himself against the attacks of the Mahdist Emirs. The history of his limited success, which was mainly due to his situation and not to the valor or loyalty of his soldiers, is told in minute and somewhat wearisome detail. It is unnecessary to dwell at length upon the account of the rescue. The interested motives and malign influence attributed to Mr. Stanley and to England, both by Emin and by his biographer, are clearly disproved in the translator's notes and Dr. Felkin's statement. The truth is, that the two men, unsympathetic by nature, were mutually and keenly disappointed in each other. Emin confidently expected moral and material support from Stanley, which the terrible hardships the latter had endured prevented him from giving. Stanley looked for a man like Gordon, forceful in character and action—a natural ruler of men, before whom he was to lay the proposition of the King of the Belgians to hold Equatoria as a part of the Congo Free State, and that of an English company to found with their aid a new state on the Victoria Nyanza. He found an amiable gentleman who had lost control of his mutinous followers—a band of wretched Egyptian clerks and savage Sudanese—and who was incapable of deciding even whether to stay or go.

The sad story of Emin's last expedition, to which the second volume is wholly devoted, has already been told by his companion Dr. Stuhlmann, and reviewed five years ago in these columns. To that admirable account only personal details, which have little general interest, are added here. With the aim of extending the German possessions, Emin started from the coast in April, 1890, and with considerable difficulty reached the unexplored region to the west of the lakes. Here the expedition, weakened by hardships and the lack of food, was decimated by an epidemic of smallpox. The able-bodied were sent back to the east coast with Dr. Stuhlmann, and Emin, after some months' delay, went westward with a vague intention of reaching the Cameroons. A few days' march from the Congo, in October, 1892, he was murdered by some Arabs, in revenge, his biographer thinks, for a raid he made on an Arab station. It is a pitiful tale in which the catastrophe is foreshadowed by such entries as these in his diary, "I am very weary. Would it were over!" "Would that I had died after my fall on the stones of Bagamoyo!"

The rank of Emin among men of science must be determined by them. In this biography he appears only as an enthusiastic collector from his boyhood to his death. This passionate and thoroughly unselfish love of nature was a resource of immeasurable worth in his situation. It was a constant stimulus to exertion, and kept him from mental stagnation. He longs for rescue, not that he may return to Europe and friends, but because "it would be a crime if all these beautiful collections were ruined." In one of the darkest days of the last expedition he writes, "Amidst all my recent troubles and trials, I have had one great consolation: I have discovered a largish cat, hitherto unknown to naturalists." The last entry in his diary, made probably a few moments before his murder, is, "Das Barometer steigt schnell

[the barometer is rising rapidly]." Many of the museums of Europe were enriched by his zealous and absolutely disinterested labors, while his life-long attitude towards fellow-workers in science is shown in this sentence from one of his letters: "In any case, if either you or any of your friends wish for anything which it is possible for me to procure, whether in the department of zoölogy, botany, or otherwise, my services are absolutely at your disposal." He will have an enduring monument in his contributions to the scientific knowledge of Central Africa, though posterity will probably deny his right to the title once given him, "the apostle of culture." His civilising work has apparently left no trace.

A word of praise should be spoken for the uniform excellence of the translation, which is in such smooth, idiomatic English that it is difficult to realize that it is a translation from the German. The volumes are attractive in their appearance, and contain an index and a map of Emin's journeys in Africa.

The Underground Railroad from Slavery to Freedom. By Wilbur H. Siebert, Associate Professor of History in Ohio State University. Macmillan Co. 1898. 8vo, pp. xxv, 478.

That humor which heaven bestowed in large measure on the abolitionists, while denying it is *to* to slaveholding republicans, invented the term "Underground Railroad" for an expedition always carried on above ground, and with only secondary use of railroads. An extension of the metaphor produced "agents, station-keepers or conductors." Political geography (as, the adjacency of free Canada to the slaveholding United States as a whole, the adjacency of the free North to the slaveholding South), topography, character and derivation of population (as, New Englanders in the Western Reserve; Quakers in Southern Ohio, Indiana, and Illinois, who had left the South in order to have done with slavery), all contributed to determine the "routes." Yet in all this there was no "institution," scarcely here and there an organization till the Fugitive Slave Law of 1850 produced vigilance committees, not so much to help fugitives northward as to keep their free fellow-citizens from being kidnapped, and to warn man-hunters from free soil.

Prof. Siebert, in preparing his monograph, had the advantage of several valuable works on the operation of the U. G. R., especially in Cincinnati, Southern Pennsylvania, and Philadelphia. With commendable industry he has made independent researches, ransacked anti-slavery literature, conversed with survivors, acquired where he could original records, letters, etc., drawn up a list of more than 3,000 "helpers," made estimates of the amount of traffic, retailed some of the more striking *casus célèbres*, made the first map of routes, examined the several laws attempted or enacted to carry out the constitutional provision for the return of fugitives, and compiled a useful though not exhaustive bibliography. The result is a work of reference of very high value, enhanced by a large number of portraits and other illustrations. It is, moreover, in the main, surprisingly readable, for the author shows no great skill in construction, is somewhat repetitious, occasionally fatiguingly minute, and lacks graphic or pathetic power to narrate specimen fugitive cases

which are among the most thrilling, heroic, tragic, and shameful in American annals. One who desires to view the subject on this side should turn rather to Levi Coffin's memoirs or to William Still's 'Underground Railroad Records.'

The work is not pure history. It is frankly that of an entire sympathiser with Underground motives and methods. It has, further, a thesis, which is, that Underground activity furnished a connecting link of sentiment between the earlier and the latter-day abolitionists, and that the "institution" had a far larger part in determining emancipation—by telling upon the patience of the slaveholding oligarchy, and impelling them to secession—than historians and biographers commonly allow. But this is somewhat to confound two factors in the situation: one, the humane sympathies which led Northerners of whatever political affiliation to hide the outcast and speed him privily on his way to a free country; the other, the open revolt against the Constitutional provision and the Fugitive Slave Law in particular, as evinced by Personal Liberty laws and vigilance committees, Shadrach and Jerry rescues, 'Uncle Tom's Cabin,' and John Brown's wild scheme of a wholesale hegira. The annual losses by escapes, aided or unaided, the South could and would have put up with but for the signs of the growing public sentiment of abhorrence of slavery, with desire and resolve to restrict the extension of the slave area. This manifestation of a militant Northern conscience was due almost wholly to the persistent, organized, and uncompromising propaganda of the abolitionists, with its inevitable effect upon the creed of parties. A man did not have to be a Liberty Party man, Conscience Whig, Free-Soiler, or Republican to be merciful and helpful to the fleeing victims of slavery—if not systematically, at least on occasion. Here there was no touchstone but a common humanity. But, had there been no specific anti-slavery agitation, we might to-day be living under the conditions of 1860.

For this argument, two facts are decisive: one is that secession was fomented and precipitated by the fire-eaters of the Gulf States, or the parts of the South which suffered least from abduction or fugaciousness. The other is, that nothing but a divinely inspired madness prevented the leaders of secession from accepting at the hands of Congress and the States in 1861 terms of constitutional amendment and guarantee which would have fortified the Slave Power beyond its wildest dreams in 1787. The real moral which Prof. Siebert's monograph points, though he does not (we think) remark it, is that had two incompatible contiguous confederacies been established by secession on this continent, the Underground Railroad (impossible to suspend as long as man was man) would have speedily led to a renewal of hostilities. To doubt that the Southern leaders foresaw this, is to discredit their discernment; but then we must infer that their aim was not independence, but to make this country, in Lincoln's words, "wholly slave"—that is, at least to make slave property in transit inviolable in every part of the Union.

Prof. Siebert's explorations have sometimes stopped short of first-hand authority. On page 68 he professes ignorance of a Philadelphia Underground society of Quakers censured by Washington in 1786 (April 12, not May; the citation is at third hand). The organization in question can hard-

ly have been other than the "Pennsylvania Society for promoting the abolition of slavery, the relief of free negroes unlawfully held in bondage, and for improving the condition of the African race." It was at that date on the point of revising its constitution, and in 1787 it made Franklin its first President. (See Edward Needles's 'Historical Memoir' of this society, Philadelphia, 1848, or the late W. F. Poole's 'Anti-Slavery Opinions before the year 1806,' Cincinnati, 1873). As Washington complains of "a vexatious lawsuit respecting a slave," the case and the Society together are removed from the Underground category. On page 219, our author cites newspaper and magazine authority for extending the operations of the U. G. R. R. to Nova Scotia as well as to Canada. His "settlements of ex-slaves near Halifax," however, are only the remains of the Maroons introduced in 1796 from Jamaica, and mostly afterwards deported to Sierra Leone. Dependence on Henry Wilson's 'Rise and Fall of the Slave Power' has made him miss both the exact date (May, 1843) of Mr. Garrison's address of welcome and promised succor to fugitives, and the significance of it as a criticism on a similar invitation penned by Gerrit Smith. For this he should turn to the *Liberator* (13: 87). We have noticed one error on page 99, in Francis Jackson's letter to Theodore Parker, where "Byrnes" stands for "[Anthony] Burns." The excellent index escapes this pitfall so far as to admit no Byrnes; but then Burns is cheated of an entry due him.

Matter, Energy, Force, and Work. By Silas W. Holman. Macmillan. 1898. 8vo, pp. 257.

Very competent physicists may have a difficulty in forming perfectly clear conceptions of the fundamental ideas of physics; and the more difficulty they have, the more likely they are to want to write books on the subject, and the more deleterious those books will be. These are the minds which neglect the maxim of logic that the meaning of a word lies in the use that is to be made of it, so that every term of general physics ought to stand for a definite general phenomenon; and whoever clearly apprehends to what phenomenon a physical term refers, has nothing further to learn about that term except its grammatical construction. For instance, the word *mass* serves to express the law of action and reaction. If *mass* is defined as "the quantity of matter," then what is meant is the quantity of matter as measured by action and reaction. *Mass*, therefore, has to be distinguished from *weight*, if by weight we refer to the pull toward the earth against the elasticity of a spring-balance. But to introduce distinctions of terminology which refer to no differences in the phenomena, is an idle pedantry that only confuses at once the language and the ideas of students, and puts them out of *rapproch* with the body of scientific men. Prof. Holman's word "weightal" is as superfluous as it is unbeautiful.

The only way to keep scientific terminology free from confusion is to recognize the right of him who introduces a given conception into science to confer upon it its scientific designation and symbol, which should never be rejected nor changed except for really substantial reasons, such as the previous use in another signification of the word chosen. No man of sense will upon

any light occasion violate all usage in this matter, any more than in any other. For instance, the word *gravitation* is appropriated by all writers to that fixed attraction between distant bodies which varies only as their mass, while *gravity* is used for the acceleration of bodies toward the earth under the influence of gravitation combined with centrifugal force. It is, therefore, injudicious for Mr. Holman to attempt to reverse this practice by calling that "gravity" which is known as gravitation, and that "weight" which is known as gravity. He seems to be particularly enamoured of the word "kinergety" for kinetical energy; but it is not likely to be adopted.

As an example of the want of clearness of the book, we may take the following, which is printed in italics: "The sufficient evidence that all resistance is due to the action of energy lies in the fact that through resistance change in state of motion of bodies occurs." If, however, by "due to the action of energy" is meant, as should be meant, due to the production by kinetical energy of changed positions with changed positional energy, and the production by the distribution of positional energy of accelerations working changes of kinetical energy, then it is plain that, unless the conservation of energy be assumed at once, a resistance need not be "due to the action of energy." Great fallacies may lie hid behind the word "due."

Le Sage's theory of gravitation is discussed, without being criticised from a logical point of view. But if this theory is proposed in the hope that impact and a wonderful elasticity of incompressible bodies may supersede positional energy, then it would seem to be a blow aimed at the ideas of the differential calculus and of logic itself; for it would be an endeavor to form a conception of nature as discontinuous, and consequently as radically unintelligible as possible. If, however, positional energy and action at a distance are not to be attacked, why not admit that gravitation is such an action, until some facts are ascertained to the contrary?

The vortex-atom theory is regarded with great favor by Prof. Holman. Yet, though mathematically only too profound, it is logically not much better than the theory of Le Sage, being an attempt to get rid of action at a distance in another way. As for Prof. J. J. Thomson's verifications of its results by chemistry, they are too trifling to have much weight, not to speak of the difficulties they involve. There is nothing but *a priori* metaphysics against action at a distance, which is indissolubly bound up with the principle of energy.

Prof. Holman allows himself to treat with silent contempt Newton's theory that space is an absolute entity, although it is a scientific doctrine based upon the fact that bodies tend to preserve their absolute aspects of rotation. He falls into German metaphysics in accepting as self-evident Leibniz's hypothesis that space and motion are entirely relative, a notion unsupported by facts. Some of the German upholders of this doctrine say that bodies do not preserve their planes of rotation absolutely, but only relatively to an otherwise unknown body, which they name "Body Alpha." This "Body Alpha" is for all intents and purposes identical with Newton's Absolute Space. Dr. Ernst Mach wishes to substitute for Body Alpha the *total ensemble* of the bodies in the universe. The idea that a distant star by its motion

should instantly affect the rotation of a top, not by a physical force, but by a principle of dynamics, is contrary to all experience, and subversive of the validity of space as a representation of the relations of things. These people maintain that it is just as true to say that the earth stands still while the heavens move round it, as the reverse; so that we may say without falsehood that, by moving round the earth, the stars produce the phenomena of centrifugal force on the earth. This is action at a distance, with a vengeance. It is to be remarked that the preservation of the plane of rotation depends upon the law that a body unacted on by any force moves in a right line; and if the aspect of the plane is not absolutely preserved, then the body moves in a straight line, not absolutely, but only relatively to Body Alpha or to whatever substitute for that fetish may be imagined. All this because the Leibnizians obstinately adhere to a metaphysical notion that does not fit the observed facts.

Geometers are unanimously agreed that it is impossible to prove that the sum of the angles of a triangle equals two right angles except by a premise as little axiomatic as Euclid's celebrated postulate concerning parallels. But if it be axiomatic that all motion is relative, there is no difficulty about the triangle. For in that case two bodies may have any velocity in any direction and yet remain at rest relatively to one another. Now, this is impossible if the sum of the angles of a triangle is greater or less than two right angles.

L. L. Boilly; Peintre, Dessinateur et Lithographe. Par Henry Harrisse. Paris: Société de Propagation des Livres d'Art.

From Fragonard and Greuze and the court painters of the eighteenth century, to Géricault and Delacroix and the Romanticists of the nineteenth, French art for most people means nothing but David and his school. David, it is true, was the great man of the day; his influence was paramount in the studios, his classical creed was supreme. But still there were a few painters so entirely out of "the movement," apparently so unconscious of the tendency of their age, that, instead of reducing everything to the classical formula, they went on painting the scenes and events of every-day life just as they saw these, truthfully, faithfully, simply, with no striving after notoriety—painters who to-day, as M. Harrisse says, would be called "des naïfs." But it is really because they were so naïve, so matter-of-fact, because they knew their limitations and attempted neither the idyllic with Watteau nor the high heroic with David, that their work now has its value. It was never great; most of it would be altogether forgotten were it not for its interest as an historical document.

Of these painters, we agree with M. Harrisse that Louis Boilly holds the first rank. He was not by any means a master, he was not an artist of special distinction. But he had his own game in art—a game Thiers has defined as the painting of ourselves and our customs—and he played it extremely well. He was really the Frith of his day, which, it should be remembered, extended through the Revolution, the Directory, the Consulate, and the Empire, and, indeed, long after the Restoration. While most men were busying themselves with the making and unmaking of states, with war, with political and diplomatic adventure of every kind, Boilly, the

humble little provincial, was engrossed with the more familiar and intimate incidents of life. He painted his contemporaries as he saw them, the men in their cafés, the women in their homes; he painted the people waiting in line for the distribution of milk in days of distress, and for the distribution of wine in days of rejoicing; he painted the departure of the conscripts and the arrival of the latest news; he painted the crowds in the Louvre staring at David's famous picture of the Coronation, and the crowds in the streets gathered to see the start of the diligence. In a word, he painted just those things which the artist of his generation, supposed to be inspired by Greece, despised as petty and trivial, though to us they are far more amusing than the toga-draped heroes and the correctly balanced groups of the classical painter.

Much the same subjects are repeated in the lithographs of Boilly, who was one of the first to practise the art of Senefelder as soon as it was fairly introduced into Paris by Lasteysie and Engelmann. His prints sometimes, to tell the truth, are very tiresome. We have absolutely no patience with the series of *Grimaces* by which he is best known, though it must be admitted that the exaggeration of feature and form that irritates us was quite in accord with the fashion of the time. Even Daumier, later on, often enough fell into the same trick. But whatever fault you choose to find in them, the fact remains that Boilly's paintings and drawings and lithographs are invaluable as a chronicle of a very important and very fascinating period in French social history. It is for this reason we are glad that M. Harrisse has thought it worth while to make a catalogue of them, and the Société de Propagation des Livres d'Art has been willing to publish it.

M. Harrisse has done his work thoroughly and excellently. He has prefaced his catalogue with a sketch of Boilly's life and an estimate of his work. Of the artist's life, there is not much to tell. He was born in 1761, at La Bassée, a little town in the neighborhood of Lille. He was trained to be a house painter, but his ambition was to make himself a painter of pictures, and he managed to earn enough money, chiefly by portraits, to settle in Paris in 1785. He married, he had many children, he worked quietly, despite the social upheaval that was disorganizing France. Only once was he interrupted, when the engravings after his pictures were thought too gallant and gay by a Republican Society of Arts, and he had suddenly to take to painting the "Triumph of Marat." He worked indefatigably, for his fame was never sufficient to bring him large prices for his pictures, and it was merely by his unflagging industry that he succeeded in living by his art. Some idea of his industry is to be had when we learn from M. Harrisse that in the course of his career, besides everything else, he painted not less than 5,000 portraits. As M. Harrisse has pointed out, his pictures suffered, first because of the change in public taste brought about by David, and afterwards because of the new change ushered in by the Romanticists, for he did not die until 1845. But the public delighted in him as the English public delights in Frith. M. Harrisse thinks, however, that he will be more and more appreciated by competent judges and critics, as time goes on. We are not so sure. We cannot help wondering if his work will not

always be prized for his subjects rather than for its artistic merit, if he will not be remembered as the chronicler rather than the artist.

M. Harrisse has catalogued no less than 1,364 pictures, drawings, and lithographs. He has made a separate list of the pictures exhibited at the Salon. In every case he has given all available information as to size, subject, and history; but he modestly declares that he can make no claim to completeness, that he has probably accounted for but half of Boilly's work, so much of it has disappeared. If, out of his forty-eight Salon pictures, presumably his most important, but seventeen can be found, there is no doubt that there were innumerable pot-boilers of which not a trace is left—no great loss, we fancy, to Boilly's reputation. M. Harrisse hopes his readers may fill up many of the gaps, but it is a question whether there is any one to-day who can pretend to a title of M. Harrisse's knowledge of a painter now so obscure and forgotten as Boilly. The catalogue is well printed, and is illustrated with a sufficient number of photogravures and process blocks after Boilly's most characteristic designs to give a fair idea of the artist and his work. Altogether the book must prove of immense service to any one studying the social history and the art of France during the long period of which Boilly kept so accurate and often so amusing a record.

The Whitefoord Papers. Edited, with Introduction and Notes, by W. A. S. Hewins. M.A. Oxford: Clarendon Press; New York: Henry Frowde. 1898.

The name of Whitefoord is most familiar to Americans in connection with the negotiations which ended the Revolution. Caleb Whitefoord was an intimate friend of Benjamin Franklin, and for this reason became sole secretary to the Commission which negotiated the preliminary treaty in 1782. He is also the main figure in the volume of correspondence now under review. The family was Scotch and of ancient origin. Its founder lived in the last half of the thirteenth century, and held lands near Paisley, in the shire of Renfrew. For some centuries his descendants were only of local consequence, but, during the English Parliamentary Wars, one of them, Col. Walter Whitefoord, gained some reputation as a truculent supporter of the Stuarts. It was he, for instance, who on May 2, 1649, assassinated the regicide, Dr. Dorislaus, in his own apartments at The Hague, whither he had been sent on a mission by the Commonwealth. No one of the name has ever reached very great eminence, but in the eighteenth century two Whitefoords (and those the two with whom we are here concerned) attained a certain degree of distinction. These were Franklin's friend, Caleb, and his father, Col. Charles Whitefoord.

To associate one's self with Sir Walter Scott is always a short and sure way of attracting public attention, and Col. Whitefoord merits notice for having given the author of 'Waverley' a valuable hint. One of the finest incidents in the first novel of his immortal series is the relationship between Baron Bradwardine and Col. Talbot. Scott found the basis of their romantic friendship in an actual occurrence of the battle at Prestonpans. As Alexander Stewart of Invernahyle was leading a charge which routed the

Hanoverian troops opposed to him, he observed a royal officer remaining still at his post despite the desertion of his followers. When ordered by the Highland leader to surrender, the officer made a lunge at him with his sword, but, falling in the attempt, was soon disarmed. He "was now defenceless, and the battle-axe of a giantic Highlander (the miller of Invernahyle's mill) was uplifted to dash his brains out, when Mr. Stewart with difficulty prevailed on him to yield. He took charge of his enemy's property, protected his person, and finally obtained him liberty on his parole. The officer proved to be Col. Whiteford, an Ayrshire gentleman of high character and influence, and warmly attached to the house of Hanover."

Thus writes Sir Walter in the Introduction to 'Waverley.' Before long, however, Whiteford was on the winning side and could requite his obligation. Stewart was proscribed, his property was seized, his wife and children even were threatened. In this plight Whiteford made his way in person to the Duke of Cumberland and used every argument, not only on behalf of his friend, but also for the defenceless family. Cumberland proving obdurate, the Colonel took "his commission from his bosom, laid it on the table before his Royal Highness with much emotion, and asked permission to retire from the service of a sovereign who did not know how to spare a vanquished enemy." This dramatic coup carried the day, the Duke yielded, and thus Whiteford repaid the services which had been done him on the field of battle.

The letters which are now edited for the first time by Mr. Hewins cover, as has been said, two generations, and extend from 1739 to 1810. The dividing date within this period is 1753, when Col. Charles Whiteford dies, and the correspondence of his son, Caleb, then aged nineteen, begins to be complete. Throughout the earlier section topics and interest are almost wholly military. There are letters from Ciudadella in Minorca and from Guantánamo in Cuba, besides much detail concerning the Jacobite rising of 1745. When the Pretender landed in the Highlands, Whiteford was visiting friends in Scotland, and though he thought that the invasion would "end in smoke," he hastened to join the forces. Indeed, such was his zeal that he "went volunteer, refusing to be Adjutant-General or Aide-de-Camp to the Commander-in-Chief, with pay, thinking it his duty to serve his Majesty to the utmost of his power without any private view." His gallantry at Prestonpans we have already seen. His letters are those of an officer in the field, short and businesslike. The only long document among them is a detailed defence of Sir John Cope, who was brought before a court-martial for suffering the clansmen to beat him. The court held with Whiteford and exonerated Cope, on the ground that he had been basely abandoned by his troops. After Culloden, little of more than private interest transpires in the life of Col. Whiteford. He died seven years later, when in the full tide of professional success.

His son, Caleb, would never, save for the chance acquaintance with Franklin, which gave him a place in public affairs, have emerged from the obscurity of an artistic dilettante, or been talked about beyond the little circle where he was, as Burke says, a *décor des bons-mots*. At most he might occasionally have been mentioned in the Gentle-

man's Magazine, or alluded to in letters or memoirs. He was a sprightly and agreeable man who wrote for the newspapers, collected pictures, and was an acceptable guest at the dinner-tables of gentlemen and men of letters. He was also a devotee of the theatre, knew Garrick intimately, and was often called upon to write prologues or epilogues. It speaks well for his character that he kept his friends throughout life, and that the most illustrious among them were willing to inconvenience themselves on his behalf.

Besides Franklin, Caleb Whiteford had for correspondents Smollett, Garrick, Warren Hastings, Woodfall the publisher, Copley, and the Earl of Buchan. Nothing, however, of much moment comes out in their letters to him, and we have little hesitation in fixing on his part in the peace negotiations as the most striking feature of the volume. With Oswald, his colleague, Whiteford hired one of the best hotels in Paris, and kept open house there. The business occupied thirteen months, and, though, through a change of ministry, their services were not properly rewarded by Government, they enjoyed a pleasant degree of consequence while terms were being arranged. Pp. 187-189 contain some amusing anecdotes of the negotiations, from which we extract the following passage. On one occasion Whiteford was talking with a Frenchman, who boasted of the glory his country had gained, and emphasized England's folly in going to war with her colonies:

"He talk'd of the growing Greatness of America, and that the thirteen united States would form the greatest Empire in the world. Yes, sir, I replied, and they will all speak English, every one of 'em. His triumph was check'd. He understood what was intended to be convey'd, viz., that from a similarity of Language, Manners and Religion, that Great Empire would be English not French."

While devoid of extraordinary value, the Whiteford Papers make very agreeable reading. They are beautifully printed, and Mr. Hewins has performed his editorial duties with complete thoroughness and success.

New Yorkers of the Nineteenth Century. By Mrs. John King Van Rensselaer. F. Ten-nyson Neely. 1898.

In this collection of selected pedigrees Mrs. Van Rensselaer revives the memories and many of the names of the Dutch matrons celebrated in her late charming book on the Good Wives of Manhattan. They reappear even beyond the third and fourth generation, to justify the Scriptural promise of inherited virtues and persisting qualities. The traits impressed by Holland ancestry show themselves again in the grandchildren and great-grandchildren who led the social and business life of New York in the early years of this departing century.

The New Amsterdam stock, though still dominant, had diffused itself through alliances with the wealthiest of new-comers during the period succeeding the provincial era. At a very early date, indeed almost contemporaneously with the English conquest, many of the old Dutch names were lost by being merged in marriage with families of French and Scotch connection; and, by the time included within these charts, New England, too, had contributed the stimulus of her energy in a great degree to modify the character of the residents of Manhattan. The distinction of leadership in New York social life as it then was is thus shared by all races,

not excluding even the Hibernian. A part of the impulse in its advance is due to the blending of the qualities of each, and each of the names here recorded suggests some achievement in war, or politics, or finance tending to the solid building up of New York at the outset of the present century.

A part only, perhaps a quarter or a fifth part, of the intended series of genealogical charts is presented in this publication. Great care has been taken, through laborious study of public records and family papers, to insure accuracy in its elaborate details. The series when completed will not only form a record of value to the curious student of genealogy, but will also greatly aid professional researches into questions affecting the descent of property on Manhattan Island.

Leitchimey; A Tale of Old Ceylon. By Sin-natamby. With illustrations. London: Luzac & Co.

Ummagga Jātaka (The Story of the Tunnel). Translated from the Sinhalese by T. B. Yatawara. London: Luzac & Co.

These two recent books are worthy of mention as throwing light on phases of life in India at different ages, and also because they are issued by the publishers to the India Office in London. The 'Tale of Old Ceylon' gives an interesting picture of southern Indian life at the opening of the sixteenth century, when the first Portuguese settlements were established around the coasts of Ceylon. The plot is one of political intrigue. A king is banished through the machinations of an unscrupulous minister. His wrongs are partly avenged through the instrumentality of two young lovers, whose romantic adventures make up the under-plot.

The second work is a translation of the Jātaka Tales, or anecdotes from the life of the Buddha in a previous existence. Each addition to our knowledge of the Jātakas is welcome to students of Buddhism and to those who are interested in folk-lore. The present translation is not made from the Pāli, or sacred language of the Buddhists, but is based upon the Sinhalese version. On pp. 19, 20 is found a curious analogue to the judgment of Solomon over the child. In the Indian tale the Buddha is represented as discovering the true mother from the false by resorting to a sort of tug-of-war test, in which the rival claimants are to draw the body of the living babe over a line marked upon the ground. It is needless to add that the real mother yields her claim rather than to submit her child to the cruel torture. The "Bōsat" gives judgment accordingly.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 9, 1899.

The Week.

The ultimate ratification of the treaty between the United States and Spain was insured when the results of the elections of last November became known. Through those elections the Republicans made such gains in the United States Senate that, after the 4th of March next, they will have a good majority in that branch; and with the help of Democrats who had favored ratification, a two-thirds vote was certain in case the issue should be pushed over to an extra session. The only question was whether ratification should come before or after the 4th of March. The vote proved to be almost as close as possible to the limit of success. Eighty-four Senators recorded themselves; fifty-six yeas were necessary, and fifty-seven were given. The majority could have lost one, and still have carried their point; but they could not have spared both of the two Southern Democrats who went over to them at the last moment. The new complications created by the collisions between the American forces and the Filipinos under Aguinaldo which began on Saturday night, served as an excuse for the change of position which Messrs. McLaurin of Mississippi and McEnery of Louisiana made just before the vote was taken. Had there been no change in the situation at Manila, the friends of the treaty might have been forced to ask a reconsideration and push the final action over until after the 4th of March. The ratification was due to the conclusion by Senators of character, ability, and independence, who regret that we ever got involved in the Philippines and who oppose the policy of conquest, that they ought to vote for it. The best representative of this class is Senator Spooner of Wisconsin, who is so much against expansion that he opposed the annexation of Hawaii last summer, and whose courage would have enabled him to stand with Messrs. Hoar of Massachusetts and Hale of Maine on Monday if his judgment had agreed with theirs. His speech of last week was the strongest plea for the treaty that has been made, because of the candor and independence which characterized it.

The treaty is not yet the supreme law of the land, as Spain must first ratify it. That she will do so promptly admits of no doubt. Not only is she a weak and conquered nation that must submit to the terms of the victor, but she has every motive of self-interest to bring the matter to a close at the earliest possible date. After what we have found out

about the Philippines, who supposes that Spain would take them from us now as a gift, if she had to subdue and govern them? The truth is that Spain jumped at the chance, offered her by the war, to rid herself of what was rapidly becoming, without the war, an intolerable burden. Of course, her Commissioners at Paris made as stiff a fight for the Philippines as was possible when in their hearts they knew that their own country wanted to get rid of them for ever. They would gladly have stipulated for much more than \$20,000,000. But when they found our one formidable editor-diplomat unyielding, they secretly thanked God that they had got as much out of him as they did before he discovered how bad a bargain he had made in buying an insurrection. Spain has already abolished her Ministry for the Colonies. Whatever future fate has in store for her will be enacted within the Peninsula. To this all parties and all sections of the country and the army itself are now agreed; and the ratification of the treaty is only a remaining form.

Some of the baser newspapers are using left-over war headlines to describe the hideous affair with the Filipinos, but we are glad to observe not the slightest sign of popular approval of this attempt to make a battle out of a battue. Americans have not yet got to the point of rejoicing at the sight of natives armed only with bows and arrows marching bravely up to be cut down, like so much standing grain, by machinery. The news from Manila undoubtedly came as a cold douche to most people in this country. They never dreamed of succeeding so soon to the Spanish in the Philippines in the rôle of hated oppressors. In our good-natured and shift American way we were going somehow to "manage" the islanders. Well, it seems the poor fellows do not want to be managed, and will fight us and be killed by us, just as if we were but so many Spaniards. Of course, they listened to leaders who have shown incredible folly. The only comfort we have in our general sense of mortification at the frightful loss of life is that it did not result from direct aggression by our forces. Our soldiers were attacked, and could only play the game of war through to the bitter end, as, of course, they did, bravely and efficiently. But the country is sick at heart of this kind of glory. More than ever should our policy at Manila now be one of forbearance and conciliation. If the slaughter grew out of a misunderstanding of our character on the part of the natives, let us undeceive them by caring for their wounded and telling those who are prisoners to go home and go to work, and in all ways preparing their minds

for the coming of our college presidents and missionaries. The welcome of these last would seem to be endangered by the work of our machine guns. As a *Præparatio Evangelica*, a rapid-fire battery is a modern improvement that would have made Eusebius wonder.

It is universally admitted in Washington that the Hull bill, which passed the House on Tuesday week, cannot obtain a favorable vote in the Senate during the present session. Created in the noxious atmosphere of the staff departments, for their especial benefit, without providing for a single military reform or a single scientific advance, and made and remade while under discussion on the floor of the House, it furnishes a striking example of careless and vicious legislation. The inability of the Republicans themselves to fasten upon the country so foreign and dangerous an institution as a large standing army has been the real cause of its defeat in what seems to be the hour of its victory, and the importance of the defeat lies in the fact that without a large standing army imperialism cannot exist. The military problem presented by the failure of the bill is serious indeed. With more and more volunteers being discharged, the clamor of the remainder for release from garrison duty increases, while the mustering-out of the regular soldiers who enlisted for the war only would reduce the permanent army by about 20,000 men. Where are their successors to come from?

The unanimous action of the House in adopting an amendment to the army bill which abolishes the army canteen and forbids the sale of liquor in any camp or post of the United States, formulates a conclusion towards which impartial students of the problems involved have been drifting for some time. The canteen is a place where the lighter kinds of "drinks" are sold, under the regulation of the authorities and without the incentive that the ordinary saloon-keeper has to promote excess in order to help his business. The argument for this institution has been that drinking could not be entirely prohibited, and that there would be less drunkenness if the Government allowed the soldiers to buy beer in camp than if they were tempted to go outside for whiskey. This seemed plausible, and a good many army officers were at first inclined to endorse the system. But the experience of the recent war furnished overwhelming evidence for the opponents of the canteen. Each colonel was allowed to establish a canteen or prohibit it, and in Florida, in Cuba, and in the Philippines alike those regiments which were forbidden it

not only suffered much less from drunkenness than the others, but had by far the smallest percentage of sickness and death from disease. Every general in the army who has expressed an opinion now opposes the canteen, except one—and his dissent is the strongest argument on the side of the majority, for he is Eagan.

The experience of our army only duplicates that of England in showing that soldiers who do not drink intoxicating liquor are far more efficient, and far less subject to disease and death, than those who do. Experiments were made with three regiments from each of several brigades in the British army at different times, and in several instances where forced marches and other hard work were required. In one, every man was forbidden to drink a drop while the test lasted; in the second, malt liquor only could be purchased; in the third, a sailor's ration of whiskey was given to each man. The whiskey-drinkers manifested more dash at first, but generally in about four days showed signs of lassitude and abnormal fatigue; those given malt liquor displayed less dash at first, but their endurance lasted somewhat longer; while the abstainers improved daily in alertness and staying powers. As a result, the War Department decided that in the Sudan campaign not a single drop of stimulant should be allowed in camp, save for hospital use. The officers, including even the generals, were forbidden the accustomed spirits, wines, and malt liquors at their mess-tables, and an order was issued that the liquid refreshment for all hands, including even camp-followers, must be limited to tea, oatmeal water, or lime juice and Nile water. The wonderful freedom of the Kitchener expedition from disease, although making forced marches through the desert under a burning sun and in a most unhealthy climate, fully justified the new rule. The truth is, that the requirement of abstinence from intoxicating liquors for soldiers is only the application to the army of a principle which is coming to be generally accepted in industrial life, that men occupying responsible positions, like locomotive engineers, motor-men on trolley-cars, and men in charge of delicate machinery, must be men who are never in danger of getting drunk.

The capacity of the Democratic party, or rather of the Bryanites, for folly was again illustrated in the House when their votes were cast for a proposed amendment to the army bill providing that "no part of the army shall be used for, or shall do the duty of, a posse comitatus, or be employed in putting down strikes or riots, or do any police duty whatever in any State in this Union, except upon the application of the Legislature or of the Executive of

such State (when the Legislature cannot be convened) in accordance with section 4, article IV. of the Constitution of the United States." The object of this amendment, as was explained by its chief advocate, was to prevent any President in future from imitating the example set by Mr. Cleveland during the Chicago strike riots in 1894. The Anarchist Governor of Illinois having then refused either to restore order himself or to ask the assistance of the Federal authorities, President Cleveland acted upon his own initiative, and sent a force of the regular army, which soon put an end to a situation that had become a national disgrace. This action was warmly approved at the time by the whole nation, without distinction of party, Southern Democrats rivalling Northern Republicans in their commendation of the new rule of constitutional construction thus established. The condemnation of the precedent now by Congressmen who call themselves Democrats, only shows how Bryanism has driven brains and principles out of the party.

The easy passage through the House last week of the most extravagant river and harbor bill ever known furnishes fresh evidence of the nonchalance with which Congressmen nowadays vote away public money by the tens of millions of dollars. The bill carries something over \$30,000,000, and the Representative who had it in charge asked unanimous consent that general debate be limited to half an hour! He was evidently surprised that anybody should want more than thirty minutes for thirty millions, but one Iowa Representative suggested that there ought to be at least an hour, and then another insisted that even an hour was not enough to discuss the principles which underlie such a measure. An allowance of ninety minutes was at last made, the friends of discussion being assured that further debate would be allowed when the bill was taken up by items. But discussion produced no effect, whether devoted to general principles or to specific exposures of particular wastes of money, like the expenditure of \$1,500,000 on the improvement of the Muskingum River in Ohio during the last dozen years, the commerce meanwhile having fallen off almost to nothing. Every effort to amend the bill in the public interest failed, and only seven votes were cast against its passage—the smallest minority ever recorded on such a measure.

It must be said for the alternative Nicaragua Canal bill reported on Saturday by the House committee as a substitute for the Senate bill, that it is at least a more direct and honest measure than the nondescript affair which Senators voted in order to rid themselves of a disagreeable business. The House bill

brushes aside all the nonsense about paying the Maritime Company for its good will, and about guaranteeing bonds, and comes straight to the point by appropriating the money outright from the Treasury. That is where it would have to come from eventually, and it is honest to say so in the beginning. But there are grave defects in the House bill, quite apart from all questions of policy and cost. The President is, under its terms, to purchase from Nicaragua and Costa Rica the land necessary to build the canal and to "defend" it. Here is difficulty number one. Nicaragua has expressly said that she would never alienate any of her territory for the purpose of an interoceanic canal. It was because the committee was plainly informed of this that it struck out the word "sovereignty" from its first draft. The President was to obtain the sovereignty over the land necessary; now he is simply to obtain a "complete title" to it. But, for the United States to own land in a foreign country, without having even extra-territorial jurisdiction over it, is a dangerous novelty. Besides, the bill says not a word about neutralizing the canal, though we are under solemn treaty obligations to guarantee the neutrality of any canal that may be constructed across the isthmus. Instead of neutralizing, we are going to "defend" it, on the well-known principle of American public law that canals are built, not to promote commerce, but to provoke war and to be defended against a world in arms.

A caucus of Republican Representatives in Congress was held on Thursday evening. Its sole object was to consider the attitude which the party ought to assume towards the question of currency legislation. There was a full and frank discussion, which ended in the passage, by an almost unanimous vote, of a resolution providing for the appointment of a committee of eleven members of the present House who have been elected to the next House, "for the purpose of considering monetary legislation and submitting their views to a Republican caucus at the first session of the Fifty-sixth Congress, with authority to confer with a like committee from the Senate." The discussion which led up to this action was interesting and, on the whole, encouraging. Three speakers opposed the idea of doing anything about the national finances. One of these three, Mr. Walker of Massachusetts, is a man who is always "on the off side." A professed friend of currency reform, he has by his "crankiness" done more to thwart progress than any silverite in the House, and it will be a great gain for the cause of sound legislation when he surrenders his seat to the gold-standard Democrat who beat him for reelection last fall. The plea of those who opposed any action was that it would not be "good politics."

As Mr. Cannon of Illinois put it, "the present prosperity of the country makes it inexpedient to enter upon financial discussions." Mr. Walker was still more blunt. He said that "it would be far better politics to postpone action until after the campaign of 1900."

Gen. Gomez has made an astonishing discount in his demands for the Cuban army. To drop from \$57,000,000 to \$3,000,000 shows what a deep strategist the old General is; no wonder he made the Spanish think him invincible if he was able to exaggerate his strength as he is his claims. It was a tidy number of officers that the Cuban army had, according to the estimates for their pay submitted to President McKinley. Commissioned officers to the number of 5,119, and non-commissioned numbering 9,762, when the privates amounted to but 30,160, yield a proportion which could not be matched anywhere in the world, we suppose, off the comic-opera stage. Gen. Shafter's army, for example, had relatively only about one-third as many officers as the Cuban army, and yet it was not officers which Shafter lacked. But here, again, it may be that we have only another instance of the strategic ability of Gen. Gomez. He knew that the Spanish were all the while hoping to end the insurrection by killing off the Cuban generals, and he took measures to show them how desperate their cause was by creating so many that they could not possibly dispose of them all. But when all is said, the action of the Cubans in agreeing to accept a small advance of money and to disband is a great relief. It will immensely help on the work of pacifying the island.

Gen. Breckinridge is inviting the wrath of Alger, Corbin & Co., embalmers, and thereby subjecting himself to the peril of court-martial or inquiry, by revealing the fact that a lot of embalmed beef has been sent to Cuba by the War Department for the relief of destitute and starving natives there. He has been examining the rations sent to these poor people under the supervision of the Commissary Department, and has found "hundreds of cases of spoiled beef." He allows this fact to be made known, accompanied by a statement of belief that there is much more of the same sort of food among the supplies which have been forwarded. Some of the cases were given to the destitute on Saturday, and the ungrateful creatures absolutely refused them. Several of them were broken open in a public park, and an unanswerable demonstration was thus made as to their quality. Capt. Oakalocosa M. Smith, who represents Alger's Subsistence Department in and about Havana, is very indignant with Gen. Breckinridge, and has written a sharp letter to him asking him why he

is there "interfering with the commissary business." This letter Gen. Breckinridge has ignored. Here is surely ample ground for a court-martial. The entire proceeding is insulting to Secretary Alger and to the Commissary Department. It is said that the "embalmed beef" went to Porto Rico before it was sent to Havana. That was done probably to get it into a thoroughly "ripe" condition. Should the destitute Cubans not be treated as well as our own soldiers?

Two more departments of the State Government at Albany have now discovered that they have deficits, making four thus far which have been left in that condition by the Black Administration. The list, with deficits, now stands: Public Buildings about \$200,000; Public Works, \$200,000; State Treasury, amount unknown; State Capitol Commissioner, \$7,000. Others are likely to be added soon, for the cause which has produced the deficits in these four was common to all branches of the government. Mr. Easton, who was the Superintendent of Public Buildings under Govs. Morton and Black, says that among his 200 employees, he was allowed to have only one as his personal selection. All the others were put on the payrolls at the request of other people. The chief reason for the deficit in the Treasurer's department was the conduct of the retiring Black incumbent in raising all salaries of subordinates just as his term expired. He realized that this would be his last opportunity to get in a blow at the hated "starch," and he struck so violently at it that if his salary list were to stand throughout the present fiscal year, the department would have a deficit of nearly \$30,000. Another very popular method of getting rid of "starch" was the employment of "special counsel" by the Attorney-General for various kinds of legal service. Good Platt men, who were often members of the Legislature also, were usually chosen as beneficiaries of this kind of expenditure.

The ecclesiastical trouble in England continues, and the people who thought Sir William Harcourt was making a mistake because of his manifest unfitness to handle such sacred subjects, find that they themselves were mistaken. In the first place, he has overthrown the ritualistic bishops in fair combat. They wanted to keep him on doctrinal and dogmatic ground, where he would appear to disadvantage when matched against divines, but he was too "cute" for them. He insisted on keeping them to the law of the land establishing the Church and prescribing its ritual, and in that field he won an easy victory. He unhorsed all the Church champions in rapid succession, and proved to the bishops that they had legal duties in

the matter which they could not evade; that they had the legal power to repress ritualistic practices, and were bound to exercise it. They are accordingly, one by one, girding up their loins and setting about it. In the meantime, the attention of those who do not care to read long letters in the *Times*, is kept fixed on the matter by the excesses of Kensit, an unworthy and much exposed citizen, who does the work of disturbing the ritualistic services so as to associate them with tumult and disorder, which does damage them with the religiously and devoutly disposed. He charges "processions of the cross," shouts interruptions, alluding to "idolatrous practices," from galleries, and is accompanied by a considerable body of young athletes, who love a row and do not much care whether it is about the Eucharist or a race-horse. These people are able to keep going because of a good deal of sneaking popular sympathy, and they produce effect by creating scandal.

There were some striking points in the speech on the French colonial system which M. Pelletan, reporter on the Budget, delivered in the French Chamber the other day. He remarked that, while the army and navy cost more than those of any other country, the colonies cost more than those of all other countries put together. At this there were exclamations of incredulity, but M. Pelletan proceeded to quote figures to show that England spent 30 millions on her colonies, while Holland, Spain, Portugal, Germany, and Italy spent about 30 millions, making 60 altogether, whereas France spent 80 millions. What benefit, he demanded, did France reap from those 80 millions—or rather 90, for the estimates were always exceeded? In 1897, French exports to the colonies amounted to 118 millions, and, assuming the profit to be 20 per cent., the cost price was 95 millions. This gave a net loss of about 60 millions. England, on the other hand, exported 2,000 millions' worth of goods. He was aware that the West Africa colonies were remunerative, but why embark in adventures in which there was nothing to be gained? This system of conquests at a certain loss was an absurdity unprecedented in history. Never before had a nation expended about 60 millions and many lives for the singular advantage of ruling by force over distant populations. Could this absurdity, he asked, be continued at a time when the debt cost one milliard and the national defence another? The root of the evil was that there was no colonization, but only military occupation, while there were constant conflicts between the colonists and the military authorities. At this point M. Pelletan was interrupted, but he insisted that France was really governed by a bureaucracy, and that there was not a sufficient check on expenditure.

THE END OF THE BEGINNING.

The outbreak at Manila, which has been long expected, occurred on Saturday, and the ratification of the peace treaty followed, almost inevitably, on Monday. Very few of our public men have the courage to stand up against a military excitement. Any one who wants to know how our statesmen at Washington felt on hearing of the "rebel" attack on our lines at Manila, will do well to read Sir George Trevelyan's fourth and fifth chapters of his recently published 'American Revolution,' describing the state of mind of George III. and his cabinet after they got the news of Lexington and Bunker Hill. A glance, too, at Burke on 'Conciliation with America' will suggest some useful reflections. He will not find much talk of justice, or mercy, or conciliation, or peaceful relations, or trade, or commerce, or kindness, in the lucubrations of these statesmen, but much about "lawful authority" and "dignity" and "treason" and "wickedness" and "national prestige" and "rebellion" and "insolence." There is nothing better known in history than the armed conqueror's vocabulary.

There had been a vigorous censorship of telegrams, and the military dispatches had led us to believe that the Filipinos were quieting down and acquiescing in our rule. It appears that this was not true, and that our agents really knew nothing, or very little, about the feelings of the natives; that the American people were as ill informed about the Filipinos as the Filipinos about us. Had they known anything about us, they would not have indulged in an armed outbreak on or about the very day on which the vote was to be taken on the treaty in the Senate. By calm discussion, by appeals to the reason and sense of justice of the American people, they were making considerable headway; by taking arms, they have undoubtedly injured their cause, even if they have not helped ours. It reminds us of Cervera's coming out of Santiago to be destroyed just as Shafter was thinking of retreating.

But the treaty is now really of little consequence. The news from Manila confirms what we said the other day as to its having given us nothing except a right to conquer, if we could, in return for \$20,000,000; or, in other words, what the lawyers call a *chose in action*. If Spain could have delivered the goods, they might have possibly been worth the money; but twenty millions of dollars for the right to try to do what Spain has been vainly trying to do for many years, makes it seem as if we had bought "a pig in a poke." Judging from the experience of the Spaniards, this war may last long. In every engagement we shall undoubtedly kill more Filipinos than they will kill of us, and cause more misery among these creatures than they can possibly cause among us, and keep the world wondering over the strange-

ness of the business in which America is engaged in the hundred and tenth year of its existence. What fills us with most apprehension, and we should think would do most to keep Mr. McKinley awake at night, is the fact recorded by Prof. Worcester in his book on the archipelago, that the tactics by which the natives were able to achieve so many successes against the Spaniards were to draw them into the interior in pursuit, and then disappear, leaving them in some unhealthy region to wrestle with malaria. Against disease, neither Mausers nor Gatlings nor Maxims will avail us.

But, however the thing now goes, there are certain reflections which no enlightened and civilized man can escape. We have apparently rushed into this business with as little preparation or forethought as into the Cuban war. We got hold of the notion that it would be a good thing to annex 1,200 islands at the other end of the world, simply because we won a naval victory over a feeble Power in the harbor of one of them, and because people like Griggs of New Jersey wanted some "glory." We then went to work to buy 1,200 islands without any knowledge of their extent, population, climate, productions, or of the feelings, wishes, or capacity of the inhabitants. We did not even know their number. While in this state of ignorance, far from trying to conciliate them, assure them of our good intentions, disarm their suspicions of us—men of a different race, religion, and language, of whom they had only recently heard—we issued one of the most contemptuous and insulting proclamations a conqueror has ever issued, announcing to them that their most hated and secular enemy had sold them to us, and that if they did not submit quietly to the sale we should kill them freely. This was bad enough, but what made it worse was that it was all, as a matter of fact, untrue. Is there in any history but Spanish history a record of statesmanship like this?

SOME WHOLESOME RESTRAINTS.

A good many people are troubled by the difficulty we have had in getting a treaty ratified by the Senate, and some are in favor of dispensing altogether with senatorial consent, Tanner fashion, when the Executive happens to be in a hurry and knows that the people are with him—which is simply another form of the French *coup d'état*. But when the present crisis is all over, whether we annex or do not annex, conquer or do not conquer, we believe there are few men who care for the future of America, who will not acknowledge that the delays and difficulties which the President has encountered, contain a lesson of the highest value. Nothing is more tempting, and, therefore, more full of danger for

weak men, than a too subservient public. This is eminently true of taxation. Readiness to pay taxes, for instance, seems to be and is a political virtue, and yet it is not very far from being a vice, for it may, and probably will, prove a great encouragement to extravagance. There could not have been worse material for a political martyr than Wilkes was in England, or a more unworthy addition to the House of Commons, and yet the fight made on his behalf proved one of the most important contributions ever made to English constitutional liberty, and one of the most valuable lessons ever given to the Legislature.

When President McKinley came, drunk with glory and with flattery, out of the Spanish war, he evidently forgot that he was under any constitutional restraint, and undertook, as his proclamation of December 21 showed, to dispose of the Philippines in an address to the inhabitants that the first Napoleon, in the height of his power, might have issued. Nothing could have served so effectually to recall him to a sense of his real situation as the delay and difficulty he has had in getting the treaty through the Senate. Neither he nor any of his successors for many years to come, will forget that even the most successful war will not suffice to make the ratification of a treaty easy. The Senate will always contain bad men, cranky men, suspicious men, and jealous men, who, even if they cannot defeat a President's projects, will keep him mindful that he is a servant and not a master.

But the Senate is not the only useful restraint on him. His terror about possible rivals for the next term is another. A President who, like nearly every President in the past, seeks a second term, has, in the first place, to keep a strict watch on possible rivals, and see to it that they do not secure an undue share of credit or glory. "Possible rivals" is, in fact, the bogie which has haunted the imagination of both President McKinley and his Syndicate ever since the outbreak of the Spanish war. Every President sees in this the one serious political objection to going to war. The object of nearly every politician in seeking war in America since 1812 has been to secure glory for electioneering purposes. A Presidential candidate, therefore, who is already in the Presidential chair, has to keep a vigilant eye on such of his subordinates as are in any way connected with the war, lest they acquire an undue share of military credit. Over a year before the outbreak of the Spanish war, a well-informed correspondent wrote to us that the best guarantee against an attack on Spain was that the President could not himself take the field, and that the glory would almost certainly fall into the hands of some unknown military man, who might thereby succeed in wresting the next Presidential

term from even the "Advance Agent of Prosperity."

This fact had by no means escaped the attention of the McKinley Syndicate, and, in looking over the field to see who most needed watching, the first object of suspicion was naturally the Commander of the army. If he were to be allowed to go to the scene of action, the political consequences might prove disastrous, and he was therefore studiously kept at home and discredited as far as possible. But to keep rivals out of the field and yet make some money for the Syndicate was no easy matter, for no sooner had the Commander-in-Chief been cut off from military glory than he began to nose about the contracts, an offence hardly less serious than winning battles, and the more outrageous because the public had been so thoroughly intoxicated that it had become "patriotism" not to complain of anything the Syndicate did. Still, the substitution of a friendly board for a legal statutory court of inquiry revealed to the public the anxiety of the Syndicate about their plans. This anxiety was increased by the appearance on the scene of Roosevelt and his "Rough Riders," and their success in the field, and, worse than all, Roosevelt's success in New York. This made another candidate to be looked after and discredited. Roosevelt's civil-service performances and his mode of dealing with abuses have made him still more objectionable, but they have undoubtedly, by mere force of contrast, imposed very serious restraint on the Syndicate, who, if freed from it, would undoubtedly have "revelled in spoils" during the coming year, especially in administering our new possessions. We have little doubt that the beautiful colonial civil service which we were to have after Dewey's victory, has long been a joke in the War Department, over which the revered McKinley has smiled faintly.

To sum up, we believe that we may during the next year expect extremely valuable results from the necessity of keeping an eye on both Miles and Roosevelt. Peace, friends, hath her victories no less renowned than war. Neither Alger, nor Corbin, nor Eagan is the man to flinch when there is important work to be done, but we must not expect "irresponsible assault" to displace them. The necessity of watching the two rivals will, however, we may be sure, prevent the execution of many brilliant schemes. Of one thing we may be certain: "The displeasure of the President at the course of the commanding general" will not find expression in a court-martial or court of inquiry. The more likely way of disposing of him will be that described in the *Sun* on Thursday:

"While nobody is in a position to say what the decision of the President will be, everything points to action relieving Gen. Miles

of his duties without the formality of an official inquiry or a trial by a military body."

Public inquiries are nasty things, of which we have had enough. We advise the public to keep a close watch on the irritated Eagan, to see what happens to him.

JOHN MORLEY'S WARNINGS.

The speech which Mr. Morley made to his Scotch constituents three weeks ago was nominally on the political situation in England. It really dealt almost exclusively with the question of imperialism, which is cutting through English parties as it is through American. The political orators are few who can discuss a local condition in a way to illustrate universal truths, but John Morley is one of them. His penetrating analysis of British hyper-imperialism, his account of its drift, his warnings against the dangers into which it is recklessly running, are so clothed upon with the qualities of the higher statesmanship that they fit the imperialistic mania in any country. They are as profitable for reproof and correction to Americans as to Englishmen.

In addition to his other merits, Mr. Morley has the rare political virtue of not dreading to stand alone. He has written in one of his essays of "the awful loneliness of life"; but the loneliness of a public man cleaving to principle when all others forsake him and flee, does not frighten John Morley in the least. He likes as well as any man to be with a party espousing vital truth, but if it is a question between party and truth, he prefers to be lonely with the truth. The English Conservatives have been thoroughly Jingoed, and the larger number of Liberal leaders have run after the false gods of imperialism; but Mr. Morley refuses to allow himself to "slip and to drift a few yards to-day, a few more yards to-morrow, into the adoption of, or acquiescence in, a course of policy, a spirit and a temper" which he believes from the bottom of his heart to be "injurious to our material prosperity, to our national character, and to the strength and safety of our Imperial State." But he takes his position with such simple dignity, he has at his command such resources of philosophy and such an arsenal of language, that really, after reading his speech, one feels that it is not he that is lonely, but the other fellows. No man who had once been the object of Morley's finest sarcasm could get much true comfort out of having been proved to be silly along with great numbers.

The orator had a splendid and powerful passage in which he paid his respects to the Jingo clergy. His own reputed atheism lent just the needed edge to his rebuke of Christian apologists for war. He had for text a clerical address at a meeting of the Congregational Union, in which were all the usual mumbling

clauses to the effect that we could not be for peace at any price, that there were worse things than war, that we lived in a work-a-day world not likely to adopt at once the higher laws of religious life. What a spectacle it was, cried Mr. Morley, to see good men in the excruciating dilemma of dreading to be Jingo, and yet dreading still more to be thought for peace at any price. The fighting bishops of the Middle Ages could not have seemed more out of place as holy men. Worse things than war! So there are worse things than smallpox and delirium tremens; but you do not expect your physician to console you with the reflection. It was true that we lived in a practical world; but was it not for men who believed in the higher laws to insist upon carrying them precisely into that practical world? Otherwise, you had only to imagine these clergymen in company with the Forty Thieves, and you would hear them saying, "We are for the Ten Commandments, but still this is a work-a-day world; we cannot stand aloof from the practical business of life, and we are not for the Ten Commandments at any price." This was what was rapidly becoming of the Decalogue, and as for the Golden Rule the modern clerical version of that was, "Always swim with the stream."

Mr. Morley rose almost to prophetic stature when he denounced the common and complacent remark that "Gordon is avenged" by the slaughter of 10,000 men at Omdurman. It was an "impious and dishonoring" notion that that heroic man, as merciful as he was fearless, was like "some implacable pagan deity who needed to be appeased by hecatombs of human sacrifice." Equally trenchant and searching was Mr. Morley on the question of conquest in order to make trade; butchery of natives in order to make places for aspiring Scotch youth. He asked his Scottish audience if they had made up their minds once for all that "it is right to kill people because it is good for trade." If they had not considered that nice question for a nation with a conscience, they should do so at once, for the doctrine was spreading. Morley's account of the five points of the Jingo creed we must cite entire. It was as follows:

"First, that territory was territory, and all territory was worth acquiring; second, that all territory, especially if anybody happened to want it, was worth paying any price for; third, that this country possessed the purse of Fortunatus, bulging and overflowing with gold, and was free to fling millions here and there with the certainty that benignant fairies would, by magic, make them good, and so let us spend easy with lavish hand and a free conscience. The fourth article of the creed was—Do not show the slightest regard to the opinions of other nations, and you have no share whatever in the great collective responsibility of civilized people as joint guardians of the interests of peace and good order to the state system of Europe. The fifth article of the Jingo creed was that the interests of the people of this country—and he here drew no distinction between classes and masses—advancement in all the arts of civilized life

and well-being, their needs and their requirements, were completely and utterly a secondary and subordinate question."

The warning which Mr. Morley gave that imperialism would break down disastrously on the financial side, was peculiarly one for Americans to take to heart. We are having our fat years now, but does not all experience show that they will be followed by lean years? The burdens which are barely tolerable now will become then too grievous to be borne. The army and navy and the whole blown foreign service will then be in danger of being starved. Social discontent will rear a more threatening head than ever. New blows will be levelled at property and public security. Exploitation of the waste places of the earth for the benefit of capitalists will surely lead to spoliation of capitalists in their own land. This is in special degree the danger of a free nation smitten with the thirst for territorial aggrandizement and the pagan pride of empire. It will overstrain its resources, and will turn and rend at home the leaders who have lured it into perils and disasters abroad. The only remedy, for Englishmen or Americans, is to insist upon discussion and deliberation, and not to forsake for one single hour "those principles and professions, that temper and that faith, which came down to them from the great men who begat them."

THE THEATRE AND PUBLIC MORALS

The report that a bill will be introduced before long in the State Senate, the object of which is to establish the office of Theatrical Censor in New York city, suggests some serious reflections. There can be no doubt that something of the kind is wanted in this city badly enough, but it would be a good deal better to let conditions remain as they are than to intrust the powers of such an office to an unworthy or incapable person. It is not difficult to imagine the sort of man who would be selected for Theatrical Censor by our present rulers. The post would afford opportunities for some of the very richest pickings that ever came within the grasp of a hungry politician. He would be able to exact tribute not only from the better kind of theatrical managers, but from the proprietors of every music hall and variety show in the metropolis. The very last thing in the world that he would think about would be the effect of a performance upon public morals. His only object would be to make the giving of any entertainment, without the payment of tribute, as difficult as possible.

Everybody knows that an active stage censorship exists in all the greater European cities, and everybody knows also that our very foulest dramatic importations come to us from the countries where the censorship is supposed to be the strictest. The explanation of this

fact is that the Continental censors concern themselves chiefly with political sentiment, and care very little indeed about any mere offence to decency or morality. Here, of course, there is no demand for a political censorship. We should need an officer somewhat akin to the examiner of plays in London, a university scholar of eminence who has devoted many years to the study of theatrical literature, and is able to comprehend the scope and province of the theatre. He confines his supervision almost entirely to matters affecting questions of propriety, and, being entirely above all suspicion of political influence or pecuniary interest, it is very seldom that one of his decisions is opposed or disputed. In fact, so little is heard of him that comparatively few persons are aware of his existence or of the authority which he exercises. The appointment of such a man in this city, with ample discretionary powers and an absolute guarantee of non-interference, might be beneficial, but in the present circumstances it would be folly to look for any such Utopian occurrence.

Nevertheless, it is high time that some steps were taken to check the increasing recklessness and audacity with which the lower order of our theatrical entertainers are seeking to fill their pockets by pandering to the baser instincts of the vulgar crowd. No old theatre-goer can fail to be impressed with the extraordinary development of license upon the New York stage, which is practically the stage of the whole country, within the last twenty-five years. In the palmy days of the old Union Square Theatre, for instance, in the seventies, there was a constant outcry in conservative quarters against what was called the demoralizing influence of the English adaptations of the contemporary French emotional drama, which were so popular at that time. The influence of some of them, to be sure, was not particularly wholesome, but all of them were submitted to a pretty careful process of expurgation, and the evil in them, as a rule, was only darkly suggested and never openly expressed. It is not so very long ago that the utterance of a very common, almost meaningless, oath upon the boards of the Madison Square Theatre was resented as an outrage upon the feelings of a refined and delicate audience. No scruples of this kind are discernible in the conduct of the spectators in our modern theatres. Whereas, in the olden days, a mere allusion was resented, the actual representation of the thing itself is now watched with approval and even eagerness, and in many cases the more real the abomination, the more vigorous is the applause.

There can be no doubt that the wide dissemination of the verbal and pictorial horrors of the yellow press is responsible to a very large extent, if not entirely, for the general demoralization

into which the taste of the middle class—that is, of the theatre-supporting class—appears to have fallen. When an appetite for the morbid, the unclean, and the prurient has been encouraged by surreptitious reading, it requires grosser and grosser means of gratification. It was in the music halls that the public demand for what is commonly called spicy entertainment was first discovered, and the want was supplied with diabolical celerity. The most audacious performers, male and female, degenerates who had become notorious in Paris and Vienna, some of whom had been expelled by the police of those profligate cities on account of their abominable exhibitions, not only found a refuge but a rich reward in our music halls. They made fortunes for themselves and for the men who hired them. It was the spectacle of this prosperity, so easily if so vilely won, that prompted the managers of certain second and third-rate theatres to enter into active competition with them in the direction of public indecency. It would have been bad enough if the evil had stopped there, but of late the directors of houses hitherto deemed respectable have not scorned to profit by presenting scenes upon their boards which, upon the street, would call for the instant interference of the police. And the amazing part of it all is that the audiences which witness these atrocities unmoved, are composed largely of men and women of all ages, possessing every outward indication of education and refinement.

There is no saying to what depths this degradation of the stage and of the public may not proceed if some means be not found to punish the most notorious offenders. There is a notion on the part of the public that it is the duty of the better newspapers to act as moral constables in this matter, but the fact is, that the newspapers, although they can encourage the mischief in a thousand ways, are quite powerless, as the case now stands, to suppress or even greatly to mitigate it. Experience has proved beyond all possibility of doubt that an honest denunciation of a play on account of its uncleanness has no other result than the sending of a great number of readers to witness it. It is unfortunately the fact that some newspapers outside the admittedly yellow class, while feigning virtuous indignation, contribute enormously to the profits of this unclean business, by publishing minute details of the grosser offences perpetrated before the footlights. It is difficult to believe that a remedy for an evil so glaring cannot be found within the provisions of the common law. An indictment of two or three managers at the instigation of the District Attorney, and a prompt and remorseless relegation of them to the penitentiary, if only for a week or two, on the score of disorderly or indecent conduct, would be more effective than any censorship which is at all likely to be

established under the patronage of Tammany Hall. If the District Attorney has not time to bestow upon the consideration of a question affecting so vitally the moral well-being of the community, the matter might be taken in hand by some of the societies for the prevention of vice, which could not easily find a more important subject on which to exercise their energies.

REMBRANDT IN LONDON.

LONDON, January 7, 1899.

When in doubt, attack the Royal Academy, seems to be the motto of a certain section of the British public. At irregular intervals, usually at moments of least provocation, the story of Academical evils is told again, and again new methods of reform are urged upon long-suffering artists. This winter, the attack has come in the shape of a large and elaborate treatise ('The Royal Academy: Its Uses and Abuses'), by Mr. Laidlay, B.A., Barrister and Artist. I do not propose to enter into Mr. Laidlay's argument, in the first place because my concern just now is not with the crimes of the Academy, and, in the second, because Mr. Laidlay's methods are far too confused and involved. It seems a pity, so long as he took upon himself the task, that he did not set about accomplishing it more thoroughly. The history of the Royal Academy, written calmly and dispassionately, would be a far more eloquent plea against this much-abused institution than a windy arraignment prompted, apparently, by some personal grievance. From the time of Gainsborough, and thence onward through the period when Fuseli proclaimed his wrongs, there has been reason enough to find fault; but it is not likely that Mr. Laidlay can be successful where commissions, and societies, and movements, and New English Art Clubs, and newspaper crusades have failed, especially as artists have the remedy in their own hands if they really felt they could endure the injustice no longer. If outsiders ceased to send to the Academy exhibitions, if they combined to boycott it, the Academy could not survive many years. The only immediate outcome of Mr. Laidlay's book, however, has been the suggestion that a new, a liberal, a just, a truly representative Academy be started by the County Council, which, having already taken art under its wing by establishing a technical school as a rival to South Kensington, is considered by its admirers to be ready equipped to solve any and all artistic problems in the country. But I must confess, the performances of the County Council as patron of art, so far, do not inspire very great confidence; and as the scheme would adopt all that is practically worst in the old Salon, and as, in the face of the six thousand or more artists in the country, it gayly calls for a gallery in which every picture shall hang on the line, the last probably has already been heard of it.

All this is very amusing—though perhaps a little tragic—in its way; but more amusing still is the wonderful luck that has attended the Academy at this crisis, as at every other stage of its triumphant career. Had Mr. Laidlay published his book in the spring, had his summing up of old evils been at once followed by a fresh evil in the spring exhibition, with its accompany-

ing rumors and complaints of favoritism and worse, he might at least have run the chance of sympathetic notice and discussion. But it so happens that hardly has his book attracted the attention of the critics when the Royal Academy opens one of the most important winter exhibitions it has ever held. A couple of years ago the Council decided that there was no money in Old Masters, and last year and the year before Millais and Leighton were offered as a substitute. But the supply of modern Academical masters is limited, and it seems to have occurred to the Council that the Academy's "Winter-Garment of Repentance," as the winter show has been defined, had its moral value, even if it did not pay in actual shillings. And Mr. Laidlay is silenced, and municipal schemes discounted, and the Academy justifies its existence by an Exhibition of Rembrandts which, if it but included "The Night Watch" and "The Syndics," would be finer in many respects than the much more loudly advertised show in Amsterdam. As a stroke of policy, nothing could be more masterly: chance, certainly, is always on the side of the Royal Academy.

I pointed out at the time that many of the most notable pictures at Amsterdam came from England—the superb portraits sent by Lord Iveagh; the little Velasquez-like boy belonging to Lord Spencer; Lord Northbrook's landscape with its careful study of light; the Duke of Westminster's beautiful "Gentleman with a Hawk" and "Lady with a Fan"; the Queen's pictures from Buckingham Palace. All these reappear at Burlington House, together with many others from English collections, that were not seen in Holland. Indeed, the most remarkable feature of the show is the proof it gives of the great numbers of fine Rembrandts that are owned in England. The National Gallery is not drawn upon for contributions; only a very few foreign collections and museums have loaned their treasures. And yet, while there were one hundred and twenty-three pictures at Amsterdam, there are one hundred and two here, and these include far less rubbish.

Rubbish seems a hard word to use in speaking of Rembrandt, but at Amsterdam you could not help feeling that if Rembrandt did paint some of the work shown it would be doing him greater honor to forget it. Where England is poorest is in the large subject pictures. But, after all, there are but two which fully sustain and deserve the fame they have won for him. No one but Rembrandt could have painted "The Syndics," though when you look at some of his minor groups, for instance at "The Shipbuilder and his Wife" from Buckingham Palace, which is here, and which I had remembered as one of his masterpieces, you wonder how they would stand the test of hanging in the Haarlem Museum with the great Regent Pictures by Frans Hals. The "Shipbuilder and his Wife" is one of his early works, it is true, and it may be said that the comparison is not altogether just. But I mention it only because to see it again at the Academy is to realize more than ever that, great as an artist may be, it does not follow, as the enthusiast is apt to think, that everything he chooses to do must be beyond reproach. The other exception, of course, is "The Night Watch," which holds a place apart. Beyond these two, I think every one who has seen Rembrandt's large subject pictures, and who is honest, will ad-

mit that no small measure of disappointment mingles with the admiration they inspire. There is one at Burlington House, "Belshazzar's Feast," lent by the Earl of Derby, which is so weak in color, so poor in drawing, so commonplace and even grotesque in composition, that you cannot understand how the man who was painting that same "Shipbuilder and his Wife" in 1633 could have committed this indiscretion "about 1636," the date suggested in the catalogue. There are, however, two or three of his smaller Biblical and classical subjects that are as lovely, as marvellous in their manner, as the larger canvases are disappointing; above all, a little "Tobit and his Wife," belonging to Sir Francis Cook, and not exhibited at Amsterdam—a rich, shadowy interior, with a glimpse of a red town and a bit of green through the window that helps to remind you what an incomparable De Hooche Rembrandt would have proved, had he not been Rembrandt. There are one or two landscapes also that did not find their way to the Dutch show, especially the Marquess of Lansdowne's "Mill," with its rich golden glow, exhibited, if I am not mistaken, at the Winter Exhibition a few years ago.

But when all is said, it is in his portraits that Rembrandt was supreme, and one or two now at Burlington House I do not remember ever to have seen. The most remarkable is Lord Penrhyn's "Lady with a Parrot," painted in 1657, just a few years before that stately portrait of himself now in the possession of Lord Iveagh; at a time, that is, when his eyes were keenest to discern the beauty and picturesqueness and romance of old age. The old lady, in her simple black gown and severe cap and collar, sitting so quietly with her arms resting on the arms of the chair, in her hand a handkerchief, as in the hands of that no less perfect "Old Lady" of the Luxembourg, has all the serenity and dignity of Rembrandt's finest presentments of himself, when age had grizzled his hair and wrinkled his powerful face. Another portrait of peculiar interest comes from Mr. J. Pierpont Morgan and is called "Portrait of the Painter." I do not know on what authority this title is given, and I fancy many will be disposed to question it; for the picture represents a handsome youth of apparently not more than fifteen or sixteen. He sits with a drawing on his knees, from which he looks up and directly at you, his face eager and serious and full of charm. But there are certain passages in it, more particularly in the treatment of parts of the costume, that point to a later date; the technique is that of a much more mature period than the one suggested. The only explanation is that the canvas may have been begun when Rembrandt was still the youth it depicts, and not then finished, but kept by him in his studio and touched and repainted from time to time when he chanced to remember it; and this seems likely enough. A few other portraits have the added interest of not being so well known as the greater number shown. There are several wonderful old women; there is another much younger woman, lent by Lord Leconfield, commonplace for Rembrandt—an early work of 1635—but curious for the Vandyck-like grace of the poses and prettiness of the face; and there is, too, a portrait of "Alotte Adriaans," of four years later, that almost suggests Holbein.

Amsterdam, supplementing the great national collections, one supposed, could have

nothing more to learn about Rembrandt. But already, a few months later, in England one has the chance to see other phases of his work, other proofs of his tremendous energy and genius. He was simply inexhaustible as an artist. I make no effort, however, to enter into further detail about the collection, because, as I have explained, the most important pictures in it are those I described when I wrote of the Amsterdam Exhibitions; and as in general character the two shows vary but slightly, the effect produced, the conclusions forced upon one, are much the same in both cases. Even the drawings, as at Amsterdam, come chiefly from the portfolios of Mr. Heseltine and M. Bonnat. And, it is to be regretted, the Academy has adhered so closely to the example set at Amsterdam that Rembrandt's etchings have not been hung. However, Mr. Colvin has long been preparing an exhibition of all the Rembrandt prints and drawings in the British Museum collection, one of the finest and most complete in the world. After this, there will remain nothing to do but to prepare the perfect show of all, in which only Rembrandt's masterpieces, brought together from every corner of Europe and America, would be placed side by side in one gallery.

The Academy has issued an excellent catalogue, with a useful chronological index added. It will prove of value to all students of Rembrandt as a book of reference, even to those who have not had the pleasure of seeing the show. N. N.

PARNELL.—I.*

DUBLIN, January 21, 1899.

Presuming the time had come when 't were well for the memory of Mr. Parnell and for the good of Ireland that his life should be written, few were better qualified for the task than Mr. Barry O'Brien. It has been objected that he was not allowed access to Mr. Parnell's private papers, and that no one, during the survival of many still in the prime of life, is likely to be allowed access to them. But Parnell's was a life whose vivid interest depends not on unpublished details, but rather on a strong personality and the manner in which it impressed and affected contemporaries. Mr. O'Brien's book might be more complete if private papers had been open to him; but, even without that advantage, it may be more valuable than any biography written after the present generation had passed away could be. The book compels attention; otherwise there are not many Irishmen that understood and felt with Parnell through the major portion of his career, who would not, from the sadness of the last months of it, shrink from the task of reviewal.

Considering the political bias of the author, it is an admirable piece of work. Few men were in the position, as he shows himself to have been, to elicit, concerning phases in the life of Mr. Parnell, opinions, verging on the confidential, of Mr. Gladstone, Mr. Bright, Mr. Duffy, Mr. Chamberlain, Mr. Rhodes, and other prominent men. He has availed himself of his opportunities, and insured for his book a permanent place in all libraries pretending to any completeness in the department of British and Irish history. The balance of the relation is well preserved. Too many writers of political

lives lose themselves in history. Here we have no more than immediately concerns the subject of the story; and we are given, what is often wanting, the environment of the stage when the hero appears upon it. I shall have occasion to differ from Mr. O'Brien in his presentation of the facts of the last year of Mr. Parnell's life.

Parnell came of a family honorably associated with literature and with the history of Ireland, and upon his mother's side with the history of the United States. There was doubtless a peculiar strain in the blood, as appeared in the curious superstitions that, through all, lurked in the corners of Mr. Parnell's mind. He was born in an ancestral home, amidst lovely scenery consecrated in Irish song. There was nothing attractive in his childhood and early life, no promise of the character that was to develop. He was "sent down" at Cambridge for misconduct, and never completed a college course. A youth who opined that the Greek lexicon was wrong when it did not justify his rendering of a passage, was not a promising subject for university distinction. Even in his prime, he showed himself ignorant and uninterested concerning literature and art. His tastes lay towards mechanics and chemistry. His entrance into politics in his twenty-ninth year appeared more a freak than anything else. In so far as it was earnest, it was due to resentment at the low estimation in which his country was held. "The idea that the Irish were despised was always in Charles's mind," wrote a sister. His début was eminently discouraging to those who had made themselves responsible for bringing him forward. Says O'Connor Power:

"He seemed to me a nice, gentlemanly fellow, but he was hopelessly ignorant, and seemed to me to have no political capacity whatever. He could not speak at all. He was hardly able to get up and say, 'Gentlemen, I am a candidate for the representation of the County of Dublin.' We all listened to him with pain while he was on his legs, and felt immensely relieved when he sat down" (i., 75).

The home-rule movement, inaugurated five years previously, was flickering towards extinction. Fenianism, intensified by resentment at the cruel treatment of the treason-felony prisoners, was the dominant power in Irish politics. In Parliament it was impossible effectively to arouse the British conscience concerning Ireland. Mr. Biggar and Mr. Ronayne had the clear-sightedness to see the necessity for a change of tactics. "What's the good?" B. would say: "we can't get them [Irish bills] through. The English stop our bills. Why don't we stop their bills? That's the thing to do. No Irish bills; but stop English bills. No legislation; that's the policy, sir; that's the policy. Butt's a fool; too gentlemanly; we're all too gentlemanly" (i., 92). Parnell followed Biggar's lead, and soon became the acknowledged head of an active Irish party, bent upon obtaining as much as possible for their country, and, when ignored, making themselves disagreeable. Some of the distinctive customs and procedure of Parliament upon which Englishmen most prided themselves had to be radically altered before they could recover control of its proceedings. The deaths of Butt, Martin, and others of the elder generation of Irish Nationalists left the ground clear for the exercise of Mr. Parnell's peculiar genius. Those not content to serve under him had to stand aside.

"Parnell excelled us all," said one of his

obstructive colleagues, "in obstructing as if he were really acting in the interests of the British legislators. He was cool, calm, businesslike, always kept to the point, and rarely became aggressive in voice or manner. . . . The very quietness of his demeanor, the orderliness with which he carried out a policy of disorder, served only to exasperate, and even to enrage, his antagonists" (i., 107).

Mr. O'Brien then quotes from another follower:

"He was a beautiful fighter. He knew exactly how much the House would stand. One night I was obstructing. S— was near me. He was generally timid, afraid of shocking the House. He said: 'O—, you had better stop, or you will be suspended.' 'Oh, no,' quietly interjected Parnell, who was sitting by us, 'they will stand a good deal more than this; you may go on for another half hour.' I did go on for another half hour or so. Then there was an awful row, and I stopped. Parnell had gauged the exact limit. Another night I was obstructing again. Parnell came in suddenly and said, 'Stop now, or there will be an explosion in five minutes, and I don't want a row to-night.' In all these things Parnell was perfect" (i., 109).

It was not without opposition and doubt as to the sincerity of his professions that the Fenians left him alone to follow a constitutional movement. He suffered personal violence, and was driven from at least one platform. He managed with consummate adroitness to conciliate their opposition, and ultimately to attach them, without actually committing himself to them. His attitude towards those who differed from him, whether they were in advance or lagged behind, was not opposition, but an appeal that a fair chance should be given him to work out his programme. "We shall therefore see him," writes Mr. O'Brien, "as the years roll by, standing on the verge of treason felony, but with marvellous dexterity always preventing himself from slipping over." "Parnell's great gift was his faculty of reducing a quarrel to the smallest dimensions," and he had an instinct for knowing, where he appeared least informed, in political affairs.

And so he became the best hated man in England, the idol of the Irish people—he was the first Irishman since the days of the Volunteers who, upon their own ground, humiliated those who despised Ireland. A new departure came in bad harvests and an outburst of agrarian discontent that had only slumbered. He was led by Davitt into the establishment of the Land League, through which society in Ireland was shaken to its foundations. These were the days when Mr. Parnell uttered the few sayings that survive in the minds of the people: "Hold a firm grip on your homesteads." "Ireland cannot afford to lose a single man." "No man has the right to fix the boundary of the march of a nation." And those fateful words, so often used as a handle against him and his party in the after home-rule struggle: "None of us . . . will be satisfied until we have destroyed the last link which keeps Ireland bound to England." (Were they an echo of words used by Grattan one hundred years previously, and quoted by Boswell to Johnson? "We will persevere till there is not one link of the English chain left to clank upon the rags of the meanest beggar in Ireland.")

The Government's hand was forced, and a land bill surpassing the wildest hopes of previous land reformers (but since curtailed in its benefits by administration) was placed upon the statute book. Once again Ireland realized that material reform was to be obtained only through violence and outrage. "I must

*The Life of Charles Stewart Parnell, 1846-1891. By R. Barry O'Brien, Barrister-at-Law. Harpers. Two volumes in one. Pp. 378, 394.

make one admission," said Mr. Gladstone in 1893, "and that is, that, without the Land League, the act of 1881 would not now be on the statute book" (l., 293). Some thousand prominent Leaguers were already in prison, under Mr. Forster's act, "on reasonable suspicion." Mr. Parnell conceived and advised that the land act would be made best use of by bringing forward strong test cases at first, not by the tenants crowding into the courts. Having given grounds for the suspicion that he desired to thwart the act and discredit the Government, he was himself committed to Kilmainham. The abortive "no-rent" manifesto followed. Outrages and murder increased to an appalling extent, discrediting Mr. Forster's assurances that, if he were given a free hand in imprisoning suspected persons, the country would subside. Even Mr. Parnell was startled.

The negotiations ending in the "Kilmainham treaty" are succinctly and clearly stated by Mr. O'Brien. Mr. Parnell, with his Parliamentary colleagues, and Mr. Davitt, who had been relegated to Portland prison, were released on the understanding that Mr. Parnell at least would use his influence to lull the agitation. Wide reforms were foreshadowed by the Liberals, and a new page might have opened in Irish history but for the murder of the Secretaries. A coercive régime was again entered upon, and thoughts of reconciliation were abandoned. This was the period when Ireland, in defiance of the Pope's dissuasive rescript, contributed £40,000 to clear Mr. Parnell's estate from mortgage and make him easy as to money affairs. Home rule became the one plank in his platform. So early as 1880 he had declared: "I would not have taken off my coat and gone to this work if I had not known that we were laying the foundation in this movement for the regeneration of our legislative independence" (l., 240). British parties were played off against each other, and at one time, as is shown through the Carnarvon negotiations, fully elucidated by Mr. O'Brien, there appeared every prospect of the Conservatives adopting some modified form of home rule. Mr. Chamberlain, in the extended interview concerning those times which he accorded Mr. O'Brien, appears to clear himself from the charge of inconsistency in relation to that question. He never contemplated more than a system of representative councils in supersession of the boards by which Irish affairs are administered.

At the general election of 1885, Mr. Parnell returned to Parliament backed by a solid phalanx of 84 of the 103 Irish representatives. The Liberals were 335, the Conservatives 249. By throwing himself and his 84 men on the side of the Conservatives he could neutralize the Liberal majority, while, joined to the Liberals, a working majority of over 170 could be shown. Mr. Gladstone brought in his Home Rule Bill. It was defeated, and the Conservatives returned to power. Then followed the most interesting years of Irish agitation. The agricultural question again came up. The Plan of Campaign was launched. A perpetual Coercion Act was passed. Irish members, Irish suspects, Irish agitators (not implicated in treason) were treated with previously unheard-of severity in imprisonment. Parnell himself unaccountably held aloof from the fray, and seldom visited Ireland except on rare occasions, such as that so charmingly and graphically described by Mr. Horgan early in the second volume. The Gladstonian Liberals

became enthusiastic for the Irish cause in all its phases. No Liberal platform in Great Britain was complete without the presence of Irish members. Ireland was flooded with British sympathizers. The "union of hearts" between the two peoples appeared complete—the contest of centuries at an end. Happy were those Irish patriots who then sank to rest. The forgery of the Pigott letters was laid bare mainly through the acumen of Mr. Egan.* The speeches of Sir Charles Russell and Mr. Davitt before the Commission presented the Irish cause in a clear and favorable light to the British people. Upon the other hand, the Irish Unionists, realizing as never before the danger of the situation as concerned themselves, banded themselves together for the fray in the "Loyal and Patriotic Union." At by-elections the home-rule cause steadily gathered strength, and a large Liberal majority at the next general election was certain. Most Home-Rulers confidently expected that within three years a Parliament would be sitting in Dublin. Mr. O'Brien thus opens chapter xxii. of his book:

"Parnell's career, from his entrance into public life, in 1875, until the beginning of 1890, had been almost an unbroken record of success. He had silenced factions, quelled dissensions, put down rivalries, reconciled opposing forces, combined constitutionalists, healed the ancient feud between the Church and the Fenians, . . . had united the Irish race all the world over, and placed himself at the head, not merely of a party, but of a nation. He had defeated almost all his enemies in detail. . . . He had, indeed, reached the highest pinnacle of his fame; he seemed invincible. Yet he was standing on a mine, and while the air still rang with the rejoicing which hailed his latest triumph, the train was fired, his doom was sealed."

He alone knew the mine upon which he stood. In him alone it lay to anticipate an explosion, and, as far as possible, mitigate its consequences. D. B.

Correspondence.

A KING OF THE PHILIPPINES.

TO THE EDITOR OF THE NATION:

SIR: The speeches of Senators Platt (of Connecticut) and Foraker unwittingly reveal the abyss into which they ask the country to plunge with them. They no doubt reflect the sentiments of all who wish to launch on an unknown sea of adventure. When objection is made to incorporating Asiatics into our body politic because our national Constitution was made for European races, and particularly the Anglo-Saxon, and is not fit for the government of peoples who have no traditions of freedom and are steeped in despotism, their answer is that Congress has absolute plenary power over Territories, and is subject to no Constitutional restrictions in governing them—in other words, that a government of a Territory is entirely outside the Constitution. The only practicable way by which Congress can exercise such power is by transferring it to the President. It is true, they say, that, in an organic act, Congress usually extends the Constitution and laws of the United States over a Territory, but that the Constitution does

*Mr. Parnell almost despaired of discovering the perpetrator, and proving the forgery, when Mr. Egan, who had retired to the United States, pointed out that the word "hesitancy," spelled "hesitancy" in one of the letters published by the *Times*, was similarly spelled in letters from Pigott in his possession. The chapter dealing with these forgeries and the subsequent trial is one of the most interesting in the book.

not *proprio vigore* extend itself there, as it does over a State. Consequently, if, after adopting the constitution for a Territory, Congress should pass an act in conflict with it, to that extent it repeals the constitution.

These declarations should be taken as notice that if the Philippines are annexed, they will be governed without regard to Constitutional limitations. The advocates of this policy do not seem to be conscious, in making this avowal, that they furnish an overwhelming argument against holding Asiatic possessions, where, from necessity, Congress must invest the President with a trinity of power—executive, legislative, and judicial—which is the very essence of despotism. It means the creation of a great Oriental monarchy and an attempt to establish at Washington the empire of the Caliphs of Bagdad. It is not much comfort to be told that our President will be another Haroun al-Raschid. Mr. Platt quotes from a speech of Mr. Webster's the following language as to the power of Congress over the Territories: "It may establish any such government and any such laws in the Territories as in its discretion it may see fit. It is subject, of course, to the rules of justice and propriety, but it is under no Constitutional restraints." He also cites with approval, as does Mr. Foraker, the acts of Congress that made the President absolute dictator in the Territories of Florida and Louisiana, and a late decision of the United States Court of Appeals for the Ninth Circuit (86 Fed. Reporter, 456), the syllabus of which reads: "Congress has full legislative power over the Territories, unrestricted by the limitations of the Constitution." The Court was unanimous, and the opinion is supported by references to Supreme Court decisions tending in the same direction. Be it so; then let us beware of intrusting Congress with this colossal power to be delegated to the President, except in a case of absolute necessity. If there were a rocky island in the Pacific beyond our jurisdiction that was a Gibraltar which commanded the entrance to the Golden Gate, no one would question the propriety of our acquiring and holding it in self-defence. No such reason can be alleged for our holding the Philippines, but just the reverse. They would be a weak point in war which we should have to defend. The force detached to defend them could be of no use anywhere else.

The occasions for using despotic power should be reduced to a minimum; familiarity with it abroad may gradually sap and undermine all the safeguards of freedom at home. In such a school the Prætorian bands were trained. A government of the Philippines must be a despotism or no government at all. Asiatics are not fit for anything else. Mr. Foraker says we will hold them only temporarily until these people are fit for self-government. But all people are fit for self-government in their own way. Asiatics and Africans are as contented with their forms of government as we are; they never will be with ours. But why confine our philanthropy to the Philippines? Why not embrace all Asia in this benevolent scheme to regenerate mankind? The Velled Prophet of Khorassan undertook that. But we can't govern Asiatics consistently with those principles of liberty that are embodied as a bill of rights in the first ten amendments to the Constitution. Congress can establish a religion, extend the Anti-Polygamy Act to the archipelago, or grant an indulgence

to Mussulmans and let them follow the example of Mahomet; it can enact bills of attainder and ex-post-facto laws, and deprive men of life, liberty, and property without due process of law. The islands will be governed as a Crown colony, and the President will be King of the Philippines. How long, then, will it be before that immortal ode—"Alexander's Feast"—will cease to be simply an imaginary picture of a scene in a long-buried past? But those who rely on the authority of Mr. Webster have failed to heed his prophecy of woe in a speech against expansion and imperialism delivered shortly before the one quoted. He said:

"Arbitrary governments may have territories and distant possessions, because arbitrary governments may rule them by different laws and different systems. Russia may rule in the Ukraine and the provinces of the Caucasus and Kamtschatka by different codes, ordinances, or ukases. We can do no such thing. They must be of us, part of us, or else strangers."

The italics are Webster's. The fact that the advocates of annexation claim this gigantic, extra-constitutional power proves that it is their purpose to exercise it.

JNO. S. MOSBY.

SAN FRANCISCO, January 29, 1899.

THE DILEMMA OF THE FILIPINOS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the missionary argument for expansion, the clergyman under whose ministry I sat last Sunday offered the following petition on behalf of the Filipinos:

"We pray Thee that those who prefer to remain in darkness, and are even willing to fight in order to do so, may, whether willingly or unwillingly, be brought into the light!"

Instantly there came to my mind the naïve remark of the pious author of the 'Chanson de Roland,' in describing one of the victories of Charlemagne over the Mussulmans:

"En la citez nen at remes pelen
Ne seil ocis, o devient crestiens;"

—that is to say: "There was not a pagan left in the city who was not either killed or made a Christian." So may it be in Manila, when a similar dilemma is prepared for its inhabitants!

The serious aspect of this matter is that, just as there were united in Charlemagne a greed for aggrandizement and a piously barbarous desire to make Christians by conquest, so we see joined together to-day—not in the same individuals, but in the unnatural coöperation of the most diverse dispositions—the imperialism of selfishness and the imperialism of philanthropy. Each forgets that its greatest successes in the past have been due to an appearance of disinterestedness. But no wonder that we move so fast with two such allies hand in hand!

Yours very truly,

RAYMOND MACDONALD ALDEN.

UNIVERSITY OF PENNSYLVANIA,
January 30, 1899.

FRANKLIN'S "ANECDOTE."

TO THE EDITOR OF THE NATION:

SIR: Just before the proceedings of the first American Congress of 1774 reached Great Britain, the King suddenly dissolved Parliament, and issued writs for a general election. It was a move of peculiarly shrewd "politics," for the Ministry had every reason to believe that the proceedings of Congress

would be conciliatory, tending to allay the heat of the English public against the colonies; and by thus prematurely forcing a new election while the public was still excited against America, it was hoped that the Government majority would be increased—a theory which proved eminently successful in practice. When the proceedings of the Congress were transmitted to Parliament, they came before men prepared to give them no heed, and were referred, with a great mass of other papers, to a committee which Edmund Burke happily styled "the Committee of Oblivion." Franklin, who was then in London, drew up what he termed an "anecdote" of the King's speech for the meeting of this Parliament, undoubtedly intended for publication in the press of the day, but which, so far as I have been able to learn, was not printed then, and is included in no collection of his writings, yet which deserves to be known, both for its clever imitation and for its shrewd prophecy.

Very truly yours,

PAUL LEICESTER FORD.

BROOKLYN, February 8, 1899.

ANECDOTE

The intended speech for the opening of the first Session of the present Parliament vis Nov' 29 1774

My Lords and Gentlemen

It gives me much concern that I am obliged at the opening of this Parliament to inform you that none of the measures w^h I adopted upon the advice of my late Parl^t in respect to the disturbances of my American colonies have produced those salutary effects, w^h relying upon the supposed wisdom of their deliberations I had been induced to expect. I therefore sent that Parl^t a packing rather abruptly, & have called you in their place to pick a little advice out of your wise heads upon some matters of the greatest weight & importance relating to a sort of Crusade that I have upon my hands. I must needs tell you that the business if you chuse to undertake it for me will be a seven or ten years job at least. You must know then that my ministers have put me upon a project to undertake the reduction of the whole continent of North America to unconditional submission. They w^d have persuaded me to coax you into this project by representing it to you as a matter very easily to be done in a twinkling, and to make you believe that my subjects in America whom you have always hitherto considered as brave men are no better than a wretched pack of cowardly run a ways, & that 500 men with whips w^d make them all dance to the tune of Yankee Doodle; but I w^d tell you no such thing because I am very sure if you meddle with it that you will find it a very different sort of business.

Now Gentlemen of the House of Commons I give you this fair notice for yourselves & your Constituents. If you undertake this job it will cost you at the least farthing a good round sum of 40 or 50 millions; 40 or 50 thousands of your Constituents will get knocked on the head and then you are to consider what the rest of you will be gainers by the bargain even if you succeed. The trade of a ruined & desolated Country is always inconsiderable, its revenue trifling; the expence of subjecting & retaining it in subjection certain & inevitable. On the other side sh^d you prove unsuccessful, sh^d that connexion w^h we wish most ardently to maintain be dissolved, sh^d my Ministers exhaust your treasures & waste the blood of your Country men in vain will they not deliver you weak & defenceless to your natural enemies?

You must know this is not the first time that the Serpent has been whispering in to my ear, Tax America. Coax what it will, make them your bawlers of wood & drawers of water.

Let them feel that your little finger is thicker than the loins of all your ancestors. But I was wiser than all that. I sent to L^d Rockingham & the advice that he gave me was this, not to burn my fingers in the business. That it was ten to one against our making any hand of it at all, that they were not worth shearing & at best that we sh^d raise a cursed outcry & get but little wool. I shall remember his last advice to me as long as I live. Speak good words to them and they will be thy Servants forever.

And now my Lords & Gentlemen

I have stated the whole matter fairly & squarely before you. It is your own business, and if you are not content as you are, look to the rest for yourselves. But if I were to give you a word of advice it should be to remind you of the Italian Epitaph upon a poor fool that kill'd himself with quacking

Stava ben, por star meglio, eto qui.

that is to say. I was well, I would be better, I took Physick and died.

A NEW ERA IN COTTON.

TO THE EDITOR OF THE NATION:

SIR: The greatest event in the history of cotton is Eli Whitney's invention of the cotton gin. Another great event, if not fully as great, is the discovery of a new system of baling cotton by which it is compressed as it leaves the gin-stand to twice the cubic density formerly attainable, and, without the old wrapping of heavy jute bagging and iron ties, but with only a simple neat cotton or burlap covering, it is ready for direct shipment to any part of the world. This system is commonly known as the "round bale."

Under the old system of baling cotton, we are taxed 6 per cent. on every bale of cotton we export. The foreigner buys cotton only. He will pay nothing for iron ties or jute bagging, but taxes every bale 6 per cent. tare for the weight of its wrapping. As cotton is by far the most valuable article for export this country has, the tax is a severe one. The value of our cotton exports for the past twenty years is \$4,367,191,810. The tax the Southern planter has paid and this country has lost in gold amounts to the enormous sum of over \$262,000,000. In the round or Lowry bale the covering weighs practically nothing, and there is no tare. The Southern farmer pays no tax.

A wrapping for cotton that has cost the country's wealth over a quarter of a billion dollars in twenty years should be a magnificent one. As a matter of fact, no great commodity has been handled in the barbarous (I do not speak extravagantly) way cotton has. It arrives at the mills badly exposed, in many cases the bagging almost entirely gone, and the cotton damaged from rain, mud, etc. In the round bale the package arrives at its destination in perfect condition. The farmer saves the loss from damage he used to pay. Because of the greater density of the new bale, ocean freights are one-third to one-half of the old rate. Insurance is also less. In Memphis the Board of Underwriters have recently reduced the rate to one-half that of the old. Every one of these savings is just so many dollars in the Southern farmer's pocket.

A radical revolution in the method of handling cotton cannot be accomplished in a moment. The enormous money investment in compresses will naturally endeavor to protect its interests. But the round or

Lowry bale is such an enormous stride along the path of progress that it is impossible to withstand it. Very few years can elapse before, necessarily, its use will be universal.

W. COLLIER ESTES.

MEMPHIS, TENN., February 1, 1899.

HORACE, DANTE, AND TENNYSON.

TO THE EDITOR OF THE NATION:

SIR: Horace has insinuated himself into many a modern verse, and he was unquestionably "old" and "familiar" for Tennyson. The interesting suggestion of your correspondent, however (*Nation*, December 22, 1898), that the closing lines of "Ulysses" are a reminiscence of Teucer's address to the companions of his voyage (*Odes*, L. 7), at least needs qualification. Surely it is well recognized that the "Ulysses"—if we consider the poem as a whole—was inspired by the twenty-sixth canto of the "Inferno," while the passage in question is not so nearly related to Horace's verse as to the following (112 ff.):

"O frati, dissi, che per cento mila
Perigli siete giunti all' occidente,
A questa tanto picciola vigilia
De' vostri sensi ch' è del rimanente,
Non vogliate negar l' esperienza.
Dietro al Sol, del mondo senza gente."

Dante in his turn, it may be, has Horace in mind—Horace at any rate in this ode, as once or twice elsewhere, is strangely Dantesque; but again, a more obvious original is at hand. Dante knows Horace—at least he cares for him—chiefly as satirist and critic: if the present passage is not an exception, he apparently does not imitate him. Any coincidence, however, with the manner or the words of his *buon maestro* Virgil is at least direct, if not intentional. Here one naturally recalls the familiar verses in the "Æneid" (I., 198 ff.):

"O socii—neque enim ignari sumus ante malorum—
O passi graviores, dabit deus his quoque finem," etc.

Whether these lines are a "charming reminiscence" of Horace's, or *vice versa*, is a more delicate and possibly insoluble question.

It need not be added that while Tennyson was more immediately influenced by Dante's Ulysses, he may well have felt the kinship of all three passages. E. K. R.

TOURS, FRANCE, JANUARY 15, 1899.

THE BEAST-LIKE SOUND.

TO THE EDITOR OF THE NATION:

SIR: I do not remember ever to have seen a protest raised in the press against what seems to the writer a growing tendency, certainly here in the West, to use colloquially, instead of words, sounds termed fitly, I think, *beast-like*.

It strikes one as a sad (though doubtless an unconscious) combination of laziness and under-breeding to hear constantly the *awh*, *awh* of affirmation, the *unh*, *unh* of negation, and the everlasting *awugh?* of interrogation, besides the shades of meaning indicated by kindred sounds which quite fail of coherent expression. Some of these latter variants are, by the way, often amusing by their ingenious adaptation to the passing mood.

Parents early practise the whole gamut upon their children, and I have seen them take apparent hearty pleasure in the "beast-like" replies of the little ones. Teachers in the public schools are victims, and confirm their charges in this original sin. Young

men in trade and professional life give free vent to this sound, and is it to be wondered that young women in society fairly chatter in it? But while rare among older men of position, it seems particularly attractive to women of all ranks and ages. Women of cultivation—indeed, of most gentle and refined manners—persist in introducing the sound to the marring of their English.

The writer hesitates somewhat in putting the matter before you thus at length—amid the general prevalence of the beast-like sound about him, he is indeed "a voice crying in the wilderness"; but possibly the attention of others may be arrested by a condition of our colloquial speech which many (deafened by the iteration of these sounds described) do not heed. At any rate, among your readers I feel sure of sympathy with my plaint.—Yours faithfully,

HENRY LEVERETT CHASE.

ST. LOUIS, JANUARY 24, 1899.

THE PHILOSOPHY OF RHYME.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Prof. Newcomer, settles the question between perfect and allowable rhymes very neatly by defining rhyme to be "recurrence of the same sounds," and leaving the similarity to be determined by the usage of recognized poets. Poetry is verse written by poets, and Shakespeare and Burns are ultimate authorities in rhyming usage. The definition of a rhyme cannot be made *a priori*, but must be induced or generalized from an examination of the verse of those whom common consent calls poet.

Still, their usage is in accordance with certain principles or with the philosophy of the subject. What is the function of rhymes? First, the rhyme marks the termination of the lines, and, by manifold "combination and arrangements," enables us to form a great variety of stanzas, like the rime royale, the sonnet, the Spenserian, the French ballade and rondeau. The Greeks and Romans elaborated stanzaic forms without rhyme, but we cannot do so. These forms give pleasure by their ingenuity as well as by their metrical beauty. For this function of rhyme, perfect rhymes are not necessary. In fact, in one very pleasing form (the *sestina*), identical words in ingeniously changed sequences make the stanza.

The second function of rhyme is to give the pleasure which comes from the perception of temporal acoustic correspondences, or, in plain English, echoes. Leaving on one side the question how far this pleasure arises from the musical sense, and how far it arises from the gratification we take in ingenious constructions, an echo always gives pleasure. But an echo is never an exact repetition. Owing to the motion or changing density of the air, an echo is never a perfect rhyme, and part of the pleasure it gives comes from the very fact that the sound is modified when given back. It may be rather fanciful to say that the rhymes of poets are analogous to the echoes of nature, continually changing in tone and timbre, and seeming to come from something alive and not be struck out with the monotonous iteration of a hurdygurdy; but it is certain that neither is mechanically perfect, and that the lack of perfection is part of their charm.

However, this is a mechanical age, and I

suppose we must have machine-made verse with perfect rhymes, as a "typical product." Fortunately, we are not compelled to read it, but can still enjoy "imperfect rhymes" in Burns's songs and Shakespeare's Sonnets and "Venus and Adonis." Prof. Newcomer is undoubtedly right, too, in saying that there are very few absolutely perfect rhymes in our language, and that the similarity of the vowel sound in two words depends very much on the individual pronunciation. In other words, there are virtually only imperfect rhymes in English.

CHARLES F. JOHNSON.

TRINITY COLLEGE, HARTFORD,
January 30, 1899.

Notes.

M. F. Mansfield & A. Wessels issue immediately 'Studies of the Mind and Art of Robert Browning,' by James Fotheringham; 'Aubrey Beardsley,' by Arthur Symonds; 'The Story of the West Indies,' by Arnold Kennedy; and 'The Long, White Cloud (New Zealand),' by the Hon. William Pember Reeves.

Dodd, Mead & Co.'s spring list embraces Ruskin's Letters to Rossetti and other of his contemporaries; a translation of Joubert's 'Thoughts'; 'Songs of the Rappahannock,' stories by Ira S. Dodd; and a new volume of poems by Paul Laurence Dunbar.

Macmillan Co. announce a translation of Joseph Texte's 'Jean Jacques Rousseau, and the Origins of the Cosmopolitan Spirit in Literature,' by J. W. Matthews; and an 'Elementary History of Greece to the Death of Alexander the Great,' by C. Oman.

'In Cuba with Shafter,' by Lieut.-Col. J. D. Miley of the General's staff; 'A History of Yiddish Literature in the Nineteenth Century,' by Prof. Leo Wiener of Harvard; and 'The Orchestra and Orchestral Music,' by W. J. Henderson (in the "Music-Lover's Library") will be published by Charles Scribner's Sons.

A. C. Armstrong & Son will soon bring out 'Book Auctions in the Seventeenth Century,' by John Lawler (in the "Book-Lovers' Library"), and 'Neglected Factors in the Study of the Early Progress of Christianity,' by Prof. James Orr.

Among the works promised for the coming season by the New Amsterdam Book Co. are 'Dickens and his Illustrators,' by Frederick G. Kitton, containing twenty-two portraits and seventy original drawings, with sketches of each artist's career; 'Twenty Years in the Near East,' by Arden G. Hulme Beaman; 'British West Africa,' by Major A. F. Mockler-Ferryman; 'The Downfall of the Dervishes,' by E. N. Bennett; 'Two Native Narratives of the Indian Mutiny at Delhi,' translated by the late Charles T. Metcalfe; 'Annals of Eton College,' by Wasey Sterry; 'Memoirs of Admiral the Right Hon. Sir Astley Cooper Key,' by Vice-Admiral P. H. Colomb; 'The Canon Law in England,' by Prof. F. W. Maitland; 'Reading and Readers,' by Clifford Harrison; and 'Dante's Garden,' by Rosamond Cotes.

From Doubleday & McClure Co. we are to have 'The Fight for Santiago,' by Stephen Bonsal; 'How to Plan the Home Grounds,' by S. Parsons; 'Through the Turf Smoke,' Irish peasant stories by Seumas MacManus; and Dr. Maurice Jokai's 'Hungarian Nabob,' translated by R. Nisbet Bain.

J. F. Taylor & Co., No. 66 Fifth Avenue,

New York, have in hand a new uniform edition of the Novels and Poems of Charles Kingsley, supplemented by the Letters and Memoirs of his Life, edited by his wife. This "Westminster Edition" will fill fourteen medium 8vo volumes, printed from new type at the University Press, Cambridge. There will be numerous illustrations by Zeigler, Reich, and others. The number of sets will be limited to one thousand.

"Beacon Biographies" is the name selected for short lives of eminent Americans contemplated by Small, Maynard & Co., Boston, under the general editorship of M. A. De Wolfe Howe, as, 'Daniel Webster,' by Norman Hapgood; 'J. R. Lowell,' by Prof. E. E. Hale, Jr.; 'R. E. Lee,' by Prof. W. P. Trent, etc. 'The Memory of Lincoln,' by the same firm and editor, will consist of the very best poems which have to do with Lincoln. Finally, Washington's Farewell Address, with an introduction by Worthington C. Ford, will bear the same imprint.

The handiness of the size of the dozen little volumes of the "Camberwell Edition" of Browning's Complete Works (T. Y. Crowell & Co.) is first to be commended in this venture. The outward appearance also is attractive, and the type is sufficiently large and clear, although the quality of the paper does not permit an elegant impression. The editors, Charlotte Porter and Helen A. Clarke, have supplied "arguments" to the longer pieces, and superabundant notes for followers of the cult if not for school use. The lines are numbered. We must not forget to add that a pretty photogravure frontispiece—portrait, scene from nature, painting, or what not—adorns each booklet.

A new edition of Luce's 'Seamanship,' fourth in number, revised by Lieut. W. S. Benson, U. S. N., has been issued by the D. Van Nostrand Co., after an interval of fourteen years from the previous one. This textbook, which is still prefaced by a short note from its distinguished author, Rear-Admiral S. B. Luce, U. S. N., has been brought up to date and to the battle-ship era without omitting anything of value concerning the handling of craft of various kinds under sail alone. Its value would be still further enhanced by a fuller treatment of the handling and qualities of vessels of two and three screws based upon experience and the discussions in the *Revue Maritime*, but it still easily maintains its lead as the best textbook of the kind in the language. Its appendix has been rendered especially valuable by the part relating to the definition of technical terms used in modern naval construction.

Albert Lavignac's 'The Music Dramas of Richard Wagner and his Festival Theatre in Bayreuth' (Dodd, Mead & Co.) is a book for which there ought to be a brisk demand this season when we are having Nibelung cycles, and Wagner operas two or three times a week. M. Lavignac is professor of harmony at the Paris Conservatory, and as the Parisians are just at present perhaps the most enthusiastic of all Wagnerites, his volume was warmly welcomed there. Esther Singleton has made a readable English version of it, retaining all the musical examples as well as the pictures and portraits, adding to the latter one of the late Anton Seidl, as the latest addition to the list of Bayreuth conductors. Only two days before his death Mr. Seidl wrote to the translator giving some information about Bayreuth which is printed on p. 510. M. Lavignac begins his volume

with a sketch of life in Bayreuth, which is followed by the story of Wagner's life, briefly told. Then follow analyses of the poems and music of the operas from "Tannhäuser" to "Parsifal," written with French lucidity, and avoiding technicalities as far as possible. In his naming of the Leitmotives he does not always follow Wolzogen's lead, but that is no ground for complaint. The appendix contains Bayreuth casts from 1876 to the present day; also tables of Bayreuth rehearsals, with other information not accessible elsewhere. In brief, M. Lavignac has justified his temerity in writing "the thousand and first book on Wagner."

'Leslie's History of the Greater New York,' by Daniel Van Pelt (Arkell Publishing Co.), disposes of New York proper in one volume and of the outlying boroughs in another. The work is frankly a popular compilation, not a philosophical history in any sense. For example, the career of Tweed and his gang is rehearsed justly and in proper reprobation, but the continuity between Tweed and Croker, or between the ring system and the boss system, is not even suggested. In fact, Croker's name does not, we believe, appear in these pages—but there is no index. Apropos of Tweed, it is well to be reminded that Spain extradited him for punishment in courteous excess of treaty requirements. These volumes are freely and not badly illustrated.

A checked fate is revealed in the history of Norwich University, compiled by William A. Ellis, B.S. (Concord, N. H.: Rumford Press). This institution has more than once changed its name and its location—from Vermont to Connecticut, and then back to Vermont; from Norwich to Middletown and Northfield. Its original style was "The American Literary, Scientific, and Military Academy"; for a time in distress and deeply indebted to a succoring alumnus, it was dubbed Lewis College. The institution, founded in 1819, has been a feeder to West Point and Annapolis, and its alumni, graduates, and non-graduates, took part in all our wars following that of 1812. Rear-Admiral Dewey is in the latter class, and there are at least three who attained equal rank in the navy—Carpenter, Hiram Paulding, and Boggs. Many of the lesser generals of the civil war; politicians like W. Pitt Kellogg, and Horatio Seymour, and Gideon Welles; notable scholars, clergymen, and men of science, are scattered up and down the biographical sketches here painstakingly put together, with very interesting portraits (often of an early and a later date). Several chapters of reminiscence supplement the introductory chronicle of the University. The work is a useful addition to its kind, and is handsomely printed and illustrated.

The value of the files of the *Library Journal* to the profession has been greatly enhanced by the publication of a 'General Index' (New York) to the twenty-two volumes ending with December, 1897. The early volumes of this series are now rarities, and the Index will at least show him who consults it some part of what they contain on the subjects he is interested in. It is not, however, a compound of the annual indexes, which must still be resorted to for certain details. The compiler, Mr. F. J. Teggart, now the librarian of the Mechanics' Institute, San Francisco, has made a free offering of the fruit of his labors, originally undertaken for his own use. The latest volume was indexed by Miss Helen E. Haines, managing

editor of the *Journal*. The page is printed in two columns, one blank to allow of additions.

Some years ago several fine specimens of historical fiction that betrayed a wonderfully accurate knowledge of the details of church and secular history appeared in Germany and attracted general attention; but for a long time it was not known to the literary world that the "George Taylor" who professed to be the author was none other than Prof. Adolf Hausrath, the Heidelberg church historian. With the sole exception of the late Prof. Ebers, the Leipzig and Munich Egyptologist, Hausrath was the only University man who had successfully utilized his minute investigations for the purposes of fiction; and he possessed the advantage over Ebers that he did not modernize his characters in thought and action. Hausrath has recently brought out a new novel, entitled 'Pater Maternus,' "a romance of the seventeenth century." The scene is laid in Italy, and depicts the experiences of a young Augustinian monk, who goes to Rome to find peace for his soul, and finds it there—not where he expected, but in the house of a converted Jew. Hausrath is peculiarly happy in a piquant style, reminding the reader of Renan. In 'Pater Maternus' the author evidently had in mind the personality and experiences of Luther.

Tennant & Ward, New York, announce for March 1 a new monthly magazine, the *Photo-Miniature*. The first number will treat of Modern Lenses, and each issue will be a like monograph pertaining to the theory or practice of photography.

Rhodora is the name of a new monthly journal published by the New England Botanical Club under the editorship of Dr. Benjamin Lincoln Robinson, curator of the Gray Herbarium of Harvard University. Its aim is to further the study of the local flora. Among the contents of the initial number are brief articles on "Rattlesnake-plants," "A New Wild Lettuce," each with a plate, as well as notes on "Fleshy Fungi near Boston" and on "New England Algæ." Among the contributors are Dr. Robinson, Merritt L. Fernald, and Hollis Webster of Harvard University.

Petermann's Mittheilungen, number twelve, contains the concluding parts of the monograph on West African culture by L. Frobenius, and the account, by N. A. Busch, of his journey in the northwestern Caucasus. There is also the useful index of the geographical literature of 1898, which shows a large increase of noteworthy works over the previous year. Out of the 884 titles, 176 relate to works on universal geography, 294 to Europe, 94 to Asia, 82 to Africa, and 53 to the United States.

Nine articles on the political situation in Austria by Dr. Max Menger, originally published in the *Neues Wiener Tageblatt*, in June and July, 1898, have been reprinted in pamphlet form (Vienna: Steyermühl), and form a convenient means of gaining an insight into the critical condition of Austrian affairs. An appendix contains the several ministerial decrees concerning the use of the German and the Czechic languages in Bohemia and Moravia.

The opening of the first free public library and reading-room in the large and wealthy city of Nürnberg makes one reflect with wonderment on the almost universal lack of such institutions in German cities. This is, no doubt, to be accounted for by the exist-

ence of so many excellent libraries, open to scholars and the higher classes generally, and of the popular *Leihbibliotheken*, which, to a certain extent, meet the wants of the middle and lower classes. The foundation of free public libraries of a higher order, with well-appointed reading-rooms, however, has commenced at last, with the result of proving that a real demand for them exists. At Nürnberg the opening of the first was even immediately followed by the demand for a second in another part of the city.

The university statistics of Germany for the current winter semester give little promise of the speedy solution of the "learned proletariat" question, which has vexed and perplexed the authorities for a decade and more. There has been, during all these years, an overproduction of university graduates, an excess of supply over demand. The state has been able to utilize only a certain portion of the finely educated specialists who offered their services in the departments of theology, law, medicine, and the various branches found combined in the philosophical faculties. Bismarck on more than one occasion declared in Parliament that these disappointed graduates furnished the brains of the Social Democratic party. Accordingly the authorities have been rather discouraging than encouraging attendance at the universities, and have proposed in various ways to make admittance more difficult, *e. g.*, by denying it to the graduates of the Real or scientific schools, and admitting only those who had finished the Gymnasium or classical course. Notwithstanding all this, the attendance has steadily increased, and now has reached the high-water mark in 32,233 matriculated students, or more than a thousand beyond the contingent reported last winter, when it was 31,110.

Miss Alice Bache Gould having given to the National Academy of Sciences more than a year ago the sum of \$20,000 to establish a fund to be known as the Benjamin Apthorp Gould Fund, in memory of her father, a sufficient available income has now accrued to warrant beginning its distribution, in accordance with the terms of the trust and a letter of instructions from the donor, to assist in the prosecution of researches in astronomy. Prof. Lewis Boss of Albany, Dr. S. C. Chandler of Cambridge, and Prof. Asaph Hall, formerly of Washington, are the directors of the trust, and they are now prepared to receive and consider applications for appropriations. The objects of the Fund are, first to advance the science of astronomy; second, to honor the memory of Dr. Gould by insuring that his power to accomplish scientific work shall not end with his death. Work in the astronomy of precision is to be given the preference in all cases over any work in astrophysics, both because of Dr. Gould's especial predilection and because of the present existence of generous endowments for astrophysics. In recognition of the fact that during his lifetime Dr. Gould's patriotic feeling and ambition to promote the progress of his chosen science were closely associated, it is preferred that the fund be used primarily for the benefit of investigators in his own country, or of his own nationality. As, however, it is recognized that sometimes the best possible service to American science is the maintenance of close communion between the scientific men of Europe and of America, even while acting in the spirit of this restriction the directors may occasion-

ally judge it best to make a grant in aid of a foreign investigator working abroad.

The regulations for the award of the Rinehart scholarship in sculpture in 1899 have just been issued by the Rinehart Committee, Peabody Institute, Baltimore. We cannot summarize them further than to say that examples of work by candidates—"relief, figure in the round, and drawings"—must be sent to W. S. Budworth & Son, No. 424 West Fifty-second Street, New York, marked "Rinehart Scholarship," on or before March 25 proximo. The scholarship yields \$1,200 per annum and may be held for four years, with lodging in the Villa dell' Aurora, the home of the American Academy in Rome.

—*Harper's Monthly* for February opens with an illustrated article of some interest on "Lieut.-Col. Forrest at Fort Donelson"—a condensed chapter from a life of General Forrest by Dr. John A. Wyeth. The point of the paper is that the Confederate troops surrendered were sacrificed unnecessarily; that they might all have escaped, as Forrest and his men did, quite unmolested by the Federal army. The author seems to have accumulated a mass of evidence on the subject, and if he is right, of course what happened afterwards might have been different; but the main thing was the loss of the fort, and to prove that this might have been saved is a pretty difficult task. Of one thing there is no doubt, that Forrest refused to surrender, and expressed the opinion at the time in his report that, had the Confederates renewed the fight the next day, they would have gained a victory, "as our troops were in fine spirits, believing we had whipped them." Mr. Henry Cabot Lodge, who has just finished a history of the Revolution, begins his "Spanish-American War." His historical style is not unlike that of a good many others, but his idea of turning historian to justify his own political course is a good one. His Massachusetts vassals will read this history with varied emotions. What we enjoy most about him is his ingenuity. He says of the *Maine*, that had Spain shown "a generous sympathy" and made "a prompt offer" of reparation, she might have saved herself. Now, any one would imagine from this that Spain refused sympathy and made no offer. The fact, of course, is that Spain offered to submit the whole matter to arbitration, and abide by the result, whatever it might be. But let no one charge Mr. Lodge with misrepresentation; what he said was *generous* sympathy, and a *prompt* offer; the sympathy was not generous enough, and the offer should have been two days or so earlier. Again, he gives an account of the *Virginus* case, in which he says that war was averted because "the forces which cared nothing for humanity and a good deal for an undisturbed money market prevailed." The fact, of course, was that Spain acceded to all our demands, and we could not go to war, because, as our Gibbon says in his next sentence, the papers of the *Virginus* proved to be fraudulent. She was not an American ship. Mr. Lodge accuses the Cleveland Administration of "neglect of the cases of American prisoners" in Cuba. Now, Dr. José Ignacio Rodríguez, who was counsel for one of these prisoners, the celebrated Julio Sanguilly, and himself took part in the former Cuban Revolution, who has for many years resided in Washington, and who recently accompanied our Peace Commission to Paris as an expert in Spanish law, wrote a full

account in 1897 of this case of Sanguilly. Speaking of himself as counsel, he says on page 55 of his pamphlet: "He knew by his own personal experience, covering more than a quarter of a century of daily contact with the State Department, not to say anything of historical teachings, that in the matter of protection to American citizens against injustice and oppression on the part of Spain, and in the fulfilment of this duty, manly [manfully?] as well as efficiently, the Administration of Mr. Cleveland, with Secretary of State Mr. Gresham and Secretary of State Mr. Olney, has a record which its enemies cannot obscure, and which challenges comparison with that of all the other administrations which preceded it."

—The *Reminiscences* of Julia Ward Howe, of which the third instalment appears in the *Atlantic* for this month, carry us back to a society now almost obliterated, that of the London of 1842-3, when Sydney Smith was in his prime, when the English of American guests was still curiously listened to and benevolently corrected, when the story of Laura Bridgman was new, when Carlyle was beginning his career, and Macready was acting *Claude Melnotte*, and Fanny Elssler was dancing, and Almack's was in its glory, and Charles Sumner was a young man—according to Carlyle "a vera dull man," of promise. Americans then went abroad well provided with letters of introduction, and, besides this, Mr. Howe, as his wife observes, was then "a first-class lion." Perhaps as curious an anecdote of manners as any is one of Dickens's behavior on hearing Mrs. Howe interject a term of endearment in some remark addressed to her husband. "Dickens slid down to the floor, and, lying on his back, held up one of his small feet, quivering with pretended emotion: 'Did she call him "darling"?' he cried." According to Sydney Smith, Mrs. Howe made only one slip in pronunciation. She should have called the House of Lords "the House of Lards." Purveyors of realistic fiction will find the collection of "Farewell Letters of the Guillotined" worth study. They are a mass of letters from the victims of the Reign of Terror, written by them just before being executed; they show that people brought face to face with inevitable death become calm, not excited. "Only in one instance is there a breath of malediction." "The Subtle Problem of Charity," by Jane Addams, is valuable chiefly as giving a striking picture of the essential contrast between the worlds in which the well-to-do and the poor live. In one case the only plausible explanation which suggested itself of the charitable efforts of a "visitor" was that the beneficiary had discovered an awful family secret involving her, and that the charity was merely disguised blackmail. One economical point is that the rich avoid early marriages partly because they do not want too many dependent children; the poor marry early partly because they hope that some of their children may soon contribute to the family purse, and perhaps support their parents in their old age. In other words, among the poor, children are, or are thought to be, so much potential capital.

—The Hon. George F. Hoar contributes to *Scribner's* his reminiscences of "Four National Conventions," 1876-1888. His constitutional dislike to say anything unpleasant about members of his own party prevents his giving an effective account of the struggles which have rent it during the last twenty

years. Of Mr. Blaine, after his defeat for the Presidency, he makes the curious remark that "his subsequent career in the Department of State, I believe, satisfied the majority of his countrymen that he would have made an able and discreet President." Of Garfield he says that he has heard men who knew him very well when the leader of the House, say that they never could feel sure that "he would not get wrong at the last moment, or have some private understanding with the Democrats and leave his own side in the lurch." This, he says, he feels sure was a great mistake. "Garfield's hesitation, want of certainty in his convictions, liability to change his position suddenly, were in my opinion the results of intellectual hesitation, and of a habit of going down to the roots of his subject before he made up his mind." Mr. W. C. Brownell's essay on Thackeray is the most substantial piece of writing in the number. It is useless to attempt to quote from it, especially as Mr. Brownell's method is not that of definition or epigram. Perhaps part of it might be summed up by saying that while the great dramatists give us real characters, the novel of Thackeray gives us real characters plus the showman, who happens to be also a great humorist, a man of the world, and a poet, too, for that matter.

—The *Century* has for its leading illustrated article an account, by Frederic Courtland Penfield, formerly United States Diplomatic Agent and Consul-General, of the steps being taken to enlarge the cultivable area of Egypt. Among the pictures, by R. Talbot Kelly, is one of Philæ as it is, but as it will no longer be after the great dam at Assuan is constructed. What Mr. Penfield calls the "practical Egypt" is a small country—the ribbon-like strip of alluvial land bordering the Nile, measuring not more than 10,500 square miles (barely as much as the States of Vermont and Rhode Island together); while the extension planned, and to be completed in the next six or eight years, will add some 2,500 miles more. Gen. Shafter gives a long account of "The Capture of Santiago de Cuba," which is a very colorless reply to his critics. He declares in substance that he managed the campaign well, and that the celebrated "round robin" was merely a reaffirmation by his officers of opinions already expressed to them by their commander. When he telegraphed to Washington that he was "seriously considering withdrawing about five miles and taking up a new position," he was actually "preparing to push the siege," and, hearing about this time that Cervera had "gone to his doom," he dashed on to victory.

—The January issue of the Oxford English Dictionary (New York: Henry Frowde) carries the letter H to Hod, and Dr. Murray promises the remainder by July 1. Few instalments have better exhibited the historical richness of this word-book. We pass over the bewildering variety of forms of the pronoun of the third person, mostly obsolete (like *hise* and *hern*); we refer rather to such information as is to be found under Hell, where is set forth its Biblical translation of Jewish and Christian use; under the much controverted Hide (of land); under the (Cossack) Hetman, captain, and (Polish) Heyduck, brigand, and obsolete (Old English) Henchman, muleteer or groom, revived by Scott with a Scotch twist as gillie, and

given a political partisan sense in this country; under Highness, where the application of the title is nicely explained; under Hill, where we are told that in England any eminence, to be a mountain, must exceed 2,000 feet; under Heresy, whose "earlier sense-development from 'religious sect, party, or faction,' to 'doctrine at variance with the Catholic faith' lies outside English," and Heretic, in which "the position of the stress, as differing from words immediately from Greek or Latin, such as *ascetic*, *theoretic*," is due to derivation through the French; under High (a remarkably long article), where Chaucer is shown to have set the pace for Spenser in squaring his orthography with his rhyme, using "both *heigh* (*hey*) riming with *seigh* saw, and *hy*, *hye* riming with *Emelye*, etc." It is curious to learn that Hockey makes an isolated appearance in 1527, and recurs first with Cowper in 1785; that Hereabout (1225) and Hereaway (1483) took on a final *s* first in 1584 and 1613 respectively; that Helpmeet is a nineteenth-century word, and not found in Webster as late as 1832; that the substantive Hem is as old as 1,000, while the verb, to edge, is not known before the fifteenth century; that the verb Hem, to clear the throat, dates from 1470, the interjection Hem! only from 1536 (Skelton). This latter date is posterior to the publication of Erasmus's 'Colloquies,' but the interjection is English, and the great Dutchman had already made his two sojourns in England. We may, therefore, suspect that he there picked up the word for the colloquy, "Virgo Pœnitens," where we read: "Hem, male sit huc tussal" (Hem! hang this cough). The word being foreign alike to Latin (in this sense) and to the Continent, the editors of the 'Colloquies' found it necessary to explain this "aside" as "feigning a cough" (so the Amsterdam Elsevir 1662, and even Roger Daniel's London edition of 1655). *Per contra*, Dr. Murray records no sign that another neologism of Erasmus's, in "Abbatis et Eruditæ," viz., the use of *heroinearum* in the sense of 'great court ladies,' has affected our English Heroine at any period. "Potentes aulicas, quasi semidas," is the Elsevir gloss, and Daniel's likewise. It was, by the way, another Daniel (Samuel), in his 'Defence of Ryme,' who flouted Erasmus as having "brought no more wisdom into the world with all [his] new revived words than we find was before."

—If George Herbert, in 1633, depicted Hell as "full of good meanings and wishings," it was Johnson in Boswell who paved the place with good intentions. "Hell of a row" has been detected in the *Morning Post* of June 26, 1810, two years before James and Horace Smith's pun in the 'Rejected Addresses' ("Punch's Apotheosis"):

"I'm Juliet Capulet, who took a dose of bellebore—
A hell-of-a-bore I found it to put on a pall."

Among the compounds we look in vain for Hell-bent, as "Maine went for Governor Kent." But America has been by no means neglected. Richard Grant White's Heterophemy is here, and Peter Herdic's vehicle named for him; Old Hickory, and Hickeys; Emerson's "hitch his wagon to a star"; Heeler, ascribed to the New York *Herald* in 1877; Hired (man), which is treated at considerable length as a notable Americanism; Highfalutin; and Highbinder, to which Poe gave the clue, proving the name to have been adopted by a gang of New York ruffians on the North River side of lower Broadway in 1805. The word has now changed its coast

and its nationality—*calum, non animus*—designating (since 1887 at latest) a secret gang of Chinese desperadoes in California. The vehicle of this transmigration will probably always remain a mystery. American, too, is our telephone call, Hello!, though it is making its way in England, as is shown by a quotation from Mary Kingsley along with "Are you there?" "Who's there?" is also common in England, we believe. In Germany the formula is self-introductory—"Here is —." Under Heterodoxy we find quoted from Carlyle's French Revolution (1837) "the difference between Orthodoxy or *My-doxy* and Heterodoxy or *Thy-doxy*." When Orthodoxy in turn is reached, we may hope to meet with Franklin's original version of this pleasantry ("Orthodoxy is my doxy, and heterodoxy is your doxy," given as one of Franklin's "definitions" in John Adams's diary, November 30, 1779, Works, 1851, iii., 186).

—It is well known that Dr. Karl Dändliker of Zurich, the author of a learned 'Geschichte der Schweiz' in three volumes, has also written a manual of Swiss history which, like his larger work, is held to be a standard authority by German readers. We announce with great pleasure the appearance in English form of this one-volume sketch. The translation is entitled 'A Short History of Switzerland,' and has been made by E. Salisbury (Macmillan). The chief cause of the satisfaction which we feel at the appearance of this book is quickly stated. To the best of our knowledge no thorough study of Swiss history (leaving aside essays or monographs on constitutional topics) has yet been published by an English-speaking author. One could easily recall the titles of several books which make pretensions, but in no case are we aware that fulness of erudition is a chief characteristic. In all of them the hand of the book-maker rather than that of the mature scholar is apparent. Mr. W. A. B. Coolidge's notices of the separate cantons in the 'Encyclopædia Britannica,' and his articles in the *English Historical Review*, alone show adequate information; but, unfortunately, they are not comprehensive. Moreover, we lack, in English, translations of Vulliemin, Rilliet, Dändliker (the *opus*), and Dierauer. Translations should not be permitted to take the place of original works in one's own language, but in the present instance we welcome a good epitome of Swiss history from whatever source it comes. Concerning Dändliker's scope and the quality of his writing, much might be said were this the proper place for an extensive review. He is not picturesque nor even animated, but he is clear—and that statement carries high praise when applied to a history of Switzerland. For complexity of topics the cantons hardly equal the towns of mediæval Italy, and yet the two may be brought into comparison. Cave-dwellers, lake-dwellers, Helvetii, Romans, Alamanni, Burgundians, and Franks are easily managed; nor does the League of Forest Cantons present much difficulty. But when the earlier *Bund* becomes one of eight, and this again a *Bund* of thirteen, the threads mingle so blindly that skill is required in keeping the clue. Dändliker, besides being a master of the facts, is intelligent and intelligible. It follows that the sketch now translated should take rank before any other manual which is available in English. The English ver-

sion of it must also be commended for smoothness and accuracy.

BISMARCK'S REFLECTIONS AND REMINISCENCES.

Bismarck, the Man and the Statesman: Being the Reflections and Reminiscences of Otto, Prince von Bismarck; written and dictated by himself after his retirement from office. Translated from the German under the supervision of A. J. Butler, late Fellow of Trinity College, Cambridge. Two volumes, xxi, 415; xx, 362 pp. Harper & Bros. 1899.

Bismarck was a nervous man, even by the American standard; and his life was an incessant struggle for self-control. When the policy of the Government was strongly attacked in the German Parliament, and his attention, as often happened, was so wholly centred upon his opponent that he forgot himself, he was wont to display his irritation and impatience in every line and movement of his face and body; and when, almost before the last sentence of the attack was ended, his huge form lurched up, the auditor who was unfamiliar with the Chancellor's characteristics naturally expected an outburst of invective. Bismarck, however, invariably began his reply in a tranquil tone, meeting his adversary's arguments either with a dispassionate statement of the facts as he viewed them, or with gentle and apparently good-humored persiflage. At the moment when the strain of waiting was over and the responsibility of public speech began, the life-long habit of self-mastery asserted itself.

Something of the surprise which strangers in the galleries of the Reichstag always felt on such occasions will undoubtedly be aroused in the reader who lays down Busch's diary and takes up Bismarck's memoirs. As Busch displays him, Bismarck was intolerant of differences of opinion, impatient at the least delay in the realization of his purposes, and unable to see any good qualities in those who crossed his policy. In his own book Bismarck discusses his political struggles with perfect calmness; describes his royal masters and their consorts, his associates and his enemies, with apparent freedom from prejudice, or at least with an obvious effort at faithful portraiture; and writes throughout, as he spoke in the Reichstag, with almost perfect self-control and in a tone and manner that are worthy of his position and his career. The difference is owing partly, of course, to the mere interval of time, but mainly to the sobering sense of responsibility. To an underling like "little Busch," supposed to be devoted and trusty, he might say anything; to the German public and to future generations he would say nothing that was not seemly. As far as the manner is concerned, he has, in fact, said nothing unseemly, not even of Augusta. As regards the matter, it may be questioned whether he has not, in her case, made revelations which a good royalist should have suppressed. How he has dealt with William II., we do not as yet know, for the memoirs close with the reign of Frederick III. It has been stated, in the German press, that a third volume exists, but that the family does not intend to publish it at present.

To the historian the chief value of Bismarck's reminiscences will be found in the fact that upon some important points they

substitute direct for indirect evidence, and personal for hearsay testimony. Apart from this, it cannot be said that the book makes any important contribution to our knowledge of events or of their causes. Bismarck's Frankfurt dispatches and Sybel's history, to say nothing of the letters and memoirs of other participants in the political life of the period, had practically covered the ground down to 1870. For the following decades there were, indeed, no publications of the same authority. But Bismarck's diplomacy was, on the whole, unusually above-board; his indiscretions, if revelations that were for the most part deliberate can be so termed, were numerous; and after his retirement from office he inspired not only occasional editorials and magazine articles, but solid books like Blum's. So much, therefore, had already been told that there was really little left to tell, and in his reminiscences Bismarck attempts no complete or even connected narration. He aims at little more than to furnish supplementary material, to throw side-lights upon events, and to make us better acquainted with the personal influences that were operative in the courts and in diplomacy.

What weight the historian is to attach to the new matter is a question that the future historian will have to settle for himself. So much, however, is already clear: no such falsification of history has been attempted as Busch's book had led the public, or a part of the public, to expect. Nor are the charges that have already appeared in German reviews of the book—charges of *suppressio veri* and *suggestio falsi*—to be taken as more authoritative than Bismarck's own story. It goes without saying that no man, however honest his effort, can describe the events of his own life with absolute veracity. They arrange themselves in his own mind, in greater or less degree, as they should have been. This process of rearrangement, however, has been going on, not in Bismarck's mind only, but also in the minds of all the surviving participants in the events which Bismarck describes; and the resultant divergence of recollections is a phenomenon with which historians are as familiar as are courts of justice. In one direction only does it appear that Bismarck has consciously suppressed—or rather ignored—a part of the truth. Like Sybel, he lays much stress upon the Prussian efforts from 1862 to 1866 to reach an understanding with Austria; and he at least permits the reader to assume that his real object during these years was rather to divide with Austria the control of Germany than to expel Austria from Germany. Again, in stating his reasons for forcing France to declare war in 1870, he passes over the fact which to the ordinary mind would appear to constitute his best reason—the fact that negotiations were in progress for a French-Austrian-Italian coalition against Prussia. It is conceivable that Bismarck is moved in both instances, as Sybel doubtless was in the first, by the desire to avoid offence to Germany's chief ally.

Bismarck's conjectures regarding things that he could not know, are of course entitled to little weight as compared with his testimony about things that he at least might have known. The motives and aims which he ascribes to his opponents in the palace, in Parliament, and in the army, are necessarily hypothetical. Bismarck was a good guesser: a great deal of his success in diplomacy was due to the accuracy of his guesses; but the best guess is something short of evidence.

Assuming that Bismarck has told us only what he believed, we still have difficulty in accepting all the "intrigues" of chapter xxvi. An alliance between Protestant Tories and Ultramontanes, such as occurred after Bismarck's retirement, may well have been preparing in 1878; the Empress Augusta would naturally have favored such an alliance; but we cannot believe that the National Liberal leaders (cf. vol. II., pp. 206, 216) were in such uncongenial company. There can, we think, be little doubt that, after his fall from power, which was doubtless preceded by much pulling of wires and exercise of back-stairs influence, Bismarck had in his old age a touch of the commonest of delusions—that of persecution. We have the first hint in Busch (vol. II., p. 514), when Bismarck declares, just before his resignation, that he is sending off his papers to avoid a probable seizure! This delusion rapidly extended backward and colored Bismarck's view of antecedent facts. In Blum's book, which was largely inspired by the Prince after his retirement, there were nearly as many conspiracies as in the present reminiscences.

Closely allied with this disposition to discover intrigues is the emphasis everywhere laid on personal influence as a factor in determining the course of events. In this, however, there is no suggestion of anything less than perfect sanity of judgment. Bismarck is making no guesses and advancing no theory; he is simply giving us the result of his experience. His own career, his own influence in shaping history, have been a striking demonstration of the one-sidedness of Tolstol's saying, that great names are merely the labels that we affix to events. Bismarck's reminiscences reinforce the demonstration by showing the influence exercised by lesser men in high places. His reflections drive the lesson home: no one can read his acute criticism of Prussian policy from 1790 to 1859 without seeing how different the course of events must have been if the third Frederick William had been less dense, the fourth less erratic, and both of them more willing to take risks. This insistence on the personal element lends to the story in many passages a dramatic interest that few histories possess; and the masterly studies of the chief actors will make the book live as literature. Frederick William IV., William I., Augusta, and Gortchakoff, for example, have become as real, in these pages, as any characters in fiction; and they are made real after the best literary fashion, not so much by direct description, good as this is, as by their acts and words in little matters.

In the same way, Bismarck makes himself real; and perhaps the most interesting question that the book raises is this: How far does Bismarck's Bismarck, as revealed in these reminiscences, differ from the Bismarck that we have already known? Here again we can only say, as we have said of the contribution the book makes to our knowledge of history, that we obtain from it new data, but nothing to change our general impressions. We find a nature fundamentally aristocratic. We find an intellect of marvellous clearness, that sees things exactly as they are, not warped by prejudice or colored by desire. We find a constructive imagination of the highest order, which enables its possessor to divine things he does not know, and to foresee things he cannot reason out. We find a temperament of restless energy; a will of iron, or rather of steel, because it is

supple; and a courage that often seems audacity. On the side of morals we discern, as in the case of all greatly successful statesmen, a sharp if unexpressed distinction between private and public affairs. In public affairs, the only test of right is advantage—not, of course, the advantage of the statesman, not even the advantage of the king, but the advantage of the state. This, in Bismarck's case, was not simply the state whose affairs he was administering; not simply Prussia, from 1862 to 1866; not simply the North German Union, from 1866 to 1870; but the state that he aimed to create—the national German State.

Bismarck's "realism," as it has often been called, finds striking expression in chapter xii., in which he describes the loyalty of the average German to his dynasty, and explains the absurdity of the attempt to unify Germany over the heads of all the dynasties:

"Whatever may be the origin of this factitious union of particularist elements, its result is that the individual German readily obeys the command of a dynasty to harry with fire and sword, and with his own hands to slaughter his German neighbors and kinsfolk, as a result of quarrels unintelligible to himself. *To examine whether this characteristic be capable of rational justification is not the problem of a German statesman, so long as it is strongly enough pronounced for him to reckon upon it*" (vol. i., p. 324).

The italics are ours. The adjective "factitious," by the way, which suggests a judgment, is interpolated by the translator; there is no warrant for it in the "partikularistische Zusammengehörigkeit" of the original.

Of Bismarck's frankly avowed disregard of interests other than German, an excellent illustration is given in chapter xv., which deals with the Polish question. He explains that, in the early sixties, there were at the Russian Court two parties: the one friendly to Poland and to constitutional government both in Poland and in Russia; the other hostile to Poland and devoted to absolutism. The former party was 'inclined to a French alliance; the latter to a Prussian. "It was our interest," Bismarck writes, "to oppose the party in the Russian Cabinet which had Polish proclivities" (vol. i., p. 340). He therefore used all his influence, first as Ambassador and afterwards as Premier, to frustrate the reform of Polish and of Russian institutions. It is possible that the programme of the Polonophiles was not in Russia's interest; it may be that Poland was irreconcilable, and Russia itself unripe for constitutional government; but Bismarck does not consider it necessary to discuss these questions. "It was our interest" is final. His duty was to Prussia; not to Poland or to Russia or to humanity.

The title which Bismarck gives his book is exactly descriptive of its contents. He has not attempted to write his own life or the history of his time; he has simply given us certain "reminiscences." These, in the majority of instances, are selected less for their own sake than to furnish a text for "reflections"; and there are several chapters which are simply reflections upon German policy, domestic and foreign. There can be little doubt that Bismarck's chief motive in writing the book was to influence, by his arguments and suggestions, the movement of German policy. In the German as in the English title the *Gedanken*, the reflections, come first. It is probable that this testament will long be cited, not merely because of the authority of his name, but also because of the intrinsic good sense of

the counsels he has bequeathed to his people.

In even the most masterly chapters, however—those dealing with international relations—there is a singularly limited horizon. Bismarck discusses European politics as if his little Continent were the world. Great Britain seems merely a neighboring island, and Russia appears to have no interest or existence outside of Europe. That there are other continents; that issues are arising outside of Europe of such magnitude as to dwarf all purely European questions; and that these world issues must reach into and modify the relations of the European states among themselves—of all this, Germany's greatest statesman, who himself started Germany upon a course of colonial experiment, takes no account. The explanation is obvious. In Bismarck's youth the rest of the world exercised no appreciable influence upon Europe. In his manhood this influence was still a negligible quantity. In his old age the partition of the world seemed a commercial rather than a political affair. The ultimate political results lay far beyond the roads his mind was wont to travel. His disregard of world politics is a striking proof of the completeness with which men of action belong to their own time. The present ruler of Germany is a man of incomparably less wisdom than his grandfather's chancellor, but he is (at least in his interests) of our generation.

Was Christ Born at Bethlehem? By W. M. Ramsay. London: Hodder & Stoughton; New York: G. P. Putnam's Sons.

Prof. Ramsay here brings new material to bear on the account, given in the Third Gospel, of the birth of Jesus. According to the Evangelist, the birth occurred when Quirinius was governing Syria, and it occurred in Bethlehem because Joseph and Mary went to that city in consequence of a decree of Augustus that all the world should be enrolled. To this account various exceptions have been taken, the chief objections being that Augustus is not known ever to have ordered a general census, and that Quirinius was not governor of Syria at that time. The most important part of Prof. Ramsay's book is his reply to the first of these objections. A few years ago (in 1893) three scholars (Kenyon in *Classical Review*, Wilcken in *Hermes*, Viereck in *Philologus*) announced, independently of one another, the discovery that in Egypt, under the Roman Empire, an enrolment was made every fourteen years. The Egyptian census documents mention the years 62, 90, 104, and so on up to 230 A. D., as years of enrolment, and one, found by Messrs. Grenfell and Hunt four or five months ago, gives a year earlier than 50 (held by Ramsay, from the names of the officials mentioned in it, to be the year 20). That this system was extended to Syria, Prof. Ramsay holds to be probable from the statement of Tertullian that the enrolment with which the birth of Christ was connected occurred under Sentius Saturninus (governor B. C. 9-6), and from the testimony of an inscription (recently shown to be genuine) in which it is said that a certain Q. Aemilius Secundus, by order of Quirinius (then governor of Syria), made the census of the population of Apameia.

Prof. Ramsay concludes that Augustus instituted a general census system for the Empire, and that this is the statement in Luke. Reckoning back from A. D. 62 (or from 20)

the year B. C. 8 would be an enrolment year. Palestine was a troublesome district, and Augustus, Ramsay suggests, might well have desired to know its military strength. But B. C. 8 is too early for the birth-year, and our author suggests that Herod, knowing that the census would not be palatable to the Jews, obtained a delay of a year, with the further concession that the enrolment, to humor the Jewish national spirit, should be by tribes and families, and not after the Roman fashion. Prof. Ramsay assigns the birth of Jesus to the late summer of 7 or 6 B. C. As to Quirinius, our author holds that he was at that time military leader in Syria; Varus, the Imperial legate proper, was a man without military experience, and, as the country was turbulent, Quirinius, an able and successful general, might have been placed there to preserve order.

These new details of the Imperial system of enrolment are of very great interest, and it seems not improbable that it was instituted by Augustus. It is also true that the Greek present infinitive (*ἀναγραφέσθαι*) may refer to the recurring seasons, or the general rule, of enrolment, and that the title given to Quirinius (*ὑπερσυνάρχης*) may mean "military leader," or "procurator," and that such an officer might have been charged with the conduct of an enrolment.

It is doubtful whether Prof. Ramsay's special interpretation is permitted by the Greek. When the Evangelist says: "This, as first enrolment, occurred when Q. was procurator (or military governor) of Syria," the word "this" almost certainly refers not to a general law but to a specific edict. The chronological argument is, however, not affected by this point, and Prof. Ramsay's defence of the accuracy of Luke is entitled to consideration, though a final conclusion cannot be reached till more facts have come to our knowledge. Whether his arguments turn out to be valid or not, he has brought together much interesting material. His book is marred here and there by a bitter and unjust tone towards those much-enduring persons, "the critics." On the whole question two obvious remarks suggest themselves: Luke's general credit as historian would not be destroyed by a mistake of a name or a date; and his general credit is not established by proving his accuracy in this particular case.

A Gunner Aboard the "Yankee." Edited by H. H. Lewis, late U. S. Navy. Doubleday & McClure Co. 1898.

This book, which carries with it an introduction by Rear-Admiral Sampson, is the result of the experience of a member of the New York Naval Reserve in the war just closed, and is based upon the personal diary of the anonymous author, who is known on the title-page as No. 5 of the "after-port (5-in.) gun."

The Naval Reserves of the United States have been and are still practically a naval militia of a number of the States, recognized and aided by law, it is true, by the general Government, but, previous to the war, with no official and definite rôle or assignment to duty by the bureau in the Navy Department charged with the care and assignment of the personnel, both enlisted and official, of the navy. Our navy, from its small size and the constant demands made upon it, was, before the war, mobilized up to almost its full strength; its modern construction caused but a small part of its material to be under

repair, and there was practically none in ordinary or inactive reserve. This fact, and the busy demands of administrative routine, led to a neglect of preparation for expansion and for the mobilization of the auxiliary naval reserve forces, until the warlike situation and the foresight of the then Assistant Secretary of the Navy induced the necessary measures for a mobilization of the reserves and the general expansion of the navy. Under these circumstances the Naval Reserve force finally received attention and place in the schemes for providing a war navy for offensive and defensive purposes, and the various bodies were then directed to fill their complements and prepare for active service.

The naval authorities who had discussed the rôle of the Naval Reserve, but who lacked the administrative function to place them, had proposed that the reserves should be used to man the vessels that were to form the second or inner line of defence. These vessels, localized as far as possible, were to consist of auxiliary vessels improvised from tugs, yachts, and smaller merchant vessels, of a size and for a duty such that individual intelligence would count for the most, and manual labor and numerical force for the least. This, with the coast signal service and local torpedo-boat work, was and is the rôle of the naval militia as distinguished from the proper and seagoing Naval Reserve. But the war with Spain never became a defensive war of a nature which involved the continuance of a second line of defence, and the vessels, large and small, which were assigned at first to coast-defensive purposes were drawn off gradually for the constantly increasing blockade duty and for the other offensive operations in the West Indies. The few that remained were mostly consigned to the patrol of mine fields and minor auxiliary purposes, or to man the obsolete monitors for harbor defence. Hence a very large portion of the Naval Reserves served in deep-sea vessels, and were drafted into the sphere of active warfare in foreign waters. Although, to a certain extent, the use of this fine personnel to do the duty of the hewers of wood and the drawers of water on board ship was like the using of fine razors to cut blocks, none the less was the work done well and uncomplainingly; and in the reward most eagerly sought after—a brush with the enemy—they showed a spirit as well as a skill and endurance that deserved and received words of high commendation from their commander-in-chief. The men were better than the officers, as a rule, in the Naval Reserves, always excepting the graduates of Annapolis and the few others who had seen service in the merchant marine.

The narrative in this book is from one of the men before the mast and "behind the gun," who was drafted with a number of his fellows of the New York Naval Reserve into the U. S. S. *Yankee*, formerly the Morgan liner *El Norte*. Fortunate in their ship, they were even more fortunate in their commander, one of the best all-round officers in the regular service. The story will be found to be of interest, and is told with a sprightliness and humor that should give it many readers.

It is not probable that in any future war in which the United States may be engaged, an enemy of so little enterprise will be found as Spain proved to be, nor one so sparing in its raids and attacks upon our coast towns and coastwise commerce. Hence

it is important that, after the formation of a proper national reserve for the navy, seagoing and with sea experience, sufficient aid should be given to the naval militia of the various States as a supplement to the Naval Reserve for torpedo-boat work, for auxiliary naval purposes, and for the inner line of floating defence. The experience of the late war emphasizes the existence of a distinctively military factor to be found in the panic fears of wealthy and thickly settled sea-coast districts.

The Gods of our Fathers: A Study of Saxon Mythology. By Herman I. Stern. Harpers. 1898. Pp. xxx+269.

Precisely who our fathers would be if they were determined by deduction from this book, it is not possible to surmise. It may be, however, that the author himself had this very fact in mind, for we are a composite people made up fundamentally of all sorts of Germanic elements united into a veritable hodgepodge of descent. As a whole, we should be shown by such an evolution of an ancestor not only to be more Norse than anything else, but to be preponderantly of direct Norse extraction at the time of the Viking age, which it is perfectly plain that most of us are not. The fact that the book is called a study of "Saxon" mythology sheds only an apparent light on the subject. The very first paragraph shows that the author uses "Saxon" in a purely generic sense, in spite of the specific signification that rightly belongs to it, for here there are gods enumerated of whom the Saxons never heard, and, later on, he speaks of Loki as "the Satan of the Saxons," and of Baldur as "the Saxon Christ," though the real Saxons were guiltless of either the one or the other.

The fundamental difficulty in the present book lies just in this heterogeneous character of its material. The author plainly starts out with the assumption that Norse mythology is Germanic—or, as he puts it, "Saxon"—mythology, and that all of it is of equal importance. With this, which from the nature of the case is by far the principal portion of the material that has come down to us from the heathen days of any part of the race, he combines wholly at random anything else he can find among the other Germanic peoples, with no thought of resulting incongruity. He has his drag-net out for things "Saxon," and all is "Saxon" that comes into it. What appears, consequently, from the book to be a mythological system is in reality no system at all, but an *omnium-gatherum* of Germanic mythological matter of all degrees of value, and of all ages and places of origin.

Instances of these processes appear throughout the book. Walhalla, for instance, is described as "the human heaven of the Teutons, a sort of Olympus and Elysium combined," when in reality this was a Norsemen's paradise, wholly a development of the warrior spirit of the Viking age, and one in which the rest of the Teutons had no share. Much of the mythology to be gathered from Norse sources is inherently new and local, and some of it is not, in a proper sense, mythology at all. Although the belief in giants, in this way, as personifications of the forces of nature, is a possession of the whole Germanic people, and one, furthermore, that they shared with the other Indo-Europeans, the giants as we

have them from Old Norse sources are purely creations of Northern, and not of Germanic, phantasy. We know, in point of fact, infinitely more about the mythology of the Scandinavian North along broad lines, not merely because our sources of information are fuller and clearer, but in great part for the reason that there was, through special development, infinitely more to know. Yggdrasil, the world tree, for instance, is Germanic, but its whole outfit—the goat, the stag, the deer, the dragon, the eagle, the squirrel—is elements of Eastern-Christian mysticism thus locally associated. There is much, furthermore, in Old Norse sources that is simply to be ascribed to the creative poetic phantasy of the skaldic poets themselves, and that never had any firm lodgment in the religious belief of the people whatever. The author, however, entirely ignores all principles of this sort, which have become veritable truisms to one who has read the literature of the subject.

Besides the uncritical use of material, the book is full of curious misapprehensions. "The realm of Hel," it says, "as an abode of departed spirits, virtually appears only at the close of the Asen dynasty," when, in reality, it is one of the most fundamental conceptions of Northern heathendom. The 'Heimskringla' it calls "a crude attempt at universal history," when, to quote Carlyle, who correctly appreciated its value, it is "to be reckoned among the great history-books of the world." The meaning of "Loki" has nothing to do with *lus*; this god does not "invariably designate the element fire," and he is not "the personification of evil." To correct the faults of statement, however, would be essentially to rewrite the book from title-page to colophon.

At the beginning, in lieu of a dedication, the author prints the following quotation: "It would be an interesting work to show how Norse and Greek Mythologies respectively have colored the religious, social, political, and literary character of Greek and Romance peoples on the one hand and Norsemen and Teutons on the other. Somebody will undoubtedly in due time be inspired to undertake such a task." It need hardly be said that the lists are still open.

John Adams, the Statesman of the American Revolution. With other Essays and Addresses, historical and literary. By Mellen Chamberlain. Houghton, Mifflin & Co. 1898. Pp. 476.

Under the editorial supervision of Mr. Lindsay Swift, Judge Chamberlain has here brought together a selection of the more important papers and addresses prepared by him for various occasions during the last fifteen years. With two or three exceptions, they deal with subjects in American history and biography, in both of which fields the author has long been a recognized authority. While they by no means represent the sum of Judge Chamberlain's work as a scholar, they serve to exhibit his principles and methods, and his views, of the proper standpoint from which to interpret American history. That some of his most original conclusions no longer seem novel, is of itself a gratifying indication of their acceptance by thoughtful students who have gleaned after him.

The initial essay on John Adams, the longest and most important piece in the volume, is a thorough-going examination of the

causes of the Revolution and of the relation of Adams to the constitutional side of the struggle. No writer has set forth more clearly or instructively the nature of the influences which brought about the separation of the American colonies from the mother country. In Judge Chamberlain's view, writs of assistance, the Stamp Act, and the various revenue and coercive measures of Great Britain were the occasion, rather than the cause, of the Revolution. They were irritating and, from the standpoint of political expediency, indefensible, but they only hastened a crisis which, even without them, could not have been permanently averted. The causes of the Revolution lay rather in the inherent temper of the colonists, their English love of freedom and self-government, their jealousy of commercial interference, and their increasing reliance upon their charters as the real constitutional foundation of their government and their political rights. It was the peculiar merit of John Adams that he was one of the first to see the constitutional significance of the contest, and that he led Massachusetts, and through her the other colonies, to a more or less discerning acceptance of his ideas.

In the paper on the "Constitutional Relations of the American Colonies to the English Government," Judge Chamberlain goes over this ground again, with especial reference to the constitutional aspects of the case as presented by Jefferson in the Declaration of Independence. While admitting Jefferson's knowledge of the English Constitution as well as his sincerity of purpose, Judge Chamberlain is forced to conclude that, from a constitutional standpoint, the famous indictment of George the Third can hardly stand; on the contrary, "had the King been arraigned on these charges before a court of justice, undoubtedly by advice of counsel he would have demurred to the bill" (p. 155). It was the use of constitutional powers to the injury, and especially to the economic injury, of the colonies that formed the impregnable strength of the American position, and

indicated for the colonists their true line of protest; whereas Jefferson, driven to construct a political manifesto which should be at the same time in accord with admitted constitutional principles, missed the point, and framed an indictment of the King which is "perhaps the only one ever drawn in which the real offence is not even mentioned, and where an innocent party was vicariously substituted for the real offender" (p. 158).

We can do no more than to refer very briefly to some of the remaining papers. The one on the "Genesis of the Massachusetts Town," originally part of a formal discussion before the Massachusetts Historical Society, is a vigorous criticism of the theory which connects the town with the contemporary English parish, or ascribes to it such origin and status as are set forth in Alexander Johnston's History of Connecticut. In Judge Chamberlain's view, the origin of the unit of local government in New England is to be sought neither in the forests of Germany nor in the ecclesiastical system of England, but primarily in the special conditions and needs of a new self-governing community in a new world. The Germanic theory in general, and Johnston's application of it in particular, are subjected to further destructive criticism in the "Remarks on the New Historical School," read before the same society at a somewhat earlier date. The paper on "The Authentication of the Declaration of Independence," in itself a model of painstaking and exhaustive research, may be regarded as the final word in the controversy over the date on which the Declaration was signed.

The essential characteristic of Judge Chamberlain's historical method is his reliance upon primary sources of information. His conclusions are invariably the result of exhaustive study of original and contemporary material. He himself confesses, in one or two notes to the present volume, that his, for the moment, neglect of secondary writers has sometimes caused him unnecessary labor, and led him into doing for himself work already satisfactorily done by

others. But the invariable citation of chapter and verse in support of his statements, and the constant evidence that his knowledge is based upon first-hand research, give to his historical writings a high and permanent value, and invest his conclusions with a soundness, a freshness, and a defensibility to which a less exacting worker could not attain. Add to this power of intelligent and patient labor the mental equipment of a trained lawyer and experienced judge, and a clear and forcible style, and we have a scholar whose work, though not large in amount, combines with singular success industrious search for facts, skill and fairness in weighing evidence, and attractiveness of literary form. Of such qualities American historical scholarship can never have too much.

BOOKS OF THE WEEK.

- Barry, Rev. William. The Two Standards. Century Co. \$1.50.
 Cajori, Prof. Florian. A History of Physics. Macmillan. \$1.60.
 Duff, J. D. Fourteen Satires of Juvenal. Cambridge (Eng.): University Press; New York: Macmillan. \$1.50.

 The Judgment of Socrates. A Translation from Plato. Boston: Houghton, Mifflin & Co. 15c.
 Wright, Prof. W. Grammar of the Arabic Language: 8d ed. revised. Vol. II. Cambridge (Eng.): University Press; New York: Macmillan.

"Literature," says of Prof. Beers' "English Romanticism in the Eighteenth Century" (Henry Holt & Co., New York. 12mo. \$2): "The author presents in himself a rare combination—a scholarly and historical knowledge, which places at his command a seemingly inexhaustible fund of literary data, and a keen and appreciative literary taste. The style of the book is happily easy, and a certain characteristic humor runs pleasantly between many of the lines. . . . The author is always interesting and lucid, his analyses are clear and profound, and his lighter details of literary happenings are often delightfully amusing. The book is a notable example of the best type of unpedantic literary scholarship."

The Nation.

NEW YORK, THURSDAY, FEBRUARY 10, 1899.

The Week.

The difference between the McEnery resolution adopted by the Senate on Tuesday and the substitute offered by Mr. Bacon of Georgia is not great. Both protest that the United States has no intention of permanently annexing the Philippines, and both look to the ultimate self-government of the islanders. Mr. Bacon, however, contemplates the erection under our control (if not by our initiative) of "a stable and independent government," whereupon we are to "leave the government and control of the islands to their people." Mr. McEnery would give the islands "a government suitable to the wants and conditions of the inhabitants," as a preparation for self-government, and "in due time make such disposition" of them "as will best promote the interests of the citizens of the United States and the inhabitants of said islands" (mark the order). In practice, it will be found that we shall maintain our sovereignty as long as we please, in default of a fixed policy to withdraw at once and let the Filipinos begin the art of self-government as soon as our last ship and our last soldier leave the scene. There was a tie vote on the Bacon substitute, and the Vice-President turned the scale against it—a fact of some significance in case anything should happen to Mr. McKinley before the expiration of his term.

The President has done now what he should have done five or six months ago, appointed a court of inquiry to go to the bottom of the army scandals. This is the only course authorized by law and as such competent to bring out the truth, as was repeatedly pointed out last September, when the President was considering the matter. He refused to follow it then, and adopted the expedient of a commission which had no authority to compel the attendance of witnesses or to administer oaths, and which, from the time of its selection to the present moment, has commanded the confidence of nobody. Its report was so thoroughly discredited in advance that the President himself was compelled to confess its worthlessness by appointing a new investigating body to do what this one has failed to do. What he has really done is to authorize a genuine inquiry to decide whether or not his bogus inquiry has suppressed the truth. That the new body has the ability and character, as well as the power to do this, nobody will question. Its members, Gen. Wade, Gen. Davis, and Col. Gillespie, are as well fitted for the task as any officers in the

army, and we shall know precisely what the facts about embalmed beef are when they have finished their work. That the conclusion will be reached very soon is a safe calculation, for Gen. Miles, upon whom the burden of proof rests, has his evidence well in hand and will be able to present it without delay.

The Judge-Advocate had in his pocket at the Eagan trial, and should, according to army usage, have made a specification of it, a letter written in the previous July to a citizen of New York, which showed clearly that Eagan's "paper" on Gen. Miles was not the result of a sudden impulse, but was his habitual mode of meeting remonstrances on his official conduct. The reason why this letter was not produced, the historian will say, was revealed by the nature of the defence, which was insanity or hysterical excitement, induced by newspaper denunciation, for charges which Gen. Miles's subsequent revelations proved to be true, but which, at the period of the trial, it seemed possible to cover by a furious air of injured innocence. This defence again furnished the court-martial with the excuse for the recommendation to "clemency" for one of the most heinous of military offences. What will seem to the historian to clinch the proof of a "put-up job" is the President's dealing with the sentence of dismissal. Eagan was just six years from retirement by age, so his sentence is made to run, "suspension from rank and duty" for just six years, with admission to the retired list afterwards. In fact, he loses nothing by his crime and conviction, except his allowances for forage (about \$75 a month), and he distinctly gains by relief from duty at his age. He will for six years lead a life of leisure on full pay. This disposition of the case, which we fully expected, will explain to a large portion of the public the reason why Alger cannot be got rid of, and do much to confirm in many minds the belief in the existence of the McKinley "Syndicate." But he is such a good man.

The list of deaths among our troops in Cuba, Porto Rico, and the Philippines during January, one of the healthiest months of the tropical year, contains seventy-one names, including those of a colonel, two captains, and a first lieutenant. It is probably the shortest which we can expect to have, until our troops are withdrawn in large numbers, since, aside from the warfare in the East, smallpox in Manila and yellow fever, already reported in Cuba, must be counted on to swell the roster of the victims of imperialism from day to day as the warm and rainy seasons approach. Al-

ready there are rumors that all the American troops must be out of Cuba by April 1 if serious losses are to be prevented, and the friends of the volunteers are naturally growing more and more eager for their return. To them it may be some slight consolation to realize that our troops are in very much better situations than is, for instance, the French army in Madagascar. Its death-rate per hundred is from seventy to seventy-five. French soldiers who survive return home prematurely aged and broken, bringing back in their systems the poison of the swamp fevers, which can almost never be eradicated.

Another matter bearing upon the question of health as related to the national Government still more imperatively demands action before the session expires a fortnight hence. The danger of yellow fever in the United States during the coming summer is greater than we have ever before encountered, because of the greater freedom of intercourse between Cuba and our Southern States since the surrender of the island by Spain. The ablest and coolest authorities are most impressive in their warnings. Dr. George R. Fowler of Brooklyn, who has been chief surgeon and medical inspector on Gen. Lee's staff since last July, has just returned from Havana, and he expresses the gravest apprehensions as to the danger of a terrible outbreak of yellow fever after the rainy season sets in. There is every reason to expect the appearance of the disease in our Southern States, and unless Congress takes early action we shall see the usual quarantine wars between the different commonwealths in the most aggravated form ever known. The Southern press is already sounding a note of alarm. The New Orleans *Times-Democrat* says that this warfare "has been going on for years, and the situation has become steadily worse instead of better, the boards getting further away and denouncing each other more savagely"; that "the story of these interstate agreements is one of failure, of loss and injury to the South, of stagnation of business, distrust, and even hostility"; and that, "if our quarantine affairs are going to be administered in this way, if there is to be a continuous struggle between the several boards, then the South has one of the greatest perils to face it has ever known." The *Times-Democrat* closes by declaring that "there is but one escape—placing the quarantine in the hands of the federal Government."

English newspapers do not understand American squeamishness over pushing civilization forward in the Philippines

on a powder cart. We are young and tender imperialists. The English are hardened to the business; they know all about "punitive expeditions," and are blasé in fighting now the Matabele, now the Afridi, shelling palaces in Zanzibar in order to settle the royal succession to their taste, and cramming the Bible and cotton goods down the throats of recalcitrant natives. In time we may hope to attain this high imperialistic level, but as yet we have a few dregs of republican conscience left to trouble us. Americans have queer and unpleasant sensations when they see their soldiers mowing down natives armed with bows and arrows. All accounts agree that one detachment of the insurgent army, the Ygorotes, were so armed, and that they were put forward against Krag-Jørgensens and Maxims. Of course, our troops had to cut them down like wild beasts as they did, but there must have been many an American soldier to exclaim, when all was over, as English soldiers cried out at Omdurman, "This is not a battle, but an execution."

For the rest, the military dispositions of Gen. Otis and the conduct of the troops in action appear to have been deserving of all praise. The affair was undoubtedly far more serious than the first dispatches indicated. In fact, the test of the stuff of our soldiers was more severe than that the English army had to undergo in fighting the Dervishes. The Khalifa ordered his men out in broad daylight to charge the English on a perfectly open plain. Few of them ever got within half a mile of the English lines, the mass being slaughtered by the Lee-Metfords at a range of nearly two miles. The attack of the Filipinos was by night. In the morning our troops had to charge through jungles and rice-fields against an enemy intrenched and occupying fortified villages. A portion of the native army, as Gen. Otis reports, had arms of precision and quick-firing guns. They knew the ground, which was necessarily strange to our men. Under all these circumstances, we say, the task of our army before Manila was harder than Kitchener's before Omdurman. If the Dervishes had stayed in their works, defended by Krupp guns, and awaited assault, instead of rushing out to seek Paradise by the shortest route, the two cases would have been more nearly parallel. Of course, the critical feature of Kitchener's campaign was that he was operating at such an enormous distance from his base. A serious reverse would have meant annihilation such as befell Hicks Pasha. Gen. Otis had no such possibility of crushing disaster to disturb him.

The selection of Mr. Samuel J. Barrows to succeed the late John Russell Young as head of the National Library is probably a gain for the service.

It is, however, a concession to two mischievous pretensions—the one, the old spoils doctrine that public office is a proper refuge for politicians who have lost a job (as Mr. Barrows, whose Massachusetts constituency declined to reelect him to the House of Representatives last November); the other, that journalists (as in Mr. Young's case) have the first claim to the most important librarianship in the country. Mr. Barrows's personal appeal to Senators to look with favor on his nomination is another unpleasant feature in connection with the filling of a post which should seek the man. However, in point of scholarship, culture, and experience in library affairs, Mr. Barrows is much better equipped than his predecessor. His Congressional career has disappointed his best friends; may he favorably disappoint in his new career those who object to the principle of his selection.

Secretary Long has put an end to the Sampson-Schley controversy for all time. In a letter to the Senate giving the reasons which induced the President to promote Sampson over Schley, he sets forth at great length in chronological order all the official data bearing upon the campaign against Cervera's fleet, with a result which is very disastrous to Schley and extremely creditable to Sampson. He shows that Schley deliberately disobeyed orders from the Navy Department, leaving the entrance to Santiago virtually unguarded for two days, there being during that period nothing to obstruct Cervera's escape, had he attempted it, save the unarmored scout *St. Paul*. He shows also that Schley's excuse for disobeying orders, that he was short of coal, was not true, since he had on board the *Brooklyn* at the time between ten and twelve days' coal supply, and even more on the other vessels of his fleet. He shows also that in the great battle of July 3, in which Cervera's fleet was destroyed, each commanding officer proceeded on standing orders laid down by Sampson, and that from first to last he was the guiding genius of the whole affair. He shows finally that Admiral Sampson, in spite of Schley's disobedience of orders, magnanimously recommended that he should be promoted because of his services in the battle of July 3.

A correspondent sends us a document to which we venture to call the attention of the Assistant Secretary of the Treasury, Mr. Howell, whose interesting explanation of the personal-baggage-inspection regulation we comment upon elsewhere. The proposal to restrict to \$100 worth the amount of wearing apparel and personal effects which an American returning from Europe could bring in free, was first made in 1892. A bill making that restriction was before Con-

gress, and the news of it reached an American in Paris. He wrote to the Committee on Ways and Means at Washington for information about the bill, and received from its clerk, Ruter W. Springer, a reply giving the text of the bill, and saying in explanation of it:

"You will see by the opening words of the bill that 'the wearing apparel and other personal effects (not merchandise) in actual use of residents of the United States returning thereto from foreign countries' is that to which the bill refers, and European citizens visiting this country will not be inconvenienced in the slightest degree. *The bill is intended to protect domestic tailors and other laboring men who produce what may be generically known as personal effects; and it is thought will not affect foreign commerce to any great extent. The bill has been petitioned for by 25,000 tailors and over 1,500 other persons.*"

That puts the measure on its proper ground. It is not designed to produce revenue, but to "protect domestic tailors," and was petitioned for by 25,000 tailors. Who got up these petitions? Do Shayne the furrier and his associate tailors know anything about them?

Quay continues in that most unfortunate of rôles—a boss without prestige. On Thursday he suffered another serious setback at Harrisburg. He was afraid to stand trial in the traditional way, with the public prosecutor enjoying the immemorial right of securing a jury of men who seemed worthy of trust. So he resolved to have the Legislature abolish the old rule by passing a law which would prevent the District Attorney from "standing aside" men summoned on a jury panel whom there was good reason to suspect. It was the most impudent proposition that could be imagined, and success was the only thing that could redeem it from contempt. But the scheme has failed, for a majority of the House postponed further consideration of the matter until March 21, while the trial of Quay is set for February 27. The reverse is not only disastrous to the boss in itself, but still more so in its moral effect, since it greatly encourages his opponents and disheartens his supporters.

A copy of the interesting circular which Mr. Croker has sent to all the members of his club, asking them to increase its membership, has been forwarded to this office. It is an extremely interesting document in many ways, but in none more so than that in which the great man reveals himself frankly as the guiding genius of the institution. He is not its President, or Secretary, or any other official. He signs himself modestly as "your fellow-member, Richard Croker"; but that he is the real boss of the club, that everything it does or thinks proceeds from him as absolutely as if the letters "D. C." on the lamp-posts of its front door actually stood for Dick Croker, is visible in every line of the circular. "There is," he says, "a

first mortgage on our house, amounting to \$125,000, which it now becomes our duty to pay off. If we all act together it need not be difficult to do this. With 2,250 names upon our roll, a simple calculation shows that, if each member brings in one new member, the initiation fees thus derived will enable the club to pay off all its debt and have a handsome surplus. That we can do this during the current year, if we make up our minds to it, admits of no doubt." Why not require every man on the city pay-rolls who has had his salary raised to join at once? That would settle the matter in a jiffy. Possibly this order has been issued already, in a secret circular. It would hardly be put on club paper as this one has been.

The proposed police bill which has been prepared by Mr. Elihu Root, after repeated conferences with the Governor and the leaders of the Republican organization, is by all odds the best measure of the kind that has been drawn in many years. It embodies two fundamental principles that we have advocated repeatedly as the basis of real reform in police administration—a single head or Commission, and complete separation of the Bureau of Elections from the Police Department. On the latter point there is no longer room for argument. All the teachings of experience favor it, and we should have had it provided in our new charter had the framers of that instrument been less under the influence of partisan Republican considerations. The experience which we have had since Tammany got possession again, has convinced even machine Republicans that a bi-partisan board is of no use to them. They have had two Republican members of the board since Van Wyck came in, and the board is as thoroughly Tammanyite as if all four members belonged to that organization. All opposition to a single head seems to have been overcome, therefore, and that change seems to be generally conceded.

It is to be accompanied, of course, by the establishment of an entirely independent Bureau of Elections, with a bi-partisan board of four members in control, to be appointed by the Mayor, on condition that "no more than two shall be adherents of the same political party." A bi-partisan election board is a necessity in order that the interests of no single party may dominate its action; but so long as we have a Tammany Mayor, we shall be in danger of having some such board as our present Police Board. Two Tammanyite Republicans may be assigned to sit with two Tammany Democrats, and there will be no redress. The phraseology used in the present bill is the only one which will not conflict with the Constitution. Under the phraseology the Mayor might, if he chose, appoint

two Tammany men, a Socialist and a Prohibitionist, leaving the Republicans out altogether, and his act would be legal. We must in this, as in all other matters, depend for good government solely upon getting a good man for Mayor.

The proposition of the State Board of Tax Commissioners that the Legislature shall in some way tax the deposits in the savings banks of this State will meet with no sympathy either from intelligent students of the problem of taxation or from the people at large. If all personal property were bearing a just share of the burden of taxation, something might be said in favor of bringing these deposits into the tax list. But when it is notorious that the assessors discover but a small proportion of the personal property in the State in individual hands, there is something very like injustice in the proposal to place a tax on the accumulations of people of small means because it is possible to do this when they are placed in banks, which have to make reports of their finances to a State department. Surely, the mere fact that a poor man's money can be found and taxed, is no reason why the force of the law should be brought to bear against it. The reasoning of the Commissioners seems very defective. They start out with the declaration that a tax of one-fourth of 1 per cent. would bring about \$2,000,000 into the State Treasury, and without reducing the interest paid to the depositors. Aware, apparently, that there is something wrong in the idea that such a sum as this can be taken from any class of people without their knowing it, they next assume that it would reduce the rate of interest, but declare that this would not amount to more than one dollar a year for each depositor. The savings bank is acknowledged to perform too valuable a service for the State to have its operation hampered in this petty way. If the Commissioners would study the recommendations of such experts as the late David A. Wells, they would learn how to make personal property bear a just share of the tax burden without inflicting injustice or individual injury.

Exactly what the "open door" means and implies has been a subject of vigorous debate ever since the phrase was invented. But Lord Charles Beresford, just arrived at San Francisco after his semi-official visit to China, imports a decidedly novel element into the definition. He gravely assures an interviewer that the open door in China involves a unified Chinese army, officered by Europeans, and armed and equipped according to the best modern standards. Precisely what relation this new Chinese army will have to the open door is not made clear; perhaps its duty will be to shoot down any

man who attempts to shut it. Lord Beresford is not explicit on this point, partly, we suspect, because if he tried to explain his real thought, it would be seen that he has in mind the possible use of Chinese soldiers against his dearest foe, the Russians. But it will be a great comfort to the statesmen of China to be told that the control of their army is taken from them in the mystic name of the open door.

Mr. Rhodes has consented to defer his Cape-to-Cairo railway scheme a little. He will take a guarantee for one more section of it, and await developments. Developments of an unpleasant kind, however, appear in the London *Truth*, which has a terrific exposure of faults and follies and scandals in the construction of the line from Mombasa to Uganda. Parliament had voted \$15,000,000 for this section, but *Truth* brings figures to show that it will cost nearer \$50,000,000, and can never be made to pay. It also adduces many instances of incompetence and extravagance of which the select Foreign Office committee in charge of operations has been guilty. Incidentally it is mentioned that already 5,000 coolies have lost their lives in the construction of the line. A paper which, like *Truth*, makes a specialty of exposures, must expect to have its charges rather generously "written off." But the margin left is serious enough, and would seem to warrant, if not to compel, a parliamentary investigation before another penny is voted.

Mr. Balfour's proposal to endow a Roman Catholic university at Dublin comes at an unlucky moment. With the anti-Ritualist agitation rising higher every day, it is not probable that Parliament will even give a hearing to the project. Of course, Mr. Balfour's plan involves erecting a great Protestant university at Belfast at the same time, but though this seems a perfectly fair equivalent to him, it will not to the aroused English evangelicals. All told, it is a singular and embarrassing position which Mr. Balfour now holds as leader of the House, in presence of spreading and violent theological passions. An apostle of toleration and a devotee of sweetness and light, how can he possibly take sides in the controversy? Yet how can he hold the balance level? His letter explaining his plans for the Irish universities breathes of benevolence, and abounds in the subtle distinctions so dear to his intellect. But, under the circumstances, it gives him an air of a detached philosopher innocently entering Donnybrook Fair. The Catholics will have none of him because he does not go far enough to suit them. The Protestants will rage at him because he goes much too far to suit them. It looks as if the mild metaphysician were not cut out for such shillelah-work.

THE WARNING.

Primarily, we suppose, Mr. Cannon's bold and startling speech in the House on Thursday was Speaker Reed's way of saying "Check!" to the Hanna-McKinley Syndicate gamblers. They, in their desperation, have been challenging the power of the Speaker and the Republican leaders in the House to keep down appropriations. What shall it profit a Syndicate to hold the Government in trust unless it can exercise the right to lay taxes and vote appropriations? Hence the fury of Hanna and his fellow-speculators when informed that Mr. Reed was opposed to their schemes. They never heard of such impudence. But they would teach the Speaker who was master. They would pin an appropriation of \$115,000,000 for their pet Nicaragua Canal bill to the river and harbor bill, and ask Mr. Reed what he was going to do about it. Well, what he did was to put up his lieutenant, Chairman Cannon, to make a statement of the financial situation of the Government; to warn the party and the House and the country of the catastrophe to which the imperialistic raids on the Treasury would swiftly carry us.

Mr. Cannon has always clung to the old-fashioned notion of the responsibility of a chairman of the committee on appropriations. He bluntly declares that his chief function is not to make appropriations, but to prevent their being made. In his way, he thus plays the part of a finance minister or Chancellor of the Exchequer in countries which have a rational system of public finance—ruthlessly killing private appropriation bills, and holding down the sums voted for the public service to the lowest possible figure. This is the main business of a government confronting a popular legislature. But, in this case, the rest of the Government have gone over to the raiders. From President down (or up), they have endorsed and pushed ship subsidies, canal extravaganzas, and every form of surplus-dissipating bill. Mr. Cannon stands alone. But his position, if unique, is also highly honorable and useful, and his courage in taking the country into his confidence will not lose its reward. If not immediately, then in the near future, Americans will have grateful words for a man who stood up in the midst of an imperialistic orgy of squanderers of the public money, and told the truth and called a halt.

Mr. Cannon's first flashlight on the gulf which yawns before the Treasury was his proof that the deficit at the end of the current fiscal year will be \$159,000,000. This he figured on the basis of the actual monthly deficit for the portion of the year already elapsed. Secretary Gage had estimated the deficit at \$112,000,000, but the difference only showed how expenditures had gone on swelling beyond all expectation. Even

this huge deficit of \$159,000,000 did not reckon in the \$20,000,000 to be paid to Spain for kindly selling us an insurrection, nor the \$25,000,000 or upwards of claims of our citizens against Spain which, under the treaty, our own Treasury assumes. Mr. Cannon next paid his respects to the boasted surplus, and showed that it would be practically exhausted by July, 1900. At the end of the present year there would be an available surplus of \$108,000,000. But even Mr. Gage had admitted a deficit of \$31,000,000 for the year 1899-1900, and that, of course, was on the basis of existing law. But already the appropriations for the army and navy had added millions to the estimates; and the total upshot would be that in less than two years we should have to issue more bonds or levy fresh taxes. This would be truly an awful thing for the Advance Agent of Prosperity, just on the eve of his second campaign.

"Where do we come in, then?" faintly asked the champions of the Nicaragua Canal bill and ship subsidies. "You do not come in at all," was Mr. Cannon's rough answer. "You are out in the cold and must stay there." Surely they must, unless we mean to rush to embrace bankruptcy. When the severest economy is necessary to pay ordinary expenses, with what face can we appropriate \$115,000,000, as the Hepburn bill proposes to do, to dig a canal in foreign territory? Even this sum is a mere first guess at the cost of the canal, which is certain to demand \$200,000,000 if built in the wasteful way laid down in the bill. And as for pure gratuities to Hanna and his fellow-subsidy-seekers, what figure in the election would a party cut which had flung \$50,000,000 into their eager hands and then had to issue bonds to foot the bill? The Hanna-Payne subsidy bill was truthfully described by the minority report as "one that was prepared and brought to Congress by a voluntary committee of ship-owners and ship-builders, representing the gentlemen who will receive the bounty which the bill proposes to give from the public Treasury." It will at least require an extra session, after Mr. Cannon's speech, for that burglarious crew to get inside the vaults.

Mr. Cannon's fearless words, moreover, go beyond the particular matter of the danger in our financial situation, or the iniquity of any special scheme of public thievery, and strike, even if unintentionally, at the great peril of reckless imperialism. As John Morley said the other day, an essential article of the imperialistic creed is belief in Fortunatus's purse. The true expansionist flings public money about as if there were no end to the national resources. Mr. Cannon has performed the great public service of presenting his little imperialistic bill. He shows that, in spite of war taxes and war loans, the last dollar in the Treas-

ury is in sight. There must be new imperial taxes and imperial loans if we are to go ahead in our present lavish way. This is a very disagreeable revelation, but it is the one that always comes to man or nation that has run a rake's progress.

THE DISCREDITED COMMISSION.

It is safe to say that there will be no general demand for copies of the full report of President McKinley's investigating commission. The abstract given to the press on Monday will quite suffice. One needs to read only that to see that the report is nine-tenths whitewash to one-tenth apology. The plain truth is, that the Commission lost public confidence before it began its work, and that it has since passed through stage after stage of discredit, until finally it had to suffer the awful blow of having its creator disown and repudiate it, as respects the chief part of its inquiries, by appointing a competent court of inquiry to do what it had so signally failed to do. How can the President expect the public to pay any respect to his commission's report on the great beef scandal when he himself has practically shown that its conclusions on this subject are not worth the paper they were written on?

The whole course of the affair, from the appointment of the Commission to its rather pitiful finale, has been one long demonstration of how not to do it. When Mr. McKinley set about the business, there was much firm talk about his stern determination to secure a commission which would completely command public respect and trust, and which would push the inquiry to the bitter end without fear or favor. Some of the eminent men first named seemed to promise such a result. But it was an ominous thing that one after another of them declined to serve. The significant thing was, that they did it in almost every case after conferring with the President. This does not necessarily imply that they found him half-hearted in the business. It does surely indicate, however, that they found the proposed method of inquiry weak and vicious in method, and that they were unwilling to have their names associated with what was bound to be a fiasco. It was certain to be that, in any hands; in the hands of the men who finally consented to serve, failure was foredoomed. More than one of them was an avowed partisan of War Department methods; others were open to the suspicion of being prejudiced by personal favors received; the rest carried little or no weight. The result was inevitable. A dawdling inquiry, without power to compel the presence of witnesses—from which, in fact, witnesses shrank as from a prejudiced tribunal—has issued in a report in which the hair has grown in the shaving, so portentously slow has it been in preparation, and which fell flat

as a document in which the public will take but the most languid interest.

But if the Commissioners show themselves feeble and almost unable to make up their minds in nearly all matters else, in one particular they are suspiciously emphatic and make their animus clear. One great culprit they have found, and he is Gen. Miles. It would be laughable, if it were not so despicable, to note how they go out of their way to attack him. In the part of the report relating to the military camps, for example, there is a glaring instance of their partiality. Some of the sites they report to have been badly chosen. Chickamauga was bad, Camp Alger was bad, Tampa was bad, Miami was bad. Yet the only instance in which they specify an officer responsible for locating a camp in unfavorable surroundings is the case of Miami. Why was this? Because that was recommended by Gen. Miles. No mention was thought necessary of the man who selected Camp Alger or Chickamauga or Fernandina; but wherever they saw Gen. Miles's head they showed their eagerness to hit it. So they tacked on his name, leaving the others to be brilliant by absence.

It is, however, when the Commission approach the beef scandals that they show most clearly their own incapacity and *parti pris*. They begin by severely condemning Gen. Miles for not having run to the President with his first suspicion that the meat was bad. Instead of waiting, as he did, to get complete reports, he should have gone off on the first hint he had that the rations were not what they should be. As a military procedure we do not comment upon this; but that it was common sense seems clear to the layman. Then the Commission triumphantly fish out of the War Department records a recommendation by Gen. Miles in 1897 of "canned meats put up by reputable firms" as an army ration in Alaska, and seem to think, in their fuddled way, that this is a complete proof that putrid meat was a good thing for the soldiers to eat in Cuba and Porto Rico. Then they victoriously present proof that the refrigerated meat was, on the whole, good, when the main charge is that the canned roast beef, so called, was bad. But really it is not necessary to dwell upon this part of the report. The President himself has made the sufficient comment upon it by throwing the whole of it into the waste-basket, and appointing a military court to do thoroughly the work which these civilians have hopelessly bungled.

The really valuable part of the report is in danger of being overlooked in the mass of irrelevant or prejudiced matter. This is the testimony of the Commissioners, unwilling witnesses as they are, to the essentially faulty organization of the army in general and the War Department in particular. They point out how the various departments were con-

tinually at cross-purposes with each other and with their official head. The result was delay and floundering. When these Commissioners, who certainly are entitled to pose as authorities on floundering, assert this of the operations of our military authorities, under the present vicious system of organization, it may be taken to be true. Thus at whatever door we go in, we always come out with the conclusion that the army is badly organized, that it works under antiquated and conflicting laws, and that there is a crying need of adopting new methods, so as to put our army into line with the teachings of experience and the practice of the leading military countries. This part of the Commission's report is well worth the attention of the Senate in its consideration of the army bill.

BAGGAGE EXPLANATIONS.

The Assistant Secretary of the Treasury repudiates with something approaching to heat the charge that the Treasury has been "doing anything at the dictation of this or that merchant"; and asserts that what it has been trying to do is its duty in "enforcing the law in the manner most promotive of good morals in its own service." Well, how is it that what is called "The Merchants' and Manufacturers' Board of Trade," officered by two tailors, one tailor-trimnings dealer, one shirtmaker, one auctioneer, one shoe-dealer, one dealer in dressmakers' supplies, and one furrier, have been boasting through these officers for two years that it was they who had got the regulations changed; that their design was to stop people from buying things in Europe which these dealers had for sale in New York? How was it that they were allowed to put on the wharf detectives, in their own pay, to watch the officers of the Government and see that they did their duty? This sort of thing has been going on openly for two years, without denial or remonstrance on behalf of the Treasury. Was the assumption surprising that the passengers were being harassed in the interest of private dealers? Has Shayne been telling falsehoods about the operations of the Treasury, or has he not? If he has, why has he been allowed to do it so long without contradiction or remonstrance?

The Assistant Secretary's explanation, that the regulations, far from being intended to bring profits to the tailors, were meant to enforce the law in the manner "most promotive of good morals in our own service," is interesting. But in all services we have ever heard of in which "good morals" are of any importance whatever, there are only two modes of promoting them. One is to employ a high class of men; the other is to diminish the temptations to do wrong, and increase the rewards to do right.

This means, being interpreted, the exaction of high qualifications from persons desirous of entering the service, and the giving them, when in, fixity of tenure and high pay. This question has been so much discussed, both here and in England, and has been so thoroughly tested in every civilized country, that we feel quite warranted in saying that all doubt on the subject is ended. When a man complains now of the badness of his service, we prescribe these remedies with as much confidence as we have in prescribing a blue pill for inactivity of the liver. To us the Assistant Secretary's remedy, the tormenting of the public with whom the officers come in contact, is extremely odd. All civilized Powers have precisely the same difficulty to contend with that we have. They all collect a large portion of their revenue, if not all, by duties on imports. They all have to contend with the dishonesty, in one form or other, of the inspectors on the wharf or on the frontier. They all try to meet it by sharp punishment of the officer who is employed to prevent smuggling, and who yet allows it to be done by any class of men, whether passengers by foreign steamers or any other. America is the only one, as far as we know, which makes the passenger or traveller a public servant *pro hac vice*, and proceeds to make him assist, by a process of annoyance, in collecting duties on his own baggage, which the Government officer, through either corruption or negligence, fails to do; at the very moment, too, when the passenger will be most unwilling to undertake any such task.

This seems a startling statement; but is it not correct? The Government collects the bulk of its revenue through customs duties, and employs a large host of officials to collect them on all goods coming over the frontier. It has power to employ as many as are necessary, and professes to do so. It is the duty of these men to search the baggage of every passenger. They fail in their duty, and the experience of human nature tells us that it is for one of three reasons. Either their original character was bad, or they are not paid well enough, or the temptation to smuggle is made too strong by the amount of the duties. The Government makes no effort to improve the character of the officers, or to raise their pay, or to diminish the temptation to smuggle by lowering the duties. The only thing it can think of is to annoy the passengers to such a degree that they will hesitate either to travel or to buy clothing or other small articles abroad.

The way this remedy is applied is almost comic. When one of the great steamers arrives with five hundred or one thousand passengers on board, all are obliged to sit in rows, waiting for hours to make sworn "declarations" before a small number of officers, con-

cerning a number of things they may not have seen for at least a fortnight, and which they must then produce, no matter how small in value. If they fail to enumerate the various articles in their baggage, no matter how trifling, and the officer finds them afterwards, it may be presumed that the passenger's declaration was a perjury, and the officer may report him to his superior as a person who has sought to defraud the revenue. His only recourse is to throw himself on the mercy of the Deputy Surveyor. To him is submitted the question, practically without appeal, first whether the "declaration" is or is not a perjury; whether the swearer meant to smuggle, and whether he has told the truth about the price of the article. The inspector who examines the baggage and the Deputy Surveyor then have the passenger in their hands. One of them may accuse him of lying and smuggling, throw all his clothing out on the wharf, detain him for hours, and insult him grossly.

The object of all this is to make the passenger submit to great humiliation in order to relieve the Treasury from the necessity of employing more inspectors, and paying them such salary as would deliver them from temptation. Nothing can be more amusing than the plea of the Assistant Secretary that the Government treats passengers leniently in taking "forgetfulness," "absorption of mind," or "business worry," as an excuse for omissions in making the declaration. The Treasury theory evidently is, that the traveller is a person who is caught in something *flagrante delicto*—that is, when he ought to be collecting revenue for the Government, he allows his thoughts to wander off to his children or his own wretched affairs. It evidently considers him very kindly treated when he is not worked harder, and does not have his property confiscated oftener for absent-mindedness.

The truth is, the whole affair has been greatly muddled. In the first place, the value, or rather the importance, of the passenger travel, from the revenue point of view, has been grossly exaggerated. Dingley knew so little about it that he allowed himself to be persuaded by the New York tailors and dressmakers that it could be made worth ten million dollars a year to the Government. It is not worth, as has been shown by experiment, \$200,000. It is not worth the civilized man's while to annoy and pursue his fellow-citizen that the state may get this sum. It is, to use the popular phrase, "a mean business." It is worth twenty times that sum to the United States to have its citizens see the world, mark, learn, and inwardly digest. We are the only people who try to frighten travellers away. The sight of a transatlantic steamer's saloon full of passengers, waiting to swear their "declarations," makes foreigners wonder and Americans blush. The source of the trouble is, that Ame-

ricans have not yet learned to distinguish between trade and travel as means of collecting revenue. Trade is profitable; travel is worth nothing. To have citizens move about and see is the main use of travel. To be persuaded by tailors to stay at home and buy their goods is a sorrowful experience which we certainly ought to avoid, now that we have begun to be conquerors. A nation that has killed four thousand heathen in one fight ought not to coop people up and make them swear about their sleeve-buttons and undershirts. What does the great Griggs say to this? Does he call this glory?

THE RIGHT OF MARINE CAPTURE.

Commander Stockton, President of the Naval War College at Newport, has an article in the February *North American Review*, in which he opposes the proposed surrender of the right to capture the merchant vessels of an enemy at sea. The article is written "at the suggestion of Capt. Mahan," and is intended to be a clear presentation of the subject "from the point of view of a belligerent," and of one "to whom the practice and principles of international law are not unknown." The article is a summary of all that can be said in favor of the right of marine capture.

Commander Stockton is, we think, quite right in assuming that the Declaration of Paris may now be regarded as an integral part of international law. The rules that the neutral flag protects the enemy's cargo, and that neutral goods are not subject to capture under an enemy's flag, have been adopted by the great majority of civilized states, and by us they have, in practice, been accepted as binding; but it should not be forgotten that if we are not yet among the signatories, it is because we alone among all governments objected that the Declaration did not go far enough, because it did not exempt all private property from capture.

Commander Stockton says at the outset that he is opposed to prize-money laws, and is in favor of their repeal, obviously because he perceives that until the prize-money laws are repealed, there will always be a sinister pecuniary interest affecting the settlement of the controversy. But, for ourselves, we believe that the prize-money laws are the life and soul of the system, and that without them, as we shall endeavor to show, the capture of merchant vessels would speedily lose its interest for everybody. Prize-money may be little or nothing to Commander Stockton, but his disclaimer does not affect the fact that the navy as a whole has a most powerful pecuniary interest in the maintenance of the practice. Indeed, as enemies of the practice, we are rather grateful to him for so separating the military argument in favor of marine cap-

ture from the baser motives on which the system is supported, that any one can readily see just how strong the former is.

To come at once to his argument: his first point he evidently thinks a novel one. Hitherto the advocates of marine capture have discussed it as a simple extension to the sea of the exemption of private property from seizure on land. Commander Stockton insists, on the other hand, that private property on land is not free from seizure. He says that the extent of the exemption on land is "over-estimated." This statement he supports by showing that, in the Franco-German war, the Germans took, by means of "systematic, but unrecompensed, requisitions and contributions," some six hundred millions of francs. He also insists upon the great damage to property done by the march and encampment of armies in the field. Besides this, there may be deliberately ordered devastation on land, as in Sherman's march to the sea. What has been given up on land is pillage, or the appropriation to the individual soldier, officer, and commander of the goods and chattels, and money and ornaments and statues and bills receivable of the citizens or subjects of the enemy.

This is true, but it is not new. It may all be found in such a well-known handbook as Lawrence's 'Principles of International Law.' What the advocates of exemption from capture at sea say is, not that there is no confiscation or devastation on land, but that the requisitions and damage are allowed only for purely military reasons—the subsistence of troops, the operations of war, or compensation for military losses—and not for the unmilitary and sordid purpose of enriching the soldier at the expense of a defenceless victim. Merchant-ships are captured altogether as plunder, and the proceeds are divided among the captors exactly as if they were pirates or buccanniers; the case does not differ from plunder on land, except that prize money is obtained through the adjudication of a court, and therefore is more decorous than the corresponding land operations.

The real question is, supposing prize money abolished—how much value would the right to capture merchant vessels still have, as a pure belligerent right? How far does it contribute to making the enemy sue for peace? Commander Stockton argues that it is a very valuable right for several reasons: (1) because many vessels can be made over into war-ships; (2) because incoming cargoes, if not seized, would yield to the belligerent customs duties; (3) because capture is cheaper than an effective blockade; (4) because by capturing merchants' ships you may cut off the enemy's food supply or destroy its commerce.

The reply of the advocate of the exemption to all this is, not that it is not theoretically true, but that in the history

of modern warfare there is no proof that the right has been of any substantial value to a belligerent in shortening the war or bringing the enemy to terms. In all the wars that we know anything about, the pecuniary losses through capture have been compensated by insurance; and the crippling of the enemy by cutting off its food supply, though much talked of, has never taken place. In our civil war our merchant marine was obliterated, yet commerce went on just as usual, and when an impartial court estimated our damages, they were unable to put the loss higher than \$15,500,000, in a war which cost thousands of millions. Commander Stockton tries to meet this by saying that if they had had any prize courts, the Confederates would have prevented the English from carrying our cargoes, and confiscated American vessels transferred to the English flag, as having only a colorable register. But he supports this strange contention by no authority or proof whatever. The fact is, that, under the practice which has become established since the Declaration of Paris, endangered commerce, at the outbreak of a war, goes for refuge to neutrals, and, with their aid and that of the insurance companies, the losses through marine capture are so distributed as to play no part in bringing the enemy to terms. The idea of throttling the food supply of your enemy, and making prizes of all his ships, and so bringing him to terms, is a magnificent belligerent dream, but it is not such war as we know anything about. It is a legacy of Napoleon to our reactionary publicists; but even he found it impracticable, and it is certainly much further from realization now than it was in his day.

There are a great many of the old rights of war for which a far clearer case can be made out than for the retention of the right to capture private property at sea. For instance, there was the right to murder or enslave enemies when taken prisoners, universal throughout the ancient world, or to hold them to ransom, so much valued in the Middle Ages. Is it not a distinct loss that we must feed and protect and house prisoners, and get nothing out of them in return? Would not a poor country, going to war with a rich one, have a great military advantage if it could seize upon multi-millionaires and other contributors to the sinews of war, and insist upon their ransom under pain of death? Plunder on land was most effective during the Thirty Years' War in Germany, and caused far more damage than has been caused by the right to capture merchant vessels in any modern war; shall we restore it? The moment you abandon the modern view that the only legitimate object of war is the exhaustion of the armed forces of the enemy, every right of war becomes valuable, even those which have fallen into desuetude

and disgrace. Almost every one of Commander Stockton's arguments in favor of marine capture can be matched by one in favor of plunder on land.

PARNELL.—II.*

DUBLIN, January 21, 1899.

Capt. O'Shea, a Parliamentary colleague, had in 1880 introduced Mr. Parnell to his wife. "A friendship, which soon ripened into love, sprang up between them, and from 1881 they had lived together as husband and wife." Capt. O'Shea strangely does not appear to have realized the situation until 1889, when he filed divorce proceedings. I must here part company with Mr. O'Brien. The remainder of his narrative, covering the last two years of Mr. Parnell's life, is largely an apology for him and condemnation of those who repudiated his leadership. The author contends that the connection was generally known, that in any case Parnell's followers condoned it after the trial, and that they abandoned their leader at the call of Mr. Gladstone. He implies that home rule would have been saved had they stood by him; that Mr. Parnell's death, the dissensions that have paralyzed Ireland, and the practical disappearance of the home-rule cause from consideration are due, not to the action of Mr. Parnell, but to that of his former followers. Upon all these points I differ with Mr. O'Brien, and must appeal to authorities slurred or ignored by him.

The connection was not generally realized. To a considerable degree, from the period of his imprisonment Mr. Parnell appeared an altered man. His old earnestness was abated, his openness and a certain simplicity of character appeared warped. He shrank generally from publicity, and upon some crucial occasions he was not to be found. The real cause was not generally suspected. When rumors of the divorce proceedings (a year before the trial came on) appeared in the press, Mr. Davitt went over from Dublin expressly to see Mr. Parnell. The interview was afterwards reported in the New York papers, and is given at page 14 of Mr. Stead's 'Story of the Parnell Crisis':

"Mr. Parnell then spoke to me as follows: 'Davitt, I want you to go back to Ireland to tell our friends that I am going to get out of this without the slightest stain on my name or reputation,' and he repeated those words again. I fully believed, and I think he intended me to believe, by those words, that he was entirely innocent of the charge made against him. I immediately went and told John Morley so. I crossed over to Ireland and told Archbishop Walsh. Mr. Morley was delighted and so was Archbishop Walsh—intensely relieved, Archbishop Walsh was. I wrote out to friends in Australia and in America, and I repeated those very words—that he was entirely innocent of the charge made against him."

Week after week, his organ, *United Ireland*, reported votes of confidence passed in the belief that he would successfully defend the action. Our feelings were voiced by a speaker at the Cork Board of Guardians:

"Any one who knew the character of Mr. Parnell knew that a man in his position, leader of the Irish race, not alone in the United Kingdom, but all over the world, would never, by committing such an offence, give himself and the cause of his country away to his enemies."

And so it was all over Ireland. We confidently assured the high-minded men and

*The Life of Charles Stewart Parnell, 1846-1891. By R. Barry O'Brien, Barrister-at-Law. Harpers. Two volumes in one. Pp. 378, 394.

women who in England and elsewhere espoused our cause, that he would come out unscathed from the divorce proceedings, as he had from the Pigott forgeries. The trial came on, and was undefended by Mr. Parnell. The jury gave a verdict against him without leaving the box.

"I repeat [says Mr. O'Brien] that I do not think it is my duty to enter into the details of this most unfortunate suit. Mrs. Charles Stewart Parnell [Mr. Parnell married Mrs. O'Shea after the divorce] and her children [by Capt. O'Shea] are still alive. I must consider her and them. I shall not dwell on a subject full of sorrow and pain to both."

That is precisely the difficulty which Mr. O'Brien should have realized when he undertook the responsibility of writing Mr. Parnell's life. No one desires to "dwell on a subject full of" such "sorrow and pain." Mr. O'Brien's book will find a place upon the shelves of the principal libraries throughout the world. No one will undertake the hateful task of publishing the divorce proceedings in permanent form. Not many will care or find it easy to consult the papers of November 17 and 18, 1890. Not many are likely to have preserved the condensed accounts given in the 'Story of the Parnell Crisis,' an extra of the *Pall Mall Gazette*. The revelations of the most scandalous character. Falsehood and duplicity had marked Mr. Parnell's conduct. He had, passing under feigned names, taken different houses to facilitate the intrigue. He had disguised himself, he had hidden away. Much of the evidence could never be gainsaid; some, which it was said might have been shaken on cross-examination, has never been weakened by any open explanation. Addressing a meeting afterwards in Dublin, Mr. Parnell said:

"I could not come amongst you and look you in the face as I do to-night, did I not know that there is another side to this question, as to every other question, and that you will wait and hear the other side before you decide."

Neither during his lifetime nor since his death, so far as I am aware, has any other side to the shocking evidence been presented, and it was then realized that in forcing Capt. O'Shea upon Galway in 1886, he had palmed off on Ireland the husband of her who for years had been his mistress.

Some excuse can be offered for those who upon the moment, at the National League, and at the Leinster Hall, boasted unshaken confidence in their leader. The Leinster Hall meeting had been called long before for general purposes. Some were conciliated by the resolution concerning Mr. Parnell approving only his *political* conduct. Most felt bewildered. Many were carried away by what Mr. McCarthy said:

"I am not going to ask what were the motives—I am perfectly certain myself that they were generous and they were chivalrous—which led to the result that no defence was put in in that case. I am not going to ask you here—I shall not ask you whether, if my esteemed personal friend, Mr. Frank Lockwood, who sat in that court, had been allowed to ask certain questions in that case, whether he might not have knocked all to pieces certain evidence given there, and whether he could not have made the case to assume a position very different in appearance. . . . You would have had a very different story to-night."

It is impossible to explain the attitude of those who saw nothing in Mr. Parnell's conduct to weaken their allegiance—of admirers who became adorers, of those who previously

criticised or held aloof and now became his most ardent followers. Nothing can explain it but the glamour, force, and attraction of his personality. "I have often thought Parnell was like Napoleon," said Mr. Chamberlain to Mr. O'Brien.

Prepared to sacrifice to the Irish cause everything but honor, shocked most of them beyond expression at the proceedings in the divorce court, puzzled by such speeches as Mr. McCarthy's and the apologies of some of the most high-minded men and women in Ireland, the Irish members attended Parliament, which met a week after the trial. Some sought counsel of English friends, and were amazed there also to find opinions favorable to Mr. Parnell. We were informed on reliable authority that a communication from Mr. Gladstone would be read at our assembly, before the election of chairman. It was understood that, in consideration of Mr. Parnell's services to Ireland and his feelings, he was to be reelected, whereupon he would of his own accord resign, and, for a time at least, retire from public life. No communication was read, he was reelected, he made not one word of apology. We supposed that somehow it was generally thought best to condone his conduct—that the general political outlook would not be materially affected. However, almost immediately afterwards it became known that Mr. Gladstone had written a letter to Mr. Morley asking him privately to convey to Mr. Parnell his opinion that his leadership of the Liberal party would be difficult if Mr. Parnell's leadership of the Irish party were continued. It was evident that Mr. Parnell had kept out of the way. A member afterwards acknowledged that Mr. Parnell's private secretary remarked to him: "Morley is searching everywhere through the House for Parnell, with a letter from Gladstone, but I will take devilish good care he will not find the chief, because I will keep him out of the way."

Mr. McCarthy appears to have been responsible for not having at the meeting communicated to his colleagues the contents of this letter, when aware that it would not otherwise be brought forward. In self-defence, Mr. Gladstone gave the letter to the public the same evening. The principal passage ran:

"While clinging to the hope of a communication from Mr. Parnell to whomsoever addressed, I thought it necessary . . . to acquaint Mr. McCarthy with the conclusion at which, after using all the means of observation and reflection in my power, I had myself arrived. It was, that, notwithstanding the splendid services rendered by Mr. Parnell to his country, his continuance at the present moment in the leadership would be productive of consequences disastrous in the highest degree to the cause of Ireland; . . . would not only place many hearty and effective friends of the Irish cause in a position of great embarrassment, but would render my retention of the leadership of the Liberal party, based as it has been mainly upon the prosecution of the Irish cause, almost a nullity. This explanation of my own view I begged Mr. McCarthy to regard as confidential, and not intended for his colleagues generally if he found that Mr. Parnell contemplated spontaneous action. But I also begged that he would make known to the Irish party at their meeting tomorrow afternoon that such was my conclusion, if he should find that Mr. Parnell had not in contemplation any step of the nature indicated."

A majority of the Irish members felt they had been tricked, and demanded that the question should be reopened. Mr. Gladstone's letter was in no sense felt by them as a command; it conveyed necessary information as

to what was likely to be the attitude of English Liberals, the main wing of the home-rule army. Mr. Parnell, with extraordinary adroitness, set about confusing the issue. He issued a manifesto calling in question the good faith of Mr. Gladstone, and declaring that the "independence of a section of the Irish Parliamentary party" was "apparently sapped and destroyed by the wire-pullers of the Liberal party." He played upon every prejudice and passion of the Irish nature. The English were "wolves now howling for my destruction," as later Mr. Gladstone was "an unrivalled sophist," "a garrulous old man." On his own showing, he deliberately violated the seal of secret, private, and confidential intercourse at Harwarden. Future political coöperation of responsible ministers would be impossible. It was asked of the majority: "Would any people, on the eve of victory, abandon, because of an act of immorality, the general who had organized victory?" The answer was clear: "Certainly, if, in the exposure, characteristics fatal to confidence in him were shown; and if his conduct and bearing had alienated a leader and a people without whose aid victory was impossible."

Ireland became fatally divided against herself; the majority believing that to obtain home rule under or through Mr. Parnell would be impossible—the other that it was possible only through him. Few can look back with any equanimity upon the contest that ensued, and that was exacerbated by Mr. Parnell's decease. He wore himself out in frantic effort to reassert himself. It was scarcely to be expected that Ireland would carry on an internal quarrel upon a higher plane than that she had so often found necessary to assume in her contest with Great Britain. Protestants realized one curious fact, that, according to Catholic canonical law, Mr. Parnell appeared to aggravate the moral offence by marrying Mrs. O'Shea, a divorced woman.

I must now draw to a conclusion this perhaps too lengthy notice of Mr. O'Brien's book. He keeps much out of view the extent to which Mr. Parnell's success depended on the assistance of the men who gathered round him. Upon one side of his life we should like to have had more information—the quarrying and mining operations he carried on in the County of Wicklow. Often, while pondering these volumes, have I asked myself, Can it be that the Ireland of to-day is the same Ireland as that of Mr. Parnell's time, fused in agitation, set in grim determination for the attainment of home rule? A few lines from the Irish correspondent of the *Times* might be taken as fairly representing the present situation:

"The present circumstances of Ireland may be briefly summed up in the statement that at no period of her history did she appear more tranquil, more free from serious crime, more prosperous and contented. . . . There is no longer the agitation which convulsed the country in days gone by. . . . The relations between landlord and tenant continue to be generally friendly, and both parties are, with some remarkable exceptions, adapting themselves with prudence and good feeling to the change consequent upon the application of a new law."

We must, however, remember that this is quoted by Mr. O'Brien as written in 1875, on the eve of the most searching agitation Ireland has seen in this century. It is never safe to judge from appearances. Nevertheless, many of the elements and conditions of violent agitation that formerly existed appear now wanting, apart from the extent to

which Mr. Parnell gathered to himself, only to carry down with him, the political spring and hope of the country. The revulsion from the delusive hopes of the French Revolution is said, with many Liberals in the early part of the century, to have induced a philosophy of despair. The breakdown of the home-rule movement, small in importance as it was in comparison with the French Revolution, has not been without a similar influence.

No chapter in Mr. O'Brien's book is more interesting than the last—Mr. Gladstone's "appreciation" of Mr. Parnell—a remarkable proof of the generosity and self-forgetfulness of that noble spirit. I shall conclude in Mr. Gladstone's words: "Poor fellow, poor fellow! . . . Dear, dear, what a tragedy! I cannot tell you how much I think about him, and what an interest I take in everything concerning him. A marvellous man, a terrible fall." D. B.

EXCAVATIONS IN THE FORUM.

ROME, January 15, 1899.

Since I wrote you last December, the excavations in the Forum have been steadily continued. The exploration of the foundations of the Temple of Vesta is completed. After clearing away the encumbering earth, brick walls were found. These, built in the centre of the mound, were four in number. The one on the western side had been destroyed in some past age. The others seem, from the excellent character of the work, to be of the time of Hadrian; but as no stamped bricks were found, it is not possible to be absolutely sure of the date. Near the bottom of the chamber formed by the walls a brick with the words *Rec Dn Theodorico Bono Rome* came to light. This, however, did not belong to the walls, but is evidence that, as was the case in respect to many other buildings in Rome, Theodoric interested himself in the preservation of the Temple of Vesta. What purpose was served by the walls cannot be told. Were they built by Hadrian to support the superstructure, or did they form a chamber for the ashes of the sacred fire which were taken off once a year and thrown away by the *Porta Stercoraria*? Of small objects few were found. A splendid boar's tusk and one or two Roman bronze coins of late date were turned up. Much more numerous were the fragments of vases ranging in date from our own times to the end of the fifth century before Christ. These shards were, as a whole, of but little value, but among them was one small piece that is of sufficient interest to make up for the dulness of all the rest. It is a bit of a Greek red-figured vase of the end of the "strong" style, and shows the figures of two warriors in combat. It was found deep down among the foundations. Its interest is in the suggestion it affords that such were the vases used by the Vestals for their own needs and those of the goddess. How else could such a fragment have got so deep down below the temple?

Such has proved to be what Lanciani (to mention only one, but he the latest, among many writers on the subject) described as "a shapeless mass of concrete!"

What will first strike the attention of whoever now, returning to Rome, goes to the Forum, is the Honorary Column. Once more it stands erect and fulfils its purpose; for though we do not know to whom it was originally set up, it serves henceforth as an honorable monument to Minister Baccelli and

to his "braccia destra," Signor Boni, with-
out whom its disdained fragments would still
be cluttering the ground. There is no ques-
tion that the column stood originally not di-
rectly on the existing brick base, but, like the
Column of Phocas, on a marble pedestal placed
between the base and the shaft. This pedestal
has not been found. Consequently, some
were in favor of doing nothing about the col-
umn, while others thought it had best be
placed directly on the brick base. Fortu-
nately neither of these courses was followed,
but a pedestal of brick was made of the same
proportions as the pedestal of the column of
Phocas, and on this the column stands. This
is, clearly, the proper solution of the ques-
tion. To erect the column on the base with-
out any pedestal would have been to make an
architectural abortion which no one with any
understanding of architecture could advise.
As in the case of the brick support of the
edicula of the Atrium Vestæ, this brick
pedestal is not a restoration or in any way
deceptive. It merely serves to set the column
in its proper relation to the base and to the
neighboring buildings.

A work that does not attract much visual
attention, but which adds greatly to the at-
tractiveness of the Forum, is the closure of
the opening made by Rosa years ago into
the Cloaca Maxima at the eastern end of
the Basilica Julia. The constant stench that
arose from the sewer made the neighborhood
disgustful, and the only reason for the origi-
nal making of the hole, or for now leav-
ing it, was that inquisitive tourists might look
at this ancient drain. There are so many
opportunities for the satisfaction of the
"yellow" curiosity that enjoys such sights,
that this hole seemed needless, and it re-
quired only a few moments' consideration
on the spot to convince Minister Baccelli
that it had best be closed.

Another small but much required under-
taking was the insertion of some iron bars
in the base of the Temple of Saturn to clamp
together the blocks which showed ominous
signs of giving way and letting the super-
structure crash down. Signor Boni has seen
to this, and the Temple is safe for a long
time to come.

So far I have described matters of im-
portance, but in no way surprising or ex-
citing. Two discoveries, however, have been
made the interest attaching to which could
scarcely be surpassed in connection with
the history of Rome. One of these is the
base of the column set up where Cæsar's
body was burned, and one the "black stone"
which was supposed to mark the burial-place
of Romulus. For what more could one ask?
After the exploration of the Temple of Vesta
was completed, Signor Boni turned his at-
tention to the Temple of Cæsar. As all who
have studied the topography of the Forum
will remember, Suetonius tells of a column
of Numidian marble (what we call *giallo
antico*) dedicated *parvuli patriæ* on the spot
where Cæsar was burned. An altar also was
placed there, but this was destroyed because
the worship of Cæsar was illegal. After-
wards, Augustus built, as he tells us in his
autobiographic inscription, the Temple of
Julius. Later authors say that the temple
stood on the site of the funeral pyre, and it
is scarcely conceivable that Augustus should
have destroyed the column. Those who know
the Forum will recall that in the front wall
of the podium of the Temple of Julius there
is a semicircular recess, in front of which
stands a wall of tufa. This tufa wall does

not close the recess to all access, but merely
makes it necessary to enter from the sides.
The wall is of late origin—probably, to judge
from the construction, of the third or fourth
century of our era. If there was one spot
where more than anywhere else one would
have sought for traces of the marble column,
it was in the space between this late wall
and the inexplicable hemicycle. It is well-
nigh incredible, but it is the fact, that when
some time ago this spot was excavated, only
a few bushels of earth were taken away at
one end of the wall, and the space between it
and the hemicycle left absolutely unexplored!
Signor Boni has now cleared away the
earth, and there, on a pavement of well-cut
travertine blocks, are the remains of a base
such as one would expect the column to have
had. This is the pavement which Cæsar
trod. Here is the very spot where once his
body rested. Here Antony aroused the deeper
emotions of the plebs, and here from the
phoenix ashes of a dead Republic rose the
young Empire.

Only the core of the base is left, and the
marble that originally covered it has dis-
appeared—stolen, no doubt, in the sixteenth
century by one or other of the architects
who used the Forum as a quarry. This core
is noteworthy, for it is made of fragments
of *giallo antico* and gray Carrara (*lunense*)
mixed with *pozzolana*—these chips being,
most probably, those made by the workers
on the column; for *giallo antico* was not a
common marble, and *lunense* was rare in
those days. Pliny says that M. Lepidus, a
consul in 676 A. U. C., was the first to in-
troduce the *giallo*, while Mamurra, one of
Cæsar's officers, first used *lunense* in large
pieces.

To many persons the so-called Tomb of
Romulus will be of quite as great interest
as the site of Cæsar's funeral pyre. The
ancient authors give us but scanty infor-
mation about the tomb. What they say, though
slight, is perfectly clear. Festus, under the
words *niger lapis*, writes that there was a
"black stone in the Comitium which showed
where there was a grave"; some thought this
had been intended for Romulus; he, of
course, was never buried, and, after his dis-
appearance, the grave was used for Faustulus
and Quinctilius. These statements are borne
out by the scholiasts on a verse of one of the
Epodes of Horace (xvi. 13), who say that
Varro wrote that the Tomb of Romulus was
before the Rostra, where, also, two lions
stood. One of the scholiasts quotes Varro as
saying not *before* but *behind* the Rostra. For
various topographical reasons, this must be
a mistake. A few days ago this "black
stone" was found. Signor Boni had for some
days been exploring the late branch of the
Sacred Way that ran from the Arch of
Severus to the Temple of Faustina. In the
neighborhood of the arch there was an op-
portunity to enlarge the extent of the ex-
plorations, and very soon a well-laid trav-
ertine pavement of the Republican epoch was
found. It was in close proximity to the spot
on which the buildings of the Comitium
stood, and this pavement is part of that of
the Comitium. Hardly had it been discover-
ed when the workmen came upon a trav-
ertine curb. Further digging showed that this
curb protected a *black stone*. This has now
been entirely uncovered, and turns out to be
a small pavement, about twelve feet square,
of black marble blocks (19-25 cm. thick),
protected on all four sides by the travertine
curb, the latter, however, not entirely pre-

served. This is sufficiently strange, but what
proves the sanctity of the site is, that when
(probably in the fifth century A. D.) the road
was built that now runs from the Arch of
Severus over the spot, large marble slabs
were raised like a solid fence all about the
black stones to protect them. The blocks of
the pavement, which are not absolutely regu-
lar in form, are of the black marble streaked
with white that comes from Tænarum—what
the modern *scapellini* call *marmo nero di
Grecia*. For the present they have been par-
tially covered up, as the attacks of relic-
hunters began instantly after the announce-
ment of the discovery, and the authorities do
not desire fresh confirmation of Horace's
words:

"quæque carent ventis et solibus ossa Quirini,
nefas videre! dispabit insolens."

Not only is this *niger lapis* of great interest
in itself, but we now know more accurately
than ever before the approximate position of
many of the most sacred monuments of
Rome, for close to the Tomb of Romulus was
the statue of the wolf suckling the two bro-
thers, and the Nævian fig-tree planted by
Tarquinius Priscus over the spot where he
had buried the stone which Nævius cut in
two with a razor. How splendidly dead his-
tory is awakening into life!

Since the discovery of the metope of the
Basilica Æmilia, several other objects of a
similar nature have been found. One, most
interesting because the first of its kind
known, is a piece of one of the windows of
the second story of the Basilica Julia. This
had been discarded by the previous excava-
tors as of no interest. Considering that they
thought so little of the metope of the Basilica
Æmilia as to build it into the retaining wall
of a road, it is not surprising that they did
not realize the value of a piece of window
frame. There are, in truth, no terms of con-
tempt too strong to characterize the work
that has been done before this year in the
Forum and that which is still being done in
other parts of Italy. Were it worth while,
proofs of such mismanagement, carelessness,
and self-seeking could be given, that those
hearing them might think they were lis-
tening to tales of Turkey.

The discovery of such pieces as the metope
suggests two things that it is greatly to be
hoped Minister Baccelli will successfully ac-
complish. One of these has been already
undertaken: it is the taking over from the
Church of the Temple of Romulus, which,
freed from late additions and put in its origi-
nal shape, so far as may be, will then serve
as a museum for all objects found in the
Forum, and others, such as photographs or
engravings or casts, that are connected with
it. Here ought to be put the statues of the
Vestals found in the Atrium Vestæ and now
in the Museo delle Terme. Where they now
stand they are lifeless objects—dead archæ-
ological facts, material statistics. In the
Forum near where they were originally
placed, they would acquire some faint im-
pulse of life, and render the Forum and Ro-
man history more truly intelligible than it
now is even to those few who are blessed
with the power of imagination.

The other suggestion given by the present
work is that the Minister arrange for the
excavation of the northern side of the Fo-
rum, which is entirely disused except for a
loop in the track of the electric tram—a loop
which, with no difficulty whatever, could be
run along the road beside S. Adriano. This
undertaking would be worthy of him. To do

what has so far been done required no intelligence; the results have all been got by merely removing earth that plainly was out of place. It will take some thought and trouble to carry out the further excavation here suggested, but it will have to be done some day. Minister Baccelli might as well pluck the laurel as leave it. Then, too, the ground where the Capitoline Plan was found ought to be excavated. It never has been. A mere ditch, a few feet broad, was dug at the foot of the wall on which the Plan was originally fastened. If the earth, not only a few feet, but a few yards away from the wall were searched, other pieces of the Plan would, in all probability, be found. That game is assuredly worth the candle.

There are many other varied interests of which to write—the question of the Ducal Palace at Venice, which has aroused much comment; the Ponte Vecchio at Florence, which seems to be saved this time; the School at Mondragone, which has nothing to do with antiquities, but is a good illustration of certain governmental conditions—but I fear I have trespassed too much already on your valuable space. All must sincerely hope that the new year will carry out the promises uttered with the last breath of 1898. R. N.

Correspondence.

"TAKE UP THE WHITE MAN'S BURDEN."

TO THE EDITOR OF THE NATION:

SIR: I wonder if anybody fully appreciates how this recent lyric is taking hold of people, and what an appeal it is making in favor of imperialism and militarism to many whom no other appeal would reach. The "burden" is the work of civilizing and policing the world, beginning, of course, with the Philippines. The "white man" is the Anglo-Saxon. It is to America that the appeal is made to "take up" this "burden." The "judgment of your peers," which is to drown every other voice, is the judgment of England. And certainly if the lines mean more than this, they mean this at least.

But let us not stop at the first line. Let us look the "burden" fairly in the face. There it all is, set down in black and white by an expert who weighs his words. I forbear quotation, as the lines are familiar, but can the most hardy read them without a shudder!

And who imposed this burden? That is a very long and a very old story. The burden of civilization, whence came it? But the main question is, Who are to share it? Who laid it upon the shoulders of the "white man"? There is a Good Book that says something about burden-bearing, but it makes no such limitation as this. Indeed, it was once a problem how to get the "white man" to assume an iota of this burden. Do not reason and revelation agree in this, that all races—white, black, and red—need the discipline of this sort of burden-bearing? Have we not read into these lines a race pride and a race narrowness which demand a chastisement somewhat like that which Mrs. Browning used to administer to her insular friends? "You evidently think that God made only the English. The English are a peculiar people. Their worst is better than the best of the exterior nations. Over the rest of the world He has cast out His shoe."

E. A. STRONG.

YPSILANTI, MICH., February 6, 1899.

DOMESTIC PEACE, FOREIGN WAR.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for January 26, in an article on "The English Political Muddle," occur these words: "Both the Republicans and Conservatives are now getting out of their domestic difficulties in the same way, . . . by undertaking to thrash somebody." I am reminded of a remark that Plutarch makes in his *Life of Coriolanus*: "The consuls contrived it so that employment abroad [under arms] might still the intestine tumults." This was nearly twenty-four centuries ago, when the Roman republic was in its teens. For us the device has the respectability of age; to the Romans it might have appeared as a youthful indiscretion.

A. B. H.

WENTZVILLE, MD., February 6, 1892.

Notes.

'Democracy and Empire,' by Prof. Franklin H. Giddings, an imperialistic apologia, and 'The Trail of the Gold-Seekers,' by Hamlin Garland, an account of the author's journey to the Stickeen River and Atlin Lake country, will be published by Macmillan; the one shortly, the other in June. In October, 'Boy Life on the Prairie,' also by Mr. Garland.

Longmans, Green & Co. have in press or in preparation 'Selections from the Sources: A Supplement to Text-books of English History, B. C. 55-A. D. 1832,' arranged and edited by Prof. Charles W. Colby of McGill University; 'The Life of William Morris,' by J. W. Mackall; 'The Early Married Life of Maria Josepha, Lady Stanley, from 1796,' edited by J. H. Adeane; the fourth and concluding volume (1660-1696) of 'The Memoirs of the Verney Family,' by Margaret M. Verney; 'A Handbook to French Art,' by Miss Rose G. Kingsley; 'Wood and Garden: Notes and Thoughts, Practical and Critical, of a Working Amateur,' by Gertrude Jekyll; 'A Text-book of Theoretical Naval Architecture,' by Edward Lewis Attwood, Assistant Constructor, R. N.; and 'Indian Philosophy,' by Max Müller.

M. F. Mansfield and A. Wessels, No. 22 East Sixteenth Street, New York, are making a facsimile reprint, for subscribers, of the first (Lahore) "Public Document" edition of Kipling's 'Departmental Ditties,' now become very rare. They announce also the same author's poem, 'The Betrothed,' with illustrations in tint by Blanche McManus.

J. M. Bowles, Boston, will soon publish 'Composition,' by Arthur W. Dow, curator of the Japanese Paintings and Prints at the Boston Museum of Fine Arts.

'Washington the Soldier,' by Gen. H. B. Carrington (Boston: Lamson, Wolfe & Co.), is, in the main, an abridgment of the valuable work by the same author, 'Battles of the Revolution.' The maps of battle-fields are the same, and for authenticity and completeness are among the very best that are accessible. They were carefully compiled and drawn by the author himself. In the briefer form, recast and made more distinctly biographical, the book will be welcome to a large class of readers to whom the larger work is not easily within reach.

The second edition of Haigh's 'Attic Theatre,' just issued by the Clarendon Press (New York: Henry Frowde), practically superseded the edition of 1889 in respect to many

points which have been illuminated by the discoveries and investigations of the last ten years. Several chapters have been entirely rewritten, others have been thoroughly revised, new illustrations have been added, and the latest conclusions as to many mooted questions have been incorporated in the work. Moreover, all the latest literature, German, French, English, and American, on the stage question and on the architecture of theatres recently explored is here represented with great completeness. While adopting Dörpfeld's plan of the Dionysiac Theatre at Athens and some of his professional opinions as to the date of its structures, Mr. Haigh rejects, after an elaborate discussion, the German antiquarian's special views on the stage question. The whole treatise is brought up to date in the most satisfactory manner, and the Clarendon Press deserves the thanks of scholars for this second edition, which sums up so promptly the conclusions of many scattered dissertations and the results of explorations accessible only in expensive publications.

The Germans possess a model *multum in parvo* in the 'Jahrbuch' of Kürschner, of which the issue for 1899 is as rich in its contents as any of its predecessors. The amount of general information, from reliable sources, found between the covers of this pocket encyclopædia is truly remarkable. While on American subjects it is quite naturally not complete, on non-American, and especially European, subjects it is almost all-embracing for a volume of its scope and purpose. The cost is only one and a half marks.

Of Andree's 'Allgemeiner Hand-Atlas' a new fourth and thoroughly revised edition has appeared, edited by A. Scobel. This standard work now contains 263 fine maps, nearly equally divided between main and side maps. The additions to the new issue deal largely with America, thus repairing one of the shortcomings of the first three editions. Not only political, but also physical and commercial geography is furnished here, representing the latest detailed researches all over the globe. About 200,000 geographical names constitute the Index. A popular edition of Andree has been brought out by the publishers, Velhagen & Klasing, in Leipzig, for the remarkably low price of 28 marks (or, in leather binding, 32 marks), while an *édition de luxe* on Japan paper in fine binding will cost 120 marks, and be limited to 100 numbered copies. The high coloring of the mountainous districts causes some difficulty at times in reading the names.

A list of 220 early books relating to America (more than half antedating 1550), the gift in December last of Mr. Alexander Maitland, is recorded in the January Bulletin of the New York Public Library. There, too, is to be found a summary review of the valuable library of Samuel J. Tilden, now incorporated with the amalgamated collections resulting from his foundation. We can mention only 123 volumes of Cobbett's 'Parliamentary History' and Hansard's 'Parliamentary Debates'; 115 volumes of the New York *Herald* (1846-1886), with files of the *World* (1860-1886), *Times* (1865-1886), *Tribune* (1867-1886), and *Sun* (1870-1886); an extraordinary collection of Gillray's caricatures (1777-1811), mounted and bound in eight folio volumes, with specimens of Hogarth and Cruikshank; and numerous extra-illustrated works—Waverley, Moore's *Byron*,

Bray's Stothard, Thornbury's Turner, Par-ton's Franklin, Ticknor's Prescott, Boswell's Johnson, Macaulay's Life and Works, etc.; Duyckinck's 'Cyclopædia of American Literature,' and Cromwelliana.

The Library of the University of Pennsylvania has been acquiring, through P. S. King & Co., London, a set of British Parliamentary Papers—the most important before 1880, a complete collection since that date. A catalogue of the earlier papers has been printed by Messrs. King, with analytical annotations revealing curious and important documents concealed under general and apparently unrelated titles.

The second annual report of the Historical MSS. Commission of the American Historical Association, dated December 30, 1897, and issued last year from the Government Printing Office, is notable for its tabulation of certain Colonial Assemblies and their journals as a guide to students; for the conclusion of the letters of Phineas Bond, British Consul at Philadelphia, to the Foreign Office, 1790-1794; and the Mangourit correspondence respecting Genet's projected attack upon the Floridas, 1793-'94. The next report will be eagerly awaited, as it will contain the correspondence of John C. Calhoun, as already announced.

Commissioner Swan's eleventh report on the Public Records of Massachusetts is remarkable for an appendix giving the locations of towns in counties, according as these have undergone change of boundaries. Such changes are described in detail before the alphabetical list is given. As the Massachusetts example of the care of records is being followed by other States, and deserves to be followed by all, the report has a widespread interest. A State standard ink has been evolved for insuring permanence of records, and Mr. Swan now addresses himself to the subject of the ink proper for type-written records. This discussion, too, has a general importance. For one thing, he says, never use a copying-ribbon for records.

The well-known American Father Hecker is not allowed to rest easy in his grave. He was made last year the occasion of a stout volume, by Charles Maignen, entitled 'Études sur l'américanisme. Le Père Hecker est-il un saint?' (Rome: Desclee & Lefebvre; Paris: Retaux). The question implies the author's answers. The Abbé discovers, beside the virtues of his antagonist, shortcomings spiritual and intellectual, and aberrant doctrine. Father Hecker was a Liberal in disguise. His pet Paulist foundation makes no show in vigor in comparison with the Redemptorists whom he quitted when seeking a more "American" form of conventual life.

The *Annales de Géographie* for January contains a brief description of some of the physical features of the coast of Maine as an example of the coastal plane, by Prof. W. M. Davis of Harvard, and the conclusion of M. Pasquet's account of the development of London—the "ville-province." His aim has been, not to attempt to exhaust so vast and fertile a subject, but simply to show "how the past of London has determined the present, how this past still lives in the present." There is also an illustrated account of a journey in Southern Yunnan, and an interesting summary of the results of the commercial mission to China of the Lyons Chamber of Commerce, accompanied by a valuable "economic" chart, exhibiting, among other things, the principal products, dis-

tributing centres, and ways of communication in Central and Southern China. M. Martonne describes the curious distribution of forests in Madagascar, where they form a belt—in some places two belts—surrounding the interior treeless highlands, the different species of trees and their commercial value.

The overthrow of Mahdism has directed attention anew to the great Mohammedan Religious Order of the Sanatsiyah, which, though not yet fifty years old, has one hundred and twenty monasteries scattered throughout northern Africa and the Sudan, and seven hundred students in the theological college attached to the head monastery in the oasis of Jaghbûb in the Libyan desert. According to a writer in the *Church Missionary Intelligencer* for January, the great object of the founder "was to erect an impassable barrier to the progress of Western civilization and the influence of Christian powers in Muslim lands." In these ardent propagators of a great Pan-Islamic movement it is possible that Great Britain and France will find deadly foes harder to conquer than the Khalifa and his dervishes.

Among the varied contents of the January Quarterly Statement of the Palestine Exploration Fund are reports of the new excavations on the possible site of Gath by Dr. Bliss and his associate, and an interesting notice, with photographs, of Abraham's oak at Hebron, by Dr. C. Shick. In regard to this region he says, "One thing struck me, namely, to see that in the last forty years the cultivation of the land, hills, and valleys had made marvellous progress round this site and Hebron in general. Everywhere it was green with vines, trees, etc., and between them are many new houses in all directions. Moreover, wherever I went, there was plenty of water to be found either in cisterns or springs, and I could see several rivulets or little brooks." A traveller on the east of the Jordan in 1898 met the Haj pilgrimage on its way to Mecca. It consisted of 10,000 civilians, with an escort of 500 mounted infantry and a mountain battery, and was at least four miles long. Children and women, he says, were almost in as great numbers as men, and for half an hour after it passed he could hear it "like the sound of the sea." He was particularly impressed with the marvellous discipline which prevailed among this mixed multitude.

"The Mythology of the Bella Coola Indians," by Franz Boas, is published in the Memoirs of the American Museum of Natural History as the second contribution of the Jesup North Pacific expedition. It treats of the remnants of a once numerous tribe now living on the coasts of Dean Inlet and Bentinck Arm in British Columbia. They are shown to have developed a peculiar mythology, involving the coördination of a number of supernatural beings whose functions are so well defined that they may properly be termed deities. This system is vastly superior to that of the neighboring tribes. The Bella Coola are divided into village communities organized on an endogamic basis, each having its tradition and rites. The description of their ceremonies, and translation of many of their legends, constitute a valuable addition to our knowledge of Indian folk-lore. A series of plates portray the masks used in some of the ceremonials.

The Museum has also issued the tenth volume of its Bulletin, containing several papers

of note. "The Huichol Indians of Mexico," a primitive tribe hitherto almost unknown, are described by Carl Lumholtz, who also contributes an article by himself and Ales Hrdlicka on "Marked Human Bones from a Prehistoric Tarasco Indian burial-place in the State of Michoacan, Mexico." These are believed to have been the bones of enemies kept as amulets and buried with the warrior who procured them. William Beutenmüller's "Descriptive Catalogue of the Bombycine Moths found within Fifty Miles of New York City" is illustrated with several plates. Papers on "The Extinct Camelids of North America and some Associated Forms," by J. L. Wortman, on "The Vertebrate Fauna of the Hudson Highlands, with Observations on the Mollusca, Crustacea, Lepidoptera, and the Flora of this Region," by Edgar A. Mearns, and contributions from Joel A. Allen, Henry F. Osborn, and others are included in this volume.

The *Annales* of the Argentine Meteorological Office, volume 12, contains the first instalment of a series of observations relating to the climate of Ascunción, Paraguay, and Rosario, province of Santa Fé.

Dr. Murray remarked lately that it was a rash man who should affirm what his Oxford Dictionary didn't contain. A correspondent reminds us that Franklin's "Orthodoxy is my doxy," etc., has already appeared under *doxy*, but not ascribed to him, and with an error of J. Q. Adams for John Adams, and of year (1778 for 1779). There, also, is given Priestley's attribution of nearly the same formula to Bishop Warburton.

—Mr. Todd, who founded the newspaper department in the Boston Public Library, has procured for that institution a file, complete as far as possible, of the London *Times*. This gift is of 232 bound volumes, which include all issues since 1808. The file in the Lenox Library runs back two years further, to 1806. That in the Congressional Library is said to be the only one in America containing all issues of the *Times* from its establishment in 1788. It seems impossible now to discover in book marts any file for the first twenty years which are lacking in Mr. Todd's collection. Nor is this strange, since in 1800 its circulation was no more than 1,000 copies. It is now thirty years wanting one since Mr. Todd brought about the establishment of a newspaper reading-room in Newburyport, by offering the City Council \$300 a year for purchasing newspapers if an apartment for the use of them should be furnished by the authorities. He was then a resident of Newburyport, and has described to the writer how he was led to that new library departure. Meeting business men (often of liberal education), he asked scores of them how many books they had read during the last year, and in most cases the answer was, "None. We must read the papers or we cannot do business; and then we have no time for books." Solon's laws were not the best he could give, but they were the best the Athenians would take. Thus speaks Mr. Todd regarding his experiment in Newburyport and his benefaction to Boston.

—The Wisconsin Historical Society, which ended its first half century on the 30th of January, has just published an annotated Catalogue of its Newspaper Files in a volume of three hundred and seventy-five pages. The size of this compilation appears surprising, although the collection amounts to

ten thousand bound volumes; but the work is much more than a list of newspaper titles. On well-nigh every page are notes as to the successive editors, politics, religious doctrine, and other features of the publications. For example, the *New York Weekly Inspector*, an octavo journal which attained two volumes, August, 1806-7, was "edited by Thomas Green Fessenden in opposition to Jefferson." (It was to this publication that Poe truthfully referred for one of the earliest occurrences of the word *highbinder*.) In many files there is many a gap, but it is frankly stated with infinite painstaking what and how many there are of these missing links. Thus, it is confessed that the sixty years of the *Pennsylvania Gazette* treated in sixteen lines are represented by only thirty-four volumes, although not a few numbers are of the rarest dates, as 1775-'77, the volumes for which three years are quoted by dealers as worth \$500. Reproductions and facsimiles are also carefully acknowledged, and the presence of an index in each volume. To facilitate the labor of consulting the catalogue, it is divided into two parts, the first of which is styled Geographical. Here the papers are arranged alphabetically according to their location—first those in the several United States, and then those in foreign countries. In the second part, termed Chronological, the arrangement is by decades, with abbreviated titles, while for details in each case the reader is referred back to Part First. The earliest of all issues was in Oxford (Eng.), *Mercurius Aulicus*, 1643. The earliest dates in America were the *Boston Gazette*, 1719, and, in Philadelphia, the *American Weekly Mercury* and the *Independent Whig*, both 1720. The foreign publications are set forth under two hundred and eighty-two titles. The titles up to 1750 were sixty-nine, and fifty-six in the Revolutionary decade 1771-'80. Among foreign notabilia are the *Toronto Grip*, 40 volumes, the *Parisian Montieur*, 31 volumes, and the *Leyden Nouvelles Extraordinaires*, 18 volumes, from 1765. This Wisconsin newspaper index seems to make a new departure in its line, and has cost a prodigality of labor. No newspaper searcher in any large collection can fail to hold in grateful remembrance Miss Emma Helen Blair, to whose patient, intelligent research and rare expertness the editors chiefly ascribe whatever is most valuable in the Catalogue.

—The American Economic Association has published (through Macmillan) the first of its studies for 1899, containing the notable presidential address of Prof. Hadley, on the "Relation between Economics and Politics," and the reports of two committees, on currency reform and on the twelfth census. All deserve careful attention, and give evidence of the useful activity of the Association. The Report on Currency Reform is a temperate and careful statement, by a body of competent specialists, of the reasons why reform is needed, and of the direction in which it should proceed; and, without obtruding any pet plan of its own, gives advice which, alas, the average Congressman is too apt to disregard. Yet every such judicial statement of the needs of the case has its effect on public opinion, and serves to strengthen the slow-gathering convictions of the half-informed legislator. The Report of the Committee on the Twelfth Census is a more elaborate production, and criticises in detail the methods of our overgrown cen-

sus. A reasonable pruning of the scope of the census is generally advocated, and the familiar and sensible recommendation for the establishment of a permanent census bureau is repeated. We observe that the complete reports by the various experts (some twenty in number) who examined for this committee the several divisions of the census, are to be published in full as one of the larger monographs of the Association. The volume so made up will be a mine for all who have occasion to use the census volumes, and will command attention among the official compilers of statistics the world over.

—We take this opportunity to notice two other of the Studies recently published by the Economic Association. Mr. M. A. Aldrich's summary account of the American Federation of Labor (No. 4 of the Studies of 1898) is by far the best to be had of that curious organization. Neither a trade-union proper, nor a loose affiliation of everything in sight, like the English Trade Union Congress or the Central Labor Unions of our cities, the American Federation has pursued for many years a steady policy of promoting trade-union organization, which, whether or no one sympathizes with its aims, commands the respect due to careful plan and consistent execution. It has at least a fighting chance of escaping the fate of its predecessors, and especially of the Knights of Labor, who met deserved defeat and almost extinction after a brief career of o'ervaulting ambition and organized disorder. How far the Federation will succeed in maintaining its coherence, will withstand the blandishments of the Socialists and the insidious temptation to take a hand in party politics (always the beginning of the end in our labor organizations)—all this the future must show. Meanwhile Mr. Aldrich's compact analysis will be welcome to observers of this factor in the social movement. Somewhat different in type, yet useful in the same way, is the account of the purchase of the railways by the state in Switzerland, which Dr. J. Cummings has translated from the French of M. Michèle. Here we have a movement which, on the surface at least, is of signal interest to the American public: the purchase and prospective management of the entire railway system by a democratic community having a federal political organization very similar to ours. It is true that the small scale of the operation, the peculiar geographical position of Switzerland, the curious financial complications from the ownership of bonds by the Swiss and of stocks by foreigners, deprive the experiment of the significance which at first sight it seems to have for us. But none the less the movement is a most instructive one, taking its place with the state railways of the Austro-Prussian colonies as portending a danger or a triumph—as one chooses to view it—for the future of democracy. This account, at all events, tells the tale; we know of no other source in English where one can learn just what has been done in Switzerland, why and how the railway purchase is to take place, the pros and cons of the debate. As everywhere, the advocates of state purchase take a rose-colored view of the financial outlook, and do not fairly grapple with the financial complications which are inevitable when the democratic public demands at once good pay for the servants and low rates for the service.

—When is there to be an end with Sir Richard Burton? His life was essentially one of "fierce wars and faithful loves." Dr. Johnson would have taken him to his heart as a good hater. And the wars and the hates promise to drag themselves on so long as there are papers of his left that in any degree seem ready for publication. His friends would be well advised to leave him at rest with the work which he has done and of which the world already knows; it is surely enough to keep his fame as a great linguist, an unwearied explorer, and a gallant soldier. He was not a scholar—his judgments and theories are worth nothing; but what he saw he told, and we can depend upon his story. His great version of the "Thousand and One Nights," in spite of the loquacious inadequacy of its commentary, is the work of a specialist in life though an amateur in books. Compare his account of Mecca with that of Snouck Hurgronje. Burton's, with all its little absurdities, lives; that of the Dutch scholar is learned, accurate, and very dull. But for the existence, at least in print, of such essays as have now been edited by W. H. Wilkins ("The Jew, the Gypsy, and El Islam"; Chicago: Herbert S. Stone & Co.), there seems no shadow of excuse. The volume, beautifully printed and got up, with an excellent etching of Leighton's portrait, contains three separate papers. The first, on the Jew, might be regarded as a venomous attack if it merited any regard at all; but in it Burton is among books, and his amateurism is rampant, self-sufficient, and exhaustive. His appendix, dealing with human sacrifice among the Eastern Jews, and with the murder of Padre Tomaso, the only part of first-hand value, is suppressed by the editor. The second is a study of the gypsy, and may contain some useful matter, as it is based on Burton's own observations. That, however, can be determined only by "Chinganologists"—such is their beautiful name—and to them we must leave it. Experience of Burton in other fields suggests that the harvest here may not be great. Much of the essay is taken up by polemic as to priority. Third, comes a comparatively short paper on Islam, about which the less said the better. It seems to have been written soon after 1853; and it will be absolutely misleading to all but those who do not need to read it. Perhaps, when all our squabbles and jealousies have been stilled by the throwing of the little dust, these essays of Burton may be read as we now read "The Anatomy of Melancholy" of his great ancestor. Then the wild ideas, the far-fetched learning, the squinting brain working in a style strangely mixed of the purest English and a dozen tongues besides, may come to their true kingdom.

—Mr. Thwaites's edition of the "Jesuit Relations" (Cleveland: Burrows Brothers Co.), which is now almost exactly midway in its course of publication, reaches with volumes xxxiii. and xxxiv. what is probably the culminating point of its interest, if one considers the narratives chiefly as records of heroic and self-obliterating deeds. We refer to the destruction or dispersion of the Huron people by the Iroquois, a catastrophe which involved one of the Jesuit missions and several of the leading missionaries. 1648 and 1649, memorable in European history for the Peace of Westphalia and the execution of Charles I., were also years of great activity in the American wilderness. During 1648

the Jesuits thought themselves (leaving out the one contingency of Iroquois attack) within easy reach of a coveted object, viz., the salvation of several thousand Hurons. We have already seen that Brébeuf did not shut his eyes to the likelihood of a deadly attack from the Five Nations, but, during the twelvemonth before that relentless foe came with fire and sword, the purely missionary prospects appeared much more hopeful than ever before. At one spot in Huronia, the residence of Ste. Marie, there were, according to Ragueneau's report, forty-two Frenchmen, including eighteen Jesuits. 1,300 persons had been baptized since the last annual report, and 3,000 natives sheltered by the fathers during times of famine and pestilence. Furthermore, it had been proved by experience that a better means existed of reaching the Indians than by open denunciation of their witchcraft and devils. Gentle ridicule and an appeal to the judgment were yielding the fruits of salvation where threats of hell-fire had previously proved fruitless. Many of the early converts are reported as proving steadfast, and manifesting a faith which does not desert them even among the flames of torture.

—Thus, in 1648, Ragueneau records some striking successes; yet the year had its full share of disappointment and death. On the 4th of July St. Joseph was sacked by the Iroquois, Father Daniel martyred, the church destroyed, and the flock butchered or scattered. Early in the next spring the foe returned, now confident of capturing the principal Huron villages and destroying the flower of the race. Two explicit accounts remain of this raid—the most sanguinary which was ever directed by one North American tribe against another. The one is Christopher Regnaut's narrative of the death which Brébeuf and Gabriel Lalemant met; the other, Ragueneau's story of the whole invasion, with its immediate results. We omit details of the torture to which the Jesuits were subjected (merely recalling their superb fortitude), and confine our brief notice to Regnaut's statement concerning the episode. Since this is the principal source of information as to the manner of Brébeuf's death, it deserves scrutiny. The details proceed from an Indian source, for neither Regnaut nor any other Frenchman fell into Iroquois hands at St. Ignace and survived. In this regard our source resembles that relating to Dollard's exploit at the Long Saut in 1660. He and his sixteen followers were all killed, and the circumstances of the fight rest on Huron testimony. However, Regnaut stands much nearer to Brébeuf's martyrdom than does any French writer to Dollard, because on the day following he reached the spot and found remains which justified the Indians' stories. He describes in the most explicit way what he discovered, and how he secured the relics which were afterwards venerated at Quebec. The style of this important document is simple and straightforward, although in concluding the writer apologizes for its roughness: "Ce n'est pas un Docteur de Sorbonne qui a composé ceci vous le voyez bien; cest un reste d'Iroquois et une personne qui a vecu plus qu'il ne pensoit."

A PIONEER.

Emma Willard and her Pupils; or, Fifty Years of Troy Female Seminary. American Tract Society. 1898.

This bulky volume, published by Mrs. Rus-

sell Sage, frankly accounts for itself in a preface of admirable candor, though of very little literary competence. It is part of an organized attempt by students of Mrs. Willard's Troy Seminary to do honor to their teacher, and incidentally to place themselves in the ranks of sharers in the so-called higher education. The work of collecting and compiling this record was intrusted to a committee of the Emma Willard Association. The result is something between an expanded form of the ordinary general catalogue of a college or university, and a literary and social study of an institution of learning. This is to be regretted, for, in spite of index and classification, an alphabetical list of the students of the Troy Seminary conceals by its very fulness much that is of interest to the reader, and, on the other hand, the historical sketch of Mrs. Willard and her work seems almost pitifully inadequate until it is supplemented by the scores of interesting reminiscences appearing in the rambling contributions of the representatives of Mrs. Willard's seven thousand pupils. The portraits of persons connected with the Seminary give a fair impression of the wide range of the influence of Troy Seminary, and suggest some of the reasons why Mrs. Willard, in spite of her undoubted ability and devotion to the interests of women's education, did not succeed as did her contemporary, Mary Lyon, with far less personal magnetism and with a less striking personality, in founding a permanent institution or in definitely influencing the course of higher education for women in this country.

Mrs. Willard leaves the impression of having been more of a courtier than of a statesman. Her trust was in persons rather than in ideas; and her resources, in the demonstration of strong individuality rather than in the development of fundamental social ideals. When the New York lower house threw out the bill for endowing her school, she declared, "Could I have died a martyr to the cause and thus have secured its success, I should have blessed the faggot and hugged the stake"; but she had apparently played her last card, except so far as she could recommend her school by industry and enterprise of the personal sort. It is a perfectly natural sequel, from the reader's point of view, that her personal and deputed conduct of the school should be referred to as "the Willard dynasty," but the reader feels that this is not the way institutions grow. Mr. Depew's tribute to her on the occasion of the dedication of the Russell Sage Hall in 1895, "She was an apostle, an evangel of the higher education of women. . . . Her influence did not stop here. It crossed the ocean; . . . it created Girton and Newnham Colleges under the shadows of Oxford and Cambridge," etc., is not simply eulogy in hysterics, it is a complete misapprehension of the history of the higher education of women. The relation of Girton and Newnham to the education of women is so essentially different from anything dreamed of by Mrs. Willard that it may fairly be questioned whether she would have approved of it; and in any case the credit for the idea of a college for women connected with one of the English universities and resulting in Girton College must be definitely given to Miss Emily Davies, as far as it is worth while to assign credit for ideas so manifestly in the air that it is almost a matter of chance who happens to express them first.

But all this detracts not at all from the

value of the specific services Mrs. Willard rendered to her generation, nor from the impressive dignity of her personality, and only changes the angle from which her work is to be viewed. Born in 1787, in Berlin, Conn., the sixteenth of seventeen children, before the appearance of Webster's Dictionary or Spelling-Book, when families still did "chores" and knew leisure only by change from less to more congenial labor, Emma Hart was trained by the efforts of a father who read Shakspeare and Milton aloud to his family, and who told them what he knew of science and encouraged their interest in it. She seems always to have been a girl whom Miss Austen would have called superior; and when, after financial trouble came upon her husband, Dr. John Willard, to whom she was married in 1809, she opened a school, it was the sort of thing readily looked for from her and in which her success was taken for granted. But a little town in Vermont, such as Middlebury, did not offer scope enough for her growing plans, and, with the experience she had gained in Waterford, N. Y., and in Middlebury, Vt., she moved her school to Troy. In this step she had enlisted the sympathy of DeWitt Clinton, John Adams, Thomas Jefferson, George Combe, and Dr. Dick. It was in this stage of her work that she hoped for State aid, and indeed the Senate granted \$2,000 for an endowment; but the bill failed in the House. With the help of \$4,000 raised by the Troy Corporation by tax, and another fund raised by subscription, Mrs. Willard, at thirty-four years of age, opened the Troy Seminary.

Precisely what this change of plan meant to Mrs. Willard, and how far it may have modified the scope of her ambition, it is now impossible to say. It must be admitted that she was bitterly disappointed at her failure to secure State help for her school; but whether she essentially changed the character of what she was trying to do in view of this failure, or not, it is certain that her work had from the start certain clear limitations and an equally clear coherence. She found the public impervious to ideas that she valued highly, and, in many directions, she had politely to bully her public; in others she waited for the results of the educating process she was applying to the parents through their daughters. In this connection some of her letters, fortunately preserved, are most edifying, in spite of their inflated rhetoric. One of her primary objects was to improve the character of the teaching of women in the United States, and to this end she wrote textbooks and trained promising pupils for the profession (as she tried to persuade them their work might be considered). Her success may be inferred from the fact that she helped organize schools in Greece and in Bogotá, besides supplying teachers to scores of schools and to hundreds of families in this country. Some sixteen years before Mt. Holyoke was opened, she insisted upon public examinations for her pupils, provided them with instruction in science, and was one of the first to use the so-called laboratory method of instruction. She combated the notion that study of anatomy and physiology was indelicate in a woman, and insisted upon instruction in manners, cooking, and morals. She was a firm supporter of what was then known as woman's sphere, and wrote and talked emphatically of the claims of the home. Her

interest in the engagements and marriages of her pupils was almost romantic, and she enjoyed journeying from one to another of the homes they had made, to see how they carried out the spirit of her instructions.

The history of the school is a frank display of the thousand and one interests, big and little, trivial and important, that make the thing we call education in a school for a hundred boarders and two hundred day scholars. Board and tuition in the Seminary, in 1819, cost at the rate of \$3.50 a week. There are hints from time to time in the letters of old graduates that the modern college girl might profit by the simplicity in dress and furnishing required at Troy Seminary. One writes:

"I recall the simple, uncarpeted rooms, . . . each furnished with a lowpost double bedstead, a painted bureau, table and washstand of the simplest pattern, two chairs, a looking-glass, and a box-stove for wood. . . . We made our own beds and fires and brought up our own pitchers of water from the pump in the yard. A lunch of excellent dry bread, a slice apiece, was served to all who wished it twice a day, at eleven A. M. and nine P. M."

The course of study was more or less flexible, and nowhere is there a record of what precisely was required for graduation. It was not until 1843 that diplomas were awarded, but after that time a sharp distinction for official purposes seems to have been made between the holders of full diplomas and of "partial certificates." The textbooks used by Mrs. Willard herself have an antiquated flavor, full of quaint associations to some of us, from corner cupboards in country houses, or from the stories of aunts and cousins who went to Troy when a young woman from Canandaigua was known as one of the "Western girls." They were Newman's 'Rhetoric,' Hedge's 'Logic,' Paley's 'Moral Philosophy,' Dugald Stewart's 'Intellectual Philosophy,' Day's 'Algebra,' Legendre's 'Geometry,' Adams's 'Latin Grammar.' Besides writing and helping compile textbooks on geography and history, Mrs. Willard published a 'Treatise on the Motive Powers which produce the Circulation of the Blood,' which attracted respectful comment from scientists in Europe. Her 'Journal and Letters from France and Great Britain' by its sale helped found the first girls' school in Athens. Her poem "Rocked in the Cradle of the Deep" was written on her return from her first visit to Europe in 1830. At this time she visited the Government schools of France, and came back with profound conviction of the importance of the work women had to do in the world. In 1838 she surrendered the conduct of the school to her son and his wife, and retired to Berlin, Conn., where she took an active part in the educational interests of the State and of New England. Her friends at this time were Dr. Henry Barnard, Mr. May, and Mr. Alcott. In 1844 she went back to live in Troy, in the seminary grounds, and there, in 1870, she died.

The record of the pupils of the Troy Seminary is given in decades, each with a character and atmosphere of its own. The first naturally has more of the picturesque and the socially interesting, although there is quite as much of definite attainment and more of positive accomplishment in any one of the later periods. A touch of pathos and tragedy comes in with the histories of the woman associated closely with the civil war. The Troy Seminary had always drawn many pupils from the South, and it is to the credit of the school

that the representatives of both North and South were energetically loyal to their standards of duty during the conflict, and prompt to avail themselves of opportunities for the renewal of old ties as soon as it was over. The fifth decade closes the connection of the Willard family with Troy Seminary. In 1872 Mr. and Mrs. John Willard withdrew, the seminary property owned by the city was purchased by the trustees, and Miss Emily Treat Wilcox made principal. That the school, even after its fifth decade had closed, was still popular, is shown by the fact that, on Miss Wilcox's withdrawal, in 1895, eighty young women received diplomas for the full course and nine took certificates for a partial course. But before this the women's colleges had been opened, and department work had been organized along lines of a strict division of labor. The time was past when a woman teaching mathematics, chemistry, the higher branches of physics, English literature, and psychology, herself, however highly endowed or however attractive and influential, could expect to compete with the college for women, differently organized and with a most attractive social life. The fifth decade, therefore, contains many names of a high degree of general attainment, but fewer than any other of eminence or special accomplishment. Henceforward these were to be looked for in the catalogues of Mt. Holyoke, Vassar, Smith, Wellesley, Radcliffe, Bryn Mawr, the associated colleges for women, and in coeducational colleges and universities.

HENRY REEVE.

Memoirs of the Life and Correspondence of Henry Reeve, C.B., D.C.L. By J. K. Laughton, M.A. Longmans, Green & Co. 1898.

This is the 'Life' of a man who was exceptionally happy in realizing every energy and using all his talents like tools. A "lambent dulness" inevitably plays about the biography of one who, without personal brilliance, pursued so unchequered a career. Henry Reeve is a good representative of a nation that has set its heart's delight upon action, and these two volumes record a long life of hard work and energetic play. With no advantages of birth or fortune, without a spark of imagination or a ray of humor, this middle-class provincial, by dint of a calm self-confidence and an intelligent and active interest in the questions of the day, acquired an influence that, for fifteen years, at least, was international. He was the only son of a widowed mother of small fortune, and it was to her common sense that he owed the advantage of not having buried his mind in a university education—a piece of good fortune that sometimes lifts your average Englishman above the mediocrity that, to the 'varsity man, too often appears golden. Like Gibbon, he rubbed off the provincial in Switzerland, and acquired his cosmopolitanism in the brilliant society of Geneva and Paris. A desultory education and frequent visits to the French capital did much to counterbalance the solid British qualities of a man who had not a single redeeming vice.

That there was much solidity to leaven we gather from his youthful letters from Geneva. At the age of nineteen, he writes in describing a friend's marriage:

"The young ladies have, of course, been thrown into a delicate confusion by this

early *enlèvement* of one of their virginal band; puis, de l'autre côté, the cohort of male admirers in dire dismay and disappointment. . . . I, for my part, at the above-mentioned soirée, made my congratulatory bow with all due gallantry; but in my own room I have felt that a very vain bubble, when it bursts, leaves almost as great a chasm in a man's spirit as if a mountain rose from its foundations and became air" (p. 20).

This is "steep" even for the Early Victorian thirties. At the same age he "thinks with Cousin" (or rather, "has long thought") what Cousin thinks; at twenty-two he writes that "Hugo has fallen rather low, and is so mad, so childish, and so blackguard that all his acquaintance have cut him, or he them. I saw him at the Bibliothèque du Roi, but did not care to renew our acquaintances" (p. 36). A few years later he "dropped the acquaintance" of Louis Napoleon.

It is not, however, our object to show that Henry Reeve lacked a sense of proportion and a sense of humor; we should rather remind ourselves that this dull person who, to judge by his correspondence, from his teens to his seventies, was never guilty of an incorrect sentiment or a single epigram, so impressed his contemporaries with his ability that at twenty-five he was given the responsible and well-paid post of Clerk of Appeals to the Privy Council, and at twenty-six was "on terms of acquaintance with the whole cabinet." From 1842 to '57 he was one of the chief leader-writers for the *Times*, in the days of Delane's editorship, when the spirit of nations still rose or sank every morning at the bidding of the most important journal in Europe. Reeve had nothing of the "touch-and-go, blackguard-genteel" which, as Scott said, distinguishes the genuine press-man. He never "plunged," but wrote his leaders with a lively sense that he was swaying the cabinets of Europe. And whenever there was a political crisis, especially in foreign affairs, it is plain that Reeve's private letters of advice (written, for the most part, from Paris) had a real influence on the policy of the English statesmen to whom they were addressed. His relations with French politicians were hardly less intimate. Guizot and De Tocqueville, whose 'Democracy in America' he translated, were his lifelong friends. Perhaps the most interesting portions of the book are those connected with the *Coup d'État* and the fortunes of the Empire, to which Reeve was inveterately hostile. In 1855, at the age of forty-two, he succeeded Lewis as editor of the *Edinburgh Review*, and ceased to write for the *Times*. In spite of Disraeli's sneer at the quarterlies as "Boots at the Red Lion and Chambermaid at the Blue Boar," whose occupation had gone with the coming of railways, the editorship of the *Edinburgh* was still one of the highest prizes of the profession of literature. Moreover, Reeve, who, besides writing many articles himself, never published the articles of his contributors without careful revision, may be said to have occupied, like Oliver Wendell Holmes, "not so much a chair as a settee."

He was, at heart, an historian and a politician rather than a literary man. If we may judge from his 'Life,' he practically left off reading when he began to write. We get no glimpse of his literary preferences or dislikes; his judgment of Carlyle—he "is odious—arrogance, vanity, self-conceit, ingratitude to old friends"—is purely personal and in the nature of a *tu quoque*. Though his thorough grasp of a given political situation made him invaluable in

Downing Street, he had no gift for political prophecy. He always expected an Orleanist restoration, he backed King Otho and championed Austria against the Hungarians. Gladstone, who has fared so ill in contemporary biography, was naturally the *bête noire* of so determined a Conservative. After the defeat of the home-rule bill in 1886, Reeve writes: "I do not remember another instance in which a man's best and earliest friends have turned upon him, to unmask him, and that without any motive of personal resentment. It is the noble motive which led Brutus to strike Cæsar" (p. 346). It was about this time that Mr. Labouchere said of Gladstone: "How is it possible to play with an old sinner who has got an ace up each sleeve, and says God Almighty put them there?"

The professional politician will find in these pages much that is of interest, if not strikingly new. In 1873 Reeve suggests that "England is directly concerned in Cuba by its close proximity to the Bahamas. Cay Lobos (British territory) is but twenty-four miles from Cay Confitas (Cuban territory). That leaves but eight miles of high seas in width. The people of the Bahamas have made frequent complaint to the Governor about the conduct of the Spanish authorities in Cuba. In August this year the Governor of the Bahamas sent a memorial to the Captain-General of Cuba about the impediments to the Bahama sponging-trade caused by the arbitrary acts of the Spaniards. No notice has been taken of this. It has not even been acknowledged" (p. 220).

In 1895, during the struggle between China and Japan, he writes to a friend: "It is curious that nobody points out that the United States are the country with the largest future interest in the Pacific, and that they must have a voice in this controversy" (p. 206).

The general reader will be interested in Reeve's account of the famous "Brougham hoax," which is told in outline in the 'Greville Memoirs,' but now for the first time in detail. In October, 1839, Reeve wrote to his mother:

So rapid and so mysterious is the flight of all rumors which have grief in them, that I shall probably not be the first to announce to you the death of Lord Brougham. Yesterday morning A. Montgomery, a youth on whom Brougham doted, rushed over to Gore House before they had sat down to breakfast, with the letter in his hand. . . . It was from Shafto, the only uninjured survivor of the party. Brougham, Leader [still alive in 1898], and Shafto hired a bad hack carriage to go from Brougham Hall to see a ruin in the neighborhood. It was so like him to choose to go in a wheelbarrow instead of a coach and four. They had not gone far when the splinter-bar broke; they were thrown out, and one of the horses kicked Brougham on the head, which made him insensible, so that he could not get out of the way of the carriage, which turned over on him in the ditch, crushed his head, and killed him on the spot."

This was the only letter received in London. In an hour the rumor pervaded the town.

"Shed" rushed from the Athenæum to pen a magniloquent obituary, which appeared in the next day's *Chronicle*. . . . Windsor Castle shook with glee, and Lord Holland began to think that he should venture to speak again in the Lords'. For the first time for five years, all the world talked for a whole day about Brougham's virtues, and there was wondrous forgiveness of injuries in the whole metropolis. For my part I had selected the 12th and 13th verses of St. Jude's Epistle for the funeral sermon. . . . Nobody could look at Brougham's wild, uncouth handwriting without tears in his eyes.

I had not half done my reflections on B. and his gifts when I discovered from a letter from Brougham, dated Sunday, that

he did not die on Saturday. In the afternoon everybody learned it was a hoax—a very pretty piece of devil's amusement."

Reeve adds that, in November, when the Queen had withdrawn from the Council, "the Duke of Cambridge ran round the room after Brougham, vociferating at the top of his voice, 'By God, Brougham, you did it; by God, you wrote the letter yourself'; to which B. could not well reply," though he had actually challenged his old friend, Sir A. Paget, the week before, for saying as much.

Reeve makes another effort to clear Mrs. Norton's memory of the charge of treachery which Mr. Meredith has done much to perpetuate in 'Diana of the Crossways.' The facts are these: Early in December, Peel announced to his colleagues in the Cabinet his intention to repeal the Corn Laws. Lord Aberdeen told Delane, the *Times* editor, on December 3, and on the 4th the *Times* published it. There was great agitation, and Peel resigned on the 6th. His premature announcement in the *Times* was a piece of strategy on the part of Aberdeen, who wished to soothe the Government of the United States in the negotiations then pending. But this was not known, and so the scandalous story arose that Delane had bought the secret from Mrs. Norton, to whom it had been confided by Sidney Herbert, one of her admirers. Mr. Meredith, in the last edition of 'Diana,' has added a note to the effect that the incident is fiction, but the misrepresentation will probably haunt Mrs. Norton's memory for ever.

Reeve owes a great part of his reputation to the notoriety he gained over the publication of the 'Greville Memoirs.' Greville had intended to intrust the famous journals to Sir G. Lewis, editor of the *Edinburgh*, but he survived Lewis, and Reeve, a week before Greville's death, was invited to take over the memoirs as he had taken over the editorship of the *Review*. The 'Greville Memoirs' had a success of merit as well as a *succès de scandale*. The first part was published in 1874.

"The Queen, though I believe she had not yet read the book, but only newspaper extracts, sent me a message by Helps to express her disapproval of it, on these grounds: (1.) It was disparaging to her family. (2.) It tended to weaken the monarchy. (3.) It proceeded from official persons. I begged Helps to reply, with my humble duty, that the book showed that, if the monarchy had really been endangered, it was by the depravity of George IV. and the absurdities of William IV.; but that under her Majesty's reign it had become stronger than ever" (p. 226).

The Queen, however, never forgave Reeve, and he never received the K.C.B. which would naturally have followed on the C.B. given to him in 1871.

We do not think it is altogether the fault of his biographer, Prof. Laughton, that one reads the two massive volumes of this biography without becoming interested in the personality of Henry Reeve. He kept no *journal intime*, and we could have spared the extracts from his meagre diary of engagements which Prof. Laughton has too conscientiously included. A mere list of dinner engagements with all the celebrated men and women of Europe, and no record of their table-talk, is but a Barmecide feast for the reader. To us, Reeve appears as a sedate and pompous official. His biographer should have made some effort to explain how it was that a person who, from his letters, seems able to record nothing but commonplace facts and strikes no spark from his correspond-

ents, was a social success, to a degree that is mysterious, in the most fastidious and brilliant circles of London and Paris.

Chinese Porcelain. By W. G. Gulland. With notes by T. J. Larkin, and 485 illustrations. Charles Scribner's Sons, 1898. Pp. xxiv, 270.

This book is an attempt to do for the student in ceramic art, or in the collecting of decorative objects generally, a part of what is done at a much higher cost by the large books of Du Sartel and Granddier. That is to say, it gives a great many illustrations, in fairly good photographic prints, of important pieces of Chinese porcelain, and these are so far described that their significance is explained to the comparatively unpractised student. It is a regrettable fact that photography renders fine Oriental ceramic ware rather less agreeably than works of art of any other class. The gloss or still higher polish of the porcelain, the rounded forms retreating from the focus, the prevalence of deep-blue which the photograph always misinterprets, the placing of patterns, borders, and figures on such inaccessible surfaces as the shoulder of a vase or the inner side of the lip—all these circumstances enhance the general difficulty of rendering bright colors in the photographic gray and white. A piece of porcelain has to be handled to be enjoyed—every collector knows that; even the piece behind the plate glass of the museum and plainly visible in full daylight (as all museum pieces are not), is difficult to appreciate thoroughly. Take away from it, then, the charm of color, the truthfulness of representation which only a comparatively flat near object can receive, and show from one point of view only that which is meant to be examined from a quite indefinite number of points of view, and you face a difficulty which has hitherto been insuperable. For this reason the description of each photograph in the text is quite essential. Even a nearly flat plate is much better understood after being so described; and when it is a convex and somewhat elaborate piece which is the subject of examination, the description becomes indispensable.

There are two attempts in the book at classification of pieces, the one by their shapes, the other by their surface decoration. It is hard to see the value of either of these attempts. The first classification, that of form, begins with the commonest European shapes, cups with handles, cups and saucers, dishes and platters, and the like; and one of these tea-cups is called "bell-shaped," another "cylindrical," which it certainly is not, and other pieces are described simply as "rectangular," meaning thereby rectangular in plan, or "hexagonal," or "octagonal," with the same significance. It would be hard to explain what is gained for the student by being able to refer to such a classification as this. The only thing which he would be apt to get from the pages and the cuts devoted to this subject is the readier use of the names employed in the trade—such names as "beaker," "ginger-jar," "pilgrim-bottle," etc., and such adjectives as "oviform," "bulbous," and "pear-shaped." In other words, these pages serve as a dictionary reversed; the name of the object being given after the presentation of the object—or definition first, term afterwards. The possible utility of this is, of course, to be admitted. The other classifica-

tion, that by decoration, is apparently an enlargement of the rather preposterous one introduced by Albert Jacquemart. It is due to the dealers in porcelains to say that they are not very much enamoured of the attempted division of Chinese porcelain into *famille verte* and the other families, and the relegation of by far the greater number of varieties and styles to the "exceptional" class. On the other hand, the terms "celadon," "under-glaze," and such partly naturalized French terms as "flambé" and "soufflé" should be explained, and are so explained here. The fault to be found with this part of the work is its failure to seem really learned—to be the outcome of a lifelong acquaintance with the subject.

This is still more visible in the prefatory chapters devoted to the Chinese religion; drawing, painting; symbols, emblems, and charms; flowers and plants; and fabulous animals. In all this there is apparently one point of view only, the old, exclusively European, untravelled, non-Oriental, condescending tone. The religion and philosophy of China are treated as if by a Christian missionary, the painting is treated as if by an exclusivist student of eighteenth-century painting in oil, the decorative writing is treated as if by a person who cannot understand that writing in itself can be lovely, and who is, therefore, not a student of mediæval or later manuscripts. The symbols, emblems, and charms are explained according to the traditional old ways, without any serious attempt at ascertaining the facts, and the way in which the painting on porcelain of animals and plants is criticised can be best exemplified by the following sentence (p. 115): "The drawing of flowers on porcelain is often so conventionalized, and the coloring so untrue to nature, that it is frequently difficult to make out the particular species intended." As to this last subject, it is, however, fair to say that it is rather description than criticism which this part of the book undertakes. It is only when one opens the book at the brief chapter devoted to drawing and painting that he meets the full European ignorance of Oriental art in a concentrated form. The opinions of Marryat about Chinese painting, and the queer old stories, so often repeated, of how the Chinese could not understand drawings in perspective, and the like, are offered here once more as grave analysis, and here again a sentence expresses the whole chapter: "The inveterate prejudices of the Chinese did not admit in painting either of drawing or perspective." Again, in the paragraph on Drawing and Painting, on page 7, and under the general treatise on Religion, it is gravely alleged that, as the Chinese always prefer literature to fine art, so "the small amount of encouragement accorded to drawing and painting accounts for the, in some respect, backward state of these arts in China." One would suppose that the recent treatises on the painting of China as seen through Japanese eyes, and on the painting of Japan, founded confessedly upon that of China, and what little has been ascertained direct of the great early schools of painters in the Middle Kingdom, had never been published. It is true, indeed, that Western people are hardly able as yet to study Chinese painting of the great schools with any thoroughness. Even the painting of Japan is but inadequately represented, except in one or two collections, not generally accessible; and perhaps those who control and best know those collections would be the

first to say that even their abundant stores fail to reveal the whole historic truth. At the same time it is now easy to check and modify out of existence the hasty conclusions of writers who, half a century ago, before the opening of the Japanese world to Europe, themselves knowing nothing of any fine art whatever, blundered into statements not only untrue but containing the exact opposite of the truth.

The conclusion seems to be that nearly five hundred photographic illustrations with such comment as will explain their general significance cannot but be valuable, and that some of the information given in the chapters of general discussion is useful as well, except that this latter is too generally mingled with erroneous or wholly inadequate criticism.

The Battles of Trenton and Princeton. By William S. Stryker. Boston: Houghton, Mifflin & Co. 1898. Illustrated.

In selecting the battles of Trenton and Princeton for historical study, General Stryker takes a subject that he has made peculiarly his own. He has from time to time printed for private circulation essays on the events connected with those engagements, and the volume now published comprises the mature results of special investigation. It is hardly necessary to point out the author's minute attention to detail, and the many evidences of his industrious drudgery among printed and manuscript sources. The work has been done thoroughly; and if it fall short in any line, it is not because of carelessness on the part of the writer, but because of certain limitations of view inevitable in so restricted a study.

The importance of the surprises, rather than battles, was of a political and not a military character; and in laying so much stress upon the military incidents, Mr. Stryker has slighted the more important, because the more lasting, effects on the social aspect of the Revolution. He has a partial appreciation of some of these effects, as his closing chapters show; but he fails to recognize their value in educating the Revolutionary forces. The evacuation of Boston by the British army certainly had a great effect in furthering the cause of liberty. The mere fact that an army, hastily collected, imperfectly equipped, and ignorantly officered, should have obliged the seasoned and disciplined troops of England to retreat from a stronghold open to the sea, was in itself sufficient to support the views of those who thought the success of revolution possible. But when the same forces, with the American army better trained and equipped, met on Long Island and above New York, the advantage possessed by the foreign soldiers became manifest, and Washington was forced to retire until he was beyond the Delaware, and pursuit was checked only by the absence of boats and the want of enterprise on the part of the British to build them.

Retreat is disheartening to an army when no alternative of success is offered. It was hopeless to make a stand against the enemy; almost equally hopeless to retreat through a country favorably disposed to accept the King's mercy, so liberally offered and so niggardly given. The very atmosphere of the Jerseys was tinged with loyalty, and Washington was "cruelly disappointed" in receiving no aid from the inhabitants. Hardly a company of men reinforced him in his long

and anxious journey, while hundreds flocked to the following standard of the King, eager to make their peace and take the oath of allegiance. He gained no military strength during the retreat, but was successful in placing a wide river between his army and the enemy, thus securing time for gathering together his scattered forces. Even this was a matter of some difficulty, for Lee's eccentric movements and disregard of orders made a full union doubtful. Indeed, had not Lee been, or permitted himself to be, captured, the battles of December would never have taken place. As it was, reinforced by militia and in full command of his own army, Washington found himself strong enough to venture an offensive movement, and the successes have come down as constituting his strongest claim to military glory.

It is not as military operations, however brilliant, that Trenton and Princeton are to be gauged. They proved thus early in the game the incapacity of the Continental Congress to conduct the war, and the remarkable ascendancy of Washington's personality. They were the first test applied to the system of running a campaign through a legislative council, as compared with one controlled by a strong and independent executive. Congress had raised its army on short enlistments; so each December the trained force melted away, to give place to a new army that must be whipped into form. This experiment, defensible on political grounds, was disastrous in a military point of view, and reacted disastrously on the strength of Congress. To raise a new force and to pay bounties, required funds; to equip, to clothe and feed it, was very costly; to transport it, with all its baggage, in active service, was almost beyond the power of the commissariat as then constituted. Money was demanded in immense sums and wastefully expended. But Congress had no funds, levied no taxes, and was possessed of a doubtful credit, contingent upon success. Bills of credit had been issued in large amounts, and were accepted by the people until the enemy gained advantage. Every step taken by the British in the Jerseys reduced the area of circulation of these bills, and cast discredit on the whole issue. For who would accept these promises anywhere when their value was seen to vanish at the approach of the hostile force? British gold against American paper won the day, for unless the Revolution ended in independence, the Continental credit was worthless. Further, Congress was confessing its own weakness by hastily leaving Philadelphia on a prospect of Howe's advance, and by conferring powers of a dictator on Washington. Yet this was the body that "created" the credit on which the bills must rest. Their formal resolutions denying any intention to leave the city were as mischievous as those denouncing as enemies any who should refuse to accept at par the paper money. Both acts showed weakness, not strength; and both acts were properly interpreted by the people.

Unless Congress could give some evidence of an established credit, the contest was at an end. Unless it could still circulate its bills for something like their face value, it could not carry on the war. A military success was essential, and it was in recognition of this fact that Washington determined upon risking all on a happy stroke. His conduct was justified by the event. He checked the advance of the British, saved

Philadelphia from capture, and obliged the enemy to retire to New York. The wavering were strengthened, Congress resumed its sessions at Philadelphia and again set the printing-presses to work. The poison of depreciation had set in too far to be checked, but it wrought more slowly; and the question of army management was brought to the front, though not fully settled for some years. Unless Washington had surprised the Hessians and carried the day at Princeton, the battle of Saratoga would not have been fought, and the French alliance would hardly have become effective. Trenton and Princeton are, therefore, pivotal events in the Revolution; but it is because of the lessons they taught in the administration of the army that they are of special value. Short enlistments were soon set aside for enlistments "during the war." Paper money in a few years ran its course of depreciation and disappeared from circulation, proving more destructive than the British army had ever been. With an army at his back, and a commissariat no longer dependent on the weak credit of Congress, Washington husbanded his strength until the happy occasion of the Virginia campaign offered a fair opportunity for exerting it. The politics of the Revolution made victory possible only when the Congress and its foolish financial experiments had been crowded from the scene. In December, 1776, its incapacity was first tested and proved.

It is a pleasure to meet with a work composed on such a scale and showing such care in matters usually slighted—such as the names and ranks of the officers. Apparently Lieut. Kimm was twice killed and on different places of the field (pp. 149 and 172). It is hardly just to assume, on so slight evidence, that Charles Lee was informing the enemy before his capture. The tendency to accept legends is compensated by a bulky appendix of original documents. The book has many illustrations, some of which are hardly historical.

The Autobiography of a Veteran, 1807-1893.
By General Count Enrico della Rocca.
Translated from the Italian and edited by
Janet Ross. Macmillan. 8vo. Pp. 299.

The translation of Della Rocca's memoirs has been made by Mrs. Janet Ross, daughter of that delightful letter-writer, Lady Duff Gordon, and granddaughter of Mrs. Sarah Austin, who was herself well known as a writer and translator. In translating, Mrs. Ross has somewhat condensed, especially the passages dealing with military details, which, for the ordinary reader, have little meaning and less interest. The result, so far as we have compared the translation with the original, is usually satisfactory. We have noticed no instance in which the General's opinions have been misrepresented through omission or condensation.

The work as it stands in English, even more as it stands complete in Italian, is as entertaining as it is important. It will take its place along with the autobiographies of Garibaldi and of Massimo d'Azeglio as a successful personal record of a great period. Many readers besides those who pay special heed to the history of recent Italy, will enjoy it, because it not only gives fresh news of famous persons and events, but also reveals in its author a character intrinsically interesting. Della Rocca is a type of that best class of Piedmontese nobility which did so much to transform little Piedmont into the

Kingdom of Italy. Aristocracy has hardly ever had so fine an exemplification as in Piedmont during a part of this century. There *soblesse oblige* meant something. Della Rocca, like his peers, was brave, soldierly, devoted to his sovereign, having the instinct for diplomacy which seems to be innate in all Italians, and able, in spite of provincial bringing up, to conduct negotiations of great moment among the men of the world in Paris or Vienna. Moreover, in his personal criticisms on his contemporaries he is generous and candid; and he freely acknowledges his own mistakes. Very entertainingly does he describe the life of the old régime in which his youth was passed; and thenceforward, for more than fifty years, as he was attached to the person of Charles Albert and Victor Emanuel, he gives us near views of these remarkable princes. And not of them only, but of Napoleon III. and Plon-Plon, of Cavour, Lamarmora, Garibaldi, and most of the other Italian leaders of the age. He is no eavesdropper, nor scandal-monger, and had much rather talk over old campaigns than rehearse the court gossip of Europe; but he still admits enough personal details in his narrative to endue it with life. For the historian, he has many little points concerning the coming to pass of great events, and some secrets and half-secrets to reveal; while at all times his is the testimony of a credible witness whom fortune placed in a favorable position.

To enumerate the important events in which Della Rocca took part would be to outline most of the crises in Piedmont's history for half a century. He was particularly useful on secret or delicate missions. As early as 1840 Charles Albert employed him to investigate privately the French frontier fortifications. Della Rocca slung the tin box of an amateur botanist over his shoulder, and, while ostensibly busy in collecting flowers, he learned what was necessary about the French defences. Later, he was sent on a delicate errand of a different kind. After the death of Queen Maria Theresa, Victor Emanuel was urged to marry again, and Napoleon III. hinted that it would be politic for him to ask for the hand of Princess Stephanie of Hohenzollern-Sigmaringen. Accordingly, Della Rocca was secretly dispatched to Düsseldorf, where he pretended to be a mere ordinary traveller, bent on seeing the sights of the city, while really hoping to get a glimpse of the Princess. For a while he was baffled. At last, however, he bethought him of asking to visit Prince Hohenzollern's stables, and this brought him an invitation to the palace and the chance he wanted of setting eyes on the Princess herself. He decided that she was too young and shy to suit his master. Among his diplomatic missions we may mention that to Napoleon III., after Orsini's attempt, when the Emperor was greatly exasperated against Piedmont, and Della Rocca's discretion and tact conciliated him. These specimens show what stuff his book contains. It is well worth reading. In writing it, the chivalrous old General has added another historical portrait to the really vital documents *pour servir* of the century.

The City Wilderness: A Settlement Study.
By Residents and Associates of the South End House. Boston: Houghton, Mifflin & Co. 1898.

We have in this compact volume an ex-

haustive study of the "South End" of Boston and its inhabitants. Beginning with the time when the old "Neck" was but a narrow path, often submerged by the tide, the authors trace the changes in the topography of the region, under the influence of increasing business and population. As these demands increased, the flats and marshes were filled in, houses and shops were built, and on half a square mile of made land there now live some 40,000 people. Necessarily the surface of this land is to a great extent too low for residential purposes. The sewage is pumped out, but the dampness cannot be, and the sanitary conditions must be unfavorable in spite of all regulations. Moreover, such portions of the land as were originally fitted for residence, and were covered by well-built houses, are no longer occupied by well-to-do people. The tide of the ocean has been forced back, only to make room for the tide of immigration. This floating scum necessarily deposited itself where it could find a place, and its presence drove away such of the former inhabitants as were able to remove to more agreeable neighborhoods. Their dwellings, built for the housing of single families, have been altered so as to shelter three or four, their yards and gardens have been covered with tenements, and the alleys, intended for the use of garbage-carts, have become the front streets of inferior houses.

The inhabitants of this region represent every nation of Europe and all the continents of the globe. There is a native American element, not of the best, but it is far outnumbered by the heterogeneous mass of immigrants. It must be said that this motley herd somehow manages to lead its varied life with surprisingly little friction and with a certain amount of prosperity. Not more than one-fourth of the families belong to the class called poor, having incomes of less than ten dollars a week, and only one-sixth of them receive alms. That they receive what is better, in the shape of elevating influences, is proved by the appearance of this book. It records a bewildering number of systematic and unsystematic efforts on the part of outsiders to improve the condition of this "city wilderness," not the least of which is to be reckoned such a missionary enterprise as the "South End House." This book, however, is not a record of the work of the "settlement"; it is a study, substantially on the lines followed by Mr. Charles Booth in London, of the physical, racial, social, economic, and political conditions of a community of foreign nature, established within an American community, and comprehended within American citizenship. Such communities are found in all our great cities, and as this investigation is thoroughly scientific in character, it deserves the attention of all who are interested in charitable labors.

We shall pass by the chapters which describe the characteristics of the different races, their employments, their amusements, and their vices, and shall note only that there is no lack of religious influences or of schools of divers kinds. These descriptions do not differ materially from others in similar fields, although it is cheering to find a hopeful spirit lighting up a sombre picture. The chapter on the "Roots of Political Power," however, deserves particular attention as illustrating that degraded form of party government which produces "boss-rule." The description of the development of the local

"boss," or political leader, is particularly graphic, and is a genuine contribution to political science. The lesson which it bears on its face would seem to be that no progress towards better city government is to be expected so long as there is a great deal of patronage at the disposal of government officers. The local politician, in short, attains his power because he is able to distribute some of the public revenue among his followers. Without that resource he would lose his influence; and his influence increases as the number of "places" offered by the municipal government enlarges and as their emoluments are swollen. In view of this, the anticipation expressed in another chapter that enlarged municipal functions and the limitation of municipal employment to the members of favored guilds will purify our politicians, appears to us inconsistent. No attempt is made to support this theory by evidence, and, as we have noted, the evidence brought forward is against it. But a difference of opinion on this point need not keep us from heartily appreciating the disinterested labors which have resulted in so instructive a volume as this "Settlement Study."

The Hittites and their Language. By C. R. Conder, Lt.-Col. R. E. Dodd, Mead & Co. 8vo. 1898.

Whether with or without reason, it still remains true that scholars are wont to look askance at the writings of certain men whose theories they treat with ill-concealed disdain. The author of the volume before us belongs in this category. Others might easily be mentioned, and it will be remembered that the name of Schliemann figured on the list. It cannot be denied that men like Schliemann, Sayce, Conder, and others are often carried away by their zeal for the subject of their investigations, and advance theories which cannot be maintained under the bright light thrown upon them from the workshop of the humdrum scholar. The world may sneer, if it will, but it is the richer because these men have lived and theorized. By all means let us have cool-headed scholars to control results, but we also need men who are not afraid or ashamed to go ahead and propound theories at the risk of seeing them adjudged fallacious or even chimerical. For science is advanced and the ground is cleared even by a negative result.

In the present book, Col. Conder's thesis is that the Hittites were Mongols who spoke a Mongol (Turanian or Turkish) agglutinative language, and that, therefore, the Hittite inscriptions are to be deciphered by the help of Mongol speech. In his 'Hettitische Inschriften' (1892) Peiser had already declared in favor of comparing the Hittite language with the Turkish, and made an attempt at deciphering the inscriptions. Then came Jensen with his 'Hettiter und Armenier,' in which he classes the Hittite as an agglutinative or suffixing and uninflected language, but nevertheless ranks it as Aryan, and compares it with Armenian, a prefixing and inflected language. Both Jensen (whose work Messerschmidt has severely criticised) and Conder undertake to translate the Hittite inscriptions, but with results so widely divergent that, for the present, laymen must needs suspend judgment, to put the matter mildly.

According to Conder, the Mongol race held

undisputed sway in the Tigris-Euphrates valley from 2250 to 1700 B. C. Their empire was first shaken by Egypt (1700 to 1200 B. C.), and was finally overthrown and its inhabitants scattered by the Semitic race in Assyria and Palestine (1200 to 700 B. C.). Their peculiar script ceased to be used before 1500 B. C. The earliest notice of the Hittites in Syria is in the fifteenth century, when their empire extended from Marash to Carchemish and Phœnicia; but as history advances, their empire contracts, until we hear of it only at Carchemish. East of the Euphrates the Hittites were only occasional invaders.

The author next essays to show that his thesis that the first ruling race in western Asia was Mongol, is proved both by the language and the physical type as seen in Hittite monuments. He does not claim for them the Mongol type of the Mantchus or the Chinese, but that of the pure Turks or Tatars of Bactria. These people he calls Sumerians, and contends that their language presented all the main features of the Turkish speech of to-day. These Mongol tribes ruled west of the Euphrates in Syria and Asia Minor before the Semitic race gained power; they were attacked in the west and north by Aryans and in the south by Semitic races, and were finally crushed at about 700 B. C. The texts, written in a very early pictorial script which still exists on rock-cut sculptures throughout all this region, were surely couched in Mongol speech, and not in Aryan or Semitic speech, seeing that the population was certainly Mongol. The peculiar script of the rock-cut sculptures is intimately connected with that of the Sumerians in Chaldean.

Conder next investigates the rock sculptures, the slabs, and seals which are inscribed with Hittite inscriptions, and undertakes to prove that the religious designs found upon them serve to show that the religion of this Mongol race was portrayed by symbolism identical with that of the Sumerians and Akkadians. Religious symbolism, therefore, like racial type and language, supports the contention that the Hittite script was that of the northern Mongols of the earliest age, and dates from about 2250 B. C. The Hittite symbols do not exceed 167 all told, while the Egyptians possess 400, the Babylonians 550, and the Chinese 24,235. The inscriptions are written in boustrophedon style—a fact discovered, we believe, by our Dr. Ward, though no credit is given him for this or his other work along these lines.

Between the Hittite hieroglyphs and the Cypriote syllabary the author draws a parallel which seems to have a plausible basis, and then he proceeds to show that the Cypriote emblems were originated by a people who spoke a Mongol language. For instance, a Cypriote sign having the outline of two mountains has the sound *mt*; we, therefore, must hunt for a language in which *mt* means "mountain" or "country," if we would find the language of those who invented the script. Similarly, a sign representing a man holding a stick has the sound of *ts* or *ds*. Accordingly, in the language of the inventors of the script *ts* or *ds* must mean *best* or *drive*. And so on. These conditions are fulfilled in Mongol speech, where *mt* and *mt* do mean "earth," "land," or "place," and *ds* means "to drive." Conder next proves that internal evidence of the texts themselves shows that the structure of the language is Mongol, that is, agglutinative, using suffixes

and post-positions instead of prefixes and prepositions.

Col. Conder then falls foul of De Rouge and his theory as to the origin of the alphabet, and shows that in early Egyptian Hieratic *Aleph* did not mean "ox," nor *Beth* "house," etc., as we should naturally expect from their Phœnician names. But we do find that in old Mongol *ᠠ* or *av* means "bull," and in Akkadian *eb* (Turkish *ev*) means "house." Therefore, we owe the invention of the alphabet to the Hittites and not to the Egyptians. This thesis, we believe, was maintained by Sayce some ten years ago in his book, 'The Hittites.' Scholars generally believe that De Rouge's theory is builded upon the adamant rock, and therefore may not be undermined. But there are some who chafe under this yoke, and Evans, for instance, in his masterful essay, 'Primitive Pictographs and a Pre-Phœnician Script from Crete and the Peloponnese,' ultimately points to the Hittites as the original inventors of our alphabet.

Now, whatever may be the final word in regard to all this theory, it has much in it that is plausible, much that is suggestive, as well as much that is wrong. The Elamites, Kassites, and Sumerians have nothing to do with the Hittites, so that the first chapters of the book might have been omitted. Assyriologists will certainly call Col. Conder to account for his comparison of the Hittite hieroglyphs with the archaic script of Babylon, and philologists will hardly approve of his linguistic methods.

The results of Col. Conder's labors are set forth in the several appendixes. Appendix i. deals with Chronology, ii. with the Akkadian language, iii. with Deities and Myths, iv. with the Hittite syllabary, consisting of 167 symbols, v. with the Origin of the Alphabet; vi. gives a translation of the Hittite texts, vii. gives the Hittite vocabulary. At the end of the volume we find sixteen plates containing the known Hittite inscriptions. These plates will be valuable, although much less so than if they had been larger. In the front of the volume a map professes to show the distribution of the Hittite monuments, but it fails singularly to do so. It were difficult to discover why the author has neglected to note the existence of Hittite monuments at El Flatan Pufar, Fasiller, Izghin, Arslan Tash, El Bostan, and Singhirli; but such is the fact.

Col. Conder does not wield a facile pen, for his pages are disfigured by such sentences as this: "Ten years of study seem to result in the historical rather than the religious being the true explanation" (p. 189), or this: "In conclusion of the present chapter, it is proposed to consider the later history of the script" (also p. 159).

Éléments de Botanique. Par Ph. Van Tieghem. Paris. 1898.

Of late years there have been few greater surprises in botany than that which has been given by Prof. Van Tieghem's revolutionary proposal to change the system of classification of plants. So-called natural systems of classification of organisms are expressions of views as to relationships. Under the old dogma of constancy of species, such a thing as a natural system, in the sense of its expressing relationship by descent, was manifestly an impossibility. Degrees of difference and of likeness were carefully weighed, and from the results were constructed sys-

tems which were expressions of these degrees. Some of the systems were characterized by most interesting collocations of species, and were helpful in many ways. The most widely accepted of these systems which had their birth under the dominance of the belief that species did not greatly change, was the work of many hands. In its composite form, it was adopted by innumerable writers, and is even now the basis of some of our most convenient manuals. But it became plain, after the general acceptance of a working theory of evolution, that the established system must be revised. It was admitted that the marvellous sagacity of its constructors had, in truth, anticipated many of the results reached by applying the theory of natural selection, but the time appeared to have come for a complete revision in accordance with the new luminous thought. This work fell to the hands of certain Germans, and their reconstruction was thorough. Hanstein, De Bary, Eichler, Engler, and many others, cooperated in the endeavor, and although the system was not finished at one coup, it was marvellously consistent. Its usefulness as a practical system has been everywhere acknowledged to a greater or less extent, and it is, day by day, more and more approving itself to its users. It appears to be a clear statement of the birth-relations between species of plants.

A few years ago, Prof. Van Tieghem of Paris undertook the study of certain parasitic plants of the higher class, and came to remarkable conclusions as to the structure of their seeds. The investigation has been continued with but few interruptions from that time to the present, but its course has traversed some fields outside of its earlier limits. As a consequence of these excursions, the author began to suspect that there had been an overlooking of obscure affinities even where the light had seemed brightest. In communications to the French Academy, Prof. Van Tieghem gave from time to time fragments of his discoveries, and last year presented a synthetic view—a system, in fact. The proposed system differs in so many particulars from the recently established one which we have referred to, that it has been looked upon in most quarters as based on insecure foundations. There has been a general feeling that the results attained were of extreme interest, but could not be consolidated into a unified working system of classification.

In the handbook now before us, Prof. Van Tieghem makes a fair trial of his system, and commends it to the attention of elementary students. This is of the nature of a distinct challenge, and the challenge will no doubt be eagerly accepted by many. We must frankly say that the boldness of such a challenge commands respect, and, however the contest may terminate, cannot fail to have profound influence upon existing systems. In stating this to the lay reader, one feels as if he ought to give in untechnical language the reasons for this conviction. Such a presentation of the case is, however, plainly impossible from its very nature, and we can only hint at even the most striking of the innovations.

As everybody knows, there are two great groups of higher plants known respectively as dicotyledons and monocotyledons; the dividing line between them, based on the number of seed leaves, being associated with other less constant but yet strongly marked characters. Among these secondary charac-

ters are the contrasts as to structure of the stems, veining of the leaves, and numerical plan of the blossoms. The line between the two groups was laid down as long ago as the close of the seventeenth century by the great master, John Ray, and nothing has been done from that time to this to obliterate the line. But, as may be supposed, much thought has been given, since the idea of selection assumed sway, to the fundamental question of the relationship between these groups. Did they spring fully differentiated from a common stock, or did one develop from the other at a later period, and so on? Such answers are hard to obtain, but a few of them seem to be nearly within reach. The questions and answers are purely speculative, and have, at first sight, little or nothing to do with the questions of a practical character as to what plants are on this side and what are on that side of John Ray's line. It would seem to most persons to be a matter of inspection and counting whether grasses, for instance, have in their seeds one cotyledon or two. In such inspection and counting, everybody has made out for the grasses only one cotyledon or seed-leaf in the embryo, and hence, from John Ray's time down to Van Tieghem's, grasses have been by common consent termed monocotyledonous. But Prof. Van Tieghem has detected a rudimentary second cotyledon in the embryo of grasses, and has associated this discovery with certain others.

As a result of his interpretation, he places the grasses in a quasi-intermediate class, and puts by their side a vagrant order of dicotyledons which have held an uncertain position in all systems. This may indicate the revolutionary character of Prof. Van Tieghem's work. It may also indicate to our botanical teachers that in his elementary treatise may be found many surprises worth examining. And we may say to such teachers that they will find the little handbook thoroughly French in its lucidity, and charming from beginning to the end.

Modern American Oratory: Seven Representative Orations. Edited, with Notes, and an Essay on the Theory of Oratory, by Ralph Curtis Ringwalt. Henry Holt & Co. 1898. Pp. vi, 329.

Mr. Ringwalt prints here, without abridgment, addresses delivered by Schurz, Black, Phillips, Depew, Curtis, Grady, and Beecher, as specimens of the chief styles into which oratory is divided; with the additions indicated on his titlepage. There is, further, a bibliography of orators and oratory. The volume is intended as a textbook, containing both precept and example for young speakers. There are pretty abundant references to previous treatises, and at the same time the determination to be untrammelled by the past is pushed to paradox, contempt being expressed at the very outset for the "popular estimate which ranks Edmund Burke among the world's great orators." After reading carefully every word of the introductory treatise, one is forced back upon the conclusion that Mr. Ringwalt, like all his predecessors, will do good service by teaching young orators some things to avoid; but as soon as they attempt to construct orations by his precepts, they will lose the very essence of all oratory—reality. There are, in some of his model orations, many passages in the falsest taste, which were perhaps carried off at the time by the personality of the speaker, but which would be very likely to infect

a college speaker by the taint of their influence.

Mr. Ringwalt's English is by no means above criticism. He says "masterful" for "masterly" (p. 12), "look to" for "look at" (p. 13), "proportion" for "portion" (p. 21). He upholds Cicero's *Oratio* for Milo as a model of narrative oratory; yet he must know it was never delivered, and consequently lacks one of his own essentials for a really model speech.

The New Far East

A Study of Present Political Conditions and Prospects. By **ARTHUR DIOSY**, Vice-Chairman of the Council of the Japan Society. With 12 illustrations from special designs by Kubota Beisen, of Tokio, a reproduction of a cartoon designed by His Majesty the German Emperor, and a specially drawn map. 8vo, probable price, \$3.50.

The author, who is the founder of the Japan Society, shows that Japan is not only a traveller's paradise, "a pleasant land of beautiful scenery, a country inhabited by an interesting race with charming, gentle manners," but also (as has been evident since her defeat of China) the land of a brave and serious nation of fighting and thinking men; a nation capable of being, and determined to be, a dominant factor in the Eastern world. China, credited till her overthrow with boundless stores of latent strength, is shown to be an inert mass, drifting toward disintegration. Mr. Diosy sketches the changes in manners and customs that have produced "the new Japan," and concludes with a consideration of political conditions in the East, and a suggestion as to the expedient Oriental policy of England in the future. The book is illustrated by Kubota Beisen, a Japanese artist well known in this country, where he visited and held exhibitions of his work in 1892-94.

THE WIRE-CUTTERS.

By **Mrs. M. E. M. DAVIS**, author of "Under the Man-Flag," etc. Crown 8vo, \$1.50.

A story of Texas village and country life, told with thorough knowledge of the place and people and with admirable skill. Mrs. Davis describes graphically a local struggle over the wire fences which shut the cattle from springs, and some dramatic characters and events of the civil war. In all respects a notable novel.

**THE FEDERATION OF THE
WORLD.**

By **BENJAMIN F. TRUEBLOOD, LL.D.**, Secretary of the American Peace Society. 16mo, \$1.00.

In this little book Dr. Trueblood makes a strong, reasonable appeal for a union of all civilized nations in the interest of peace, a federation of the world, based on sound economic as well as humane principles. It challenges respect by its breadth of spirit, its wide survey of the condition of the nations, its recognition of the obstacles to union, and its emphatic plea for the larger interests of mankind.

**FIELDS, FACTORIES, AND
WORKSHOPS.**

ON, TWO SISTER ARTS, INDUSTRY AND AGRICULTURE. By **P. KROPOTKIN**. Crown 8vo, \$3.00.

Prince Kropotkin discusses with great ability and enthusiasm The Decentralization of Industries, The Possibilities of Agriculture, Small Industries, and Industrial Villages, and Brain Work and Manual Work. The Appendix reports industrial facts and products in the several European states. The book embodies a vast deal of research and observation, informed with zeal for human welfare.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 23, 1900.

The Week.

President McKinley's address to the Commercial Club in Boston contained a frank announcement that the protectionist "racket" is played out. "We have quit discussing the tariff," said Mr. McKinley, "and have turned our attention to getting trade wherever it can be found." With something dangerously like plagiarism from his predecessor in office, he added: "We have turned from academic theories to trade conditions, and are seeking our share of the world's markets." This is the very thing which the same eminent economist declared only eight short years ago would lead to national disaster. "The foreign market is delusory," was then his cry. It was the "poorest" of all markets, he said, because "in the foreign market the profit is divided between our own citizen and the foreigner, while with the trade and commerce among ourselves the profit is kept in our own family. If any one says, after reading that profound utterance, that Mr. McKinley in 1890 evidently knew nothing about foreign trade, we agree, with the addition that we do not think he does now either.

Clearly all that will be done by the present Congress regarding our policy towards the Philippines will be the ratification of the treaty, the appropriation of the \$20,000,000 required to carry out one of its provisions, and some makeshift measure for keeping in the army during the next twelvemonth as large a force as the exigencies of the situation require. The \$20,000,000 appropriation was ruled out of the Sundry Civil Bill in the House on a point of order on Thursday, but the course of the debate showed that the money would be voted in some way before the 4th of March. It would, of course, be ridiculous to force an extra session simply in order that the appropriation might be made after the 4th of March, instead of before. Indeed, Mr. Bailey, the Democratic leader, who is a member of the committee on rules, said that this committee would provide a way to meet the demand, and there would be no popular support of any opposition to such a provision. On Monday a separate bill carrying the appropriation passed the House without difficulty.

It is no pleasant prospect which the news from Manila holds out. The natives have taken to the jungle, where they feel perfectly at home, and ask us to come on. This is an old game of theirs. They have tried it on the Spa-

niards for years, and it seems the most natural thing in the world for them to begin it on the Americans. Gen. Otis has troops enough to hold his lines and repel all attacks with ease; but an aggressive campaign in the interior is out of the question. Even after reinforcements arrive, it will be impossible to hunt the natives down in detail without enormous loss of life. If they choose to go on fighting, we may have for a long time nothing better to offer to the world in the way of Philippine government than the Spanish did—that is, the coast towns held by force, and the interior left unexplored and uncontrolled. It is a great disappointment, undoubtedly, that the Filipinos have shown such a perverse determination to select the sauce with which they were to be eaten; but it should have been foreseen. "Why shall we not," asks Mr. Denby in the *Forum*—"why shall we not take the people of the Philippines kindly by the hand and lead them into the blessed light of perfect freedom?" Well, Mr. Denby and his fellow-commissioners are now nearing Manila, and will soon be in a better position to answer the question than any one at this distance. Seen from here, the principal difficulty in taking the Filipinos kindly by the hand is that they seize that particular occasion to stick a Malay creese into you.

Article 13, amending the Federal Constitution, declared that involuntary servitude, except as a punishment for a crime duly proved, shall not exist "in any place" subject to the jurisdiction of the United States. The Philippine archipelago will, by the treaty, be thus subject. In the secret documents relating to the treaty recently published there is, on page 369, in a report of the testimony given by Gen. Merritt before the Paris Commission, the following:

Senator Davis—"Do you understand that a condition of slavery prevails which is described in that letter read?"

Gen. Merritt—"Yes, sir; entirely as described by Mr. André."

André was highly commended by Merritt as having been in the Philippines fourteen years as Belgian Consul. His letter is on pages 386-389. It describes as generally prevailing the slavery forbidden by the Constitution of the United States. What is to be done with such slave labor? The majority of the Senate Republican leaders and lawyers contend, as Teller, Foraker, and Platt of Connecticut have contended, that the Philippines will not be under the thirteenth amendment till Congress shall so enact. Will Congress enact it? If Congress will not make the enactment, then can President McKinley, or his army officers, acting under the Constitution, uphold the slavery? Ought they not to destroy it

wherever met? Which Spanish laws are, after the treaty has been ratified, to be enforced in the Philippines?

The earnest and unusual appeal of the War Department for the passage of the Hull army-reorganization bill, given out on Sunday, doubtless reflects the anxiety of the Administration lest it be caught without the necessary troops to carry out its Christian policy of civilizing the Filipinos by means of rifle and cannon. It is true, as the appeal states, that Senator Cockrell's compromise bill shows little of the expert's hand, and is lacking in many minor details, but the same is true of the Hull measure in a very large degree. The open confession that the latter was drawn solely by Adjutant-General Corbin and the officers of the department (nearly every one of whom would obtain promotion under it), without any aid from line officers, confirms a well-accepted belief in army circles, which led to its being received with grave suspicion, aside from its inherent faults and weaknesses. No progressive military reform bill could come to life in any Washington staff bureau to-day, because such a measure would begin by sweeping consolidation and effacement of those very bureaus which the Hull bill will strengthen and fortify to a remarkable degree. Yet these branches of the army are the very ones which were to blame for the delays and suffering of the last summer, and their present organization is one long since abandoned by all the Continental nations. The fact is, that if the army's reorganization is to depend upon hasty action taken within the next two weeks, nothing but wasteful, inefficient, ignorant and even corrupting legislation can be looked for. What is needed is an extra session, with plenty of time for the careful examination of a really scientific and far-seeing measure, and with no time for the hasty passage of some concoction of the discredited firm of Alger & Corbin.

The navy personnel bill, originally drawn a year ago by Gov. Roosevelt, has now passed both houses of Congress, and after minor conference changes will go to the President. A more radical alteration of the corps of officers could hardly be made, since the bill provides for promotion by selection, raises the pay to correspond to that of the army, and practically amalgamates the line and engineer officers. How this last change will affect the service can be known only after it has been tried for several years, since not even the English navy has as yet gone so far as to demand that the young officers must be trained engineers, as well as expert gunners, navigators, and fighters. The weak points of the re-

organization are the provisions that when retirements and deaths do not annually provide twenty-five promotions to the lieutenant-commander's grade, a board of rear-admirals shall weed out the least efficient officers, who will then be forcibly retired. Whether this ever-changing board can be relied on to act in a judicial manner and to be free from the minor political influences which have hitherto made themselves felt in Washington naval circles, is a grave question. The principle, too, of retiring able-bodied officers, competent to be of considerable value to the Government, simply to make room for younger officers, establishes a new and dangerous precedent in our pension policy. The late war has proved that the present commanding officers, even if above the ideal age of command, have been fully qualified to perform all the duties asked of them. Whatever the outcome of this reorganization, nobody will deny that the navy has earned the right to try to improve itself still further, by its admirable bearing and conduct in the war, and by its splendid example of what can be done by a department of the Government from which the politicians are kept at bay.

We accept the confession of the "friends" of the Nicaragua Canal bill that it is dead for this session of Congress. Certainly they could devise no more irregular or desperate means of getting their cherished measure through by hook or crook than the one which they tried on Wednesday of last week in the House, only to meet with ignominious failure. If the rules of the House, devised to prevent sneak-thieving in connection with appropriation bills, are to be openly set aside in favor of grand larceny, there is an end of safeguarded legislation. No wonder the House drew the line at the revolutionary proposal of the "friends of the Nicaragua Canal" to fasten their measure as an amendment to the Sundry Civil Appropriation bill. When we say "friends of the Nicaragua Canal," we mean, of course, the people who want, not a canal, but a bill. Any old thing will do. In Heaven's name, pass a bill! Morgan's bill, Hepburn's bill, the Maritime Company's bill, the Cragin-Eyre bill, any one of them, any two of them dovetailed, all of them shuffled up together—pass any measure you will, only pass something. That is what the "friends" have been saying to Congress, and the reason is obvious. As Mr. Dockery warned the House, the same forces which are pushing the subsidies bill are pushing the crude, the impossible canal bills. They are the forces of corruption—what it is convenient to call the McKinley Syndicate. Senator Hanna frankly avowed their plan of campaign in angry talk to Mr. Cannon. In this halcyon time of expansion the Syndicate must grab all that was in sight. Subsidies, bounties, canal

bills—anything would "go" if it was only labelled "expansion" or "greater America." The next Congress might be more particular or timid. Now was the time to seize everything, and what did Mr. Cannon mean by getting in the great Hanna's path? Well, behind Mr. Cannon there stood a burlier form than his. It is the Speaker of the House to whom the credit is due of having smashed the Syndicate.

Another step towards the abolition of liquor in the military and naval service of the nation has just been taken by the Navy Department. The canteen system that has existed in the army, by which beer was sold under the oversight of the military authorities, has never obtained a strong foothold in the navy; but there have been several vessels aboard which such sale was permitted, and there are now two such. An order has been issued by Secretary Long announcing that, after mature deliberation, the Department has decided that it is for the best interest of the service that the sale or issue to enlisted men of malt or other alcoholic liquors on board ships of the navy, or within the limits of naval stations, be prohibited; and forbidding commanding officers and commandants hereafter to allow any such liquor to be sold to or issued to enlisted men, either on board ship or within the limits of navy-yards, naval stations, or marine barracks, except in the medical department.

There is still a chance to save the next census from being wrecked. The bill which provides for that great enterprise passed the House with a section enacting that, in the selection of the statisticians, clerks, and other employees, the operation of the civil-service law, which would naturally apply to such places, should be suspended. The Senate has it in its power to amend the measure so that these thousands of positions shall be brought within the sphere of the merit system. It seems absurd that any argument should be required to demonstrate not only the wisdom of such a provision, but also its necessity, if the census is to be worth anything. Experience has shown the truth of this beyond the possibility of question. The rules were suspended in 1890 in the same way as is now proposed, and the result was that the Superintendent had to give the larger share of his time to the distribution of "patronage," and got such an inefficient set of subordinates that their work was largely worthless. The pending bill provides for "pass" examinations, and its advocates have claimed that such tests would be as valuable as competitive examinations; but the "pass" system was tried a decade ago, and it proved utterly worthless, alike as a method of getting efficient employees, and as a guard

against the controlling influence of political considerations in appointments.

A Washington correspondent reports that the Republican leaders in Congress think that they have got hold of a new issue. They have "kept it dark" hitherto, but judge that the time has now come to reveal it. It is nothing less than a proposition, in accordance with the fourteenth amendment, to revise the basis of representation of the various States in the lower branch of Congress and in the electoral college, with a view to a radical reduction of the power exercised by the States which formerly used to be known as "the Solid South." Every State places some restriction upon the right of male citizens to vote; not one, for example, allowing an idiot to cast a ballot. Some States require the payment of a poll or other tax as a prerequisite to voting. Many States insist that a man shall be registered in order to vote. Several States, like Massachusetts in the North, and Mississippi, South Carolina, and Louisiana in the South, have established an educational qualification. These latter three States have constructed an elaborate system, of which the educational test is only a part, with the openly avowed design of disfranchising the larger part of the negroes who formerly voted. The practical operation of this system gives those Southern States whose colored population is large, Representatives in Congress and Presidential electors out of all proportion to the number of votes which they cast. As nearly all these Representatives and electors are invariably Democrats, the Republicans have a partisan motive for wishing to make a radical change.

The plan proposed is to find out the number of male citizens in every State whose right to vote is denied or in any way abridged, and reduce the Representatives and Presidential electors for each State in the proportion which the number of such male citizens bears to the whole number of its male electors. This would involve only slight changes in the North, but would revolutionize the representation of the States in the South, particularly the lower South. But how are you going to establish the fact of abridgment? A large proportion of the qualified white voters in Massachusetts and of the qualified black voters in the South do not go to the polls. The fact that they do not cast their ballots does not mean that their right to vote has been abridged in any way. It simply indicates that they do not care enough about the privilege to exercise it. It is futile to think of effecting through the fourteenth amendment what the fifteenth amendment has failed to secure, namely, protection against nullification of the right to vote "on account of race, color, or previous condition of servitude." The Supreme Court has always

shown a blind eye to evidence of such nullification.

Sanitation in Havana and Santiago has already, though incomplete, wrought wonders in stamping out infectious diseases and reducing the death-rate. There will necessarily be something of a relapse, however, when the rains come and find Havana without adequate sewerage. It is already too late to undertake the work this year; to have the streets torn up in the rainy season would be to invite worse horrors. This question of cleaning up old cities and conquering the plague after conquering the territory which it haunts, is one with which the English have had long and sorrowful acquaintance. "Year by year," says Kipling, "England sends out fresh drafts for the first fighting line which is officially called the Indian Civil Service. These die or kill themselves by overwork, or are worried to death or broken in health, in order that the land may be protected from death and sickness, famine and war, and may eventually become capable of standing alone. It will never stand alone, but the idea is a pretty one and men are willing to die for it." A recent number of the *London Lancet* gave a tragicomic account of the efforts of an English surgeon to root out the plague in Malegaon. There was no hospital, so a rest-house in a Mussulman cemetery was converted into one, which, the surgeon wrote, "was very handy, for the cases usually die in five days." The dogged energy of the man in pursuing his course in the face of the ignorance and superstition and hostility and deception of the natives at last had its reward, and Malegaon became plague-free. But it was not till after the Englishman had had his house looted by the natives, and he himself had been smitten with the plague; in the end, however, the people feted their deliverer.

Doubtless the most serious complication which Governor Roosevelt has to face in the way of a Black legacy is the financial condition of the State. It was brought out at the conference of Republican Senators on Thursday, that the deficits in the various State departments now aggregate about \$453,000. It was also revealed that, in addition to spending the \$9,000,000 special appropriation for canal improvements, with the work only half done, Aldrich entered into contracts for nearly \$5,000,000 more of work, and that the State might be held liable for these. Then there is a special item of \$1,500,000 for war expenses which must be paid. Part of this will be paid back ultimately by the national Government, but in the meantime it must be met by taxation. Here is a total of about \$7,000,000 to be added to the State's expenditures for the year, and that means a perceptible increase in taxation. Thus

the Roosevelt administration must be made to bear the burden of the shortcomings and misdeeds of the Black régime or starchless partisan orgy. If the special counsel, under the Governor's inspiration, can succeed in bringing Aldridge and Adams to book for their doings, the responsibility for the greater part of this burden will be placed where it belongs, squarely on the shoulders of Black and Platt. The people of the State can be trusted, in any event, to see that it is in no way chargeable to Gov. Roosevelt.

The assault of the Croker Government upon the Manhattan Elevated Railway Company gives that corporation the opportunity of its life. Let its managers come before the public with a full revelation of all their relations with Tammany in the past, setting forth the facts as a reason for refusing to yield any further to demands from that quarter. That would silence all Croker's fears and anxieties lest the company be not doing its full duty to the dear people. It would remove all his doubts about the artistic perfection of the elevated structure in Battery Park. It would quiet the qualms of President Mike Murphy and Dr. Feeny of the Health Board about the unhealthful influence of absorbent matting on the floors of the cars, and the danger to life from draughts through the lack of vestibules on the company's trains. The whole Croker "outfit" would find everything relating to the company's business in perfect condition on the mere threat of a revelation of this character. Why will not Messrs. Sage and Gould make such disclosure? Why not let us all know how it comes about that the extremely cordial relations which existed between Croker and the company when Mayor Van Wyck came in, are now so thoroughly disrupted? Only a little more than a year ago nothing was too good for Croker's agents to say of the elevated system. Croker's Mayor extolled it in his first message, and Croker himself spoke highly of it in his various public communications. What was the cause of these delightful relations then, and what has led to their discontinuance?

The public mind is in a very receptive mood on these points now. We may say, also, that it is in a more friendly mood toward the Manhattan Company than it has been for a long time. The vicious character of Croker's assault, combined with his obvious ingratitude for past favors, has created sympathy for the company. There is a general feeling that Croker has "gone too far." Then, too, he has timed his assault badly. We have just emerged from a most unusual test of our transit facilities, in which the elevated lines have demonstrated their great usefulness, not to say their superiority, in such crises, over all other methods which we have in use now.

The people have had it brought home to them that, if we had not had the elevated lines, we should have been nearly deprived of the facilities of locomotion. They are no more convinced than heretofore that the elevated system is adequate for our needs, but they are convinced that until we have something better we cannot suffer any diminution in the accommodations which it offers. Our ruler should have waited until pleasant weather had come, say five or six weeks hence. His motives in making the attack would possibly have been questioned with as much interest then as they are now, but he would not have so alarmed the public about its own convenience. He should be able to see that the one thing he should avoid in the administration of the government is serious interference with the comfort of his subjects. He can rob and blackmail all he pleases, but he must not make life uncomfortable for us. There must be advisers about him who are shrewd enough to see this if he is not. The adviser was certainly shrewd, or else had a retentive memory, who reminded him of that Battery Park agreement upon which he could base his assault. Nobody believes that Croker himself remembered that this agreement was drawn in 1876, when William C. Whitney was Corporation Counsel. Mr. Whitney himself is so absorbed in the affairs of the Metropolitan Street Railway Company that it is doubtful if he remembered it himself till he saw Croker using it as a club. Had he been consulted, he would surely have advised against the assault at this time.

The French seem to be acting on the whole with great restraint and good sense in the crisis precipitated by the sudden death of President Faure. This will disappoint their enemies abroad as well as intriguers at home. It will also mystify a certain order of excited commentators on French affairs who have built up, for their own comfort, a pleasing sort of fiction about "Gallic" fickleness and folly. Things which would be incredible anywhere else they confidently predict for France; and if you ask why, their only answer is, "Oh, well, France, you know—" In particular are they given to foretelling a revolution in France. In favor of whom or how brought about, they will not say, but a revolution they insist upon having year after year. Now it need not be denied that French affairs take many unexpected turns, and that the safest prophets are those who arise after the event; but there have been signs for some time that the solid and conservative elements of the country were getting more and more in control of the situation. Their success in peacefully electing a suitable President in M. Loubet furnishes excellent reason for hoping that they may soon surmount their remaining political difficulties.

THE PRESIDENT IN BOSTON.

It cannot be denied that Mr. McKinley's speech before the Home Market Club in Boston last Thursday was as shrewd as it was characteristic. There was not a spark of initiative or leadership in it. The President stood up before his fellow-countrymen, in this great crisis of our national life, to confess himself as perplexed and confused and ignorant as they, yet as hopeful also, as well-meaning, as ready to grin and bear it, to trust to luck to make all come out right in the end. These are not the arts of the great political orator, or the ways of the daring political leader, but they perfectly fit the assumed rôle of an expectant and obedient servant of the people. They hit the great average dullness between wind and water. "McKinley thinks just as I do," will be the complacent remark of the mass of his readers. Ninetenths of mankind divide all thought into just two classes—"my idee exactly," and "humbug." Mr. McKinley is one of the rare public speakers who are able to talk a good deal of humbug in such a way as to make their average hearers think it excellent sense and exactly their idea.

His performance at Boston was all the more clever because he was confronted there by exceptional difficulties. He had to face past utterances of the Home Market Club, and its recent positive declarations against the policy of adventure in the Philippines, to the defence of which he devoted his speech. Worse than that, he had to face utterances and declarations of his own against that policy. When Mr. McKinley addressed the Home Market Club in 1888, he was the most home-keeping statesman in all the land. "Let England take care of herself, let France look after her interests, let Germany take care of her own people, but, in God's name, let Americans look after America!" That was then his eloquent cry. He was against any "entering wedge," such as the Home Market Club now asserts his policy of the "open door" to be, which "will in the end overthrow the entire edifice" of protection. As for going out to "invade the world's markets," no man could be hotter against that fatal policy than was Congressman William McKinley. Hear what he said, on April 24, 1890, would happen if we were to try doing precisely what we are doing under his direction:

"If we would invade the world's markets, harsher conditions and greater sacrifices would be demanded of the masses. Talk about depression—we would [should] then have it in its fulness. We would [should] revel in unrestrained trade; everything would, indeed, be cheap, but how costly when measured by the degradation which would ensue. When merchandise is the cheapest, men are the poorest; and the most distressing experiences in the history of our country—aye, in all human history—have been when everything was the lowest and cheapest measured by gold, for everything was the highest and the dearest measured by labor. . . . With me this position is a deep conviction, not a theory."

With such awkward voices coming out of the past, it required, we say, no little address on the part of President McKinley to surmount the oratorical difficulties of his position in Boston. But he surmounted them by ignoring them. Not a word about trade or protection or the open door fell from his lips. Instead of charging up the hill, he made a wide détour, and appeared innocently unaware that there was any hill at all. This must have been something of a staggerer to the officers of the Home Market Club, who had been publicly remonstrating with the President for fatally wounding protection in the house of its friends by throwing the Philippines and Cuba and Porto Rico open to the trade of the world. They perhaps wondered how he could get out of this "corner." Bless their simple hearts, had they not read the *Tribune* on the extraordinary eloquence of Mr. McKinley's "silences"? "Corners" simply disappear when silence is dense enough. Difficulties must be impudent indeed if they continue to exist after being ignored.

As a master of significant silences, however, Mr. McKinley was not so successful when he came to speak of our liberating and civilizing mission in the Philippines. If he could only have ignored the volleys from those Filipino guns! But he could not, and their crackling disturbed some of his most touching periods. We were in Manila as "liberators" and "rescuers"—there was no doubt of that; but somehow we had only precipitated "a reign of terror," and the liberated natives were unaccountably engaged in shooting down their rescuers. Still, we were to go on and confer priceless blessings upon the "gems and glories of those tropical seas," and if "the misguided Filipino" did not appreciate or desire our presence, why, the "liberator" could not "submit important questions concerning liberty and government"—their liberty and government—to men whom it was necessary first to kill. Their children and grandchildren, as the President said, may "bless the American republic because it emancipated and redeemed their fatherland," but the present generation is in a fair way to be killed off in the process.

We dwell upon some of the examples of moral and political confusion in the President's speech, because they show us once more into what a false and humiliating position the country has been brought. Mr. McKinley said the best that can be said for the honest intentions and humane purposes of this country in taking over the Philippines. But no canting about humanity can cover up the frightful inconsistencies which mark our progress. We may be humane, but the Filipinos think us tyrannous. The situation in the islands is clearly pictured in a letter from its Manila correspondent in the *Evening Post* of Friday. He wrote a month be-

fore the armed collision, but the drift towards hostilities was unmistakable. The more the natives saw of the Americans, the less they liked them. They did not relish our ways, our manners, or our morals. They would draw no fine distinction between aggressors; and if the Americans were to do as the Spanish did, they would simply class both together in a common hatred. This is the enormous difficulty and inconsistency of our position. We are going where we are not wanted, to do what is not liked. We may be as pure of purpose as St. Francis and as humane in intention as St. Dominic; but if the natives have to be shot in order to be taught how good and benevolent we are, they cannot be greatly blamed for regarding all our humanity, even when tricked out in the flowers of Presidential rhetoric, as no better than the cruel tender mercies of the wicked.

THE DECLINE OF THE PORT.

We do not put this heading to this article to make a sensation, but simply to call the attention of our readers to a very important fact, the truth of which all admit—namely, that the business of the port of New York is and has long been declining, and that nothing is being done to arrest its decline, while much continues to be done to hasten it. Two or three years ago the subject was taken up by the Chamber of Commerce, which for a little while talked a good deal about it, and gave forth much speculation about its causes. The cause of the decline of a port must always be a subject of mere speculation. The business of a port consists in the number of ships which bring cargoes to it and take them away from it. Every one is entitled to his own opinion as to the reason for which this business improves or falls off. The Chamber of Commerce, on the occasion referred to, clung fast to the belief that it was the badness of the channel which did it; and our suggestion that it was bad government seemed almost to throw a great many of the Chamber into a rage, so reluctant were they to cast any imputation on our rulers. The best authorities on this question would be the people who have ceased to send their goods here. We may be sure that as long as merchants are desirous of sending goods here, ship-owners will be glad to carry them. We have not yet heard of a single ship-owner who has withdrawn his vessels on account of the channel. When the big steamers keep up their traffic we may feel pretty sure that the channel trouble is not serious, and that smaller vessels have no real difficulty in keeping up their traffic.

The great difficulty in dealing with the question is that the persons who could throw most light on the subject and know most about its causes, are terrorized, as nearly everybody in New York

is, by an authority of some sort. Shippers are terrorized by the custom-house; ship-owners are terrorized both by the health officers and by the custom-house, while everybody is afraid of Tammany; and there is, of course, therefore, a general desire to throw the blame on somebody or something else, preferably something inanimate like a channel, which will avoid the necessity of blaming somebody who can hit back or inflict vengeance. The custom-house trouble has been becoming worse and worse as the tariff fever has grown. The desire for more duties has naturally magnified the office of custom-house inspector as the man who collects the tariff, and the rights and the comfort of citizens who pay have become of less importance. Our custom-house has been absolutely converted from an office for the collection of duties into an office for discouraging foreign travel, and for controlling people in the purchase of their clothes and their manner of spending their summer. More astounding, too, this is done on the instigation not of leading citizens, merchants, manufacturers, lawyers, or even influential politicians, but of scrubby little tailors or variety men who find their custom short, and actually are able to get the Government to help them persecute and annoy their leading fellow-citizens. Well knowing what they are up to, it legislates for their benefit, and allows them to plant salaried spies on the wharves to discredit and humiliate its own officers, when the proper course for a great government would have been to allow its officers to throw the spies into the river. This would have been illegal, possibly cruel, but it would have exhibited pride. Finally, when charged with helping the tailors, the Assistant Secretary of the Treasury denies it all, and pretends that the legislation was for the promotion of "morality." When one groups a lot of these things together, who would suppose the United States passed much of its time on "glory-crowned heights," or was even a wholesale dealer?

The whole management of the custom-house is infected with the same picayune character. One of the marks of a great nation is the practice of doing things above board, revealing its intentions openly, and defying criticism. People who go to Europe in summer are no more bound to support New York tailors than any other class of the community. Very few of them can afford to support a tailor. Very few tailors deserve to be supported by anybody else. An honest government which thought tailors should be supported by any species of coercion, would have said so. It would not have allowed tailors who were desirous of compelling other people to support them to masquerade as promoters of revenue; it would have put the desire of tailors to be supported in the preamble of the bill, as its true cause.

Then see how it treats its own citizens, who make no complaint, who ask nothing but their constitutional right to go and come, and follow lawful callings, and bear no more than legal burdens. It finds that its inspectors on the wharf are unfaithful to their trust. So, instead of compelling them by law to examine baggage honestly, and increasing their number so as to make the passage of the custom-house by travellers prompt and easy, it falls foul of the passenger, and compels him to submit to the most humiliating ceremony of modern times. It compels him to swear to what he has in his baggage, and then immediately announces it does not believe him by examining the baggage and treating the passenger's "forgetfulness," or "absorption of mind," as presumptively criminal, to be explained before an officer called the Deputy Surveyor, who is armed with judicial powers to pass on the wharf on the honesty of the passenger's intentions, condemn him without jury, and confiscate his property! Are Americans grown so sheeplike that this oath can continue to be administered, without purpose or remonstrance, year after year, and made the basis of a charge of fraud by an officer without legal education, or, for all the passenger knows, without character? Will nobody get the power to administer it for the purpose of convicting citizens of perjury, legally tested? It may be right or expedient to administer it to a trader about the goods he is importing, but to administer it to a man who is simply seeking to reach his home with his personal baggage, and make him wait for hours in order to take it, is one of the most grotesque outrages ever perpetrated in a free country.

The duty of custom-house officers in such a country is not to lay traps for travellers, or trouble or detain them, or throw their effects out on the dirty wharf. It is to examine them as fully and fairly as possible. A government has a right to say how much clothing a traveller may bring in with him free of duty, and has a right to ascertain how much he has brought in, and make him pay on it; but it ought to calculate whether the sum of money it gets from the process is worth the delay, annoyance, and trouble to which it has to subject the citizen. This is the question which runs through the whole subject of import duties. Is the result of the tax worth the cost of collecting it, whether it be in money or vexation? We have no doubt every passenger would pay \$25 to avoid being stripped on the wharf, but would the result make it worth while to strip him? Tailors have no more claim on the state than other people. Make Jones pay his taxes, but there is no "moral" duty to make him pay if the tax is too small to be worth collection. If your force of inspectors is too small, enlarge it. If it is dishonest,

dismiss it. If it is efficient, cling to it. But do not attack private citizens because you do not know how to manage your own business.

THE NEW QUESTION IN ENGLAND.

The controversy with the ritualists in England continues and grows. Sir William Harcourt has for some months been engaged in a discussion with the bishops, in which he has completely overthrown them. His point was, that they could put an end to the ritualistic vagaries if they chose, that the law gave them full powers. They regretted the ritualism, but maintained they could not stop it, first, because they had no legal power; second, because the ritualistic parsons were few in number; third, because they were numerous and valuable; and fourth, because many of their practices were really permitted in the prayer-book, but had fallen into desuetude.

By disposing of the first of these pleas, Sir William really made short work of all the others. In his last letter he cited two cases, one before the old Arches Court previous to its abolition more than twenty-five years ago, but the other in 1883, in which parsons, on the bishops' prosecution, had been deprived of their livings for departures from the ritual as prescribed in the prayer-book. He showed clearly enough that there was abundant law for the bishops' interference with the very practices which are now going on in so many churches in England, and the only reason that will bear examination why they are not stopped, is the bishops' refusal to interfere. The question why they refuse is receiving various answers, but the favorite one is that they really sympathize with the ritualists themselves, either because they agree with them on points of doctrine, or because they consider the ritualistic clergy so valuable as a religious influence on the masses, particularly in the great cities, that they shrink from driving them away from the church.

Lord Salisbury has assigned a reason for the bishops' inactivity which has probably a good deal of truth in it, viz., that they dread the expense of clerical prosecutions. We have been assured by one of them that it costs him at least three thousand dollars out of his own pocket to prosecute even what is called a "criminous clerk," guilty of immorality, where the case is plain. Prosecutions on points of doctrine cost even more, because they involve long arguments by crack counsel, learned in church law. Now bishops are human. Their incomes, though apparently large, are not so, considering the demands upon them. Custom requires them to live in a certain style, and the amount of hospitality which they have to bestow is a terrible burden. Their charities, too, are very large. On the whole, therefore, they may be considered poor men as far as their

official income is concerned, and but few of them have private fortunes. A year ago a bill was introduced in Parliament providing that they might receive the cost of prosecutions of offending clergymen from another church fund, but it was withdrawn at their unanimous request, because they did not wish to appear to be saving their own pockets at the expense of another worthy object. They generally have families, too, and one of the curious anomalies of the English church is that, though the church is a state institution, they are expected to keep it sound and respectable out of their own money. Everything has been done in times past to make them consider a bishopric a good thing from a worldly point of view, and yet they are now expected to act as if the worldly side of the office were of no consequence.

They are now, however, apparently left without excuse for not acting. Harcourt having demolished their legal defence, they are brought face to face with the popular feeling, which is strong. And it is strong for more than religious reasons. The democratic wave has naturally not rolled so long in England, and taken away the county government from the fathers and brothers of the parsons, without reaching the churches. The old doctrine that the church and churchyard were the parson's freehold, has been shaken to its base. It is not many years since some of the parsons were disposed to resist even the act of Parliament which allowed people, under certain restrictions, to have other than Episcopal burial services in the churchyards, over their own dead. One parson wrote to Archbishop Tait that he would meet with a pitchfork the first Dissenting funeral procession which came to his churchyard. That has all gone by. The democracy, having got hold of the state, is now disposed to deal drastically with the church also, and cut down the parson's powers as well as the squire's.

Consequently, there is a good deal more than either ritual or theology in the present movement. The independence of the clergy offends a great many people who care nothing about the ritual, and the tendency of the ritualistic movement is greatly to exalt the power of the clergy. In fact, to all intents and purposes, it makes them the "church," and gives the laity hardly anything to do except genuflect. This the masses in England are not disposed to stand. The relations between the country people and their parson are rarely cordial. Under the old régime the parson was apt to meddle a good deal, and take a good deal on himself in virtue of his social position and his property in the church and glebe, and he could not do so for long years without breeding a good deal of resentful feeling. It is mainly in the towns among the "residuum" that the ritualistic clergy have

made way. In the country towns the masses are apt to dissent, and in the country they growl a good deal at the parson.

This is, therefore, not a lucky time at which to push a Romanizing movement and spread "priests" all over the country once more. Some one, in writing to the *Times* about the matter, recalls a passage from Froude in which he speaks of the terrible mistakes of the Catholic reaction after the Council of Trent. Instead of trying to come to terms with the Protestant revolt, it became more arbitrary, uncompromising, and ferocious than ever, and we had the massacre of St. Bartholomew, the Dutch war, the Dragnonnades, and so on. The result was savage hatred of the church in the leading countries of the world. This is now dying out, but instead of still further fostering kindly or tolerant feelings towards the pretensions of the church, the ritualistic clergy are making demands on credulity which the public rejected three hundred years ago, when it was twenty times more credulous than it is now and had twenty times as much respect for priests as it has now, and when the clergy had an intellectual preëminence which they have lost.

THE PRE-IMPERIAL JOSEPHINE.

PARIS, January 26, 1899.

The indefatigable M. Frédéric Masson gives us a new volume on the first wife of Napoleon. It is entitled 'Joséphine de Beauharnais' and deals with her only before she became the wife of General Bonaparte. M. Masson has hitherto been occupied chiefly with the Empress; he gave to the public the end of his long and patient study before its beginning. Many parts of the present volume have appeared in fragments in reviews, but we have now before us the whole of Josephine's existence from 1783 to 1796; and strange and romantic as her after life was, her early life is in one sense no less interesting.

When the ceremony of Napoleon's coronation occurred, when the new Cæsar took the crown from the hands of the Pope to place it himself on his head, when he felt surrounded by all the pomp of the court of his own creation, he turned for a moment to his brother Joseph, and, remembering his early days, asked, "What would our father say if he saw us now?" Josephine might well have made the same reflections: the contrast between her new and her former life was as great, and, in one sense, perhaps greater, for if there was much to explain and justify the glorification, the apotheosis of the new Cæsar—if a hundred victories surrounded him with a prestige which was felt by all—what was there to explain the ascent of Josephine into the region of historical greatness? She had a single title to it: she had been distinguished and chosen by Napoleon, and she had been loved by him. Napoleon often said of himself, "Je ne suis pas tendre," and he gave sufficient proofs of it. He was *tendre* towards Josephine, and towards her alone; he felt for her a genuine passion, which he never afterwards felt for any other woman, and

this is why Josephine will always interest the psychologist as well as the historian.

"This woman," says M. Masson, "played in the sentimental life of the General, the Consul, the Emperor, the chief part. Her action was not foreign to decisions which he took; and in order to explain certain tendencies of his mind, certain states of his imagination and his heart, it is necessary to know exactly who she was, how she thought, where she came from, and what became of her. In most if not all of the books which have been written about her, one finds only imbecile legends, interested praises, voluntary errors, a lot of idle declamation, proving nothing and explaining nothing; in the place of facts, epithets; in the place of dates, adjectives. I have found it necessary to go over this life as a judge would have done; to preserve of all that has been printed only serious, authentic documents, coming from the contemporary parties concerned; to group round these documents those which I owe to my personal researches; and, of the collection so formed independently of any preconceived idea, without any sentiment of flattery or of complacency, to disengage the woman, her life, her acts, her character, her spirit."

In 1726, Gaspard-Joseph Tascher de la Pagerie went to Martinique in quest of fortune. He belonged to an old and poor family; he married a Mademoiselle de la Chevalerie, and had three daughters. One of them, Marie-Euphémie-Désirée, succeeded in being attached to the household of the Governor of the French Islands, M. de Beauharnais. The Governor had among the officers of his staff a M. Renaudin, who fell in love with Mademoiselle de la Pagerie and offered to marry her. Renaudin's parents opposed the marriage, but not because of Euphémie's poverty. "The ill-behavior of her father, his disordered affairs, and the reproaches which were publicly levelled in the island against Mlle. de la Pagerie for having obtained on several occasions, through her standing with M. and Madame de Beauharnais, favors which excited much discontent," were the reasons alleged by the family. On the death of the elder Renaudin, the mother withdrew her opposition; the marriage took place, and the power of the young Madame Renaudin became greater than ever at the little court of the Governor. M. de Beauharnais gave great dissatisfaction to the inhabitants of the island; he was recalled and replaced. He left for France in 1761, with his wife and a young child. M. Renaudin remained in the colonies; Madame Renaudin left with her father for France. There was no legal separation between her and her husband, and she retained all the legal advantages which she had received by contract from her husband. While he was Governor, M. de Beauharnais procured a good match for a brother of Madame Renaudin, Joseph-Gaspard de la Pagerie. This young La Pagerie was married by a Capuchin curate of Trois-Îlets to Mlle. des Vergers de Sannois, of a good nobility of Brie. He was Lieutenant of Artillery and of the coast-guard. Josephine was one of the three children of M. de la Pagerie. She was born on June 23, 1763—a Frenchwoman, since at that date the island was in possession of the French. La Pagerie was put on half-pay and pensioned; he had a powerful patron at Versailles in the person of M. de Beauharnais, who was in high favor and had been made a Marquis.

On her arrival in France, Madame Renaudin first took an apartment of her own, but after a short time she began to live openly under the same roof with M. de Beauharnais. Madame de Beauharnais retired to her mo-

ther's house at Blois, and came only occasionally to Paris. She died October 5, 1767, and from that day Madame Renaudin became completely the mistress of M. de Beauharnais's house. She kept under her sway not only Beauharnais, but his son Alexander, who had remained behind at Martinique; she formed the project of marrying Alexander to one of her relations on the island. M. de la Pagerie was very poor; a storm had ruined his home and his plantation. He had to live with his children in the sugar-factory. It was there that Josephine was brought up, a child of nature, idle, lazy, among negro women who idolized her, obeyed her in everything, and looked upon her as a superior being. M. Masson shows her learning to become a coquette in solitude and in complete independence, without any but negro society, without any intellectual, moral, or religious culture, with a mother, grandmother, and aunts as ignorant and lazy as herself. At the age of ten she was put to school at Fort-Royal in the house of the Dames de la Providence. Towards her fifteenth year, her education was considered ended, and she returned home.

"Are we to believe that, at that period, Tercier, then Captain in the regiment of Martinique, who flatters himself not to have been indifferent to her, does not lie, on that page of his memoirs? Ought we to retain something of the strange story of that Englishman who, in the prime of his youth, knew and loved Josephine, who remained faithful to her memory, who would never marry, and who, in 1814, having become a general, wrote to the Empress, who remembered him and asked him to dinner at the Malmaison? But, on the day fixed, the Empress was ill, in bed, and the Englishman never saw her again."

Alexander de Beauharnais came back to France and was educated with the two nephews of the Duke de la Rochefoucauld in the ducal castle of La Roche-Guyon. Mme. Renaudin, who was his godmother, never lost sight of him. The children of Beauharnais had inherited a good fortune from their mother; she planned a marriage between young Alexander and one of her nieces. Alexander was appointed lieutenant at the age of nineteen, and took the title of Viscount; he had 40,000 livres a year from his mother and more expectations (*espérances* is the classical word in French). Mme. Renaudin did not care which of her nieces Alexander should marry; owing to various circumstances, Josephine was chosen. At the first interview between her and her future husband, he does not seem to have been much pleased. He was only nineteen, but Mme. Renaudin lost no time, and, the contract having been made in due form, the marriage took place on the 13th of December, 1779, in the little church at Noisy-le-Grand, where Mme. Renaudin had bought a country house. The young couple established themselves in the hôtel of the Marquis de Beauharnais, in Paris. Josephine made the acquaintance of her new aunt, Fanny de Beauharnais, a literary woman, "who," says M. Masson, "gave herself to letters chiefly to find lovers; who had had Dorat, Boissy, and Ginguené before falling as low as Cublères; who, though her husband was generally known as an honest and good man, . . . surrounded herself with such persons as Restif de la Brétanne, Mercier, etc." Fanny de Beauharnais's books have been preserved from utter oblivion only by the illustrations of Moreau le Jeune and Marillier. She was born Mouchard, was a *fillic de finance*, and her poems seem to have been written chiefly

in order that she might dedicate them to her fine relations. Such a person could not have a very good influence on young Josephine. Her daughter married the eldest brother of Alexander, and was herself a distinguished and respectable person, but she had as little as possible to do with Mme. Renaudin, and, in consequence, saw very little of Josephine.

The young creole was, in fact, quite abandoned. The Viscount soon left her to join his regiment; he wrote her letters which read more like those of a schoolmaster than of a husband. He had, he said, formed the plan of "recommencing her education." Josephine, in his absence, had a child on September 3, 1781, who was named Eugène Rose (the future Prince Eugène). Josephine was soon afterwards again *enconcinte*. She informed her husband of it at the very moment when he was at Brest, on the point of starting for Martinique, which was threatened by the English. The second child was born April 10, 1783, in Paris, and named Hortense Eugénie (the future Queen Hortense).

What news did Viscount Beauharnais receive at Martinique? He heard only in June that he had a second child; in July he writes to his wife a letter the text of which is given by M. Masson—a very insulting letter, in which he accuses her of misconduct before her marriage with M. de B—, an officer of the regiment at Martinique; with M. d'H—. "I don't ask you to repent," he says; "you are incapable of that, as a woman who, on the point of departure, embraces a lover, knowing that she is destined for another, has no soul; she is lower than the worst *coquines*." He tells her in this letter that he will never again remain under the same roof with her, and orders her to retire at once to a convent and there await his return. The stories which Beauharnais heard in the island were probably only a pretext for a rupture; he took a mistress, lived publicly with her, and sent her to France to await him in Paris.

When the Viscount returned to Paris, Madame Renaudin tried to obtain a reconciliation, but in vain. Josephine took rooms at the Abbey of Panthemont (now given to the French Reformed Church), which was then an asylum for ladies of rank who found themselves in awkward circumstances. An arrangement took place, in virtue of which Josephine and Alexander were to live separately; Josephine was to receive a pension of 5,000 livres; Hortense was to remain with her and to receive an annuity of 1,000 livres till she was seven, and of 1,500 livres afterwards. Eugene was to remain till he was five years old with his mother, and was to be given to his father afterwards. The Viscount had to make the most ample excuses for the letters which he had written from Martinique, in a moment of anger, and to declare his accusations, founded on idle reports of servants and mulattoes, to be absolutely groundless. Josephine may thus be said to have come out of the struggle with all the honors of war.

Correspondence.

RULES FOR UNDERMINING A FLOURISHING REPUBLIC.

TO THE EDITOR OF THE NATION:

SIR: A century and a quarter ago, a cer-

tain illustrious American, resident in London as agent for Pennsylvania and several of her sister colonies, drew up and published a set of "Rules for Reducing a Great Empire to a Small One." These rules were several times reprinted, received a wide circulation, and met with much favor from an appreciative sovereign and his obedient ministry and compliant Parliament. Indeed, so closely were they followed that within a very few years his Britannic Majesty found himself eased of the larger part of his transatlantic possessions—at a total expense of only a few millions of pounds and a few thousands of lives.

My friend, Mr. Ichabod Hackney, has submitted to me, with a view to possible publication, a brief set of "Rules for the Undermining and Ultimate Overthrow of a Flourishing Republic," which I beg to lay before you, being myself not well assured whether they be worthy of publication, or, from their all too manifest inferiority to the famous "Rules" after which they are evidently modelled, more fit for consignment to the waste-paper basket. In any event, Mr. Hackney does not presume to hope that his rules will meet with such favor in high quarters, or be adopted with such speedy and signal results, as was the case with those written for his Britannic Majesty's benefit. They may serve, however, as a first rough draft of certain precepts calculated to promote a most worthy end, and subject to such farther elaboration, improvement, and additions as may occur to abler and more experienced publicists and writers than my friend Ichabod.

Rule 1. For chief magistrate of the republic which it is designed to undermine and, if possible, destroy, let some thorough-going opportunist be raised to power by the aid of a syndicate of men possessed of large means and an ardent thirst for still greater wealth. To this syndicate, which must, moreover, be intimately familiar with the workings of destiny, the chief magistrate is to look for guidance and direction on all occasions.

Rule 2. Let this chief magistrate studiously disregard the issues on which he was chosen by the people, and speedily forget his ante-election promises to the country. If, for example, currency reform and the relief of a depleted Treasury were the issues of his campaign, let him set about emptying the nation's coffers entirely; and if he give his undivided attention to the attainment of so desirable an end, he will of necessity have no time whatever to devote to currency reform.

Rule 3. To hasten the accomplishment of the purpose mentioned in the rule immediately preceding, let no opportunity for engaging in war be neglected, as it is well known that warfare is the most expensive of national pastimes. If an occasion offers for purchasing the privilege of joining in this diversification, so much the better, for the ultimate expense is thereby greatly increased. The purchase of a ready-made insurrection at the antipodes is an ideal mode of promoting the end in view.

Rule 4. Conquest, expansion, and militarism, which proved of such efficacy in bringing the Roman Republic to an end, and in finally hastening the downfall of the Empire, should be the nation's watchwords. With the traditions and fundamental principles of a flourishing republic and a country long regarded as in very truth the cradle of liberty, no policy could be more utterly at variance than one of forcible annexation

of conquered peoples; hence its peculiar fitness for the purpose in hand.

Rule 5. To insure the better observance of the foregoing rules, let the utmost possible power be lodged in the Chief Executive and his syndicate. The Legislature will thereby be relieved of much anxiety, and the minds of the people prepared for that centralized or despotic form of government so likely to follow in the train of conquest and militarism. Nothing can better fit them for its final acceptance than a frequent exercise, on the part of the Executive, of prerogatives either rightfully his or assumed by him to be so—as, for example, proclamations to inferior races whom we purpose annexing, or the retention of an unworthy minister, or interposition on behalf of a disgraced military officer, and his retirement on full pay until such time as he may be entitled to retire with honor on half-pay.

Mr. Hackney is prepared to furnish additional rules bearing on the numerous details sure to present themselves in executing so great a reform; but it seems unwise to trespass further on your courtesy at present.—Very truly yours,

PERCY F. BICKNELL.

MALDEN, MASS., February 18, 1899.

THE SPANISH CONQUEST.

TO THE EDITOR OF THE NATION:

SIR: Prof. W. G. Sumner's thesis, that we have not conquered Spain, but have been conquered by Spain, suggests the story of King Zohak.

"King Zohak [says Macaulay, quoting Southey] gave the devil leave to kiss his shoulders. Instantly two serpents sprang out, who, in the fury of hunger, attacked his head and attempted to get at his brain. Zohak pulled them away, and tore them with his nails. But he found that they were inseparable parts of himself, and that what he was lacerating was his own flesh."

It seems to me that Uncle Sam, in attacking Spain, gave the devil leave to kiss his shoulders.

A. F. H.

GRANVILLE, O., February 8, 1899.

MR. KIPLING'S CALL TO AMERICA.

TO THE EDITOR OF THE NATION:

SIR: The cable informs us that "Kipling's stirring verses, the 'Call to America,' have created a profound impression" on your side. What that impression may be, we can only conjecture. They profoundly impress many of us here as first-class specimens of cant, to which one of the examples, drawn from Dryden, given by Johnson as an example of the proper use of the word cant, aptly applies:

"Of promise prodigal, while pow'r you want,
And preaching in the self-denying cant."

There is something almost sickening in this "imperial" talk of assuming and bearing burdens for the good of others. They are never assumed or held where they are not found to be of material advantage or ministering to honor or glory. Wherever empire (I speak of the United Kingdom) is extended, and the climate suits the white man, the aborigines are, for the benefit of the white man, cleared off or held in degradation for his benefit. Where the climate does not suit us, and the natives are in too advanced a condition to be cleared off, the first consideration (at least with the majority, men

of Mr. Kipling's turn of mind) is our material advantage and honor and glory. We are in a precious hurry to lay burdens down when they do not pay, as in the case of our solemn obligations to the Armenians. We are ever ready to shirk them, as in the case of the status of our Indian fellow-subjects in our colonies, when the bearing of the burden of seeing fair play done would be inconvenient. In so far as is compatible with our interests and honor and glory, we have perhaps made the interest of "natives" under our rule of higher and more enduring consideration than that recorded of any other conquering and governing Power. But this talk of burdens is, as I have said, unadulterated cant.

Taking India as a test, no one moves a foot in her government that is not well paid and pensioned at her cost. No appointments are more eagerly contended for than those in the Indian service. A young man is made for life when he secures one. The tone of that service is by no means one "bound to exile," "to serve . . . captives' need," "to wait in heavy harness," or in any degree as expressed in Mr. Kipling's highfalutin lines. It is entirely the contrary: "You are requested not to beat the servants" is a not uncommon notice in Indian hotels. The most refined and educated natives with three-fourths of British officials narrowly and not indeed always escape the appellation of "D—d niggers." Much of England's wealth is derived from the connection with India. She is one of the richest countries in the world (average income, £40 per head); India one of the poorest (average income, thirty shillings). If there were any reality in a united, equally considered empire and of the white man bearing burdens, it would be shown in relation to her. But no—India is made to pay to the last farthing in all questions of common account. She was made to pay for the erection of that palatial India Office in Whitehall; she has had to pay for a state ball given to the Sultan of Turkey in London; she is made to pay even for the training in England of British troops sent out to govern her—of course for their transit, maintenance, and pay in India. So anxious are we, where good pay is concerned, to save Indians the heavy burden of enjoying them, that, while our sons can study and pass at home for Indian appointments, her sons must study and pass in England; and even in India itself whites are afforded chances closed to natives. You are told to go abroad and "Fill full the mouth of famine." Within the last three years we have had the worst famine of the century in India—some eight million perished of disease and starvation. The heroic efforts to combat it have been, with the exception of voluntary contributions, at the expense of India, and have added to her debt. It is impossible to gauge the eventual inevitably impoverishing effect upon India of the millions of pounds annually drawn from her and, under the heads of salaries, pensions, home charges, and army and navy construction, spent in Great Britain.

There never was a fostered trade and revenue resulting in more disastrous consequences to humanity than the opium trade and revenue. There never was a more grinding and debilitating tax than that on salt (it would be a criminal offence in India for a poor woman to evaporate from sea water the smallest grain of it). Upon any prin-

ciple of clearing our consciences and "taking up white man's burdens," we might assume both, and none of us eat a mouthful less or enjoy a moment's less real happiness. By none have such suggestions been laughed to greater scorn than by men of the Kipling cast of mind. And what nice feeling he displays towards your future fellow-citizens—"New-caught sullen peoples, half devil and half child," "Sloth and heathen folly," "Silent sullen peoples," etc. Surely you are not to be egged on to the relinquishment of all your best traditions by such impudent Pharisaical rhyming. Since 1862 you have enjoyed institutions as perfect as man has yet contrived them, let some in their application misuse and degrade them as they may. Here, through old traditions and foreign complications, each one of us is made responsible for unfairnesses and villanies of many kinds. You and we have each to clear ourselves from our several reproaches and work out our destinies as best we may, with all humility and searchings of spirit. In deliberately entering upon our courses, you would jeopardize all the principles in which you lead, without possessing the traditions and experiences rendering it likely you would improve upon the methods by which we have so faultily led.—Sincerely yours,

ALFRED WHEB.

DUBLIN, February 7, 1899.

TOYNBEE'S DANTE DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: Having had a pretty wide experience of reviewing, both as author and critic, I am not much in favor of protests on the part of the reviewed. But when a reviewer deliberately goes out of his way to disparage by anticipation a book which has not been submitted to him for criticism, as the writer of the review of my 'Dante Dictionary' in the *Nation* of January 12 has done, I think the author may reasonably be allowed to protest.

Your reviewer expresses his doubts as to my competence to deal with the "etymological side" of the Italian vocabulary of Dante's works, on the ground that I assign *hoc-ille* as the origin of the French word for "yes," which he finds to be "not quite reassuring." If ignorance of etymology is to be imputed, let it be imputed to the proper quarter. In this case, it is not I, but your reviewer, who displays either ignorance, or what, under the circumstances, would be worse, disingenuousness. *Hoc-ille* (to preserve the classical equivalent of *il*, for which it would have been mere pedantry in a Dante Dictionary to substitute the vulgar Latin form) is the accepted origin of O. F. *oil*, as your reviewer may convince himself by a reference to Arsène Darmesteter's 'Cours de Grammaire Historique de la Langue Française' (Part II., p. 177; Paris, 1897). If unaware of this fact, the reviewer is himself convicted of ignorance; if aware of it, he has most unfairly imputed ignorance to me, and in so doing has passed by anticipation a damaging criticism upon my projected work. I may observe that his assumption that the "etymological side" of Dante's Italian vocabulary will be dealt with in my forthcoming 'Dante Vocabulary' is wholly gratuitous.

It is impossible for me, even if it were desirable, to carry on a literary controversy across the Atlantic in a journal which I can only see at rare intervals. I can but express the hope that your reviewer will, in common

fairness to me, withdraw the uncalled-for insertion against which I have protested.

Trusting that you will do me the justice of inserting this letter, I am, sir, yours faithfully,
PAGET TOYNBEE.

DORNEY WOOD, BUCKS, ENGLAND.
January 27, 1899.

[We were not ignorant of the information supplied by Mr. Toynbee. It would require too much space to explain here why his form of statement is unsatisfactory. With no desire to give offence to the author of a Dictionary whose merits we cheerfully recognized, we conceived it not improper to express a hope that so important a work as a Dante Vocabulary, likely to be undertaken once for all, might be fortified at all points. If Mr. Toynbee intends to neglect the etymological side altogether, our well-meant caution was superfluous.—ED. NATION.]

LICENSE IN GERMAN POETRY.

TO THE EDITOR OF THE NATION:

SIR: The question of license in rhyme is probably as old as the art of rhyming and the profession of the critic. It is rather curious to remember, in connection with Prof. Newcomer's interesting letters on "License in English Rhyme," that the Germans, with all their tendency to exhaust any subject which concerns them at all, have never troubled themselves greatly about the culpability of their poets in the matter of impure rhymes. This I believe to be true both as to the theories of the teachers of prosody in the class-room and the practice of the poets themselves. The maxim, "Singe, wem Gesang gegeben," has guided their poets, and their schoolboys have imbibed a veneration for the songs of Goethe, Schiller, Heine, and Uhland which, if somewhat uncritical, has been all the more inspiring.

It is true that the whole subject is simplified in Germany by the very much greater elasticity of the German language as compared with the English, by the latitude given to provincial differences of pronunciation, and the absence of those idiosyncrasies of orthography which, in the English language, make it possible to "rhyme" *bough* with *enough*. Theoretically, German poetry is perhaps nearly as full of impure rhymes as English—Goethe, Schiller, and Heine team with rhymes like *Gehör, mehr; Gäste, Feste; prüfen, Tiefen; Gewinnst, Dienst; Schosse, Lose; heulen, Wellen; sprissen, grüssen; Sehnen, Thränen*. But practically such rhymes are considered pure. Indeed, it may be doubted whether Schiller, the Suabian, would not have been prepared to defend *Sehnen* and *Thränen* as a perfectly legitimate rhyme. (The argument of a "rhyme to the eye," to which Prof. Newcomer is disposed to allow some slight weight in English, does not, in my opinion, appeal to Germans.) A Berliner will recognize the difference in sound in *Sehnen* and *Thränen*, and a Hanoverian will render the umlaut in *Thränen* with even greater clearness; but probably no German anywhere pronounces the word as it is pronounced on the best German stage, say the Vienna Burgtheater or the Hamburg Thalia-theater. No critic challenges this or any of the above rhymes as objectionable, and even Schiller's *Röthe, Stötte; Blässe, Gekröse; verödet, getödet*, pass un-

ter. The *tour de force* which Heine indulges in more frequently than any other German poet—his *entled'ge, Komödie; Kaiser, Ketzer; Glanz, Renaissance; Balaam's, Abraham's*, etc.—are enjoyed for their comic effect, but neither particularly admired nor condemned. Even simple assonance, which plays such an important part in the Volkslied, has found a legitimate place in modern German poetry through Goethe, Tieck, Chamisso, Uhland, Rückert, and others. Goethe's *Floß* and *Sohn*, in "Es war einmal ein König," is perhaps the best known example of such assonance.

It may be said that the Germans have taken an eminently common-sense view of this matter. They will tell you that Platen is perhaps their greatest master of form, and that his poems contain hardly an impure rhyme; and they read his perfect stanzas occasionally from a sense of duty, while they revel in the "impure" rhymes of Goethe, Schiller, and Heine. And as for English poetry, it seems to me that the uncompromising advocates of pure rhymes are happily confronted by the well-known fact that Burns's "Highland Mary," which will move human hearts as long as any language is spoken, does not contain one single perfect rhyme.

SUMMIT, N. J., February 12, 1899.

FILES OF THE LONDON TIMES.

TO THE EDITOR OF THE NATION:

SIR: In a notice in the *Nation* for February 16, on the acquisition of a file of the *London Times* by the Boston Public Library, it is stated that the file "in the Congressional Library is the only one in America containing all issues of the *Times* from its establishment in 1788." This, I regret to say, is not the case. The file in the Library of Congress begins with the number for July 4, 1791, and runs to December 31, 1791. Then five years are missing; the set being complete only from January 1, 1796.

DAVID HUTCHESON.

LIBRARY OF CONGRESS,
WASHINGTON, February 20, 1899.

Notes.

G. P. Putnam's Sons' spring announcements include 'Historic Towns of the Middle States,' edited by the Rev. Lyman P. Powell, and uniform with his 'Historic Towns of New England'; 'History of the Territorial Expansion of the United States,' by Charles Henry Butler; the second volume of Blok's 'History of the People of the Netherlands,' translated by Ruth Putnam; 'The Story of the People of England in the Nineteenth Century,' by Justin McCarthy, M. P.; 'The West Indies,' by Prof. Amos Kidder Fiske; 'Erasmus,' by Prof. Emerton of Harvard; the long-expected 'Life of George Borrow,' by Prof. William I. Knapp, in two volumes; 'Israel Putnam,' by a descendant, W. F. Livingston; 'The Law and History of Copyright in Books,' by Augustine Birrell; 'The United States Naval Academy,' by Park Benjamin; 'Roman Africa,' by Gaston Boissier; 'Industrial Cuba,' by Robert P. Porter; 'Nature Studies in Berkshire,' by the Rev. W. Coleman Adams, with photogravures; 'Volcanoes,' by Prof. T. G. Bonney; 'Shakspeare in France,' by J. J. Jusserand; 'Dante Interpreted for Students,'

by E. Willson, with original translations from the "Inferno"; 'A Study of Wagner,' by Ernest Newman; 'Islam in Africa,' by the Rev. Anson P. Atterbury; 'The New Far East,' by Arthur Dlozy; 'Methods and Problems of Spiritual Healing,' by Horatio W. Dresser; and 'Proportion and Harmony in Line and Color,' by George L. Raymond.

'Tales of the Malayan Coast,' by Rounseville Wildman, United States Consul at Hong Kong; 'Germany, her People and their Story,' by Augusta Hale Gifford; and 'The Story of Our War with Spain,' by Elbridge S. Brooks, are in the press of the Lothrop Publishing Co., Boston.

In editing the correspondence of Hans von Bülow, the letters exchanged between himself and Liszt were made a separate volume ('Briefwechsel zwischen Liszt und Hans von Bülow'; Leipzig: Breitkopf & Härtel; New York: Lemcke & Buechner). These being, however, in by far the greater proportion, written in French, the Leipzig house has very properly concluded to make an edition wholly French, to cover, title, and preface (and perhaps index, though this is of proper names).

Mr. Albert G. Robinson, who was correspondent of the *Evening Post* in Porto Rico during the war and later, has published through the Scribners 'Porto Rico of To-day.' It consists of letters first printed in that newspaper, revised and expanded. We may say of them that they have received high praise from those who know the island well, as being an intelligent and faithful study of present conditions in Porto Rico.

Longmans, Green & Co. bring out the new edition of Mr. Lecky's 'Democracy and Liberty,' in two volumes. The author seizes the occasion of a relapse to write a preface of more than fifty pages, principally devoted to showing that the most melancholy of his predictions of three years ago are sensibly nearer fulfilment, and containing a notable depreciatory estimate of Mr. Gladstone.

Chapman's 'Iliad' follows at a sufficiently long interval his 'Odyssey' in the charming Temple Classics of Dent (New York: Macmillan); but its welcome is assured. The sub-editor, Mr. W. H. D. Rouse, has appended twenty-two sonnets mostly already printed in connection with his Homeric editions by Chapman himself, and mostly dedications of the several parts of the translation to noble patrons. Mr. Rouse has edited as a companion volume Casaubon's translation of the 'Meditations' of Marcus Aurelius. Brand-new are a translation from the Italian, by T. W. Arnold, of 'The Little Flowers of St. Francis,' an anonymous work of the fourteenth century; and another, from the French, by Dr. Sebastian Evans, of 'The High History of the Holy Grail,' also anonymous, with embellishments by Burne-Jones, and an epilogue by Mr. Evans exhibiting the literary history of the book, with a theory of its origin. No other direct English version exists. The present fills two of these handy pocket volumes, and is offered "in all good faith" as "the original story of Sir Percival and the Holy Grail, whole and incorrupt as it left the hands of its first author."

In the year 1743, in Garrison Forest (so named because it contained an ancient fort built as a defence against Indian forays) was erected a modest place of worship, which is perhaps the only church in Maryland that has continued for so many years in regular use. It belonged to the Establishment, and

the Rev. Thomas Cradock was the first rector. Interesting historical facts about the church itself and the old Maryland families whose members worshipped within its walls, or lie under rudely carved stones in the churchyard, are given in 'The Garrison Church,' by the Rev. Ethan Allen (James Pott & Co.), with addition of much valuable genealogical matter from the parish records.

The latest volume of the Columbia University Studies in Political Science, entitled 'Rhode Island and the Formation of the Union,' by Frank Greene Bates (Macmillan), treats in an exhaustive manner one of the most interesting questions in the early political history of our country. It is a well-known fact that Rhode Island was the last of the thirteen colonies to enter the Union: it was almost three years after the submission of the Constitution to the several colonies, and almost two years after its ratification by the other twelve, that Rhode Island reluctantly cast in her lot with her sister States. The reasons for this reluctance have always been obscure. The present volume, tracing the preconstitutional history of the State, finds in the religious and social character of the people, and in the peculiar commercial and financial conditions of the colony, an adequate explanation, tending to remove misapprehensions in regard to her patriotism which have been rife for a century. The investigation, which is based largely on manuscript collections and records, and which involved patient labor stretching over several years, is a noteworthy contribution to American preconstitutional history.

The first three volumes of 'Special Reports on Educational Subjects,' published by the English Education Department in 1897-98, and sold by Eyre & Spottiswoode (London), contains sixty-seven separate reports on the educational systems of England and other countries, and on a variety of opportune subjects. Such timely questions as the connection between the public library and the public school, the arrangement of school museums, the physical education of girls, school hygiene, higher commercial education, manual training, games and athletics, the teaching of foreign languages, etc., etc., are treated by contributors specially fitted for the task. The article on the "Study of Education" (vol. II., p. 337), by Dr. J. J. Findlay, is a thorough and critical discussion of the whole subject. The editor of the series, Mr. M. E. Sadler, Director of Special Enquiries and Reports, writes on the "Problems in Prussian Secondary Education for Boys, with special reference to similar questions in England" (vol. III., p. 83), and gives us what is perhaps the most convenient and comprehensive treatise on the secondary-school question in Germany in its historical relations. From an account of the "London School of Economics and Political Science," by the Director of the School, Mr. A. S. Hewins (vol. II., p. 76), we learn that in this new institution—it was founded in 1895 in conscious imitation of existing institutions of the kind in Paris, New York, and elsewhere, yet specially adapted to English needs—the instruction is given by twenty lecturers, besides the Director, to an average of four hundred students during the second and third years. The history and condition of economics in England are treated in one of the sections of this report. Specialists in this country who keep abreast of the progress in their departments in civilized countries may not discover in these volumes much that is abso-

lutely new to them, but an examination of their contents may yet prove advantageous. For all public and school libraries these Special Reports are unquestionably of great value. For the next volume, contributions are promised by Commissioner Harris and President Eliot on some aspects of American education.

The Baron de Baye reprints, in pamphlet form, from the *Revue de Géographie*, his lecture entitled 'De Penza à Minoussinsk: Souvenirs d'une Mission' (Paris: Librairie Nilsson). It gives an outline sketch of his third trip to Siberia, and includes several very interesting particulars concerning the Mordvinians of the Penza Government, in Russia proper. It is very fully illustrated from photographs, most of them taken by the author. He does not distinctly state the nature of his "mission," or enter into details as to what he accomplished; but the reader infers from references in the text that it was for the purpose of collecting archaeological material, as he mentions having presented many objects found in Siberian mounds to Siberian museums. This is, however, more of a "travel sketch," and, as such, legitimately offers numerous interesting bits of information about the peasant immigration to Siberia from Russia, the conditions attached thereto, and the efficient management of this important and complicated matter by the Russian Government. For adequate comprehension of the Baron's mission and aims this pamphlet should, without a doubt, be combined with whatever he has previously published in regard to his Russian and Siberian trips.

Several years ago, M. Paul Lacombe, inspector-general of the French archives, published an interesting book entitled 'De l'Histoire considérée comme Science,' in which he endeavored to derive the laws of human progress from a consideration of the constant intermingling of the institutional element of social life with what he called the "événement," i. e., the influence of personal forces. He has just supplemented this essay by another entitled 'Introduction à l'Histoire Littéraire' (Paris: Hachette), in which he reviews the development of literature, particularly of French literature, from a similar standpoint. It can hardly be said that the results of this review are in any sense startling. That literary progress moves along the line of greater refinement in form and greater variety of psychological characterization, is a commonplace true enough as far as it goes, but scarcely of such fundamental importance as M. Lacombe seems to assume. Nevertheless, this book is a noteworthy contribution to the study of literature. In contradistinction to both Taine and Brunetière, it emphasizes the prime significance of the literary personality, and assigns to the influences of race and epoch the place of concomitant causes only. Its principal merit is a penetrating analysis of the artistic temper.

Dr. Anton Bettelheim, the well-known biographer of Beaumarchais and Anzengruber, has collected a number of his literary and biographical sketches which during the last two years were written for *Osmopolis*, *Die Nation*, and other periodicals, into an attractive little volume bearing the title 'Acta Diurna' (Vienna: Hartleben; New York: Lemcke & Buechner). While these short papers have not the same finish nor the same charm of individuality which distinguished the author's former work, they form

a convenient *chronique littéraire* of recent events in German intellectual life. The range of subjects touched upon is extensive enough to include, for instance, a sketch of the marvellous growth of Reclam's 'Universalbibliothek'; a scathing criticism of Nordau's advocacy of the Zionite movement; a charming characterization of the Swiss novelist Widmann; notices of Fontane's master-work 'Effi Briest,' of Naumann's essays on Christian socialism, of Saar's Austrian novels; and character studies of such different personalities as Gerhart Hauptmann, Friedrich Mitterwurzer, and Charlotte Wolters. One gains from these pages a fresh sense of the great wealth of literary talent and of earnest spiritual endeavor stored up in contemporary German life. Surely a country where a single publishing firm, Reclam, records a sale within the last thirty years of 619,000 copies of 'Wilhelm Tell,' of 490,000 copies of 'Hermann und Dorothea,' of 33,000 copies of Schopenhauer's collected works; where Sudermann's 'Johannes' within a year has been performed at a single theatre more than a hundred times; and where there is not a single city of importance which does not maintain a theatre of respectable standing and artistic merit—such a country may be considered spiritually safe even in the turmoil and seeming degeneracy of *fin de siècle* art.

"Accordingly to these probabilities, in no more adequate moment than present time,—when the first rays of an era of great prosperity have just arisen from a hopeful horizon,—can the life of such beautiful island as Cuba, justify the creation of this technical review, which will be, in some sort, a periodical monography of Cuban life." We take this sentence from the prospectus of the *Island of Cuba Magazine*, a private venture, published at Havana, but distributed in the United States by the "International Exchanges" of the Smithsonian Institution. It suggests the question why the exchanges should be used for this purpose. Would any magazine be allowed to use them? and if not, what "pull" has the Cuban monthly?

The *Osprey*, an illustrated magazine of ornithology published monthly, with a vacation in July and August, has been transferred from New York to Washington, where it is edited by Elliott Coues and Theodore Gill. Its aim is popular, not technical, and the three concluding numbers of last year (vol. III.) contain much interesting reading. Between birds and trees there is a close relation, and some of the most curious plates are of strange vegetation in the arid parts of this continent. In the December number a plate showing two blue jays is from the pencil of Louis Agassiz Fuertes, which on this occasion has almost a Japanese facility.

The *National Geographic Magazine* for January contains an illustrated description of a trip up the Stikine River in Alaska, by Eliza R. Scidmore. On account of its magnificent scenery this stream's valley has been called "a Yosemite 100 miles long." At one point twelve great glaciers can be seen, and there are 300 which flow directly into the river. Along the shores were frequent signs of the recent rush of gold-seekers to the Klondike and its sudden collapse. At Glenora, the head of navigation, everything apparently was for sale—"so rough notices at every door-sill and tent-flap told." In a brief article on the West Indian hurricane of September 10-11, 1898, Prof. E. B. Garrison

quotes from a Jesuit writer curious testimony to the belief in a general law as to the recurrence of hurricanes in this region. The ecclesiastical authority from time immemorial ordained that the priests in Porto Rico should recite in the mass the prayer for warding off tempests during the months of August and September, but not in October; and that in Cuba it should be recited in September and October, but not in August. Mr. O. P. Austin of the Bureau of Statistics gives some interesting facts in regard to the colonial systems of the world. Two prizes, of \$150 and \$75, are offered by the National Geographic Society for the best essays on Norse discoveries in America, the competition to close December 31, 1899.

The two numbers of volume II. of the *American Journal of Archaeology* for 1898, issued by the Archaeological Institute of America (Macmillan), possess a remarkable range of interest, from the Euphrates to Crete, Corinth, and Rome. We may mention Dr. William Hayes Ward's cylinder testimony as to the horse in ancient Babylonia, and Dr. Richardson's preliminary report on the excavations at Corinth. Among the plates accompanying the latter is a view of the uncovered spring, Pirene.

A contributor to the *Revue Internationale de l'Enseignement* for January describes in a few pages the farcical system of secondary education in Spain. The schools in question are the so-called Provincial Institutes, where boys between the ages of ten and sixteen are instructed and examined in thirty-five subjects, seven of which have been added to the list by a recent decree of the Minister of Education, viz.: Political economy, common law, history of Spanish literature, history of art, book-keeping, and industrial and agricultural technics. The Minister also recommends visits to the museums, but, as the writer remarks, in nine towns out of ten where the institutes are situated, the only museums are the churches with their wax images. The boys work from three to four and a half hours a day, and the newspapers are in a rage over such outrageous disregard for the life and health of the Spanish youth. The deplorable condition of elementary education in the kingdom may be inferred from the status of the common-school teachers as depicted in a recent number of the *Pädagogische Zeitung*. Out of 23,000 teachers, in round numbers, included in the last census, nearly 3,000 were receiving thirty dollars or less annually, 5,000 were paid from fifty to one hundred dollars, and the salary of only 1,000 amounted to more than two hundred and fifty dollars. But the worst of it is that thousands of these poor men and women were not even paid the pittance to which their contracts entitled them.

'Some Efforts of American Negroes for their own Social Betterment' is the title of a pamphlet report of the Third Atlanta Conference for the study of negro problems (No. 3 of the Atlanta University Publications). This document proves once more the useful work undertaken by the University in gathering statistics of social conditions and needs among the black population of the South. Church societies figure largely in the reformatory efforts here tabulated and discussed, along with secret beneficent societies, organized philanthropy, cooperative business enterprises, and the like. In North Carolina, so lately convulsed by race clashing, the richest black man in the State has

promoted the building of a cotton mill for his color, and white Northern liberality has been reinforced by black sympathy and aid in establishing a hospital for negro consumptives. In Texas, a former student at Atlanta University has founded a Farmers' Improvement Society, which in one town has made the negro quarter more attractive than the white. This is said to have branches in thirty-six towns, and 1,800 members. There is much other suggestive information in this report.

A circular letter, signed by Prof. William H. Carpenter, has been sent out from Columbia University asking for contributions of Dutch books and pamphlets for the library of that institution. The letter calls attention to the fact that, in the early days of the Dutch settlement, and subsequently during the time that the descendants of the original settlers still retained a knowledge of the language, books written in Dutch found their way here in considerable numbers. Many such books have been preserved, but, with the disappearance of the language, they have, for the most part, been put aside and forgotten. A collection of Dutch books, it is plain, would have a great literary and historical value if they were catalogued and made accessible to students. A few generations more will see the dispersion and irrecoverable loss of a good deal of material of this kind that is now packed away in lumber-rooms and attics. In the new Library of Columbia, with its liberal provisions for use, such books would be preserved for all time under the most favorable conditions, and would, no doubt, contribute their part to the increased interest in our Dutch beginnings that of late years has shown itself in the community.

Parliament has again faced the problems of local taxation, and the first report of the royal commission on that subject has just been published. The crux is to be found in the system of valuing property for taxation, and any plan that provides uniformity, equality, simplicity, and economy would be acceptable. Under existing methods it is possible, outside of the metropolis, for five independent valuations for the purpose of raising rates and taxes to exist contemporaneously in the same area. In England and Wales alone there are more than 1,000 valuation authorities. With such a multiplicity of agents it is useless to look for satisfactory results, and the differences in other lines greatly increase the confusion. There is no fixed or necessary time for making the valuation lists; no uniform system of, or scale for, making deductions for arriving at the ratable values of certain classes of property; exemptions and allowances are said to be allowed unduly, through pressure brought to bear on the assessing authorities; and the assessment committees have no statutory power to ascertain from owners or occupiers the rent paid and other particulars. Added to these is the common action of authorities in keeping the valuation low so as to reduce their contribution towards common expenditure.

Many attempts have been made to obtain one uniform mode of rating throughout England, but without success. Of late years, a change has occurred in the relative importance of the different rates. In 1880 the county and borough authorities raised 10 per cent. less than the Poor-Law authorities; in 1897 the former raised nearly 73 per cent. more than the latter, and the great

increase has been incurred by the county boroughs. The committee assert that, owing to the distribution of the Poor-Law Unions, it is impossible to suggest any scheme which will in all cases secure that the area of each spending authority shall be continuous with the areas of one or more valuation authorities, or be wholly comprised in the area of one valuation authority. This division of responsibility leads to extravagance, and can be corrected only by creating areas in which the valuation for all purposes shall be the same. A central Government department is set aside as undesirable, and the county borough—not always the geographical county—is suggested as a proper administrative unit, with power to adopt the geographical county. Under the direction of the county or borough councils, the valuation lists are to be prepared; but legislation must provide for the establishment of a maximum scale of deductions, and for compulsory returns from owners of rent paid and other particulars. Special properties, such as railways, canals, mines, docks, gas, water, and electric-light works, should be valued by an expert valuer, subject to appeals to the Railway Commission, or a special tribunal created for that purpose. Although it is provided that the general valuation list should be prepared, whenever practicable, by professional surveyors, the list is subject to revision on appeal. The report is an interesting attempt to point the way to uniformity in what is now a very confused matter.

Public interest in Italy, especially in educated and political circles, has been occupied with the rather singular Mondragone affair. Mondragone is the name of a Jesuit college near Frascati, which, chiefly because it happened to be popular among the aristocratic classes as a school for their boys, was permitted to continue in operation, notwithstanding the law of 1866, which put an end to all the religious orders and their work throughout the peninsula. The laws of Italy demand that when the pupils of a private educational establishment enter the higher schools of the state, they must pass certain examinations. As the pupils from Mondragone very frequently were not able to pass these examinations on account of the inefficiency of the work done by the Jesuit teachers, the friends of that school proposed to have it recognized officially by the state. A petition soon turned up signed by no less than 108 prominent names, notably of members of Parliament, addressed to the Minister of Education, Baccelli, who obligingly decreed that the final examinations at Mondragone should admit pupils to the higher state institutions. Here, then, was the singular phenomenon of a recognition of the Jesuits by a country which since 1848 had officially banished all Jesuits from its borders. Quite naturally the Liberal press raised a decided protest. The list of the petitioners was published, and among them was found also that of Crispi. The signers nearly all began to publish excuses, and Crispi himself published two letters explaining how he came to sign such a document. The Minister of Education hastened to recall his recognition, and Mondragone is a private Jesuit school again as it has been in the past.

The Peking revolution of last September, with its tragic check in the decapitation of six reformers, is the main theme treated of in the eleventh annual report of the Society for the Diffusion of Christian and Ge-

neral Knowledge among the Chinese. Three distinct parties working for a rehabilitated China were discernible. One, led by Kang Yu Wei, was hampered by the cry raised to rally in defence of Confucianism. The second party sought for alliance only with Japan, and its cry was for union of Asia against Europe—thus conjuring up that "yellow spectre" which Kaiser Wilhelm feared and pictured. A third party, with broader views than either, was ready to adopt all that was good in the whole world, without fear of harm to their religion, their continent, or their country. This party had made great progress, for it centred in the Emperor himself and had many leading statesmen of China within its pale. The number of native newspapers had increased from 19 in 1895 to 70 in 1898, and the Son of Heaven himself had sent for books illustrating foreign learning and ideas, to the number of 129, of which 89 were published by this society. The Emperor, besides reading their books, followed the advice of the reformers, gave them personal interviews, and then issued a cluster of brilliant edicts, nine in number. These bade fair to relay the foundations of the Chinese social order and intellectual culture, as well as material and political and educational developments. Unfortunately, the reformed cabinet advised cashiering some of the obstructionists, a change of costume, and the cutting off of the cue. These last straws made the burden too heavy for the anti-foreign party, who gathered around the Empress Dowager and misrepresented the motives and objects of the men they hated and feared. This remarkable old lady, now sixty-five years of age, forcibly took charge of the government, beheaded six reformers, imprisoned, banished or degraded scores of others, suppressed the restive newspapers, and forbade the formation of progressive societies or the appointment of men with reform ideas to positions of influence. But the heaven is still working. Besides the reprinting by native booksellers of the Society's publications, which cover every subject of interest to human beings, 181,349 copies of books, or more than 27,000,000 pages, were printed in 1898, and there were sold in 1898 \$18,457 worth of printed matter, as compared with \$12,146 in 1897. The active workers in this society are mostly Americans, though the supporters are various English-speaking people.

—In a recently published paper by Mr. H. C. Russell, read last summer before the Royal Society of New South Wales, an account is given of a remarkable series of water-spouts observed off Eden on May 16 last. Although the phenomenon is said to be frequently observed near this coast, sometimes in groups of three or four, the display recorded is by far the grandest ever described. Within the space of five hours, fourteen complete water-spouts and six others more or less imperfect were formed from a single mass of cloud. Nothing remarkable had been noticed in the precedent weather. In Eden, as throughout southeastern Australia generally, the morning was fine and calm, but early in the forenoon a heavy bank of cloud appeared on the eastern horizon, becoming more dense as it drifted toward the shore. About eleven o'clock Mr. Pilot Newton saw the first water-spout, which seemed to have come suddenly into existence. As straight as a shaft, it was estimated to be thirty times as high as a clipper ship, or about 5,000 feet. Beginning, perhaps, eight miles from the

coast, it drifted toward the southwest until only about three or four miles away, and then quickly disappeared. Mr. D. R. Crichton, a mining engineer, watched carefully through his theodolite, eight water-spouts being visible at one time. Of the fourteen complete ones, reaching from cloud to sea, the first was nearest the shore, the others gradually farther off, until the last must have been distant about thirty miles, toward four o'clock in the afternoon. The weather and sea were perfectly calm and quiet all the time. The cones at top and bottom of one of these spouts were measured, and found about 100 feet in diameter, while the length of each cone from its base to the point at which the spout became cylindrical was probably 250 feet. The column formed by the junction of the two cones was entirely symmetrical and about ten feet in diameter. The formation and subsidence of the spouts made an interesting scene. First, on the placid sea, came a violent disturbance, in which a rotary motion of waves throughout a surface about a third of a mile in diameter could be distinctly seen, and large quantities of broken water were raised upward. As the motion increased, the agitated space became less, the spray denser, and in two or three minutes the base of the whirlpool was formed, gradually rising to a cone-topped misty shaft or column. During all this time the clouds above were projecting an inverted cone downward for a third of the distance, until suddenly the two united, the apparent rotary motion ceased, and for ten or twelve minutes the smooth column remained unchanged. Slowly the cloud drifted eastward, dragging the water-spout far out of the perpendicular. Gradually dividing in the middle, the top rose, the bottom sank, the rotary motion again became perceptible, the water was greatly disturbed, and finally normal conditions once more prevailed. The last water-spout but one appeared to take its start from the debris of the preceding. The original conditions necessary to produce this phenomenon may be stated in general as a massive cloud of large extent floating over warm ocean water in calm weather. In an appendix Mr. Russell gives a list of thirty-eight water-spouts recorded during ten years off the coast of New South Wales, and a series of remarkable plates illustrating the more unusual.

—Mr. Russell also sends out an abstract of a paper upon the source of the periodic waves recorded from time to time on the Sydney and Newcastle tide gauges. In 1868, records of such waves of unusual dimensions were made through four days, and were subsequently thought to be due to the great earthquake at Arica, in South America. Also in 1874 and 1877 similar waves are recorded, apparently traceable to earthquakes, although after many terrestrial upheavals there are no unusual waves noticed. An ingenious explanation from the records of currents, barometric pressure, shape of coast line, and areas of low depression travelling rapidly, is given as theory to account for these periodic waves.

—Thomas Bewick, the father of modern wood-engraving, passed to that art from an apprenticeship in cutting seals and general engraving on steel and copper. In this, it now appears, he typified the order of evolution of the two arts. Moreover, the woodcuts in the fable line which made his early fame were more or less influenced in their

design by their copper or type-metal predecessors. Here again he followed the order of three centuries before his time. Such is the conclusion to which Mr. Lionel Cust comes in the folio just issued by the Clarendon Press (New York: Henry Frowde), entitled "The Master E. S. and the 'Ars Moriendi': A Chapter in the History of Engraving during the Fifteenth Century." Whereas the history of printing alike and of engraving for impression has heretofore commonly begun with the block-book, Mr. Cust is able to show irrefutably that the rare block-book 'Ars Moriendi,' purchased by the British Museum in 1872 for about \$1,300, and whose date is conjectured to be 1440, has for illustrations enlarged copies, with some insignificant liberties, of the set of illustrations to the same work executed on copper by the Master E. S., of which the only complete series extant is at Oxford. Mr. Cust further shows corroboratively that there had been an earlier plagiarist on wood from these coppers, viz., the so-called Master of St. Erasmus, who copied them directly and also reversed them. That every reader of this discussion may be convinced, Mr. Cust prints facsimiles of E. S. and of the block-book, and these alone would be worth the price of the book, which is a matter of some sixty pages, the plates included. Mr. Cust expresses amply his indebtedness to the labors and counsel of Dr. Max Lehrs, the present Director of the Cabinet of Prints and Drawings in the Royal Museums at Dresden, the first living authority on the subject of the history of copper-engraving north of the Alps, soon to publish a work upon it. The entire originality of E. S., so far as is known from many examples, and the want of evidence that he himself might have engraved the block-book or even used the knife, lead Dr. Lehrs to believe that "the unique series of engravings in the Douce Collection at Oxford are the real *editio princeps* of the famous *Ars Moriendi*." In any event, the gage is here thrown down, and every library which cares for the fine arts, and every connoisseur, will need this handsome volume of Mr. Cust's.

SVEN HEDIN IN ASIA.

Through Asia. By Sven Hedin. With nearly 300 illustrations from sketches and photographs by the author. 2 vols. Harpers. 1899. Maps. 8vo.

For courage, endurance, devotion to science, keenness of observation, tactful dealing with men, and for the extent and importance of his explorations, Dr. Sven Hedin deserves a foremost place among travellers. A considerable faculty for simple but graphic description, also, makes the story of his three and a half years' wanderings a notable contribution to literature. The unusual variety of his experiences is due mainly to the nature of the country through which he travelled. In Central Asia alone are to be found in close proximity the characteristic features both of the polar regions and of the tropics. Here, as in Greenland, the traveller may wander for weeks and months at all seasons over vast expanses of snow and ice, encountering the fiercest storms with Arctic cold. Descending from these wintry heights, he passes amid fields of rice and cotton into a desert where, as in Africa or Australia, he may perish from the torrid heat, from thirst, or from the pitiless sand driven by winds violent enough to reverse the current of a

river. Here, too, can be seen the formative powers of nature in sublimest action; the ice, snow, rain, wind, and sands shaping deserts, changing the course of rivers, obliterating and making lakes, carving out the beds of streams, cutting down lofty plateaux—works suggestive of those geologic ages when the globe was being prepared for the abode of man. Then the fact that Asia is the cradle of our race gives a peculiar interest to the accounts of the primitive life of the Kirghis shepherds, and of the cities of unknown age and origin which the explorer found buried under the shifting sands. The personality of the young traveller—he was barely twenty-nine at the beginning of this journey—is strongly shown throughout his modest narrative. It is, as it were, the autobiography of a veritable hero of science—a man who fearlessly confronts any peril on glacier or desert to trace the course of a river or the depth and contour of a lake; who of two passes will promptly choose the one promising most of danger and hardship if by taking it he can add to our knowledge of a mountain-range.

It was not one continuous journey of which Dr. Hedin gives a report in this work, but of several, during which he explored a considerable part of the Pamirs, the great desert of East Turkestan, and a strip of Northern Tibet. The aggregate extent of his explorations was 6,520 miles, out of which 2,020 "were through regions which no European had ever before visited." King Oscar of Sweden, with other friends of science, bore the cost of the various expeditions. The noteworthy part of his journey began at Orenburg, whence he crossed the Kirghis steppes by tarantass to the foot of the Alai Mountains, a route now almost superseded by the Transcasian railway. Among the places through which he passed was Kokand, a true university city, having thirty-five Mohammedan colleges with 5,300 students, and eighty-one schools for boys and girls, with about 1,200 pupils. Thirty of these schools were founded with money left for the purpose, and are situated near the testators' graves.

A winter journey over the Pamirs, Hedin's first exploring work, was a task of great difficulty and danger, from the height of the mountain passes, the cold (the thermometer drops there to -45° Fahr.), and the frequent, almost daily blizzards. "These burans, or snow hurricanes, come on with startling suddenness. One minute the sky will be perfectly clear; scarcely one minute later, and down swoops the storm. In an instant the path is obliterated. The atmosphere grows dark with whirling snowflakes. It is impossible to see a yard before you. All you can do is to stand perfectly still, wrap your furs about you, and thank God if you escape with your life." Surmounting almost insuperable obstacles on the passes over the Alai and Trans-Alai Mountains, our explorer climbed to the "roof of the world," and crossed it to the Russian frontier post, Fort Pamir. From his observations made in this and other expeditions in this region, he divides the "gigantic quadrilateral" into an eastern half, which is principally a plateau land, and a western half, consisting of a system of latitudinal mountain-chains. "There can be no doubt," he says, "that at one period the entire region was strictly a plateau, and that it is being rapidly broken down by the agency of erosion."

The spring and summer of 1894 were

spent mainly in exploring the glaciers of Mus-tagh-ata, "the father of the ice-mountains," and, like all conspicuous peaks, invested with a halo of mystery by the Kirghis, and made the centre of fantastic legends. Four attempts were made to reach the summit, 25,590 feet; but though Dr. Hedin rode on a yak to a height of 19,750 feet, the wind, the cold, and the rarefaction of the air prevented his climbing even a thousand feet higher. The mountain is in Chinese territory, and the difficulty which he experienced in crossing the frontier, notwithstanding his passport, was a striking testimony to the watchfulness of the Chinese, and their jealous fear of their powerful neighbors. The mandarins have an extraordinary way of enumerating their forces. "They are not content with counting the soldiers only, but reckon in also their horses, rifles, shoes, breeches, and so forth," apparently on the supposition that the rifle is at least as valuable as the man, and that a man is of little use if he has to go about naked and afoot. The somewhat monotonous record of Dr. Hedin's daily experiences in this cheerless region, and his observations of the depths of lakes, the volume of rivers, and the progress of glaciers, is agreeably diversified by accounts of the garrison life at Fort Pamir and at Kashgar, where he recruited after these expeditions. Prominent among these episodes is the meeting with the Anglo-Russian boundary commission in the southern Pamirs. He was present when a telegram came announcing that the British Government accepted the frontier which the Russians proposed to them. This event, which "occasioned the greatest rejoicing in both camps," was celebrated by dinners given on successive days by the Russian and British commissioners. The festivities of the second day were closed by national dances around a huge bonfire, the material for which "had all been brought for the purpose from Kanjut, on the other side of the Hindu-Kush," more than a hundred miles distant.

To the east of the Pamirs stretches the Takla-makan desert, several hundred miles in width, uninhabited and untraversed save by a few adventurous natives searching for gold and hidden treasures. Prompted by the desire to explore the unknown, as well as in hopes of finding traces of ancient civilization, Dr. Hedin ventured into this wilderness in the spring of 1895. He had with him four natives and eight camels, besides dogs, sheep, and chickens, his aim being to reach a stream cutting the desert in halves some two hundred miles to the east. For the first thirteen days everything went well, and water was got every day by digging. On April 23 they camped by a small lake, and he ordered his men to put a ten days' supply in the iron water-tanks. The desert now resembled a petrified sea, with giant waves, sometimes from one hundred and fifty to two hundred feet high. Up the steep inclines of these sand-dunes the camels clambered with marvellous surety of foot, while the men slipped back at almost every step they took. After two days in this chaos of dunes, he discovered that, either by negligence or by treachery, only two days' supply of water remained. Misled by the false information of his guide, instead of turning back to the lake, he pressed on farther into the desert. Day after day passed without a sign of the stream of which they were in search. The strength of the camels began to fail, and one by one they were left behind. During one

whole march a suffocating hurricane blew, making midday dark as pitch. Every sense was alert to discover any trace of water, a tree or depression in the sands in which they might dig. At one despairing moment a buzzing gad-fly raised their hopes to fever point. "We believed we were nearing land." On April 30 the carefully husbanded water gave out, and the next day was spent in what Dr. Hedin fitly terms the "camp of death." All day long he lay in his tent wide awake, but tortured with delirious memories of streams and fountains. In the afternoon a cool breeze sprang up, and "something happened which I can only look upon as a miracle. As the sun drew nearer and nearer to the horizon, so did my strength gradually return; and by the time he rested like a glowing cannon-ball on the tops of the dunes in the west, I was completely recovered. My body had regained all its former elasticity. I felt as if I could walk for days and days. I burned with impatience to be up and doing. I *would* not die." With two of his followers he left the camp that night, and for five days he struggled on, leaving first one and then the other of the men. On the night of the 5th of May he reached the bed of the Khotan-daria—and it was empty. "The sand was as dry as the sand in the desert dunes." With unflinching courage, and resisting an overpowering desire to sleep, he kept on to the farther bank of the river-bed, and, when within a few yards of it, he says, "a wild duck, alarmed by my approach, flew up and away as swift as an arrow. I heard a splash, and in the next moment I stood on the brink of a little pool filled with fresh, cool water—beautiful water. Before drinking" (he ends a narrative which will doubtless become classic in the annals of travel), "I counted my pulse; it was forty-nine." Carrying water in his boots, he found one of his men, and eventually another rejoined him, having been rescued by a passing caravan. The two others probably perished.

Nothing daunted by his sufferings and his narrow escape from death, a few months later he ventured again into that part of the desert lying to the east of Khotan-daria, a part of the desert of Gobi. About midway through it he came to the remains of a half-buried city, covering an area from two to two and a half miles in diameter. "All the houses were built of wood (poplar); not a single trace of a stone or clay house was discernible." Sticking out from the sand were posts, six to ten feet high, cracked and hard, but brittle as glass. Some remnants of the plastered walls were discovered, decorated with painted images of Buddha and pictures of men and women. With some difficulty he reached the River Tarim, the northern boundary of the desert, and followed it to its outlet in Lake Lop-nor. A chapter is devoted to a discussion of the vexed Lop-nor problem, which the promised publication of his scientific observations may help to settle definitively. His conclusion is that Lop-nor is a wandering lake and is now moving westward. Two of the great forces of nature are to be seen in this region at the height of their power. The evaporation is so great that four large streams—one of which, "summer and winter, day and night alike, has a steady flow of 2,490 cubic feet in the second"—are not strong enough to maintain a permanent lake in the heart of the desert. Then, during one march, the wind blew from the east with such violence that the surface current of the Tarim was reversed and

the lake expanded to an appreciable extent.

Dr. Hedin's journey through northern Tibet and across the Tsaidam desert to China in 1896 does not call for special note. His route was a little to the north of that which the English explorer, Capt. Wellby, followed the same year. Their experiences were similar, only that, being accustomed to long journeys in uninhabited wastes, Dr. Hedin does not show that intense longing for signs of human life which characterized the other traveller's narrative. The sufferings of the caravan from cold and lack of food were great. Fortunately no lives were lost, though out of fifty-six camels, horses, and donkeys which started, all but seven had perished when, after two months in the mountain solitudes, the party came down to the first Mongolian shepherd's camp.

Dr. Hedin is a typical explorer. He never loses sight of the fact that the one object of all his travels is to gain knowledge. In every place through which he passed,

"I always asked," he says, "the same questions in the same order, namely, the population of the place, its products, saints' tombs, mosques, legends, whether spring or autumn sowing was customary, or both, whether the same ground was used twice in the same year for different kinds of cereals, or whether the ground produced only one crop in the season, or even in every second year; about trade and intercommunication, roads, the distance to the desert and to the mountains, the origin and volume of the water in the rivers, the time when they usually froze and when the ice began to melt, the system of irrigation and the local regulations connected with it, the wells, prevailing winds, frequency of burans, rainfall, snowfall, etc. One question paved the way for another, and the whole thing took me from two to three hours; after that everything was carefully written down."

Though science is the first thing from the beginning to the end of his travels, yet his narrative is constantly interspersed with bright descriptive touches, picturing his dogs and their ways, his companions, or some unusually interesting camp scene or incident. Not infrequently he shows considerable imaginative or poetical power, as in his description of moonlight on the Mus-tagh-ata.

The translation from the original Swedish, by Mr. J. T. Bealby, is admirably done. We have noted one or two pardonable errors in changing the readings of a centigrade thermometer to Fahrenheit, and we are inclined to see a mistranslation in the statement that "not quite one pint of [sesame] oil will sustain a camel for a month without food." The numerous illustrations add greatly to the charm of the volumes, especially the portrait sketches by Dr. Hedin himself, and the reproductions of his photographs. One of his prominent characteristics is his modesty, but he makes one statement in his preface of which the truth will be unquestioned by all who read his story: "Although fully conscious of the mistakes of my journey and of the shortcomings of this my book, . . . I believe I really did my best as far as lay in my power."

GEIKIE'S EARTH SCULPTURE.

Earth Sculpture; or, The Origin of Land Forms. By James Geikie. Putnams. 1898.

Modern physical geography is distinguished from that which prevailed a decade or two ago in that, while the latter contented itself with a simple description of the various forms of the earth's surface, the former

searches into the causes which have produced these forms, and thus encroaches somewhat upon the field of the cognate science of geology. In the earlier conceptions of geology it was assumed that mountains and similar features of the earth's surface were due to violent convulsions of nature which had long since ceased to exist—to a *Sturm und Drang* period of the earth's youth, which, in the present old age of our planet, had been succeeded by comparative lethargy and repose. Such conceptions are still prevalent to a greater or less degree among a large proportion of untechnical people. The miner, who has the greatest familiarity with the internal phenomena of mountains, finds it necessary to call upon violent catastrophes—"blowouts" he is apt to style them—to account for the wonders he observes. On the other hand, the tendency of scientific study has long been to find an explanation of these earlier phenomena in the processes that are going on at the present time. The action of air and water in their various forms, combined with diurnal changes of temperature, if allowed a sufficiently long time in which to act, are competent to produce most of the forms which we see in our mountains, valleys, and lake basins.

The Messrs. Putnam's new "Science Series" aims to give the important aspects of contemporary science by means of a set of essays by well-recognized specialists on the latest and most advanced views in the various departments and divisions of science, for the information not only of students in other branches, but of the educated classes in general. The list of subjects in this series, as far as made public, gives a prominent place to geography and geology, which, in the modern aspect of these sciences, are made much more interdependent than of old. Physiography, or the form of the land, has been very properly intrusted to Prof. W. M. Davis of Harvard, who has done more, perhaps, than any other single person to bring the science of which he is to treat to its present advanced and rational stage. 'Earth Sculpture,' the volume now before us, which treats more exclusively of the geological causes which have produced these forms, is from the pen of the eminent Scotch geologist, James Geikie, best known, perhaps, as the author of 'The Great Ice Age,' and brother of Sir Archibald Geikie, the present Director-General of the Geological Surveys of Great Britain.

Although belonging to what may now be considered the old school of geologists, Prof. Geikie is one who has always realized the importance of connecting deep-seated geological causes with surface phenomena, and is hence well fitted for the task he has undertaken. His first chapter is on the agents of denudation. In this we might perhaps have expected from him, as an inheritor of the traditions of the Huttonian school of geology, mention of the controversy which was so long waged among European geologists between the opponents of and believers in the efficiency of simple erosion by water to remove thousands of feet of rock masses from enormous areas of the earth's surface, and which his brother's visit to the United States, to see with his own eyes the proofs that had been recorded by American geologists, did so much to settle finally in favor of the latter. He next takes up the various causes of elevations of portions of the earth's crust which erosion has since carved into mountains and valleys: (1) The plications of

sedimentary strata into anticlinal and synclinal folds; (2) the great dislocations of these strata by faults, i. e., fracture planes along which the rock masses, on one side or the other, have been moved up or down, sometimes many thousand feet, and which are probably a manifestation of the same force that has produced the folding or plication; and (3) igneous eruptions, or intrusions from below into the crust of enormous masses of molten rock, some of which have reached the surface either through narrow channels, forming volcanoes, or through a series of fissures forming lava-covered plateaux, while others have congealed beneath the surface in laccoliths or stone cisterns, bowing up the superjacent strata into dome-shaped mountain masses.

Next follows the action of the various agents of denudation or erosion upon the elevations thus produced, such as glacial action, æolian action, and the action of underground waters. Probably the geologist will be most interested in learning the views of this experienced glacialist upon some of the mooted questions with regard to glacial erosion; and first, whether glaciers do actually abrade or exercise any considerable cutting or eroding action upon the rocks over which they pass. This question he answers decidedly in the affirmative, showing that not only do glaciers score by means of the rocks imbedded in their basal surface, but they actually break up and quarry the rocks in their beds which have already been cracked and loosened by the alternate action of melting and freezing.

As to the origin of the loess, the productive soil of the great grain fields of the world, while treating it in the chapter on æolian action, he considers it to be primarily a flood-loam of glacial times, generally rearranged and distributed by wind action, thus adopting in part each of the contending theories. With regard to lake basins, he confirms the views first advanced by Ramsay, but since disputed by some geologists, that many of the valley basins in elevated regions have been primarily excavated by glacial ice. He calls attention to the fact that cirque-basins or rock amphitheatres with nearly or entirely perpendicular upper walls, in Europe, are generally on northern and eastern slopes, where the snow lies longest as being most protected from the sun and the prevailing west wind. The same fact and the same explanation hold for the glaciated regions of the Rocky Mountains in temperate latitudes. He does not, however, ascribe sufficient importance to the action of frost in the formation of these basins. Where lakes are found in the bottom of cirque-basins, they have doubtless been excavated, as he says, by the action of glacial ice, but the main excavation of the cirque itself is produced by eating back along the face and base of the cliffs at the upper edge of the snow or névé, under the influence of great diurnal changes of temperature. During the day, when melting occurs, water fills the cracks and joints of the rocks, which, freezing during the night, by its expansion pries off fragments from the cliff face, thus undermining it. Hence its perpendicularity and the fact that the cirque is confined to moderately temperate latitudes, where the sun has power enough to melt the snow and ice during the day. With regard to fiords, Geikie adopts Richter's explanation, that they are merely the drowned valleys of severely glaciated mountain tracts.

While disclaiming any special treatment of modern geographical evolution, the latter part of the volume bears very directly upon it, and in his concluding chapter the author testifies to its importance in the following words:

"We do not doubt that when the history of the hydrographic systems of the continents has been better worked out, when the evolution of surface features has been more closely followed, our knowledge of land development will acquire a precision to which it cannot at present lay claim. Geologists will then also be better prepared to attack and perhaps to solve the largest problem of all—the origin of our continental areas and oceanic basins. Not that we can expect or desire that students should refrain from theorizing and speculating in that direction until the fuller knowledge we desiderate has been acquired."

To the general reader the book is a great relief after reading the work of modern geographers, in that the author has avoided the use of their abundant vocabulary of newly coined technical terms, and furthermore that he adds a glossary of the few exceptional words he does use. Further disregard of the more modern views in geology is found in the fact that in his table of geological systems he includes under the Palæozoic system all Pre-Cambrian or Archæan rocks.

Chandler's Encyclopedia; An Epitome of Universal Knowledge. New York: Peter Fenelon Collier. 1898.

Three fat quarto volumes, containing in all 1,716 pages, open and inviting columns in large type, a bewildering mass of cuts of every description, including portraits and representations of works of art, present at first sight the appearance of the perfect type of the genial family cyclopædia. This impression vanishes rapidly as we begin to examine the work more closely. We soon perceive that it is anything but a flimsy compilation. It is, indeed, a very serious production, a universal lexicon on a generous scale, executed with no little ability according to a skillfully contrived plan. A reference to the list of contributors strengthens our belief that a valuable accession has been made to the number of encyclopædic publications. The editor-in-chief is Prof. W. H. Chandler of Lehigh University. Among the specialists to whom the various departments have been assigned we may enumerate G. F. Barker (physics), M. Merriman (engineering), J. M. Baldwin and J. M. Cattell (both psychology), J. H. Hyslop (philosophy), J. O. Murray (European and American literature), C. L. Doolittle (astronomy and navigation), L. M. Norton (organic chemistry), F. M. Burdick (jurisprudence), F. R. Hutton (machines), Cleveland Abbe (meteorology), H. E. Krehbiel (music), Walter Camp (sports), W. H. Pettes (mineralogy and mining engineering), P. S. Michie (military science).

The editorial plan is to give something about every possible topic to which any questioner may have occasion to turn, and to omit as far as possible what is not essential to satisfying his curiosity. The work is as broad in its scope as it is condensed in its structure. According to a rough computation, there are no fewer than 50,000 separate notices (20,000 more than the ten volumes of Chambers's *Encyclopædia*), the articles occupying on an average but a few lines, and rarely exceeding a quarter of a page. One would naturally infer that this universal lexicon was a mere skeleton fabric, devoid of

flesh and substance; but such is far from being the case. What strikes the reader is not the absence of characterization, but rather the prominence of this feature. It is refreshing, for example, to turn to the literary biographies, brief as they are, which often display unusual ability in the crisp, telling, and epigrammatic manner in which the position and merits of writers are summed up—in sharp contrast with the lack of characterization in too many of the biographies of such an ambitious and excellent work as the *'American Cyclopædia.'* The plan has been to let the graver supplement the pen as far as possible, so that in its wealth of illustrations this work is quite unique. The cuts are of very unequal merit, not a few of them being below the standard which should prevail in a publication of this kind. Special stress, as we are informed in the preface, has been laid upon the scientific department, and the same thing is certainly true also of technology, which is unusually comprehensive. A general freshness and up-to-dateness characterizes the compilation. We find it to be especially full in contemporary biography, although, as is generally the case with cyclopædias, a number of the newest celebrities will have to wait for admission until another edition appears. There is a large array of such modern notabilities as Sir W. M. Conway of Himalayan fame, Roberts and Parker of the Canadian muse, Moszkowski, D'Albert, Humperdinck, Brüll, Mascagni, Hadley, Taussig, Brunettière, Lemaitre, Vogüé, Henley, Le Gallienne, Dagnan-Bouveret, MacMonnies, Maartens, Maeterlinck, Verlaine, Wildenbruch, Zangwill, and others whom one is likely to look for in vain even in the most recent cyclopædias. The second edition will no doubt recognize the claims of such *fin-de-siècle* worthies as Bliss Carman, Dörpfeld, William Ramsay, Behring and Roux of antitoxine fame, Johanna Ambrosius, Reinach, Édouard Rod, James Lane Allen, and Ludwig Fulda.

In such a vast accumulation of facts and statements as we have before us the critic expects to find numerous flaws of one kind or another. They are indeed sufficiently frequent, but, taking the work as a whole, and bearing in mind the sins of even the more esteemed publications of its class, we are not disposed, after a cursory examination, to assail its general soundness. In a great many cases the pruning away has been done recklessly, almost savagely, as, for example, in "Galila," "Boers," "Moravia," and "Copta." Under the heading "Gran," the main fact is omitted, that the town is the seat of the primate of Hungary. Under "Knights of St. John" no mention is made of the seizure of Malta by the English. One additional line accorded to John Morley would have permitted the insertion of his works on Voltaire, Rousseau, and Diderot. The condensing screws should not have applied so tightly under "Great Britain" as to exclude Manchester and Birmingham from the enumeration of the principal cities. The "save every line" policy has asserted itself too vigorously in the case of the more important geographico-historical notices, as the most generous allotment of space to that class of topics would not have swelled the bulk of the whole publication by more than a score of pages. The most condensed of condensed cyclopædias cannot afford to have an article on France without any allusion to the former

possession of Canada and Louisiana, or any mention of the division into departments.

We shall point out a few of the shortcomings which we have met with in our brief survey. The statements regarding the date of the erection of the Great Pyramid given under "Pyramid" and "Cheops" are entirely at variance, the chronology of Brugsch being followed in the former case, and that of other Egyptologists in the latter. E. E. Barnard figures without his discovery of the fifth satellite of Jupiter. Under "Hamilton" (Mount) there is no mention of the Lick Observatory, and, strange to say, there is no such caption as "Lick Observatory." We discover that this institution has been relegated to the article "Observatory," a very valuable and up-to-date contribution, containing brief accounts of the principal modern observatories. Saint Paul's Cathedral figures along with the other "Saints," but the caption "Saint Peter's" is strangely absent, it being left to the reader to guess that his curiosity will be satisfied by turning to "Peter's." Berkeley, the seat of the University of California, has been accidentally overlooked. The Earl of Aberdeen is left resting on his Irish laurels without a mention of Canada. There are four various articles on "Gauge," dealing with subjects other than those pertaining to railways, but it is leaving too much to the reader's imagination to omit under this head references to "Broad Gauge" and "Narrow Gauge." Under the head of "Power of a Locomotive" we are told that the pull required to draw 1,000 tons on a level railroad is about 30 tons. This is an error for 3 tons, the resistance being but 6 pounds to the ton. A great blemish which runs through these volumes is the faulty orthography of foreign names, especially in the matter of diacritical marks.

While this cyclopædia leaves much to be desired, both on the score of completeness and of accuracy, we are sure that it will prove a valuable addition to every library, and most persons already in possession of a voluminous cyclopædia will find in this work a very useful adjunct. In a manifold way it supplements all other publications of its class. Those in particular who happen to own the "Monumental Britannica," and who think they have done their share in the way of hunting for needles in haystacks, will appreciate the value of this three-volume epitome of universal knowledge.

Zoroaster, the Prophet of Ancient Iran. By A. V. Williams Jackson, Professor of Indo-Iranian Languages in Columbia University. The Macmillan Co. 1899.

Zoroaster, or Zarathustra, in the original form, was born, according to Prof. Jackson, in western Iran about the middle of the seventh century B. C. The usual miracles took place on the birth of the founder of the new religion. He escaped death at the hands of demons and wizards, who foresaw his power and plotted against him in his youth. At the age of twenty he abandoned his father's house, and, retiring from the world, prepared himself for his ministry, which he entered upon ten years later.

On May 5, 630 B. C., an archangel revealed himself to Zoroaster, and carried him off to the presence of Ormazd, where he was instructed in religion by the Supreme Being himself. He then returned to earth and taught without success for ten years, during which time he enjoyed several visions, and

was gradually perfected in knowledge. He was then tempted by the powers of evil, who could not avail against his armor of righteousness. He now gained his first convert, but it was the only one in ten years, and the Prophet felt discouraged. The Deity comforted him, however, and inspired him to continue in the good work. Two years later the great King of Balikh became a convert. Then success followed. The true church, when supported by the state, became irresistible. The court followed the King. As for the common people, they were soon induced to become converts: "When King Vishtâsp accepted the faith, he compelled his people to do the same, and he killed a large number of them until they adopted it"—whether dead or alive, is not recorded.

In 601 B. C. Vishtâspa (that is, Hystaspes, in phonetic value, but he was not the father of Darius), as a zealous convert to a new religion, objected to continue the payment of tribute to a heretic; so he discontinued the practice, and refused the moneys due to Arjâsp, his suzerain, who lived beyond the Oxus. Hell took sides with Arjâsp, Heaven with Vishtâsp. Arjâsp was beaten, but renewed the attack in B. C. 583. In this year and conflict Zoroaster was slain. The great King Vishtâsp survived him, as did his chancellor, who had written down the 'Avesta,' or Parsee Bible, from the teaching of the Prophet.

Between history and tradition there is seldom a fixed line. In the most favorable circumstances the line of demarcation is drawn more or less subjectively; when dealing with the remote past, one must be content to admit that there is practically no boundary at all. History is immersed in tradition, transformed by it, made part of it, like salt in water, till in the end history becomes tradition, and tradition is made historical. Especially is this true of accounts handed down in regard to striking personalities, and the most complete fusion of that which actually was and that which is said to have been is perhaps to be found in the Orient. Here fact and fancy are often indistinguishable. There is a Buddha of history and one of tradition, but who can separate them? Very wisely, as it seems to us, Prof. Jackson, in recounting what may be called the personal history of Zoroaster, has let tradition declare history, and has not attempted to dogmatize in respect of the native annals. In this book he has sketched Zoroaster's life, the founding of the new church with the northern barbarians, letting tradition tell the tale unchecked, save for such critique as is needed to restrain hearsay within the bounds of probability, as those bounds must be set by a rational Occidental mind.

So clear and picturesque is the narrative that one regrets its sudden close. There was still much to write, and the history of the church to the time of the Sassanidæ would have made a fitting conclusion to the story of Zoroaster's first congregation. Prof. Jackson has preferred, however, to limit himself, as is implied by the title of his book, to Zoroaster's own time, and gives neither the history of the church, nor an account of Zoroaster's religion, the latter subject being reserved for another volume. As the traditional matter in regard to Zoroaster is somewhat meagre, there remains ample space, when the story is finished, to discuss in full the questions of date and geography

raised in the text, and to add sundry copious appendixes besides. These contain, for example, all known allusions to Zoroaster in Greek and Latin authors, and all references to him in Armenian, Chinese, Syriac, and even Icelandic literature. In preparing these, Prof. Jackson acknowledges gratefully the assistance of Prof. Gottheil and Dr. Gray of Columbia, and Dr. F. Williams of Yale.

There is one slight defect in this book, and we speak of it here that it may be corrected in another edition. The appendixes are evidently meant for specialists. But for whom is the body of the work intended? If for those who have to be told that *c. g.* means *cæmpli gratia* and that this means 'for example' (p. xxiii), then why head the chapters with untranslated sentences in Greek, Sanskrit, Avestan, Anglo-Saxon, and Latin? More seriously and more important: how is the average layman (for whom, as we opine, the work is written) to know the value of tradition as given by Nask and Yasht and Dinkart? Who are the Sassanidæ (p. 105), and when did they live? How old is Pahlavi literature? One finds by accident on p. 84 the date of one work, but nothing more. What is the connection between the early and later texts so often cited, and what is their relative value as historical material? Two or three pages would have been enough to answer sufficiently all these questions, which cannot fail to perplex the average reader. It is high praise to say that in arrangement this is the only point we have noticed obnoxious to adverse criticism.

Prof. Jackson practically ignores the extreme view of the late Prof. Darmesteter in regard to Zoroaster's date. This is well. The whole theory of Darmesteter that the 'Avesta' belongs to a period after the Achæmenidæ is so untenable that no scholar can accept it. Other scholars, however, are not inclined to put so much faith in the traditional date of Zoroaster's birth as does Prof. Jackson. Prof. Oldenberg thinks the ninth century more probable than the seventh, and Prof. Tiele, a high authority, ascribes parts of the 'Younger Avesta' to a time "not much later than B. C. 800." In one of his latest utterances on the subject ('Zur Frage nach dem Alter des Avesta,' in the last number of the *Archiv für Religionswissenschaft*) Prof. Tiele emphasizes, and it seems to us rightly, the fact that the recognized literary form of Ahuramazda differs from the inscriptional form, and that the older, Mazda Ahura, or Ahura Mazda (a somewhat later order; in either case two distinct words meaning Wise Spirit), is the Avestan form, while the Persian inscriptions not only have the later Ahura Mazda, but have the two words combined into one inseparable Ahuramazda, which gives Ἀορμᾶζδῆ, Ormazd. Now of the two the separated form, where each word is felt as an independent part, must be considerably more antique than the united Persian Ahuramazda. Hence the 'Avesta' represents a period which is at least older than that of the inscriptions of Darius, whereas Prof. Jackson would make Zoroaster himself live till the century of the Achæmenidæ. To this, Prof. Jackson can answer only that dialectical differences account for all changes. We cannot agree that dialect alone would explain the inversion and stereotyped combination here discussed. Again, a weighty argument against so late a date is the fact, also urged by Prof. Tiele, that

the 'Avesta' represents stage by stage a long religious development, in which everything is at last reduced to rule and ceremonial precision. On the other hand, the precision of native tradition is really based on no more substantial ground than dateless Persian records. There are other reasons which might be presented, but enough has been said to show that Prof. Jackson's date is still open to discussion. Of this he is himself fully aware, and, as he cheerily says "the earlier the better," he would probably not object to a satisfactory proof of the inadequacy of his own theory.

The book is written throughout in a spirit of perfect fairness and with cordial appreciation of the value of the work of others. If in some regards it is not definitive, it is because no book on the subject can be so. It is, however, authoritative in the statement of facts, careful and discriminating in the judgments rendered, and very clear in the presentation of the many theories discussed; the work of a sound scholar and a credit to Columbia. To say that the book is from the Macmillan press is to certify to its admirable appearance.

Quellen des weltlichen Dramas in England vor Shakespeare: Ein Ergänzungsband zu Dodsley's Old English Plays. Herausgegeben von Alois Brandl. Strassburg: Karl J. Trübner. 1898. Pp. cxxvi + 667.

A supplement to Hazlitt's Dodsley has long been needed, and it is to the credit of Germany that one of her most distinguished scholars in the field of English studies has supplied a want which English and American scholars have neglected to fill. The period, moreover, in which the plays contained in this volume fall, is historically the most important and in many respects the least understood of all periods preliminary to Shakespeare. The morality plays have added little to the gaiety of nations, and the transitional dramas of the middle of the sixteenth century have as a rule but little literary merit; but Shakespeare and his group follow close upon their heels, and the thing yet to be explained is exactly how they led up to Shakespeare. For this purpose we need under our hands all the material still extant. Prof. Brandl's volume supplies most of the important pieces which till now had remained practically inaccessible. Twelve plays are printed, of which only six have been reprinted in recent times, and all of these (with the exception of "Mankind," recently printed in Manly's 'Specimens of the Pre-Shakespearean Drama') in very limited and generally inaccessible editions. Of the rest, two are from manuscript and appear in print for the first time. Three pieces of John Heywood's are given, completing the reprinting of that author's dramatic works. One novelty—the play of "Misogonus," given for the first time from the unique MS. in the possession of the Duke of Devonshire—for a certain crude *vis comica* it possesses and for certain suggested affiliations, seems to us of distinct historical importance, and worthy to compare with "Ralph Roister Doister" and "Gammer Gurton's Needle."

The dramas given represent certain groups suggested by the editor, who, on the basis of this grouping, discusses the plays in an admirably planned and generally learned and suggestive introduction. The result is, perhaps, rather materials to serve for a more

general history than a complete essay on the early drama in itself; that we shall doubtless have in the author's promised continuation of Ten Brink's 'History of English Literature,' to which readers will now look forward with heightened expectations. The first step, we take it, in the construction of a history of a drama like that of the transitional period before Shakspere, in which personal genius and idiosyncrasy had so little play, consists in the classification of the dramatic material of the age and in the tracing out of the affiliations of separate plays with one another and with their Continental sources and analogues. This introduction, utilizing to some extent contributions of previous workers in the field, makes a very considerable beginning in this task. The editor also discusses questions of language and versification; and questions relating to the stage representation of these early plays receive the due attention which the historians of the English drama have long neglected to give to them. The editor's conclusions here, however, seem to us fragmentary and uncertain. The subject in general evidently demands further study at the hands of those specially interested in the early history of our drama. In his study of the sources of these plays, Prof. Brandl seems to arrive at no results which at all tend to confirm the random conjectures of Mr. Churton Collins as to the preponderating influence of the Italian drama on the transitional English drama of the sixteenth century—although, perhaps, more remains to be discovered than is here suggested in the way

of some direct Italian source accounting for the Italian setting of "Misogonus." But did Mr. Collins, after all, discover a mare's nest? There is a touch of the traditional German *Gedächtnis*, with, perhaps, an echo of Kleist and Ulrich and Schlegel, in Prof. Brandl's characterization of the Vice of the older drama as the embodiment of "mocking chance—the way of the world with all its self-irony and its frequent contradiction of the heroic will of man." But in generalization Prof. Brandl is usually temperate and conservative, as well as illuminating, and often highly suggestive. We are not sure that all his points in regard to the affiliations of individual plays and groups of plays, and especially in regard to the influence of Bale and of Lyndsay, are altogether substantiated; and there are many other points of detail which we cannot accept without fuller discussion. The work as a whole, however, both introduction and texts, is a valuable contribution. The notes are distinctly inferior, showing a very imperfect knowledge of sixteenth-century English, and are unworthy of the editor's reputation.

Approved Fiction.

God's Prisoner.

By JOHN OXENHAM. \$1.25.

Commercial Advertiser. "A very intense sort of book. Many thrilling scenes and strong delineations of emotion."

Times's Saturday Review. "It is the ingenuity of the romance-maker which is so remarkable."

Herald. "Very entertaining reading."

Chicago Times-Herald. "One feels that he has to deal here with the obduracy of an uncommon mind."

Saturday Review (London). "He tells his tale in so brisk and plausible a fashion that belief comes easily."

Poor Human Nature.

By ELIZABETH GODFREY and Impression. \$1.50.

Bookman. "It is curiously convincing. . . . It is well written, it is nobly felt, it is altogether an admirable work."

Tribune. "One of the cleverest musical novels we know, and it is particularly creditable in that it holds nothing of the hysterical gush with which the feminine writer usually fills fiction of this kind. . . . Uncommonly attractive and interesting."

Boston Transcript. "This fine, strong tale."

Literary World. "Full of interest."

The Academy (London). "Her literary skill is notable. The story is told with grace and delicacy and so little strength."

Philadelphia Press. "Charmingly written."

Chicago Post. "Shows the ripeness of her art and the evident breadth of her experience."

HENRY HOLT & CO., N.Y.

JOAN OF ARC. By FRANCIS C. LOWELL.

\$2.00. "As a piece of historical biography it is a noble success."—*Am. Rhetorical Review*.

HOUGHTON, MIFFLIN & CO.

The Spectator.

The Proprietors who in 1861 purchased the *Spectator* have since that date conducted it themselves. They are therefore exempted from many influences which press severely on the independence of journalism, and have from the first made it their chief object to say out what they believe to be truth in theology, politics, and social questions, irrespective, not only of opposition from without, but of the opinion of their own supporters. Their object is to reflect the opinion of cultivated Liberals, but in the matter of the American War they fought against the mass of the very class they are trying to represent, and were finally acknowledged by them to have been in the right.

The news of the current week is compressed into an animated narrative, which the laziest or busiest may read, without missing the life or import of the events.

The *Spectator* contains a list of all Books published during the week (not under one shilling in price), with the names of the publishers and the prices attached, a feature which will greatly increase its value to booksellers, librarians, literary institutions, and private gentlemen.

The *SPECTATOR* is on sale regularly at Messrs. Darnell & Upham's, 208 Washington St., Boston, Mass.; The International News Co., 35 and 35 Duane St., New York; Messrs. Brentano's, Union Square, New York; The Subscription News Co., 47 Dey St., New York, and 77 Clark St., Chicago, and The Harold A. Wilson Co., Ltd., 35 King St., West Toronto, Canada, where single copies can be obtained, and subscriptions are received.

SUBSCRIPTION, PAYABLE IN ADVANCE, \$7.50 A YEAR.

The New Far East

A Study of Present Political Conditions and Prospects. By ARTHUR DIÓSY, Vice-Chairman of the Council of the Japan Society. With 12 illustrations from special designs by Kubota Beisen, of Tokio, a reproduction of a cartoon designed by His Majesty the German Emperor, and a specially drawn map. 8vo, \$3.50.

The author, who is the founder of the Japan Society, shows that Japan is not only a travellers' paradise, "a pleasant land, of beautiful scenery, a country inhabited by an interesting race with charming, gentle manners," but also (as has been evident since her defeat of China) the land of a brave and serious nation of fighting and thinking men; a nation capable of being, and determined to be, a dominant factor in the Eastern world. China, credited until her overthrow with boundless stores of latent strength, is shown to be an inert mass, drifting toward disintegration. Mr. Diósy sketches the changes in manners and customs that have produced "the new Japan," and concludes with a consideration of political conditions in the East, and a suggestion as to the expedient Oriental policy of England in the future. The book is illustrated by Kubota Beisen, a Japanese artist well known in this country, where he visited and held exhibitions of his work in 1893-1894.

The West Indies

A History of the Islands of the West Indian Archipelago, together with an account of their Physical Characteristics, Natural Resources, and Present Condition. By AMOS KIDDER FISKE, A.M., author of "The Jewish Scriptures," "The Myths of Israel," etc. No. 55 in *The Story of the Nations Series*. Fully illustrated. Large 12mo, \$1.50; half leather, gilt top, \$1.75.

The events of the past year have begotten, at least in the United States, a new and keener interest, not only in Cuba and Porto Rico, but in all of that great group of American islands which still remain so largely under European control. Prof. Fiske's purpose has been to compress within the compass of one moderate volume, and yet to present with adequate form and color and in a popular style, the information about the West Indies—their history and physical aspects, their natural resources and material condition, their political relations and apparent destiny—which would meet the needs of that numerous but undefinable person, the "general reader."

Volcanoes

Their Structure and Significance. By T. G. BONNET, D.Sc., LL.D., F.R.S., Professor of Geology at University College, London. No. 5 in the *Science Series*. Illustrated. 12mo, \$2.00.

The author has endeavored to lead the reader through descriptions of the varied phenomena of volcanic action, in the present and in the past, towards ascertaining by inference the cause or causes of eruptions. The book opens with an account of "a living volcano," instances being given which explain it at every stage from birth to death.

Previous volumes in the *Science Series* are:

- 1.—*The Study of Man*. By Prof. A. C. Haddon. Fully illustrated. 8vo, \$2.00.
- 2.—*The Groundwork of Science*. A Study of Epistemology. By St. George Mivart. 8vo, \$1.75.
- 3.—*Rivers of North America*. A Reading Lesson for Students of Geography and Geology. By Israel C. Russell. Fully illustrated. 8vo, \$2.00.
- 4.—*Earth Sculpture; or, The Origin of Land Forms*. By James Geikie. Fully illustrated. 8vo, \$1.75.

The Law and History of Copyright in Books

By AUGUSTINE BIRRELL, Q.C., Member of Parliament and Quaim Professor of Law at University College, Oxford. 8vo, \$1.25, net.

The author of "Obiter Dicta," in his agreeable manner and perspicuous style, traces from its beginnings the history of public acknowledgment that an author has legal rights in the profits of his creations. Referring to this book, an authority in matters of copyright says: "It impresses me as an exceedingly effective presentation of the subject matter, and I judge that it ought to be of service, not only to the legal profession, but also to librarians, literary men, and students of social conditions."

Just Ready.

Electrolysis and Electro-synthesis
OF ORGANIC COMPOUNDS.

By DR. WALTHER LÖB.

Privatdozent in the University of Bonn.

Authorized Translation from the Author's Enlarged and Revised Edition.

By H. W. F. LORENZ, A.M., Ph.D.,

Graduate of the University of Berlin.

119 pages. 12mo. Cloth, \$1.00.

The Microscopy of Drinking-water.

By GEORGE CHANDLER WHIPPLE,

Biologist and Director of Mt. Prospect Laboratory, Department of Water Supply, Brooklyn, N. Y.; formerly Biologist of the Boston Water Works.

An elementary work, intended primarily to serve as a guide to the water-analyst and the water-works engineer, describing the methods of microscopical examination, assisting in the identification of the common microscopic organisms found in drinking-water and interpreting the results in the light of environmental studies. Illustrated with 20 figures in the text. 19 full page half tones, with bibliography and index. 350 pages.

8vo, Cloth, \$3.50.

Examination of Water,
CHEMICAL and BACTERIOLOGICAL.

By WM. P. MASON,

Professor of Chemistry, Rensselaer Polytechnic Institute

12mo. Cloth, \$1.25.

Physical Chemistry for Beginners.

By DR. CH. VAN DEVENTER.

With an introduction by Prof. J. H. Van't Hoff. Translated from the German by Bertram B. Boltwood, Yale University.

12mo. Cloth, \$1.50.

The Elements of Physical Chemistry.

By J. LIVINGSTON R. MORGAN,

Columbia University. 12mo. Cloth, \$2.00.

50% Reduction

THE PRICE OF THE

History of the Jews

By Prof. H. GRAETZ

Reduced from \$18 to

\$9.00 per set of Six Volumes

(An average of over 600 octavo pages to each volume.)

A complete description from the earliest times to the present.

The concluding volume contains an elaborate Index, Maps, and Chronological Tables.

"Prof. Graetz is the historiographer *par excellence* of the Jews. His work, at present the authority upon the subject of Jewish History, bids fair to hold its preëminent position for some time, perhaps decades."—*Preface to Index Volume*.

Scholars, Students, Clergymen, Laymen

should avail themselves of the opportunity of placing this valuable work in their libraries.

On receipt of the price, the volumes will be sent, postpaid, to any address in the United States.

NEW PUBLICATIONS IN GERMAN.

Der Praktische Deutsche.

By U. JOS. BRILEY. *Der Praktische Deutsche* is arranged after the plan of Paul Bercy's *Le Français Pratique*, but it is by no means a translation of that book. The original plan has been preserved, but the exercises reconstructed and fitted to the particular needs of the student of German. The aim has been to provide the material necessary to enable the learner to converse with Germans in their own language, and to arrange it in such an order that the study will be pleasurable as well as profitable. Roman type is used throughout excepting in a few lessons, and a vocabulary is at the end of the volume.

12mo, cloth. Second Edition, entirely revised. 251 pages. Price, \$1.00.

Complete catalogue on application. For sale by all book-sellers, or postpaid on receipt of price by the publisher.

The Nation.

NEW YORK, THURSDAY, MARCH 2, 1899.

The Week.

We are finding out at Manila what the English are finding out, not for the first time, in the Sudan, that savage warriors snap their fingers at the rules of the game of war. Lord Salisbury was hauled up in Parliament for saying that the English had "subjugated" the Sudan. "Oh, well," was his reply, "we have captured the capital and control the river, and that logically carries the whole." So it would in Europe. Napoleon in Vienna or Berlin, or Bismarck in Paris, had the enemy's country at his feet. But it does not work that way with savages—with Khalifas and Filipino chiefs. "You are conquered," says Gen. Kitchen-er to the Khalifa; "come in and surrender, and I will let you off with a hundred lashes with the koorbash, and a 'tax' of 2,000 cows." "You are conquered," says Gen. Otis to Aguinaldo; "quit your murderous shooting from the jungle and come and cast yourself on the mercy of the great McKinley, whose heart suffers a pang with every drop of blood you shed." But the ignorant and obstinate creatures, in the Sudan or in Luzon, don't even know that they are conquered. They shamelessly deny that they are conquered. As long as they are alive and can get ten men to follow them in bush or desert, they propose to fight. This is one of the beauties of conquest in savage lands which we know our Commissioners at Paris foresaw, for they keep telling us they foresaw and provided for everything. But we think they ought to leave off abusing Aguinaldo. It will make people suspect that he has given them a disagreeable surprise.

A democracy at war has always set military traditions at defiance; but we doubt if, since the First Republic of France, there has been seen quite so free-and-easy a way of carrying on a war as is now exhibited by our authorities. What with the desire to keep this war in the Philippines "close to the people," and the every-man-for-himself principle of action that animates our army officers, we are making a spectacle of ourselves. Gen. Lawton at Colombo, on his way to Manila, receives a dispatch from Gen. Otis saying that the situation in the Philippines is "critical." His first thought is, not to hurry up coaling and to get on, but to give the telegram to the press. He informed the reporters that he had an urgent dispatch also from the Adjutant-General at Washington. Secretary Alger, on being asked about this, said that no such message had gone to Lawton by his

order. So Adjutant-General Corbin must have sent it on his own hook, though we see he denies having done so. In any case, it is a beautiful example of military hugger-mugger. On top of all comes the blazing indiscretion of publishing Admiral Dewey's alarmist dispatch calling for the *Oregon*. It is explained that this was given to the press by an "oversight." It came in cipher, and apparently the translation clerk conceived it to be his first duty to show it to the reporters. Secretary Long could read it so much more easily out of a newspaper. The Department professes not to know what Dewey's "political reasons" mean. But what the country is more concerned to know is, what the Government means by trying to conduct a war by shouting all secrets from the housetops.

These revelations indicate a more serious state of affairs in the Philippines than the Government has been willing to acknowledge. But the true inwardness of the troubles at Manila is disclosed in a wonderful "special" to the *Herald*. From this it appears that the Filipinos fight only to hold up the hands of the anti-annexationists in this country. The proof of this was discovered in a letter "from an insurgent official" which was "found on a dead man." No wonder he died, for the letter was of a sort to have fatal consequences to any man having it in his pocket. It contained the horrid news that American anti-annexationists "meditated the assassination of McKinley." This filled the Filipinos with joy. All they had to do was to go on with their guerilla fighting until Senator Hoar had a chance to strike down Cæsar McKinley at the foot of Pompey's statue. Probably they think the deed has already been done, and is kept from their knowledge by the severe American censorship.

Senator Frye explicitly admitted in the Senate on Monday that the President did not at first expect or desire his Commissioners at Paris to demand the Philippines. He said in reply to a question of Senator Vest's, "The instructions of the President when we started out were to take Luzon." That is to say, the policy which the President now says would have been infamous, he was then proposing to adopt. He was proposing to restore all the islands but one to the wicked and cruel rule of Spain. As respects all those gems and glories of the tropic seas, as he now calls them, he was ready, in the case of every gem except Luzon, to follow the disgraceful plan of "scuttle." Talk about the cowardly "sail-away" policy, it was the Pre-

sident's own. He was going to leave Mindanao in the lurch. He was going to abandon Panay. He was going to turn Cebu over to the plundering Spaniard. If he had been permitted to do it, it would have been just as easy for him to say, and for the country to believe, that it was the hand of Providence that guided him in his decision as it has been to say it, and believe it, of the change of plan that was forced upon him. But what brought about the change? Why, the representations made to our Paris Commissioners. They were told that there would be terrible scenes in the Philippines if we allowed the Spaniards to stay there. The only way to keep the peace was for us to take the whole group. Some of Gen. Merritt's testimony at Paris reads queerly enough in the light of subsequent events. For example:

"Mr. Reid—Do you think any danger of conflict is now reasonably remote? Gen. Merritt—I think there is no danger of conflict as long as these people think the United States is going to take possession there. If they imagine, or hear from any source, that the Spaniards are to be reinstated there, I think they will be very violent."

The opponents of a large standing army won an important victory on Monday when the compromise army bill was finally passed by the Senate with the Gorman amendment attached, providing for the reduction of the forces on July 1, 1901, to the number allowed by law on March 31, 1898. Thus the burden of proving that the taxpayers of the United States should support a large army with which to "Christianize" the natives of far-distant islands, will rest upon the congressional expansionists at the long session of the approaching Congress. Their constituents will then have had time to think over the proposed departure from the republic's past policy in the light of considerable experience with the effects of Gatlings upon liberty-loving natives, and with the confusing excitement of the Spanish war well in the background. As for the bill as it now stands, it leaves the regular army, with the exception of the slight artillery increase, in practically the same condition as at present, with all the evils of the present staff organization unabated, even Senator Proctor having withheld his healing amendment until a future Congress and a more propitious time. As for the volunteer side of the bill, the provision which permits of the reenlistment of some of the regiments now in Manila may help the War Department out of a tight place, provided those organizations are willing to continue to kill those whose freedom they went to the Philippines to establish. For the rest, there will be plenty of places at the disposal of members of

Congress, and the authorization of three regiments of rough riders "to serve mounted or dismounted," if retained in the final bill, will provide the new volunteer army with picturesque features.

Secretary Alger's firm resolve not to resign "while under fire" is precisely what was to have been expected of a warrior of his invincible mettle. He is not the first statesman in difficulties who has made this resolution. In fact, it has been for many years the shadow of a great rock in a weary land to harassed office-holders. The moment that charges are made against them they are secure. "I might have retired," they say, "had I not been attacked; but now that I have been attacked I must hold on lest it be said that I retreated under fire." Alger goes even further, and says it has been his intention from the outset to serve out his term with this Administration, and he proposes to do so, fire or no fire. As he makes this statement just at the moment when the revelations about his beef supplies for the army are assuming a particularly unfavorable aspect, it may be taken as final notice that he will allow nothing to induce him to resign. A man of less "nerve" might say to the President: "I realize that the disclosures which are being made about my conduct of the war are in danger of injuring your administration and thus imperiling your prospects for a renomination. While I am fully conscious of my innocence, I am unwilling that you should suffer because of the odium attached to me, and I, therefore, place my resignation in your hands for action. If you wish me to retire temporarily from the War Department until the truth or falsity of these charges is established, I will do so, or I will retire permanently, just as you prefer." Would Alger do that? Oh, no. The President might take him at his word and let him go permanently.

The real reason why the President retains Alger was given in the House on Friday by Mr. Johnson of Indiana, in a very remarkable speech. Mr. Johnson is a Republican who differs from his party associates in the House only in his determination to speak the truth fearlessly, no matter if by so doing he reflects upon the party's President. In commenting upon the recent Boston banquet, at which the President spoke, Mr. Johnson said:

"The Secretary of War was in attendance, he whom the Boston populace had hissed upon the streets a few hours before, ere they turned to greet with rapturous applause the chief who had bestowed upon him his official character. We can hardly blame them, though, for this, Mr. Chairman, for they were only following the precedent set them by some of the leading Republican newspapers of the country, which for months past have been fiercely attacking the Secretary, and yet have lacked the courage to lay their axe to the root of the evil and censure the gentleman who, to reward him for his political services and disbursements in the

campaign of '96, appointed him to his present position and has maintained him there ever since, notwithstanding his incompetency, and against complaints that have been made against him."

That is a frank statement of what is universally known to be the truth. Secretary Alger cannot be got rid of simply because he bought his place with a heavy campaign contribution. He is a member of what is known in Washington as the McKinley Syndicate, which Mr. Johnson describes, also in very plain language, as the "gentlemen who furnished the money for his [McKinley's] nomination and election, and who, I doubt not, have pledged him a renomination and reelection." He might have said also that they paid his private debts before they nominated him, he being then a bankrupt. Everybody in Washington speaks of this syndicate as a perfectly well-known and recognized institution, but Mr. Johnson is the first Republican who has had the courage to lay before the country the facts about it, and to set forth its true relations to the President and his policy of imperialism.

Thursday's testimony before the military court of inquiry brought out two facts which everybody interested should paste in his hat. One was that the order for canned roast beef came originally from Gen. Eagan, him of the fragrant speech. Col. Weston was asked on whose order the roast beef had been sent to Tampa. His answer was: "The order came from here. It was given by Gen. Eagan." Eagan himself confirmed this in his own evidence. He had "considered" last May the question of supplying the troops, and had "concluded that tinned roast beef was the best substitute for fresh beef." Here, then, we have it settled who was the author of the innovation. Gen. Eagan was but defending his own when he used against Gen. Miles language as foul as the beef he had entered into contract to supply as an army ration for the first time in our military history. The other fact is that Gen. Eagan and Secretary Alger were responsible for a form of contract covering the delivery of refrigerated beef, which they now admit was grossly improper. It contained a clause calling for meat that should be good "twenty-four hours after delivery from the refrigerator on shore." That clause, says the cheerful Eagan, was "an error," he thought "a clerical error of some kind." It was supposed that the period specified was seventy-two hours. All the papers and proposals had been submitted by Eagan to the Secretary of War, but, strange to say, neither of these vigilant officials had noticed that clause. Yet it was worth thousands of dollars to the contractors. Unlucky "clerical error"! But lucky contractors!

It is evident that the session is to

expire without action on the bill to give Hawaii a territorial government. This is that "wisdom of Congress" to which both President Harrison and President McKinley were willing to leave all the "mere details" of a proper Hawaiian government. Congress says, in its wisdom, "Oh botheration!" and lets the poor Hawaiians make what shift they can. The need of action by Congress is crying. The Hawaiian Supreme Court has decided that the annexation resolutions of last July destroyed an important part of the jurisdiction of Hawaiian courts, and put nothing in its place. Yet Congress has shoved the whole thing aside. Its horizon has not been "broadened," as we were told it would be, by having distant possessions to legislate for. It still is absorbed in the duty which lies nearest at hand, which is to vote millions for the several "destricts." The only bit of Hawaiian legislation that has a ghost of a chance to get through is the bill to lay a cable to Honolulu. The vigilant Senate has added an amendment to the sundry civil bill to do that. A cable the Hawaiians (and the contractors) simply must have; they can get along well enough without courts.

Ostensibly, the Nicaragua Canal bill which the Senate attached on Friday as an amendment to the river and harbor bill is the same as the House bill, the so-called Hepburn bill. But in reality there is a vital difference between the two. The Hepburn bill swept away all the stock-jobbing speculators, and boldly provided that the President should acquire "territory" from Nicaragua and Costa Rica, and build the canal himself. The Senate slyly introduces after the word "territory" the words "or such rights, easements, or privileges." There creeps in the rotten Maritime Company, or its successors, ready to sell their "privileges" to their own Government at their own price. Only on these terms will the Senate consent to have any canal at all. If somebody's worthless stock is not to be made good by a Government guarantee, why move heaven and earth to get a bill through? Vice-President Hobart discreetly dodged ruling on the point of order that the Nicaragua amendment was not germane to the river and harbor bill. He probably knew that the Senate would not sustain an adverse decision. Anything with a job in it is always germane in the Senate. However, Senator Spooner secured the adoption of a clause authorizing the President to negotiate for the abrogation of the Clayton-Bulwer treaty. This is the orderly and decent way to go to work; so that even if the House accepts the Senate bill, the President can do little more than "negotiate" for some months to come. Not this year nor next will the canal be begun or bonds worth nothing be sold to the Government at par.

The scandalous abuses which attended the census of 1890 were among the influences that contributed to the "tidal wave" of that year, and buried under popular disapproval the Harrison Administration, which was responsible for that census. If similar scandals shall disfigure the census of 1900 through the surrender of that work to the spoilsmen by the McKinley Administration, the Republican party will again pay the penalty, and this time when the Presidency is at stake. It rests with the Republican Senators and with the Republican President to decide whether their party shall reap profit or loss from the next census. The bill which provides for taking it is now pending before the Senate. The House passed it with a section suspending the operation of the civil-service law in the Census Bureau, and thus authorizing another riot of spoils, like that of 1890. The Senate can amend the measure by requiring the application of the merit system. If it shall not so amend it, the responsibility will then rest upon the President, and the *Tribune* has pointed out his duty in the premises when it says:

"We are by no means certain that the President would not be justified in vetoing a census bill containing so inexcusable a violation of the promises under which he was elected. Unfortunate as any delay in taking the statistics beyond the regular time would be, he might reasonably expect that the people would stand behind him in emphatically reminding Congressmen that party pledges are not waste paper. They sometimes act as if they thought they were, and a sharp lesson on the subject must come some time."

The President has another responsibility, which cannot be shirked. It is for him to nominate the Director of the Census, and he need expect no opposition from the Senate. The greater the chance that Congress will muddle the bill, the more imperative that the head of the Census should be sound.

One of Shayne's or MacShayne's valuable suggestions for the solution of the custom-house difficulty is, that an officer should cross on each steamer and take the passengers' "declarations" about their baggage on the way. There are two objections to this scheme. One is that the women are apt to be sick at sea, and would find nothing more loathsome than writing out "declarations" about their clothes for custom-house officers in mid-ocean. Besides, there is no pretence, even on Shayne or MacShayne's part, that making the declaration would save them from the insult of the subsequent examination on shore. It is the double process which constitutes the offensiveness of the whole transaction, over and above the delay. The fact is, we believe, that our custom-house system was devised in the days of sailing-vessels, when about ten travellers a month went to Europe. The Treasury publicists have never been able to grasp the new situation, to understand that

tens of thousands of travellers in the nineteenth century cannot be treated like tens in the eighteenth. For the same reason, they have never been able to get into their heads the difference between a man or woman who lands in New York once in a year, or in two or three, with two or three trunks of personal clothing, and a man who has to import cases of foreign goods every week as part of his business for sale. Plenty of importers think that because they have to make out lists of their goods imported for sale, every lady or gentleman who comes back once a year from a summer trip ought to call the Creator to witness how many pairs of drawers and socks were bought in London and Paris. Why cannot our statesmen and officials grow up? Why have they no sense of proportion? Why do they not understand that the custom-house inspectors and the whole taxing apparatus are intended in civilized lands for the convenience of the citizen and not for his annoyance?

On Tuesday, February 7, there was an amusing allusion in the English House of Commons to the peregrinations of Lord Charles Beresford, towards whom the American continent and the Hon. Whitelaw Reid have, during the last week or two, been indulging in so much effusive hospitality. Sir Henry Campbell-Bannerman showed in the debate on the address what geese we have been making of ourselves in treating Lord Charles as in any sense an organ of English opinion or a good adviser of a peaceful, industrial people like ourselves. To the English Liberals he is a joke, and the Conservatives refuse to be responsible for him. So that he is really wandering around on his own hook, so to speak, advising us to fight in matters with which we have no concern. In fact, the only advice he has to give or ever gives anybody is to fight hard, and, to do him justice, whenever he gets a chance, he fights hard himself. To fight hard is, in the opinion of the military circle to which he belongs in England, the chief end of man. He belongs, in fact, to the same school of politicians to which Theodore Roosevelt belonged before he was elected Governor. If that school had its way, the world would bear a striking resemblance to the Scotch Highlands in the fifteenth century, or to Donnybrook Fair in later times—that is, fighting would be the chief occupation of the human race. Some would be always keeping "doors open" and others keeping them closed, but not with the view of keeping them permanently either one or the other. The delight of keeping them "open" would lie in the fact that some one was trying to close them by force, and the delight of trying to "close" them would lie in the fact that somebody was trying to keep them open. Negotiation would

rapidly become a lost art, and peace become a national calamity.

The attentions bestowed on Lord Charles, and the rapt attention with which he is listened to, are a somewhat sad sign of the change which has come over the spirit of our dream. We have completely changed the class of Englishmen as well as of native Americans from which we draw our advisers. It would be well, however, to wait the result of our first experiment in "imperialism" before we engage new counsellors and gush over every wandering swordsman. In another year we shall know a great deal more about "open doors" than we do now. Ought we not to wait and see how many Filipinos we shall have converted to the Gospel of Christ, and what kind of government we shall be carrying on in those distant parts—whether William McKinley will be ruling with stern severity over ten millions of barbarians, or shall have "returned to the practice of the law" in Canton, Ohio?

President Loubet's inaugural message was a quiet recital of the Executive's purpose to enforce the laws and make them respected, while endeavoring to unite all the elements of the nation's strength in loyal support of the republic which "has given France her free institutions." So strong and tranquil is the President's position that the agitators against him and his methods are already forced to betray their real animus, and to break up into mutually recriminating factions. Brunetière's fancy new League of the French Fatherland is rent in twain, he himself having been forced to renounce and denounce the action of its own officers. They are now openly for sedition and revolution, along with Déroulède and Beaurepaire, and Brunetière has thus to disown his own children. He now practically goes over to the very "intellectuals" whom he sneered at, and who had asserted that the only hope for France was in having justice done and the law made supreme over the army and terrorists of all kinds. In short, there are many signs that the French outlook is decidedly clearing. At any rate, the great experiment will have further trial. France has deliberately cast in her lot with the countries which choose freedom, despite its inconveniences. A law of *lèse-majesté* would come in very handy in Paris just now, to repress and punish outrageous attacks on the chief of state, but, on the whole, the free régime, the way of free speech and publicity, is justifying itself as well as absolutism is in Berlin. It might be said, in fact, that France's present troubles arose from her authorities going over temporarily to the methods of tyranny. Chief among these are secret trials, bewildering and mystifying the people.

A GREAT MORAL CATASTROPHE.

If, after the news of the battle of the Nile or of Trafalgar had reached England, the people through their leading organs, clergy, newspapers, legislators, politicians, had with practical unanimity determined to abandon the Protestant faith and to embrace that of Rome, as professed by most of the older nations of Europe, had begun to go to confession and to follow "processions of the cross" through the streets once more, would it not be treated by historians as one of the most astounding events of the modern world? It certainly would. And yet a revolution nearly as extraordinary has occurred among us as a consequence of the battle of Manila, or what is popularly known as "Dewey's victory." We admit there is more sign of motive in Dewey's victory for the change which has occurred here, than there would have been in the battle of Trafalgar for the change which we have imagined in England; but one would, in suddenness and unexpectedness, be the equal of the other. And the moral decadence exhibited by ours far surpasses that which would have been revealed by the English conversion, for we have, with a stronger faith than England's Protestantism, held during the whole period of our national existence, or for over one hundred years, the following creed of four articles:

(1.) That all just power is derived from the consent of the people who live under it.

(2.) That armed resistance is presumptive evidence that this consent has not been obtained.

(3.) That the people who offer this resistance are the supreme judges of its justifiability; that the morality of attempts at a revolution has to be determined by the event, and that the opinion of a conqueror, or would-be conqueror, thereon is worthless.

(4.) That fitness for self-government can be determined only by the people themselves, and that the first and surest evidence of this fitness is willingness to fight for independence; that no oral or written expression can be accepted in place of it, and that judgments as to their political capacity by foreigners who do not know the people, are absurd.

Under this creed we have lived from 1776 until 1898, and we have professed it with an enthusiasm often bordering on extravagance. In fact, "good Americans" have generally been supposed willing to die for it, after the manner of the early English heretics. Under it, too, we have as a nation, by every mode known to us except an appeal to arms, dealt with the following revolutions or attempts at revolution: the Greek revolution, all the Italian attempts at revolution, all Polish attempts at revolution, all the attempts at revolution in Spanish America and in Cuba, all Irish attempts at revolution, all Hungarian attempts. Such revolutions we have treated in va-

rious ways—some by armed aid, some by dispatches, and some by wildly enthusiastic popular receptions, like that which we gave to Kossuth. There never has been during the whole century, with its varying circumstances and numerous temptations, the slightest sign of weakness or of doubting on our part.

Our love of the creed and devotion to it, too, have been accompanied by constant hostility to its enemies, and it has had many, who would gladly have taken us up to exceeding high mountains, and have shown us all the kingdoms of the world and the glory of them. The Greek rising in particular excited prodigious fervor among us. Our poets, our statesmen, and our orators were all pressed into its service. One American in particular, Dr. Howe, won undying fame by a display of readiness to fling away his life in battle with the Turk. No European diplomat was allowed to tell us whether the Greeks were fit for self-government. They were poor, they were ignorant, they were degraded by centuries of oppression. They did not carry on war according to Jomini or Napoleon, but used all sorts of weapons that would kill or disable an opponent. They cut waterpipes, they burned houses, they went naked, they starved, they did everything except make terms with the enemy; they showed no political quality except the courage never to submit or yield. And yet there were few American eyes which did not at that day grow wet over stories of the desperate valor of Bozzaris or the heroic resolution of the women of Missolonghi.

The French and English finally went to their assistance; but they did not kill them or issue lofty proclamations to them. It was the Turks they killed. They did not propose to Turkey to sell Greece to France or England, and say they meant to keep it for one of themselves, as the Greeks were not fit for self-government. Had they done so, there would have been a howl here in America which would have lifted the roof off the Capitol. It is true their standard of political capacity was not as high as ours. They had no McKinley nor Alger nor Corbin nor Egan nor the learned Day. In short, we became, in the first century of our existence as a nation, not only the professors of the creed we have described, but the apostles of it. We professed it with far more heat than the English nation professes Protestantism. Our temper about it far more nearly resembled that of the Mussulmans in the early years of the Prophet's propagandism. There were few European Powers which did not find reason to believe that we too had some of the "true believer's" devotion.

It must not be forgotten, moreover, that, as late as the Congress of Verona, the practice prevailed in the Old World of treating whole territories, with their population, as property which could, un-

der the law of nations, be rightfully conveyed to another ruler, by way either of gift, exchange, dowry, or money purchase. The instances of this in the fifteenth, sixteenth, and seventeenth centuries are too numerous to cite in a newspaper article. Under this rule or custom this Congress parcelled out Italy, and the Holy Alliance wanted to retain her American provinces in allegiance to Spain. The first formal recognition, if we remember rightly, of the right of a people to be consulted about its fate was the plébiscite taken in Savoy when it was transferred to France in 1859. We need not say that there was no article in the old political law and usage more abominated in America than this of the Congress of Verona. It was in every American house only one degree less odious than the custom of the small princes of Germany to hire out their troops to fight for somebody else, when they were hard up for money, like the Elector of Hesse. There were at that time no flags on the school-houses, but there was no American boy whose eyes you could not make blaze by telling a story of the purchase of 10,000,000 of people for \$20,000,000, and the slaughter of many thousands of them because they refused to be sold and resisted the landing of the conquerors' troops on their shores in order to consummate the purchase. "If I were an American as I am an Englishman," said Lord Chatham, "I would never lay down my arms while a foreign soldier was landed in my country." "Of course not," the American boy of 1860 would have said, as Chatham said—"Never, never, never."

Even the boy of that period would have been disgusted with the gossip of our generals, admirals, and fighting parsons about the unfitness of the Filipinos for self-government. What do they know about the matter? How many English generals and admirals and fighting parsons thought Americans fit for self-government in 1776? Did the Austrians think the Hungarians and Italians fit for self-government in 1848? Did the Turks think the Greeks fit for self-government in 1823? And yet the Austrians spoke Italian—often were Italians themselves and had lived long in Italy. Our mighty rulers of men are buying and selling countries which they have never seen, whose language they do not understand, and of whose existence they were hardly aware a year ago. A general who has spent a month in Manila, or an admiral who has fought a battle on the coast, is treated as a competent adviser about the fate of a people of whom we know little more than about the inhabitants of Mars. This is, in itself, proof, not only of our abandonment of our ancient faith, but of our ignorance about our new doctrines.

We hear a good deal about the incompetency of the Filipino masses to carry on a government. But in what

country that has achieved its independence since we achieved ours, were the masses fit to carry on a government? Greece, Hungary, Italy, the South American republics? Is it possible that even McKinley pundits do not know that, after a war of independence, it is always, as with us, a small body of leading men who construct government and set it going? It was so in all other Spanish-American states, and we have for seventy-five years agreed to consider them successful. It is we, and we only, who have set up the ridiculous pretence that it is for foreigners to decide whether a people is worthy to be free. Any people proves its fitness to be free, as we proved ours, by achieving its freedom. That is the only sure and legitimate way. The opinion of McKinley's office-holders on the matter is not worth a dozen cans of beef. We have no reason for concluding that the Filipinos cannot set up as good a government as any other revolted Spanish state, except our own greed, and our shameless abandonment of the noble faith under which we have lived for a century, and have achieved everything that has won for us the respect and confidence of mankind.

WHO IS RESPONSIBLE FOR AGUI- NALDO?

We are reading and hearing these days a great deal of solemn denunciation of the Philippine general, president, dictator, or whatever he is. Aguinaldo's crimes are many, but the sum of them is that he doesn't like us, and won't do what we want him to. The rest is mere subordinate and superfluous detail. That he is an unscrupulous politician, frankly "on the make"; that he is vain and silly; that he is treacherous and cruel—all this is mere rhetorical embroidery of the main charge, namely, that he is cutting up rough and making us no end of trouble, where we expected to have simply a grand triumphal march of civilization and religion; the religion being, of course, of the kind that is profitable for the life that now is as well as that which is to come.

Well, Aguinaldo may be a foolish and reckless adventurer—we think he is; but he did not get where he is and acquire the power to plague us as he is doing, without American assistance and responsibility. We accuse him of bad faith, but he flings back the charge, and, unluckily, he has an unpleasant amount of evidence to support him. In his counter-proclamations of January 5 and later he definitely asserted that "the American authorities" had taken him from Hong Kong to Manila with the distinct promise of giving "liberty and independence" to the Filipinos. He specifically mentions a promise of independence made to him by the American consul at Singapore, Mr. Pratt, and says that it was on the strength of that

that he went to Cavité to aid Admiral Dewey in forcing the Spanish to surrender. Of course, Aguinaldo had no business to trust the assurances of our consuls. They were not "the American authorities." Dewey and Merritt preserved a perfectly correct attitude, and avoided all entanglements with the natives. But how was the poor untutored Filipino to know that our precious consuls were acting without authority? The severe wiggling which each of them got from our State Department for their impertinent meddling was not known to Aguinaldo. For all he knew, they were directed and empowered to make him the promises they did. At any rate, his citation of these promises is a particularly awkward thing for us, especially as the proof that he is speaking but the truth is set forth at large in the very documents which the President sent to the Senate along with the peace treaty.

In those documents it clearly appears that Consul Williams of Manila, Consul Wildman of Hong Kong, and Consul Pratt of Singapore are the men who got their own Government into this scrape with Aguinaldo. They exceeded their authority, as well as, of course, all propriety, in making him pledges and holding out to him hopes which led him on little by little, organizing an army, setting up a government, until at last he found himself actually fighting the Americans, who, he bitterly asserts, lied to him and tricked him. And that is just what our consuls did. The *Singapore Free Press* of May 4, 1898, gives an account of the negotiations between Consul Pratt and Aguinaldo. One part of their agreement was that the United States would give to the Philippines the "same terms" as it intended to give to Cuba. In an official letter to Secretary Day, Consul Pratt admits that the facts in this newspaper report were "correctly given." The disclosure was "annoying," but the muddle-headed Consul concluded that "no harm" could come of it, and that "I suppose I should rather congratulate myself that the secret possessed by such a number was kept so long."

There are pages more of the wretched interfering and intriguing of our consuls. If Aguinaldo is an inflated fool, it was they who filled him with wind. It was Wildman of Hong Kong and Williams of Manila who gave him the idea that he was to be a great "figure in history," the "Washington of the Philippines," and so on. They are the men who did the mischief. They, not their silly dupe Aguinaldo, are the ones for our able editors to spend their time in holding up to scorn. How came it that we had such men in such offices? What sort of consul was it who had to be rapped over the knuckles by his chief, and reminded that "you are forbidden to make pledges or discuss policy"? Why, they were just the kind of happy-go-lucky political scrapings that we have been in the habit

of sending to represent our country in foreign parts. What difference did it make? They had nothing to do. Well, we see what a fist of it they made when they really had something to do. If they had not been such erratic and untrustworthy harum-scarums, we might have kept out of all this horrid mess with Aguinaldo. What a figure it is which Consul Williams cuts, appealing from the deck of a battle-ship in Manila bay for the "appointive favor" of Secretary Day, telling him, "I need your recognition," and "Could I be appointed general commissioner of customs of the Philippine Islands, lighthouse inspector, or general commissioner of agriculture, I should be honored and pleased!"

Honoring and pleasing ridiculous consuls have brought us what we see. To "expand" by means of such agents would be only to advertise our folly among nations as yet ignorant of it, and to seek new worlds, not to conquer, but for the purpose of writing ourselves down asses. President McKinley cannot be too quick with his message explaining to Congress his long-meditated plan for a purified foreign service. We know that he was just bursting with it last December, but it would not have been "good form" to tell Congress about it then. You see, the treaty was not then ratified, and the islands were not ours. Well, they are ours now, at least they are ours to fight for, and we think all questions of taste and nice propriety might now be waived, and the President begin telling us how we are to avoid having such blundering consuls in the future. He might explain, while about it, how he came to send an old political "rounder" to Singapore in succession to Consul Pratt. How does he know that his new appointee has not put on a jibbah and gone to preaching a jihad, or "holy war," against some nation with which we are at peace? In any case, the President, and Congress, and all the editors and Washington-Birthday orators had better leave off at once abusing Aguinaldo, and devote their attention strictly to our own incompetents and adventurers, who are really more responsible for our trouble than Aguinaldo is.

THE REAL CULPRITS.

There is nothing unusual about Croker's "strike" against the Manhattan Company except its publicity. Hitherto all transactions of this kind between him and the corporations have been conducted in private. He has made his demands and they have been complied with. Usage has so accustomed him to this exercise of governmental powers that he has come to regard it as his right. Then, too, reputable citizens, members of great and powerful corporations, who have paid him his blackmail, have treated him with respect after the transactions were closed. He has come

to look upon himself, therefore, as a real ruler. What could be more natural under these circumstances than that he should feel indignant when one of his hitherto docile subjects suddenly refused to yield to his commands? He goes about daily as a reputable, even eminent citizen. Men of character and standing in the community treat him with deference, and some of them, including Judges of the Supreme Court, consent to become members of his Club, after they have paid him cash in return for their nominations. If these treat him as a worthy companion for reputable men and recognize him as the ruler of the city, why should he not treat himself in the same way?

The whole truth in this matter was spoken by Mr. Wheeler H. Peckham in his address before the City Club on Friday evening. It is all contained in the following sentences which we select from his remarks:

"The men responsible for the present political corruption in this city should be in prison, and not hailed as they are as the great men of the community. There are corporations which contribute to the funds of both parties, so that the failure of one side will not leave them with the minority. These contributions are made for warding off attacks or for obtaining privileges that should never be granted. The corporations say, substantially, 'We will bribe this or that party to make it give what we want,' and the inherent selfishness and cowardice of the men who stand guard over these corporations are responsible for this giving and receiving. The organization now in control of this city is as absolute in its power as any dictator that ever ruled in this world. Within its own ranks are rules that no member dares disobey. 'Taxes upon taxes shall you pay,' it says to us. 'Loan upon loan shall be increased.' 'If there are two corporations holding street-car franchises, we will strike at the one of whose stock we are short for the benefit of the one of whose stock we are long.' But we let these men go about as our neighbors and shake hands with them in the most friendly manner, when every man of them should be in jail. You will never help this community so long as you recognize the successful rascal as entitled to your respect."

Whoever has given any attention to this subject knows that every word of the above is true. Heads of our great corporations admit that they pay blackmail regularly to both Croker and Platt. Yet both men move about, not like criminals and social outcasts, but as men who are entitled to respect and even honor. This great city, with its enormous wealth and its annual municipal budget of \$100,000,000, is the personal property of Croker to-day, solely because Platt handed it over to him by running Gen. Tracy for Mayor in 1897. A more open alliance between two political scoundrels for the looting of a great city was never formed, yet both Platt and Croker have been treated with no less consideration because of it. Eminent citizens do not hesitate to meet them at public or semi-public banquets, and on one of these occasions we witnessed the astonishing spectacle of President Low proposing three cheers for Gen. Tracy, the man who had allowed himself to be the medium through

which Platt turned the city over to Croker.

It is folly to blame Croker or Platt for anything either of them may do, so long as reputable men, the foremost citizens we have, consent to associate with them in any capacity, or to give social recognition either to them or to the so-called reputable men who are their allies and beneficiaries. It ought to be the social ruin of any man to be a member of Croker's Club or to buy public position of him. Yet this is far from being the case. How often have we heard it said that "you must not be too particular in these matters," that "Croker and Platt are the outcome of a system which is supported by the people," that "they are men of force and capacity, or else they could never hold such power," and that, all this being the case, "you only injure yourself by opposing them." How often, too, have we heard reputable men go further than this and say: "Well, what is the use of fighting a man like Croker? The people have put him where he is. He controls everything. If you fight him you only hurt yourself. Why not go in with him and get a 'piece of it'? So and so, reputable men, do this, and they are getting rich by it, and their social and business positions are not injured by it. Why should we not do the same?" This line of reasoning is especially prevalent among young men, and it is to-day the most demoralizing influence that is at work in this community.

Why should Croker "strike" the Elevated Railway Company so fiercely because of its refusal to allow him to put compressed-air pipes on its structure? That he did "strike" it is unquestioned. His denial of that or any other accusation has no weight. If he could hang the pipes of his concern upon the structure it would save him millions of dollars, for otherwise he would have to put them under ground at enormous expense. He and his friends are heavily loaded with the stock of this enterprise; they have been induced to invest in it by some persuasive friend or other, and they are anxious to have it put in operation in the most economical manner possible. He, looking upon himself as the ruler and owner of the city, decided that the Manhattan Company should do what he wished in the matter, should give him for \$10,000 what would otherwise cost him millions. The company's refusal aroused him to fury. The idea of daring to offend him! He would show 'em who owns the city. That is the case in a few words. He has come out into the open with his system of government. Will this community, which has submitted so meekly to this system when operated in private, submit to it with equal docility when its operation is fully disclosed? What would be the effect were other corporations to imitate the Manhattan Com-

pany, refuse to yield to future demands, and reveal the nature of them to the public? Would Mr. Croker go to Europe permanently or to jail? He certainly would not strut about the town as he does at present, delivering addresses to the people about the conduct of their affairs.

THE PRE-IMPERIAL JOSEPHINE.—II.

PARIS, February 8, 1899.

Josephine was at Fontainebleau, where she was spending the summer of 1791 with her young children in the house of the Marquis de Beauharnais and of Mms. Renaudin, when she heard that her husband had been elected President of the Constituent Assembly. M. de Beauharnais had already for some time played an important part; he was among the orators of the Assembly. He took his place at Versailles among the *forty-seven* of the nobility—with Castellane, Lafayette, D'Aiguillon, the Duke d'Orléans, Lameth, Lally-Tollendal, the Duke de la Rochefoucauld, his patron, etc. He joined the *Tiers*; on the famous night of the 4th of August, he renounced all feudal rights, he discussed the Declaration of Rights. By a curious coincidence, two days after occupying the Presidential chair, he had to announce to the Assembly the flight of the King to Varennes. The general who tried to help Louis XVI. was the Marquis de Bouillé, whom Beauharnais had known in the West Indies. He had asked to be Bouillé's aide-de-camp and had not been accepted; now he had become one of his judges, and had to proceed to the examination of the King and Queen, who had been brought back to Paris.

When Josephine returned to the city from Fontainebleau, she met her husband from time to time in various houses. "They put on a good face with each other," says M. Masson, "but there is no intimacy. Beauharnais can speak in high terms of virtue; but he does not include in that term conjugal fidelity." Josephine sees a rather mixed society; she has no choice, going where she is invited; with her small income, she has to live very simply. The Constituent Assembly was dissolved at the end of 1791, and soon afterwards Beauharnais, inscribed in the ranks of the general staff of the army, had to join the division to which he was attached. He was in the Third Corps commanded by Marshal Rochambeau, and was soon promoted to be colonel; he found time, during the operations of the campaign in the north of France, to write letters constantly to the Legislative Assembly, full of the most glowing patriotism. "On the 7th of September, while his patron, the Duke de la Rochefoucauld, is being murdered at Gisors, and in Paris the companion of his early studies, Charles de Rohan-Chabot, is killed, Alexander is promoted *maréchal de camp* and appointed chief of the staff of the army in process of formation at Strasbourg." Beauharnais was a very poor soldier, but he wrote proclamation after proclamation, which had sometimes the honor of being inserted in the official *Moniteur*; he spoke in the clubs, wrote pamphlets. He spent the whole of 1793 in Strasbourg; the year after, he took some part in the operations of the war; he had 60,000 men under his orders, but his absolute inertia caused the capitulation of Mayence. He retreated towards Wissem-

bourg, offered his resignation to the Convention, and left the army before it had been accepted in terms which were justly severe towards so incompetent a general.

During all this time, what had become of Josephine? She spent some time in the village of Croissy, near Paris, at the house of a creole friend. It was there that she made the acquaintance of Réal, the son of a gamekeeper of Chatou, who had become Procureur au Châtelet. Through him she made the acquaintance of Tallien; she already knew Barrère, whom she had seen at Madame de Genlis's. She had great fears for her children, on account of the perpetual agitation of Paris, and confided them for a time to the Princess Hohenzollern, her friend, who took them to a house belonging to a Prince of Salm. She intended to send them to England, but Alexander Beauharnais heard of it, and from Strasbourg sent instructions to place Eugene in a national *lycée*.

Josephine had no political opinions. She was almost intimate with some members of the Mountain; she maintained affectionate relations with Charlotte Robespierre. M. Masson cites a very humble letter of hers, addressed to the Girondist Lanjuinais, in which she praises his heroism, his principles, his sensibility. In September, 1793, she had to choose a residence in order to obtain a certificate of citizenship, and she elected Croissy as her legal residence. Eugene joined her there, and, in order to prove her citizenship, she apprenticed him to a joiner—Hortense was working as a seamstress. This did not prevent Josephine from paying visits in the neighborhood—to the Demoiselles de Vergennes, one of whom became Madame Rémusat, a *dame du palais*, and the other, Madame de Nansouty; to Réal, the future Councillor of State, and a few others.

As soon as she had her certificate of citizenship, she returned to Paris, and mixed with a number of people whom the Revolution had brought to the surface of society. She was obliging, and interposed for friends in danger; she used the new Revolutionary style. M. Masson gives the text of a petition which she addressed to Vadier, President of the Committee of General Safety. It is in the style of the period, and begins: "Salut, estime, confiance, fraternité." She recommends to the mercy of Vadier her sister-in-law, wife of the elder Beauharnais. "I put myself in your place; you doubt the patriotism of the *ci-devants*, but it is in the order of things that, among them, there are ardent friends of liberty and equality. Alexander has never deviated from these principles. . . . If he was not republican, he would have neither my esteem nor my friendship. . . . I write to you with frankness, *en sans culotte montagnarde*." She ends by saying: "Adieu, estimable citizen; you have my entire confidence." Vadier refused to see her, and she gained nothing by her epistolary eloquence.

On leaving Strasbourg, Alexander Beauharnais went straight to La Ferté and to Blois. An order of arrest was sent out for him, and the first name found on the order is that of Vadier, on whom Josephine counted so much. She was herself arrested a month afterwards at Croissy and sent to the Carmes, the prison which had been the principal theatre of the famous massacres of September. It was one of the most unhealthy in Paris. There were living there at the time when Josephine arrived the Prince of Salm-

Kyrbourg, M. de Rohan-Montbazon, the Duke de Béthune-Charost, the Abbé de Boullogne, Delphine de Custine (*née* Sabran), M. de Gouy d'Arcy, who had been one of the Constituents, Mme. de Lamech, Mlle. de Sourdeval and her two daughters, the Counts of Soyécourt and Champcenetz. Many other ladies and gentlemen were thrown among men of the people, belonging to all possible vocations; there were even boys of thirteen years old. "They were all there like people on a raft at sea, condemned, before dying, to live together. Before the promiscuity of the basket of the guillotine, there was an odious promiscuity in the rooms, the courts, at meals," etc.

Josephine met her husband at the Carmes. "It was only there," says M. Masson, "that they probably were frankly reconciled—and reconciled in the manner in which the marriage union was understood ten years before: entire liberty and good friendship." They wrote joint letters to their children, who were under the guard of a Citoyenne Lannoy; but Alexander did not conceal a violent passion for Delphine de Custine, while Josephine "established herself *en coquette* with Hoche, who had entered the prison at the same time with herself." Alexander Beauharnais left the Carmes on the 4th Thermidor (five days before the 9th Thermidor, which marked the fall of Robespierre), to go to the Conciergerie; he knew that the end had come. The Revolutionary tribunal condemned him, and he was guillotined on the 6th Thermidor. In his last letter to Josephine, written from the Conciergerie, he speaks of "the fraternal attachment" which binds him to her, of his affection for his children, and of his "regret at being separated from a country which he loves and for which he would have given a thousand lives." He is unhappy at the idea that the country might suppose he was a bad citizen, and recommends Josephine to try to rehabilitate his memory. But "this work must be deferred, for, in the revolutionary storm, a great people which struggles in order to break its chains ought to surround itself with a just distrust, and fear rather to forget the guilty than to smite the innocent."

Exit Alexander: Josephine is alive. Had she been forgotten? Did she owe her life to La Bussière, the actor, who had become clerk of the Revolutionary tribunal, and destroyed some of the papers which were to be submitted to the tribunal? (La Bussière is the hero of Sardou's "Ninth Thermidor.") Josephine certainly thought so, for on the 5th of April, 1803, she was present with the French Consul at an extraordinary representation given at the Porte Saint-Martin for the benefit of La Bussière, and sent 100 pistoles as the price of her box. The legend will have it that Josephine was to appear before the Revolutionary tribunal on the 10th Thermidor; that she had already cut her hair for the scaffold. What is certain is, that her life was a question of a few days, a few hours, almost. She was very pusillanimous, and did not attempt to appear heroic; she cried often, and tried with cards to divine what her fate would be. She was one of the first persons set free; she left the Carmes on the 19th Thermidor. When her name was called, all the prisoners applauded; she had made herself very popular while in prison.

Who were her protectors? Mme. de Fontenay, the future Mme. Tallien?—M. Masson does not so believe. He speaks of Hoche,

who left the Conciergerie on the 16th Thermidor, of Réal, of Barrère, of Tallien; they probably all had reasons for protecting Josephine. "It has been affirmed," says M. Masson, "that, on leaving the prison, she became the mistress of Hoche." Barras so stated, pretending that Josephine wanted Hoche to divorce in order to marry her, and that Hoche answered that it was all very well to take for a moment a *cotin* for a mistress, but that it was absurd to take her for a wife. He also puts in the mouth of Hoche this phrase: "It was natural in prison before the 9th Thermidor to have known her intimately. Once at liberty, it would not have been pardonable." The one thing certain is, that Hoche left the prison two days before Josephine, that twelve days afterwards he was made General-in-chief of the army of the coast at Cherbourg, that he took young Eugene on his staff.

Josephine remained alone with Hortense. She had no money, and could receive nothing from Martinique. She obtained some help from a M. Emmery, a banker of Boulogne, who had long been in relations with her family. At this period she became intimate with Madame Tallien, and through her with Barras. In August, 1795, she was able to take a little hôtel in the Rue Chauteraine; she was the mistress of Barras, who after the 9th Thermidor was the real master of the Republic, and would remain so till the 18th Brumaire. She belonged to the set which surrounded Barras at the Luxembourg, and was composed chiefly of ladies of the old régime. Barras had a country house at Chaillot, where Josephine did the honors. M. Masson gives the text of an invitation of "Citoyenne Beauharnais to Citoyen Réal," asking him to dine at Chaillot; "les Citoyens Barras et Tallien doivent aussi s'y trouver." It was in this milieu that Gen. Bonaparte found Josephine. Love is said to be blind; Bonaparte certainly was when he fell in love with Josephine—he received what the French call the *coup de foudre*; his passion was sudden, uncontrollable. She found him *drôle*, he amused and interested her; she thought she was conferring a favor on him when she consented to marry him. The last chapters of M. Masson's interesting volume tell the whole story of this extraordinary marriage. Once the wife of Bonaparte, Josephine enters into history.

Correspondence.

THE ADJUTANT-GENERAL'S DEPARTMENT AND THE HULL BILL.

TO THE EDITOR OF THE NATION:

SIR: In your recent denunciation of the so-called Hull Army Reorganization Bill you have fallen into several errors of fact which, to the minds of fair-minded persons, must, in a large degree, vitiate the conclusions you reach as regards the shortcomings of that measure. One of these errors, which occurs on page 1 of your last issue, is so glaring as to call for special remark. Speaking of the draftsmen of the bill—General Corbin and the officers of the Adjutant-General's Department—you say that nearly every one of them would obtain promotion under it. Nothing could be further from the truth. Not only would not "nearly every one" of the officers mentioned obtain promotions under it, but it is

an easily verifiable fact that *but one* would have been advanced in consequence of its provisions, had it become law. That one, Major Thomas H. Barry, now at Manila, the Adjutant-General of the Department of the Pacific, an officer who has been commended to the President for his meritorious conduct by both Gen. Otis and Admiral Dewey, had no hand in the framing of the bill.

The Adjutant-General's Department, having always been noted for championing the rights of all branches of the service, and especially those of the line, is naturally proud of its traditions. Hence it is a cruel thing to cast unjust aspersions upon the motives of its officers, all of whom were captains of the line with highly meritorious records when appointed to the Department.

Will you kindly give the requisite space to this note, and oblige one who has been a constant reader of the *Nation* for the past twenty-five years?—Yours faithfully,

THEO. SCHWAN.

ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, D. C., February 25, 1899.

[With no intention to misrepresent, we regret having given occasion for this reproof.—ED. NATION.]

TEMPORA MUTANTUR.

TO THE EDITOR OF THE NATION:

SIR: I find on page 552 of the *Century* for August, 1889, in the "Life of Abraham Lincoln" for which Mr. Hay, our present Secretary of State, holds himself responsible, an illustration of what he calls "human stupidity." It is taken from the declaration of principles of the "Knights of the Golden Circle" of 1864. He quotes what he calls "the following muddled and brutal sentences":

"In the divine economy, no individual of the human race must be permitted to encumber the earth, to mar its aspects of transcendent beauty, nor to impede the progress of the physical or intellectual man, neither in himself nor in the race to which he belongs. Hence a people . . . whom neither the divinity within them nor the inspirations of divine and beautiful nature around them can impel to virtuous action and progress onward and upward, should be subjected to a just and humane servitude and tutelage to the superior race until they shall be able to appreciate the benefits and advantages of civilization."

This was in '89. It is now '99. I cannot help calling to mind what dear old Dr. Bartol of the West Church, Boston, said one Sunday at the close of his sermon: "And now, my brethren, this is what I think about this subject to-day. What I shall think about it next Sunday, the Lord only knows." G. R. W.

WISCONSIN, February 20, 1899.

[The passage quoted above will be found also on p. 3 of volume viii. of the *Life*.—ED. NATION.]

THE CONSUMER PAYING THE TAX.

TO THE EDITOR OF THE NATION:

SIR: "The wayfaring man, though not a fool," has an excellent illustration of the practical working of the above theory, if he be fond of smoking a pipe. By the change in the tax, the revenue stamp heretofore attached to the four-ounce bale of tobacco is now used on a package weighing three and one-third ounces. As the retail price re-

mains the same, the buyer loses one-fifth the weight of his purchase—or twenty per cent. of the price paid is transferred from his pocket to the pocket of the manufacturer: quite a royal sum with which to meet the new tax on tobacco. CONSUMER.

BALTIMORE, February 23, 1899.

A RECTIFICATION.

TO THE EDITOR OF THE NATION:

SIR: The following note, which occurs on page 22 of my inaugural, delivered here (in Oxford) October 20, 1898, concerns a scrap of history which is by no means dead. The flat contradiction to my Preface (in the first volume of the 'Sacred Books of the East') survives, and is repeated to-day, in certain quarters, to my annoyance and discredit. If you will reprint it, I shall be obliged.

This is the first public rectification of this by no means trivial matter which has appeared; and I think that fair-minded people will say that it is by no means uncalled-for and is not ill-timed.—Yours truly,

L. H. MILLS,

Professor of Zend Philology in Oxford.

February 9, 1899.

"Yet there appeared so long afterward as 1895, actually in the *Annuaire* of the University of Paris, [and also in the *Revue Bleue*,] the extraordinary remark: 'Avec cet oubli de soi (!) qui caractérise le vrai mérite. . . il [Professor Darmesteter] céda à M. Mills l'honneur d'achever la publication,' and distinctly gave the impression in some other words that I suggested (!) the arrangement. The exclamation-points are my own. This very singular version of the facts lingers in Paris to contradict me till this day. The renderings afterwards published in my *Gāthas* (let me repeat once for all) were in Professor Darmesteter's possession in an unfinished condition, though provisionally printed, and he wrote pointedly asking me to repeat them in the book which he was urging me to write as his continuator: 'Vous n'avez qu'à détacher de votre travail [the *Gāthas*] la traduction rythmique avec quelques notes explicatives et le mot-à-mot [Latin] quand vous en écarterez trop. Cela vous prendrait infiniment peu de temps, puisque le travail est déjà fait. . . Dans l'espoir d'une réponse favorable' (November 5, 1883, some sixteen years ago)."

THE CASE OF THE CARPET-BAGGERS.

TO THE EDITOR OF THE NATION:

SIR: The new novel called 'Red Rock,' by Thomas Nelson Page, has again brought up the old question of Southern reconstruction and the Northern carpet-baggers. It shows how hard it is to write history that so able a man, and one who obviously wishes to be candid, should yet leave out of sight some of the essential points on which the whole matter turned. The author has the candor to make two of the worst men of his story, Still and McRaffe, Southerners, while one of the best is a Northern settler, Major Welch. This shows that he wished to be fair; and yet he absolutely overlooks two points which make the key to the whole situation.

The first of these points is the fact that negro suffrage was absolutely the only method by which the negroes, who had proved almost the sole Southern friends of the Union, could be protected in their most ordinary rights from those who had tried to destroy it. Anything less would have been an act of desertion on the part of the nation which would have disgraced it for ever. The fact of this necessity will be clear to

any one who will read the reports of the conventions called in 1865 by President Andrew Johnson to repeal the secession ordinances and reorganize the Southern States. A good abstract of these conventions will be found in a book called 'The South Since the War,' by Sidney Andrews, a newspaper correspondent of the highest character (Boston: Ticknor & Fields, 1866). He shows conclusively that the apparent object of all these conventions was to keep the negroes in a condition just as near slavery as possible; to limit their right of contract, their right of locomotion, and their range of labor; to have, in short, a separate negro code. It was even proposed in the South Carolina Convention that, "The Legislature shall have power to make laws applicable to colored persons alone, and shall enact such laws as are needful to prevent negroes and persons of color from engaging in any business or pursuit but such as involves manual labor, mining, road-making, agriculture, and the production of naval stores" (Andrews, p. 60). This was not passed, but the general tone of all the legislation was in the direction of "some system of peonage or apprenticeship" (p. 178). The conclusion of Mr. Andrews, who was anything but an extreme abolitionist, was as follows: "If the nation allows the whites to work out the problem of the future in their own way, the negro's condition in three years will be as bad as it was before the war" (p. 225). This he writes after attending the conventions in three Southern States in the very year (1865) in which the scene of 'Red Rock' is laid. In view of these facts, the enfranchisement of the blacks was a simple necessity. It followed logically from the attitude of these Southern conventions.

Again, it is equally unquestionable that the persons mainly responsible for the misdeeds of the so-called "carpet-baggers" were the people of the South themselves. There never was a Western State which received into itself a better class of immigrants than those who entered the South after the civil war. In both cases there was, of course, a mixture of good and poor elements; but from the beginning, in the Western States, this material was sifted by natural processes and the fittest survived. In the Southern States, on the other hand, the immigration was equally sifted, but in the reverse direction, by the bitter hostility of the former slaveholders, who were equally intolerant to the best and the worst. I myself was at the South on military duty, from 1862 to 1864, and saw the beginning of the whole process. I knew, then and afterwards, repeated instances of men of the highest character who came in good faith to bring their capital and energy to South Carolina or Georgia, but who were simply frozen out by the bitter hostility of those among whom they purposed to live. Instead of being welcomed and encouraged, such men found themselves received with suspicion and aversion; and it was a common thing for well-dressed women to hold away their skirts from touching them as they passed in the street. The very people who came to them to borrow money would ostentatiously exclude them from their own doors. Under these circumstances, no man of self-respect could think of bringing his wife and children to such an atmosphere; and the men of the better class who would have been useful citizens more commonly sold out their purchases at a sacrifice and went North again.

The cheats and bullies, on the other hand, were less scrupulous, and stayed to revenge themselves amply on their persecutors. It must, therefore, always be borne in mind—though it seems to be easily forgotten—that the typical carpet-bagger, of evil reputation, was simply the man who was left behind to do mischief after the better class of immigrants had been driven out.

THOMAS WENTWORTH HIGGINSON.
CAMBRIDGE, MASS.

[We review this novel on another page. Mr. Higginson, we should say, expects too much accuracy from a writer of fiction. To wish to be candid and to give a general impression of candor is as much as should be demanded. In the novel it makes no difference whether the carpet-bagger was a pioneer or the "man who was left behind to do mischief." Mr. Page's Leech seems to be an excellent example of the "typical carpet-bagger of evil reputation." It is not the novelist's business to discuss points. Mr. Page does not argue about the imperative necessity of granting negro suffrage; he just shows by illustration how impossible it was at that time for the remnant of the old South to endure negro supremacy. The intolerance of Southerners for Northerners, and the incivility of the Southern women, are duly noted by Mr. Page and used in several scenes.—ED. NATION.]

THE LIMITS OF OUR KNOWLEDGE.

TO THE EDITOR OF THE NATION:

SIR: Your classical readers may recall Blass's witty use (Kühner, *Græch. Gramm.*, II., p. xii.) of the fact that the Greek plus-perfect has changed its forms, so to speak, since our school-days. We discovered within ten years how Demosthenes said, "We had seen." Are there similar gaps in our Ciceronian phrase-book?

On my table lie harmoniously three large grammars, each written by an American scholar of European reputation, each apparently just perfected with the aid of competent younger eyes. One at least claims to be "complete." Let us raise, for instance, the question, how to express, "The general says the rebels will be easily conquered," or "He says I shall be heard." Lane (p. 127) provides the desired infinitive, (*Dicit me*) *audire* *iri*, and explains it clearly (section 2278). But on p. 123 the same form from *monere* is starred, and noted, "not used." So, too, with *laudo*, *rego*, etc. Several hundred pages later we find, in fine print (section 2283), that *fore ut moneretur* is the proper form, if *monere* had no supine. And had it? Presumably not; yet who knows? And what of *amo*, or any verb not here displayed in full? We find no hint.

Harkness (p. 89) gives *monitum iri*, etc., unstarred, and later (633.3) emphasizes the regularity of the form. Yet the very next section warns us that "supines in -um" are "not very common," and cites Dräger for the fact that, in all extant Latin texts, only fifty-seven verbs form this infinitive. At 619.3 we hear that the alternative, *fore ut moneretur*, etc., is itself "somewhat rare." So we must choose between two forms, one rare, the other limited to a few verbs; and we

must make the choice by a shibboleth to which we ourselves cannot reply, viz.: "Did you, oh verb, have a supine?" It is more than doubtful if it could be worked any way, since not one verb in three, known to have a supine, makes this infinitive with it.

The Gildersleeve-Lodge proves no Oedipus. These grammarians cling to the "supine system" (though incidentally mentioning that there is no such thing). To them *monitum iri* and *audire* *iri* are alike regular. They say, however (section 248), that *fore ut moneretur*, etc., is "more common." This grammar apparently omits—probably by accident—to mention that for most verbs no supine has ever been found. It does make, however, the important remark that *fore ut*, etc., does not occur at all in "early Latin" (248 N. 1.)—that is, our chief masses of colloquial Latin, in Plautus and Terence, never use the idiom once! This, with Lane's "not used" affixed to the supines of our commonest verbs, actually bars both doors.

Dräger says that 179 verbs form supines. But that simply means that in all ages and authors only so many have been discovered. Whether *amatum*, *monitum*, *rectum*, would have been intelligible, familiar, acceptable, to Cicero's or Quintilian's ear, I suppose no one knows. Nor do we know how they would have formed the future infinitive passive of the commonest Latin verbs. It is my impression that no one ever will know.

Such accidental limitations we may strike in any direction. In German, French, Italian, we can refer to living usage, or, if no suitable form exists, it may even now be possible to develop one. In both these respects Latin is, by comparison, *dead*. A form that does not chance to occur in extant ancient authors is lost for us. If a word, a construction, an idiom, is lacking to express our thought, there is no one to supply it from his living knowledge, or to create it. Suppose that, upon some well-fought athletic field, I wish to confide to my Latin colleague the traitorous doubt, "I think our boys will be beaten." Nothing could be simpler; but who can be sure that any Roman would say either *Credo nostris victum iri*, or *Credo fore ut nostri vincantur*. "Free composition" in Ciceronian Latin is good mental gymnastics, perhaps, like trying to talk wholly in words of one syllable, or in words not containing the vowel *a*; but the truth should be frankly faced, that at every turn we may come to things that cannot be expressed at all, and we never know that any idiom or combination, not actually used in Cicero's writings, would be approved by him.

WILLIAM C. LAWTON.

ADELPHI, February 20, 1899.

Notes.

'America in the Far East' is the title of a work in preparation for A. S. Barnes & Co. by the Rev. William Elliot Griffis.

A new novel by Beatrice Harraden, to be published in this country by Dodd, Mead & Co., will be called 'The Fowler,' upon reconsideration of the author's first intention to call it 'I, too, have passed through Wintry Terrors.'

Henry Holt & Co. will publish immediately Lavignac's 'Music and Musicians,' translated by William Marchant, with numerous illustrations; and 'The Rapin,' a Parisian novel, by Henry de Vere Stacpoole.

'Strong Hearts,' three novelettes by George

W. Cable; Hilaire Belloc's 'Life of Danton'; 'How to Know the Ferns,' by Mrs. Frances T. Parsons; 'On the South-African Frontier,' by William Harvey Brown; 'A Texas Ranger,' of the old days, by N. A. Jennings; and 'Mezzotints in Modern Music,' by James Huneker, are in the press of Charles Scribner's Sons.

Macmillan Co. will soon have ready 'The Distribution of Wealth,' by Prof. John B. Clark of Columbia University.

The New Amsterdam Book Co. announce 'The British Empire,' by Sir Charles Dilke; 'Animals of To-day,' by A. J. Cornish; and Poe's 'A. Gordon Pym,' illustrated by A. D. McCormack, to be followed by others of his prose tales similarly treated.

Little, Brown & Co., Boston, and Groscup & Sterling Co., New York, announce an edition in English of the works of Alphonse Daudet, to embrace all the novels, romances, and literary reminiscences. Among the translators is Katharine Prescott Wormeley, who will do the Tartarin series and several of the other volumes. The general introduction will be written by Brander Matthews. Full-page photogravures by Goupil, from new pictures by French artists, will embellish the series.

Miss Ellen Larned, the well-known historian of Windham County, Conn., will, if sufficient support be assured, issue 'Historic Gleanings,' in the same county. Subscriptions may be sent to Preston & Rounds Co., Providence, R. I.

Julius F. Sachse, No. 4428 Pine Street, Philadelphia, solicits subscriptions for a work of his now in press, entitled 'The German Secretaries of Pennsylvania, 1720-1800: A Critical and Legendary History of the Ephrata Cloister and the Dunkers.' Facsimiles of all title-pages emanating from the "Ephrata (Kloster) Press," together with initial letters and head and tail-pieces after drawings made and used at the Cloister prior to 1750, and music scores written there, portraits, etc., will quaintly embellish the work, which is a continuation (in two volumes) of the same author's 'German Pietists of Pennsylvania.'

The Century Co. has published in book form an account of the destruction of the U. S. S. *Maine*, given in the form of a narrative by her late commanding officer, Captain C. D. Sigbee. The material composing this book has already been published in the *Century Magazine*, and offers practically nothing new or much above the commonplace. The destruction of the *Maine* will in time become one of the footnotes of history. Although, properly speaking, not one of the causes of the late war, it so accentuated the situation as to make war more probable. Captain Sigbee's celebrity arose partly from the great misfortune with which he was so prominently identified, and partly from the admirable way in which he met the disaster in his communications to the Navy Department.

Volume 4 of the Groton (Mass.) Historical Series is just completed by the issue of No. 6, which announces the discontinuance of the publication, and is accompanied by an admirable index to the four volumes, covering sixty closely printed pages. It is a fit occasion to call attention to the remarkable example of devotion to the spirit of local historical research furnished by Dr. Samuel Abbott Green, a native of Groton, and now Librarian of the Massachusetts Historical Society, in the editing and publishing of this series. The four volumes contain almost exactly 2,000 large octavo handsomely printed

pages, filled with all manner of historical and descriptive detail. In the table of contents of volume iv. we note such items as: Groton church records; mocking-birds in Groton; a wild deer in Groton; the old stage-coaches; the Groton post-office, etc. There have also been published by Dr. Green, and edited with the scrupulous fidelity characteristic of the man, at least four volumes: 'Groton Records, 1662-78' (and later edition, 1662-1707); 'Groton during the Indian Wars'; 'Groton Epitaphs'; 'Boundary Line of Groton,' and a large number of pamphlets not included in the Historical Series, most important of which are Dr. Green's historical addresses on several occasions, notably at the "Centennial" celebration July 4, 1876. It appears that Dr. Green has thus edited and published since 1875 considerably more than 3,000 pages of local history. When it is considered that his town is not, like Lexington or Concord, prominent in the history of the State or of the nation, and that its population at present is only about 2,000, it appears doubtful whether any other town of equal size and relative importance has ever witnessed such filial devotion. A very few sets of the Groton Historical Series remain unsold, and are in the hands of Mr. George E. Littlefield, No. 67 Cornhill, Boston.

It was a beneficent thought on the part of Prof. Albert H. Smyth to rescue his paper on the Apollonius story from the literary isolation of the Proceedings of the American Philosophical Society, and reprint it in book form, under the title, 'Shakspeare's Pericles and Apollonius of Tyre: A Study in Comparative Literature' (Philadelphia: MacCalla & Co.). In this volume of 112 pages the curious reader will find all that he is likely to learn upon the origin of the story, its ramifications in mediæval literature, especially in the literature of England, its adaptation in the semi-Shaksperian drama of "Pericles." To quote the author's words, "For ten years I have followed the story through the libraries of Europe, collecting MSS. and examining incunabula from Copenhagen to Constantinople." His study is thus straight from the sources. It is an admirably clear and exhaustive treatment of a complex subject. After a pretty searching inspection, we are satisfied that the author has left no line of investigation unpursued. His work is indeed a study in comparative literature: patient, painstaking, free from bias, with a distinctive gift of literary appreciation which raises it above the usual German monograph—for example, Singer's on the same subject. It is readable and stimulating; whereas Singer's lucubrations are labored and at times perplexing. Prof. Smyth's investigations and conclusions are, we happen to know personally, quite independent of Singer's. His work is all his own. We greet it as a fresh evidence of American capacity for original research.

A monograph entitled 'Théophile et Paul de Viau: Étude historique et littéraire,' by M. Charles Garrisson (Paris: Picard), presents in complete, though somewhat dislocated, form the leading events which marked the dramatic lives of the two brothers. The author, while making no attempt to mask his religious convictions, deserves commendation for the objective way in which he discusses the burning question that disturbed France in the early years of the seventeenth century; in this he succeeds so well that the total impression of the work is colorless. Its chief interest lies in the re-

vival and elaborate examination of an hypothesis suggested so long ago as 1839 by the late Philartète Charles in the *Revue des Deux Mondes*. According to this, the imprisonment of Théophile de Viau in the Conclergerie "dans le cachot du récidive Ravallac" (1623-1625), was not occasioned solely by the shamefulness of his contributions to the 'Parnasse Satyrique' nor, again, by the malignancy of the Jesuit order, whose members the poet had handled without measure. M. Garrisson, after careful investigation of external, but shadowy, contemporary evidence which seems to agree both with the poet's covert admissions in his famous "Épître d'Actéon à Diane," and with his subsequent professions of regret where it was due, arrives at the conclusion that Théophile fell a victim to the notorious jealousy of Louis XIII. by expressing a too undisguised devotion to Anne of Austria. Although M. Garrisson's arguments appear plausible enough, he would have given stronger support to his thesis by attempting to explain why the persecution of the poet lasted only two years. As the case stands, we are offered nothing more than the conjecture that the royal anger waned in that time, and the statement that before his early death Théophile de Viau was permitted to attend the *coucher du Roy*.

Among interesting smaller publications which have lately come to our notice from abroad is one from Germany on "The Language of the Soldier" (*Die Deutsche Soldatensprache*). It is by Dr. Paul Horn of the University of Strassburg. Dr. Horn is a distinguished Persian scholar and philologist; but he serves every year, for a time, as an officer in the Kaiser's army, and he has made a very interesting collection of the phrases, terms, jargon, and dialectic usages that are peculiar to the German soldier from the cannon's mouth to the darts of Cupid's quiver. The book is useful and instructive, and it is written in an entertaining style.

The historic publishing-house of Cotta, in Stuttgart, issues each year, under the title 'Musen-Almanach,' a collection of new poems from the best modern writers in the Fatherland. The annual for 1899 has been edited by Otto Braun, and between its covers are contained specimens from most of the leading living poets, especially epic and lyrical. Among these writers are found Felix Dahn, Max Haushofer, Hans Hoffmann, Hermann Lingg, Wilhelm Jensen, and perhaps a dozen others. In addition, the volume contains two prose contributions, one by Stern and the other by Aarhus. The book is brought out in splendid shape, and is one of the very best annuals of the many published in Germany.

The special features of the February Bulletin of the Boston Public Library are lists of recent additions to the statistical department—a term apparently of very wide application; works in the Polish language; and titles of books, addresses, and articles in current magazines and newspapers on the policy of territorial expansion. The expediency of printing a page and a half of titles of newspaper clippings is very questionable, when a single entry would have given all necessary information.

Bulletin No. 19, vol. iv., of the New York State Museum at Albany is a guide to the geological collections, based upon Lincklaen's 'Guide' of 1861, but in a large measure new. It is accompanied by a colored relief map of the State, showing the boundaries of the geological systems, but its character as a gene-

ral introduction to geology is greatly enhanced by a series of admirable photographs illustrating the text. These are scenically interesting, while portraying faithfully plain and mountain; glacial phenomena; rock strata, dikes, and folds; shores, gorges, falls, markings on sandstone, etc.

The Cyclopean ruins in the Caroline Islands are described by F. W. Christian in the February *Geographical Journal*. The most important of these are the remains of a "Micronesian Venice" in the lagoon of Ponape, consisting of fifty or sixty islets, "mainly artificial in formation," and occupying an area of about nine square miles. They are defended from the sea by a massive breakwater. The material used is basalt, which was brought a distance of twenty or thirty miles in immense masses—one piece has been found weighing three and a quarter tons. On one island a great wall, thirty feet high by ten feet thick, "formed of basaltic prisms laid alternately lengthwise and crosswise," encloses an oblong space strewn with fragments of fallen pillars and containing a "great central vault or treasure-chamber, said to be the grave of an ancient monarch, who bore the dynastic title of Chau-te-Leur." Some excavations were made, but the only finds of importance were "ten or twelve ancient axes, three of them about a yard in length, rubbed down from the central shaft of the *Tridacna gigas*, or giant clam." On Ponape itself was discovered an ancient cemetery in which were nine graves, "little vaults not exceeding four or four and a half feet in length within—roofed in with massive slabs of basalt," the graves of dwarf negritos, a race probably anterior to the builders of the giant masonry. Useful tables are given by Mr. J. Milne, F.R.S., showing the differences between the time used in various parts of the world and Greenwich mean time. We notice that he incorrectly puts Georgia and Florida in Eastern time. Mr. G. P. Winship of Providence contributes a note upon the evidences that Sebastian Cabot "visited the ice-bound seas in the years 1508-1509."

Miss Flora L. Shaw, the *Times* special correspondent, in a paper read before the Royal Colonial Institute of London, describing her trip to the Klondike, bears emphatic testimony to the remarkable honesty and uniform courtesy of the gold-seekers, of whom more than 27,000 crossed the passes last year. Though travelling quite alone, "I had not been three days in the country before I realized that a revolver was about as likely to be useful as it would be in Piccadilly." The great need of the country is the presence of woman as a home-maker. "The absence of homes," she says in a striking passage, "in such a place as Dawson explains to a great extent the existence of anloons; and in noting the contrast between the splendid qualities exercised in the effort to acquire gold and the utter folly displayed in the spending of it, it was impossible to avoid the reflection that, in the expansion of the Empire, as in other movements, man wins the battle, but woman holds the field." In closing she referred to the fact that, notwithstanding almost overwhelming difficulties, not the least of which were "unfortunate mining regulations and other conditions of a generally stultifying description," the average gain of the 4,000 actual workers during the past season was about \$3,000.

The publishers of the *Allgemeine Zeitung* of Munich have at last consented to receive

separate subscriptions for the famous literary and scientific supplement to that influential journal. This *Beilage* holds a unique position as the depository of much of the leading literary researches and discussions in Germany. As a scholarly journal for the educated world at large, it is the only specimen of its kind in existence. A large number of the best university men and other specialists contribute to its pages. It was in this *Beilage* that Döllinger published the famous "Janus Letters" during the Vatican Council of 1870. The subscription price for Germany is 4.50 marks, and for foreigners 7 marks per quarter year.

The year just past, aside from other astronomical curiosities, surpassed the record in cometary astronomy, no less than ten comets having been observed. Three of them were returning periodic comets, but seven were new, and two were discovered by photography. It is no new thing for a year to have as many as seven comets, but 1858 is the only previous year that has had so many as eight. The present year will perhaps afford us a great and conspicuous comet, none having appeared for already seventeen years, and the previous half-century having been favored with one very remarkable comet, on the average, every ten years. At least four comets of lesser importance, and of the periodic type, are expected in 1899, three of them in the coming summer. The first is the one originally discovered in 1858 by Mr. H. P. Tuttle, with a period nearly fourteen years, and the next is the second periodic comet first seen by Herr Tempel, while at the Brera Observatory in Milan in 1873, its period being five years and three months. The third is a faint and much extended comet discovered by Mr. Holmes in 1892, which will be remembered as puzzling the astronomers for many weeks by seemingly remaining stationary among the stars, thus giving the impression of coming straight towards the earth. Its orbit finally turned out to be remarkable as the closest approach to a circle of all known cometary orbits. The fourth expected comet of 1899 is due in the late autumn, and is the one first discovered at the Cape of Good Hope by Dr. Gill's first assistant, Mr. Finlay, in 1886, and this will be its second reappearance. All these comets belong to the Jupiter family, this giant planet having been concerned in their capture and permanent retention in the solar system.

An eclipse committee, with Prof. Newcomb as chairman, is gathering information regarding intended observations of the total eclipse of the sun which will occur on May 28, 1900, along a line reaching northeastward from New Orleans to Norfolk, and thence across the Atlantic, Spain, and Algeria. Totality is but brief in duration; still, it is expected that many observers will take part, although less can be done than if a longer duration were available. Observers will probably prefer stations east of the Alleghenies, as to the west of those mountains the duration will range from 1 minute 30 seconds near the mountains, to 1 minute 13 seconds near New Orleans, where the sun will be much nearer the eastern horizon. The circular of the committee invites the co-operation of astronomers generally as to measures to be taken to secure observations of the eclipse on a well-concerted plan, the classes of observation to be considered most important, and the best means of making them, together with information as to parties

expecting to coöperate in the work, and how the necessary funds for prosecuting it are to be raised. Similar problems confronted American astronomers in face of the previous eclipses of August 7, 1869, and July 29, 1878, on both of which occasions fine series of observations were secured, as also during the California eclipse of January 1, 1889. Cloud conditions, as already investigated, are, however, by no means so favorable as at those dates.

The Baltimore Association for the Promotion of the University Education of Women, whose purpose is "to secure for properly qualified women opportunities for advanced study," offers a foreign fellowship of the value of \$500 for the year 1899-1900. Preference will be given in the award of this fellowship to Maryland women, or women who have identified themselves with educational work in Maryland. Candidates must present the same evidences of ability and fitness as are required from applicants for the fellowships offered by the Association of Collegiate Alumnae. The committee on award for the Baltimore association are Mrs. Fabian Franklin, No. 1507 Park Avenue; Miss Edith Hamilton, Bryn Mawr School; Mrs. John Helmsley Johnson, No. 1031 North Charles Street; Dr. Mary Sherwood, "The Arundel"; Dr. Lillian Welsh, the Woman's College. Applications should be presented before March 25.

The Association for Maintaining the American Women's Table at the Zoölogical Station at Naples offers a scholarship to such as wish to study there, and will furnish the necessary information through the Secretary, Miss Ida H. Hyde, No. 1 Berkeley Street, Cambridge, Mass. "Well-qualified women will be appointed in preference; but if no suitable women present themselves, men will be eligible in their stead." The only other American tables are the Smithsonian and the University.

An excellent photographic likeness of that fine old actor, the late Charles W. Coudock, has been issued by F. Gutekunst of Philadelphia, in his imperial panel series of public characters. The expression of the face is eminently characteristic, and the peculiarity in the setting of the eyes most artfully concealed, without any sacrifice of truth.

The death at the age of seventy-seven, in Tokio, January 19, of Katsu Awa, removes the ninth and last of that brilliant band of men who stood in the forefront of the nation's history in 1868, at the fall of the Shogunate and the resumption, after nearly seven centuries of abdication, of imperial executive powers. Katsu's great-grandfather began life with a handful of "cash"—fractions of a cent—and ended it as a millionaire, able to lend to the daimio of Mito a sum representing \$5,000,000 of our current money. When, in 1854, Commodore Perry's marines and sailors landed from the fleet on the strand at Yokohama, Katsu, a soldier on the hill, as we have heard him tell the story, was then and there converted into a modern Japanese. He made up his mind that the men who could build and equip such ships and make locomotives and telegraphs could not be "barbarians." Studying gunnery and navigation under the Dutch at Nagasaki, he commanded and successfully navigated across the Pacific the first Japanese steamer, *Kowrin*, bearing the embassy sent by the Premier Ii, who was promptly assassinated for his action in signing the treaties. As the Shogun's and the

Mikado's Secretary of the Navy, Katsu was largely instrumental in making Japan's modern marine. In 1868 he saved the city of Yedo from the war-torch, and prevented a bloody conflict between the Shogun's retainers and the southerners led by Saigo. He was among the first to send a son to this country for education, and the youth studied at Rutgers College and the Naval Academy. Katsu wrote an outline of the modern intercourse of his country with other nations and a history of the navy of Japan, besides other works which showed the polished scholar. He resigned twenty-five years ago from active administrative office, but has since been one of the most valued private counsellors of the Emperor.

—Very amusing is the amount of argument as to when the twentieth century properly begins. Not only is space in the periodical press of this country and Europe given up to surmises, with adduced proofs for one or the other year of beginning, but verbal demands to settle the question at once, and finally, greet the astronomer at every turn, while bets among the rustic youth of hill-towns flourish gayly. In the current number of the *London Observatory* reference is made to an interview recently granted by the Astronomer Royal on this absorbing subject, and its subsequent burlesque in *Punch*. It seems that village wagers have an honorable precedent in the bet between two eminent Scotch lawyers as to the century to which the year 1800 belonged. They referred it for arbitration to the Lord Dean of Guild, and in 1870 gave a merry dinner at Glasgow, where evidence was taken and a decision reached. A pamphlet printed the same year for private distribution gives a humorous account of the occasion. The outcome, easy to foresee, was that 1800 belonged to the eighteenth century, one of the proofs adduced being the dictum of Sir John Herschel, that there never was a year 0, but that A. D. 1 followed immediately B. C. 1; and another the astronomical announcement that Ceres—first found of the now multitudinous family of small planets—was discovered on the first day of the new century, January 1, 1801. Of course the other side brought forth arguments, but, as their sponsors thought more upon the subject, some were afterwards withdrawn. Besides this amusing little pamphlet, the proper arrival of the nineteenth century was of such interest in Germany that a bright play upon the subject was written by Kotzebue. And that the beginning of the twentieth century differs in no wise from its predecessors, is maintained by the Astronomer Royal, who gives his evidence for January 1, 1901, as the first day of that rapidly approaching era.

—A careful reading of Mr. Henry Jones Ford's 'Rise and Growth of American Politics' (Macmillan) leaves us somewhat in doubt as to the precise object the author has had in view, and the class of persons for whom he has written. Neither a constitutional history nor a narrative of events, the book is a brief examination of some of the political notions prevalent in the colonies, and the changes which they underwent in the early years of the constitutional period; with the aim, apparently, of explaining the origin and growth of certain political principles and their resulting methods. The earlier chapters, tracing the development of political ideas from their colonial origins to the establishment of the conven-

tion system, are written in a style at once serious and epigrammatic, and throw light into a number of obscure corners. Particularly interesting are the comments on the political relations between aristocracy and democracy, and the nationalizing influence of party. The later chapters on Congress and the Executive are mainly descriptive accounts of slight importance, though enlivened by a number of fresh illustrations drawn from recent events. At the end we have three chapters of speculation as to our political future. The present divided responsibility for legislation and administration, and the popular hope for a strong Executive to hold Congress in check, will, Mr. Ford thinks, tend ultimately to centralize authority in the legislative department of the Government, and give us, in place of our present organization, a system of ministerial responsibility similar to that which prevails in England. To employ a much overworked term, Mr. Ford's book is suggestive rather than informing, and the net impression it leaves is unsatisfactory; still, it will prove not unprofitable reading to any one whose knowledge of American history is fairly extensive.

—Mr. H. Gee's 'Elizabethan Clergy and the Settlement of Religion' (Oxford: Clarendon Press; New York: Henry Frowde) is a minute and painstaking study of ecclesiastical history between 1558-1564, which was instituted with a special view to ascertaining the number of deprivations which occurred during those years. The figures ordinarily accepted by Protestant historians vary from 189 to 400, while Romanists adhere to Rish-ton's statement that "the better part of the clergy followed in the footsteps of their prelates; very many of them, high dignitaries in the church, were either thrown into prison or banished the realm." Mr. Gee's range is wider, and his scrutiny of the evidence more careful, than that of any predecessor. He has searched all extant Episcopal registers, the Domestic State Papers, the Patent Rolls, the Exchequer Records, and other documents which might illustrate the Visitation of 1559, the work of the Ecclesiastical Commissioners, and the operation of the penal laws. His main conclusion is that during the first eight years of Elizabeth's reign the number of deprivations could not have risen far above 200. According to Camden's 'Annals,' there were at this time 9,400 ecclesiastical dignitaries in the realm, and so it follows, if we accept Mr. Gee's figures, that for every clergyman removed 46 went unmolested. To a public which is familiar with "practical" civil-service methods, this proportion will hardly appear excessive, even if the stress of Reformation politics be not allowed a place among the extraordinary considerations. Numerous lists of removals, more or less detailed, have been drawn up from time to time, since the Elizabethan age, but Mr. Gee finds that they are vitiated by dependence on Nicholas Sanders. His computation is contained in the seventh book of the 'De Visibili Monarchia' (Louvain, 1571), and it is obviously to be accepted with extreme caution. According to Mr. Gee, Sanders, in an "inaccurate and exaggerated way, gave the names of all he knew or had heard of amongst the clergy and laity who had got into difficulties with the ecclesiastical authorities during those years [1558-1564]." This latest actuary of the early Elizabethan deprivations rejects all previous statements, and reaches his own result by using as data the contemporary documents for that period which still remain.

Within a small margin of error, his estimate is probably correct.

—At last, after an interval of three years, the second and concluding volume of the new edition (the third) of Wright's 'Arabic Grammar' (Cambridge, Eng.: University Press; New York: Macmillan) has appeared. There is little need to speak in praise or blame, as the Arabs would say, of such a book as this. It is the best single Arabic grammar extant in any language, and, without doubt, it will be very long before any other takes its place. De Sacy's monumental work, when combined with the commentary of Fleischer, may in some respects be a fuller thesaurus of facts and opinions, but, for all practical purposes, the student of Arabic will need to use Wright. That being the case, the only pity is that the revisers, Robertson Smith for the first eighty-six pages of volume I., and the great Leyden Arabist, De Goeje, for the remainder, did not allow themselves wider liberty in their changes. When Wright remodelled his first edition into his second, the first volume alone received an addition of almost 100 pages; in this third edition there is a reduction (aided greatly, it is true, by compression in printing) of more than thirty. It can hardly be doubted that Wright, if he had lived, would have carried the revision very much further. The additions would have been greater, and the whole would have been recast, probably on the lines indicated by August Müller in his review of the second edition. Thus, as only one example, we have a right to expect some adequate and separate statement of the laws and transformations of Arabic sounds. In Nöldeke's 'Syrische Grammatik' the *Louilehre* fills nearly a tenth of the whole book; in Stade's 'Lehrbuch der hebräischen Grammatik' it fills considerably more than a tenth; in this grammar there is simply none. The book, therefore, must be regarded as a disappointment, in spite of its intrinsic value and of the great improvement which it shows over the earlier editions. It is very good, but it should have been much better. The get-up is excellent and in every way worthy of the press from which it issues; the Arabic type is from the very clear font which was cut for Lane's use in his Lexicon.

—Lord Curzon's first public duty on his arrival in Bombay as Viceroy-elect was to receive a deputation of the provisional committee of the Imperial University, or Research Institute, which it is proposed to establish in India. Mr. Jamsetjee N. Tata offers a capital of thirty lacs of rupees (say one million dollars), yielding an annual income of some forty-odd thousand dollars, as a nucleus for the funds of the institution; and the committee appeal to Government to second their efforts. The annual charge on the several departments, when once fairly equipped, is estimated at about \$500,000. The scheme divides the studies into three groups—scientific and technical, medical and sanitary, and educational and philosophical. Bacteriological research figures largely in the plan, and ought certainly to make a powerful appeal, not only to Government, but to the native princes as well, especially now, while the plague is still raging. No better argument could be given for the utility of the scheme than the marvellous story of the wonders achieved by medical science at Anzop, a little village of less than six hundred inhabitants, in the Turkestan highlands, some two hundred miles from

Samarkand. Anzop lies in a hollow in the mountains at a level of more than fourteen thousand feet above the sea, and so walled in by other surrounding heights that better isolation from infectious diseases could not well be conceived. The plague had nevertheless been introduced there by a "holy person" who had brought back from a long pilgrimage a lot of coverings of tombs of the saints in Afghanistan. These a widow in Anzop had cut into small pieces and made into amulets for "the faithful" to wear on their breasts. It was no great matter for them to remain "faithful unto death," for 381 of the villagers were promptly stricken with plague, and all but three of these were claimed by the Grim Releaser. Dr. Lieven inoculated with Dr. Haffkine's prophylactic every one of the survivors, about a hundred and twenty in all, and then the awful pest was stayed, the last death occurring four days after Dr. Lieven's arrival with his phials of vaccine from a Bombay laboratory. It reads like a miracle even to us; but to the people of this mountain hamlet in Central Asia it must have seemed more than that, and they will doubtless for decades to come worship the St. Petersburg doctor as a god.

RECENT NOVELS.

The Open Question: A Tale of Two Temperaments. By Elizabeth Robins (C. E. Raimond). Harper & Bros.

Red Rock: A Chronicle of Reconstruction. By Thomas Nelson Page. Charles Scribner's Sons.

A Son of Perdition. By W. A. Hammond, M.D. Herbert Stone & Co.

A Sister to Evangeline. By C. G. D. Roberts. Lamson, Wolfe & Co.

The Forest of Bourg-Marie. By S. F. Harrison (Seranus). London: Edward Arnold.

'The Open Question' is a belated specimen of the novel which discusses social problems both disagreeable and dismal. Though the author enters the vineyard at the eleventh hour, she has not been standing idle in the marketplace, but has been scanning and criticising the work of the earlier laborers until she felt competent to scoop all their problems and clear up confused notions about consanguinity, heredity, negro slavery, political corruption, suicide, free will, and doom. She has appreciated the magnitude of her task, and taken plenty of room for argument and for illustration of her views in a summarized history of three generations of a Southern family named Gano, and a particular account of the fourth and last. The summary is not always cheerful reading, but is less distressing than the particular account, because it deals with the Ganos of a pre-scientific age, who recklessly intermarried and died young, ignorant of cause and effect. It is, besides, good narrative—concise, vigorous, and showing a perception of the comic side of human tragedies nice enough to enliven without danger of wounding the tenderest sensibilities. This ability to tell things directly and to characterize persons and scenes reappears in the later chapters at intervals, and sometimes lures us to forget that our duty here is to consider awful questions of race-degeneracy, disease, and death. We elude them with ease in the adventures of Mrs. Gano (the grandmother) among the Boston abolitionists; in some passages of the girlhood of the first Valeria Gano and the childhood of

the second; in one or two scenes of Ethan Gano's youth in Paris, and in those sketches of crude Western society which intrude on the open question in its most poignant phase.

Where so many questions are opened and not one of them closed (for both in argument and illustration the author cautiously avoids finality), one hesitates to assign pre-eminence. The question of the desirability of suicide receives great attention. An Australian lady, pursuing art in Paris, argues fiercely in favor of self-destruction, as if it were a luxury wantonly denied the masses by kings or capitalists. Her audience appears to have little to detain it in this world except instinctive love of life, a dumb force opposing itself resolutely to argument, and not much thought of by the author. She has a far higher opinion of the indifference to life shown by a few Roman citizens who were also philosophers, or disappointed warriors, or disgraced politicians. Like most persons who eulogize the readiness of a few pagans to go out the open door, she seems to suppose that the Roman Empire may have perished through the universal custom of suicide, and she certainly forgets that this example can have no force worth speaking of for the inheritors of two centuries of Christian tradition. Persons of low vitality like Ethan Gano shrink from the responsibilities of life, and to believe themselves capable of seeking death in "high Roman fashion" is to invest themselves with heroic attributes, and so excuse their incapacity for living in any fashion.

Ethan Gano's temperament was the best sort of soil for John Gano's fierce and shallow doctrines of heredity to flourish in. Ethan saw himself doomed to physical disease and mental ineffectiveness by the thoughtless Ganos' habit of intermarrying, and he fled from his cousin Valeria, for he had yielded to this family habit and wished to marry her. Many an ignorant Gano had committed an error which for him, with his new knowledge, would be a crime. His later subjection by the rather intemperate passion of Valeria is not surprising, but what becomes of the doctrine of heredity when a descendant of fervidly religious Southerners and rigidly religious Puritans enters without moral revolt into the compact proposed by Valeria—the compact that involves the question which is supposed to be particularly open? The compact is repulsive, and the question is not open any more than is the question of the assassin's right to stab in the dark or the anarchist's right to throw a bomb. Women who propose to live with a man until a child is about to be born, and then to get up a family holocaust, are quite out of the question. For Valeria Gano the salvation is that, from previous knowledge, no one will believe she ever did it. With her self-will and temper and intense love of life she had no need to resort to ghastly, theatrical tricks to persuade Ethan to marry her; even to persist in letting him see that she wanted him so much would have done it. From the moment that she suggests her inhuman compact, she ceases to be only a self-centred, restless American girl, warranted to turn out all right, and becomes that sort of female horror which has been copyrighted by Ibsen. Miss Robins has been so closely identified with the representation of Ibsen's heroines that they have infected her mind and perverted a naturally clear and sane vision of life. Still, Norwegian

pessimism has not devoured her, or she could not have written one-half of the book (the half which is worth reading and excuses extended notice of the whole); nor could she have drawn so effectively the grandmother of the last of the Ganos. This remarkable old lady is the great figure of the novel. By faith in God and a will to live, in spite of the Gano hereditary disabilities, she managed both to exist and rule for eighty years. Unfortunately for Valeria, she died without having heard a whisper about the compact.

It is to be hoped that Miss Robins may care to shake off the influence of Hedda Gabler & Co. They are not good society, and they and their problems have no profound significance in any country, except, perhaps, in Norway, where the weather is always cold, where people are always poor, and half the year is dark. It will be a thousand pities if these wretched Norwegian women prevail to spoil the makings of an exceptionally entertaining novelist.

The day has already arrived when a novel founded on the civil war has that rather chilling remoteness from contemporary interest which in some degree marks all historical fiction. The passions of those who suffered most have cooled, and the memories of loss and wrong are dim; so the power of vivid emotional presentation which fervid personal feeling gave to certain Southern writers has worn weaker, and they have accepted the judgment of time, which admits two sides to every case. This is a gain for purposes of enlightenment, but a serious loss to a creative art which does not make its first appeal to reason, nor its strongest impression by fair play. Mr. Page's earlier impassioned tales of the war are, therefore, more memorable contributions to fiction than is his well-considered and interesting 'Chronicle of Reconstruction.' Once or twice bygone passion dominates maturer judgment, but that is in the earlier chapters just when the storm is breaking, and before he settles down to his fair-minded chronicle. His account of the state of things at "Red Rock" may stand as an impartial picture of what was going on all over the South for several years after the war. Leech, the carpet-bagger, is a probable portrait of the sort of person who in great numbers abused his authority and brought his official superiors to shame. On the other hand, Middleton and Welch represent those men who, inferior in numbers, and perhaps in force (for the good are notoriously feebler than the wicked), loathed heaping humiliation upon a prostrate enemy and wished only to help in wiping out old scores. Dr. Cary is a fine type of the Southern gentleman who stood for the Union until he was forced by ties of affection and long comradeship to go with his State, and who accepted defeat with dignity and courage. It is a little difficult to believe that he could have been hopelessly crushed by the treacherous and malignant overseer, Hiram Still. Still's machinations for the destruction of his betters make the plot—a very complicated and melodramatic and futile sort of a plot. If many overseers succeeded in routing their masters by similar transparent infamies, that is the saddest testimony to the exhaustion of the old South in both courage and capacity. The attempts at the suppression of base-born ruffians were singularly trivial and ineffective. The Ku-Klux offered the only concerted resistance,

and the conception of that organization appears to have been childish, while its performance was farcical as well as terrible. Resort to the law-courts was, of course, worse than useless if the scenes described by Mr. Page were possible. Such scenes may be among those things in life which are stranger than fiction, but we are not convinced that they are anything better than expedients for winding up a tale. Mr. Page's fiction is not strengthened by their use, and they might even serve to discredit the general veracity of his chronicle.

Dr. Hammond's novel, 'The Son of Perdition,' is a remarkable product of profane imagination applied to the elaboration of some picturesque characters conspicuous in sacred history. Novelists choosing to embroider the plain Gospel narrative of the life of Jesus Christ have hitherto been handicapped by conscience or by tradition, or even by conventional respect for names of persons not in themselves impeccably respectable. Long before beginning this novel, Dr. Hammond must have got rid of sentimental impediments to free interpretation, and reached a point of view which has the possibly doubtful merit of being exclusively his own. The persons about whom his fancy plays most surprisingly are those of whom our knowledge is slight and not wholly creditable—Judas Iscariot, Mary Magdalene, and Sapphira. These three he involves in a wild and not finically decent romance, and for each constructs a character without authority and without aid of any faculty except imagination. But imagination keeps up at high pressure, and so, in spite of a fundamental offence against good taste and in spite of a careless, loquacious style, the book can hold the attention of those whose prejudices in favor of reverence may survive the first shock.

Mr. Charles Roberts, the Canadian poet, is a better writer of descriptive verse than of prose romance. He knows and feels more about the marshes and forests and streams of Nova Scotia than about the human beings who inhabited that province, called by another name—Acadia. In 'A Sister to Evangeline,' the climax is the deportation of the Acadians, a moment so dramatic and emotional that any hack might contrive to convey something of its imperishable pathos. Mr. Roberts has managed to miss it with astonishing completeness. He has no faculty for characterization, apparently no intuitions about human nature. His people are ineffective and superficial in ordinary life, and more markedly so in crises. He has at his command no clever mechanical devices by which a more serious deficiency might be concealed. His plot and paragraphs are as unsubstantial as his characters. His English is not the natural English of any period—closer, perhaps, to seventeenth-century Puritan phrase than any other; a form which does not go trippingly on the tongue of his eighteenth-century Frenchmen. The burden of the drama is borne by a purely artificial and incomparably dull pair, Gról, the Idiot, and La Garne, the Black Abbé. Mr. Roberts appears to be fond of them, for this is the second tale in which they appear. They are perfect bogies, and unless he can shake off their fascination, it will prove fatal to his aspirations as a novelist.

As 'A Sister to Evangeline' does not quicken curiosity about the prose work of Canadian poets, one turns to 'The Forest of Bourg-Marie,' by Mrs. Harrison (Seranus),

with that languid interest that accompanies a foregone conclusion. When, on the very first page, the Yamachiche is associated with Lethe, with spirits that stalk in Plutonian shades, and with an imaginative peasantry, interest sinks to zero. No better compliment can be paid to the author than to say at once that recovery from the depression caused by her preliminary rhetorical flourish is speedy, and that very soon we recognize work done from the life by a keen, truthful observer with a hand surprisingly bold, yet sincerely sympathetic. The plot is romantic, and hinges on the return to his native wilds of Magloire Caron, translated during several years of exile in Milwaukee into a person who hands his grandfather a printed card bearing the inscription, "Mr. Murray Carson, expert in horseflesh." This Magloire is a type of the Americanized Canuck, and is drawn to the life with a frankness no more cruel than he deserves. He is vulgar, vain, shallow, immoral, and saved only by a childlike naïveté from being intolerably offensive. The situation between him and his grandfather (the impoverished but not degenerate descendant of a noble house) is admirably taken, and if the older man appears less vivid and real than the younger, it is because his type is rarer, not because it has never actually existed. Besides the Carons, there are half-a-dozen types vigorously sketched without exaggeration or sentimentality, and with no notion of working them up to an utterly false conception of a picturesqueness inherent in their race and condition. The picturesqueness of the *Canadiens* is largely imaginary, but nobody who meets a humble *habitant* bearing the name of a seventeenth-century gentleman of France can help surrounding him with the atmosphere of romance. In the old trapper, Mikel Caron, Mrs. Harrison gives its full value to this sort of picturesqueness, while of the un-American, pictorial quality of Canadian villages there is a good illustration in the picture of the curé leaning on his garden-gate suavely inviting the great Magloire to enter and view his unworthy hollyhocks. In the make-up of her novel, Mrs. Harrison betrays inexperience. The passages of the Caron family history are cold interpolations; some of the conversations wander unduly, and the catastrophe at the Manoir is too full of sound and confusion. But these defects should be easily overcome by a writer who can give us a book so very much alive.

TWO DANTE BOOKS.

Essays on Dante. By Dr. Karl Witte. (Being selections from the two volumes of 'Dante-Forschungen.') Selected, translated, and edited, with introduction, notes, and appendices, by C. Mabel Lawrence, B.A., and Philip H. Wicksteed, M.A. Boston: Houghton, Mifflin & Co. 1898. 8vo, pp. xxii, 448, 1 plan.

Dante's Ten Heavens: A Study of the Paradiso. By Edmund G. Gardner, M.A. London: Constable & Co. 1898. 8vo, pp. xii, 310.

That the study of law fosters literary ambition and smooths the way to distinction in letters, is a proposition which might be plausibly supported by many extraordinary examples. The history of literature furnishes many instances of those who began their literary careers with Justinian or Blackstone. It is rare, however, to find a man of letters continuing to pursue legal

science as his life's work, as did Karl Witte, the most distinguished, perhaps, of modern Dante scholars. Prof. Witte's life was remarkable in more than one respect. Born near Halle in the year 1800, he was educated by his father until, at the tender age of nine and a half years, he matriculated in the University of Leipzig. Before he was fourteen, he took his doctor's degree, presenting a thesis upon the Conchoid of Nicomedes, a curve of the fourth degree. He then went to Italy to study law. He soon became interested in Dante, and almost immediately reached the conclusion that the criticism then current of the 'Divine Comedy' was hopelessly perverse and fatuous. A vigorous essay on "The Art of Misunderstanding Dante," which he completed in 1823, opened his career as a critic and contained the programme of his life work. In the same year he was appointed extraordinary professor of law at Breslau; six years later he was promoted to a full professorship, and in 1834 he was transferred to the University of Halle, where he taught law and wrote works on jurisprudence for nearly fifty years.

Dr. Witte is probably best known in Germany for his translation of the 'Comedy,' the first edition of which appeared in 1865; he is esteemed by the special student of Dante for his collation of manuscripts and textual criticism; the intelligent public, however, outside of Germany, is likely to rely on his collected essays, 'Dante-Forschungen,' for its knowledge of the spirit and results of his years of research. The volume before us contains what is best and of most permanent interest in the two volumes of the original collection. The editor estimates his work with such justness and with such a conciliating sense of humor that we cannot do better than repeat his words:

"Some passages are so technical that they will doubtless be skipped by all but a few experts, and some so popular that all except beginners will desire fuller details and ampler references; but there is no essay which, taken as a whole, has not such general interest as appears to justify its inclusion in a volume intended for the general reader; and in the more technical or erudite portions of the essays I have endeavored to give (in the notes and appendices) such information as will enable the unlearned reader to follow the argument and understand the references. Indeed, the information contained in some of these notes is of a very elementary character; but it is just what every one is supposed to know that no one is ever told; and the student is often left to a long, uncertain, and painful course of inference with respect to the very foundations of some portions at least of his subject."

What to do about controversial matters upon which the editor—himself no mean Dante scholar—differs from Dr. Witte, was a puzzling question.

"The editor," Mr. Wicksteed pertinently urges, "who never dares to trust his author and his reader together for fear they should hatch mischief against *Mm*, who nervously directs where they are to join and where part hands; who is perpetually thrusting obtrusive suggestions between them, and fluttering and clucking to his chicks at every second line, is a person who ought to be suppressed by an inviolable conspiracy of inattention."

The translators have taken their task very seriously, perhaps a bit too seriously for the general reader. The book falls into "brevier" pretty often and looks unreadable. As one reads Mr. Wicksteed's admirable appendices—all too short as they are, and tucked away in a corner—one wishes that he

had given us an original treatment, instead of reproducing Dr. Witte's somewhat antiquated work. The preparation of a series of essays of his own could hardly have taken so much time as the careful translation, with the hours spent in painfully verifying, in the British Museum Library, all of Witte's citations. The present volume is, of course, the pious tribute of an enthusiastic admirer and disciple to his revered master's memory. The demands of *Pietät* might, however, have been satisfied by an appreciative estimate of Dr. Witte's important work, accompanied by Mr. Wicksteed's own independent studies of certain phases of Dante's writings and spiritual experiences. In such a volume all the drawbacks of the present plan would have been obviated. The general reader would have learned more, and the student would naturally have turned, as he still must do, to the German or Italian originals of Dr. Witte's technical contributions.

The first three essays in the volume before us set forth Dr. Witte's general conception of the poet and the proper way of approaching his works. He himself believed that the kernel of all his later studies lay in the very earliest of them (number two of the present collection), that published in 1824, in his first youthful enthusiasm. "My other labors in this field," he says, "strike me as subsidiary to the root-idea there developed, calculated to strengthen its foundations rather than lead to anything fresh." The essay on Dante's Trilogy, with Mr. Wicksteed's admirable appendix, will prove the most instructive, perhaps, of all the chapters to the average reader. It discusses the relation of the 'Vita Nuova,' 'Convito,' and 'Comedy' respectively to their author's spiritual development. Mr. Wicksteed takes courteous exception to Dr. Witte's view of the middle period of supposed apostasy. As he forcibly argues, there seems to be no inclination in the 'Convito' presumptuously to place philosophy on the same plane with theology. It was not an alienation from religion and theology which Dante laments as his great sin. He begins the 'Convito' "with the twofold purpose of glorifying his present mistress (Philosophy), and of explaining away such part of his own reputation as seems inconsistent with the high missionary purpose he now entertains. He will allegorize all his Canzoni addressed to mortal women, other than Beatrice," whose rivals are not philosophy but only the world and the flesh. He finds the task difficult, even dishonest, and his conscience revolts from it. Such things in his past life as part him from Beatrice are not to be explained away but repented. Philosophy, however, has not stood between him and Beatrice, but leads him back to her. "The *Convito* is cast aside, superseded in its mechanism, and damned by its taint of disingenuousness. His studies in Philosophy (always guided by Theology, as the *Convito* clearly enough shows) have deepened and purified his life, till at last, in spite of himself, they have brought him back, in an agony of shame, to Beatrice, now glorified into the symbol of Theology herself—and the *Comedy* is born."

The second group of essays (iv.-viii.) prepare the reader to understand the 'Comedy' by explaining "Dante's Cosmography," "The Ethical Systems of the Inferno and Purgatorio," "The Topography of Florence about the Year 1300," "Dante and the Conti Guidi," and the significance of the poet's letters. There is a chapter on the good wife, Gemma.

some discussion follows, a part of it decidedly technical, of the earliest commentaries upon the 'Comedy' and Dante's life, and the volume closes with a paper on "Dante and United Italy." The translation is excellent throughout, in spite of the difficulties which the original presents.

Of Mr. Gardner's 'Dante's Ten Heavens' we may safely say that it is the most careful and extensive study of the "Paradiso" in English, probably in any language. The difficulties and obscurities of the third part of the 'Comedy' are well known; they may, indeed, attract rather than repel the true Dante enthusiast, but "the incredible excess of unsensed sweet" will never be other than an esoteric theme. Mr. Gardner's book is not, then, a hand-book for ladies' literary clubs, but, as might be expected, is for the delectation of the earnest student, who brings with him keen historic insight, as well as a deep sense of poetic beauty and some sympathy for metaphysics. The work serves as a valuable supplement to the notes which Lubin, Dean Plumptre, Scartazzini, Witte, Longfellow, and others have added to well-known editions of the 'Comedy.' It suggests in some ways Vernon's 'Readings on the Inferno,' but resembles more closely in arrangement and spirit Prof. Hettinger's chapter on the "Paradiso" in his scholarly study of the poem.

It is to be regretted that the author, who should have realized that he could hope to reach only the earnest scholar, did not treat somewhat more fully than he has done the questions which his little audience would most gladly hear discussed. For example, the close relation of Dante's theories of the heavenly polity to those of the Pseudo-Dionysius and of Saint Bernard is referred to in too general a fashion to be more than suggestive and tantalizing. Mr. Gardner, like so many of his scholarly countrymen, is, we must assume, ignorant of German. He makes no allusion to Dr. Witte and the abundant literature of his subject to be found only in German, and uses the abridged English version of Hettinger.

Angels' Wings: A Series of Essays on Art and its Relation to Life. By Edward Carpenter. London: Swan Sonnenschein & Co.; New York: Macmillan.

The keynote of this infelicitously named volume is to be found in the opening sentence: "There is a strong impression that the democratic idea, as it grows and spreads, will have a profound influence on Art and artistic methods; and that Art, in its relation to life generally, is in these days passing into new phases of development." Mr. Carpenter is, in fact, a bit of a Tolstoyan, though he differs much from Tolstoy in details, and though one of his gods is Tolstoy's pet aversion, Richard Wagner. Like Tolstoy, his effort is to make out a democratic doctrine of art, and to show that art, like government, should be "of the people, by the people, and for the people." He is rather clever and more or less plausible, and covers a deal of ground somewhat thinly, discoursing of painting and sculpture, literature and music, mythology and folk-lore, and, finally, of "The Art of Life," not quite convincing one that his competence is equal to his pretension.

The first essay of the book is on the somewhat oddly consorted trio, "Wagner, Millet, and Whitman," who are treated as embodi-

ments of democratic art, and on the second page we are confronted with the statement that "all three men were revolutionaries, in more than one sense of the word. Wagner was arrested in the streets of Dresden for complicity in the riots of '48; Millet was nicknamed the 'Wild Man of the Woods' by his fellow-students, and accused of being a 'Socialist' by his critics; Whitman was ejected from his clerkship in the Treasury at Washington on account of the wickedness of his poems." Now why should Millet be called a "revolutionary" because "his critics" accused him of what he always denied? And though Wagner was a bit of a republican in politics, does it follow that that most elaborate and expensive of all forms of art, the music-drama, is democratic? Millet was by instinct a conservative and the lover of what was old, and his artistic admiration was for Poussin; and while few of us will agree with Tolstoy in his dictum that Wagner's art is no art at all, most of us will agree that it is a highly artificial, romantic, and aristocratic art, which makes as little appeal as possible to the universal feelings of humanity. As to Whitman, we might perhaps give him over to Mr. Carpenter. It is chiefly in London that the art of Whitman has as yet been taken very seriously.

The second essay, which gives its title to the volume, is nominally on the tendency of art, as it grows more mature, to reject, on anatomical grounds, the symbolical use of wings, so common in early art, and to represent even flying figures as wingless. The moral of this is supposed to be that "anything that conflicts very hopelessly and fundamentally with the reasoning faculty cannot be very permanently successful in its influence on the mind." One shudders to think where this would leave the fairy stories of the Nibelung tetralogy if the doctrine were made out, but it is not. Mr. Carpenter appeals to the Greeks as the people whose "instinct of proportion and fitness, in Art and life, exceeded that of any other people we know"; and, because they represented winged figures only occasionally, thinks they showed a tendency to reject "anything which cannot be fairly distinctly thought out." But the Greeks habitually represented certain figures as winged—e. g., Victory, Eros, Iris; and they were fond of representing other imaginary creatures—griffins, chimeras, fauns, and, above all, the centaur—which it is quite impossible to think out. Again, are Michelangelo's hugely muscled colossi, supported in midair without even a wing to aid them, more thinkable than the demure and devout angels of Giotto and Angelico? It may be said that none of these things have proved "permanently successful," and that they have lost their influence on the human mind; but at least the example of the Greeks goes by the board. The rule would seem to be that, in the highest forms of art, things must be so imagined as at least to seem possible for the time being. In lower forms of art, such as decoration, it is enough if they are pleasing.

The question of "realism" having thus been brought up, it is further considered in the following essays. The material of art is considered as derived from three sources, nature, "the Physiological basis of emotion in the human body," and conventional symbols and associations; and each of these is considered in a separate essay. In the essay on

"Nature and Realism in Art," the argument is that, of the two tendencies of modern realism, that towards mere photography and useless detail is, "obviously, an error," while that towards the treatment of "those aspects of Nature—the ugly, the obscene, the criminal, and so forth—which are generally ignored" is useful in "the unearthing of a vast amount of material which, in the hands of future masters, may be available for the most searching effects." Zola is condemned for lack of artistic treatment—for not having made "the discords lead to their proper resolutions"; but we are said to "owe him much in this way." Finally, we are referred, for a "perfect example of Realism in its best form," to the frieze of the Parthenon, which is considered as "a simple transcript of actual facts." One is led to wonder if Mr. Chamberlain really believes that all Greeks of the Periclean age were as beautiful as these figures. The few portraits that remain to us prove the contrary, if proof were needed.

In "The Human Body in its Relations to Art," Mr. Carpenter deals with what Mr. Whistler thinks is all of art, what Mr. Berenson considers the most vital and artistic part of art, and what Tolstoy hardly considers art at all, viz.: the direct physiologic effect of tones, lines, colors, etc., upon the human brain and body; and also with the representation of that body in art. Here our author takes direct issue with Tolstoy, and blames him for being "so completely dominated by the fear of the senses that he cannot see the blasphemy there is in denying and crippling the human body," and, while agreeing that most modern treatment of the nude is bad in art and in morals, concludes that, "in the free, sane acceptance of the human Body, in all its faculties, lies the Master-key to the Art of the future." In "Tradition, Convention, and the Gods," we get deep into totemism and the origin of religion, but the outcome of it all is that art progresses only by overthrowing conventions and by the familiar return to nature. "To be absolutely one's self" is the true aim of the artist. Finally, we get back to pure Tolstoyism in the essay on "The Individual Impression," and are shown how the results of modern realism and modern individualism are to be reconciled and harmonized into one whole by the infusion of a new ideal, the "advent of a new Religion":

"The Religion of the future must come from the bosom itself of the modern peoples; it must be the recognition by Humanity as a whole of that Common Life which has really underlain all the various religions of the past; it must be the certainty of the organic unity of mankind, of the brotherhood of all sentient creatures, freeing itself from all local doctrine and prejudice, and expressing itself in any and every available form. The seal and sanction of the Art of the future will be its dedication to the service of this Religion."

And so, amid a profusion of capitals, the part of the book which concerns us comes to an end; for with the two analytical essays on the music of Beethoven, and with the concluding essay and various addenda on "The Art of Life," the present writer will not meddle. The work is interesting, if not conclusive, and its perusal may be enjoyed even if one rejects its doctrine.

Actors of the Century: A Play-Lover's Gleanings from Theatrical Annals. By Frederic Whyte. London: George Bell & Sons; New York: Macmillan. 1898.

Mr. Frederic Whyte, the compiler (for he

can scarcely be called the author) of 'Actors of the Century,' is the capable translator of Mr. Augustin Filon's critical review of 'The English Stage,' and it was in the accomplishment of that task, apparently, that he found inspiration for this pretentious, but not particularly instructive, volume. At all events he admits, with refreshing if superfluous frankness, that his knowledge of theatrical history and personages is of very recent date, and, arguing from his own condition, he concludes that there must be a vast number of persons just as ignorant as he used to be of the entertainment to be found in books of dramatic commentary and biography. To enlighten these unfortunates, he has made very copious clippings from the works of such familiar authorities as Charles Lamb, Leigh Hunt, William Hazlitt, George Henry Lewes, Henry Morley, William Robson, Dutton Cook, and many others of lesser weight, and has connected them by means of a running review of his own, so as to make something like a continuous narrative.

He gossips pleasantly enough, and, as a rule, so far as the first half of the century is concerned, uses his scissors with discretion, but, of course, he has nothing new to tell, while his own reflections are not very precious. With Lamb, Hunt, and Hazlitt he could not go very far wrong. It is when he comes to deal with recent and contemporaneous events, and ventures upon the expression of personal opinions, that his deficiencies in knowledge and in judgment are revealed. For instance, in speaking of comedians who attained great heights in tragedy, he groups together Robson, Coquelin, and Nellie Farren. A more grotesque comparison it would be difficult to conceive. The most conspicuous example of tragic force in a comedian, in recent times, was furnished by Samuel Phelps, whom Mr. Whyte seems to know chiefly as a tragedian. He does, indeed, quote a eulogy of this actor's performance of *Bottom*, but never heard, apparently, of his equally notable *Christopher Sly* or his *Falstaff*. Phelps was the most versatile actor, probably, of the century. He was the best *Sir Peter Teazle* of his day (except, perhaps, Chippendale), and the best *Sir Anthony Absolute* in England. His *Sir Pertinax Macmuffin* was a masterpiece, and he was inimitable in such character parts as *Baile Nicol Jarvie*. The diversity of his parts was amazing, and his excellence in all of them and his eminence in most of them undisputed, yet Mr. Whyte makes no record of these achievements. In one place he commits himself to the astonishing assertion that Charlotte Cushman was the counterpart in form and feature of Macready, as well as in histrionic gifts and characteristics—one assertion being almost as far from the truth as the other. His enumeration of modern actors of distinction is quite worthless, many good performers being overlooked altogether, while players of fifth-rate importance, or no importance at all, are set down among the leaders. Walter Montgomery, Creswick, Miss Marriott, Miss Glyn (the best *Cleopatra* of her time), Henry Marston, Chippendale, Kate Bateman, and Charles Coghlan are some of the obvious omissions, and, doubtless, there are many others. The name of Mrs. Warner is mentioned once, casually. As to the extent of Mr. Whyte's critical judgment, that may be guessed from his remark that Mr. Beerbohm Tree is the arch-type of the all-round actor, which proves that he is unable to distinguish

between mere ingenuity in the arts of external disguise and genuine artistic versatility.

The book is printed very handsomely, and contains a large number of portraits, upon which the author sets great store. Most of these have long been common in all theatrical collections, but a few of them are more rare. The portraits of Adelaide Neilson convey no hint of the extraordinary personal fascination of that meteoric actress.

Sketches of the History of Georgian Literature. Parts I. and II. (Ocherki po storii Gruzinskoi Slovesnosti.) By A. S. Khakhanoff. Moscow: University Press.

Prof. Khakhanoff of the Lazarevski Institute of Moscow devotes a certain part of his book to the mass of legendary tales and folk-literature to be found in the language of the beautiful Eastern land of Georgia. There are a great number of curious apocryphs on sacred subjects which claim the attention of the scholar now that this kind of literature has come so much to the front. The Georgians use two alphabets, the ecclesiastical and the civil. The latter is the one now most often employed. The oldest monument of Georgian literature belongs to the sixth century. First we get versions of portions of the Bible, and afterwards translations of the Greek classic authors, such as Plato and Aristotle. There is a complete manuscript of the Bible dating from the tenth century which is preserved in the library on Mount Athos. Prof. Tsagarelli of the University of St. Petersburg has taken the trouble to make an exhaustive catalogue of all known MSS., which number considerably more than a thousand. In our own time the Georgian press is very active at Tiflis. There exists in that city a society devoted to the diffusion of education among the Georgians. In this way many useful modern works and many of the old classics are rendered accessible. We remember seeing at Tiflis the interesting collection of manuscripts belonging to this society. The great period, however, of the development of Georgian literature was during the eleventh and twelfth centuries. This is rightly styled by Prof. Khakhanoff their golden age, and it is with the close of this period that the two present instalments of his work end. At a subsequent date he proposes to treat of the long but inactive time supervening, which lasted from the thirteenth to the close of the eighteenth century. The concluding volume is to tell of the renaissance of Georgian literature under the rule of the Russians.

The thirteenth century includes the age of Queen Tamara, the great sovereign of Georgia, in whose time the country reached its highest pitch of prosperity. That she was a remarkable woman there can be no doubt, but her name is absolutely encrusted with legend. All the wonderful things in the country are assigned to her—and her portrait has come down to us (if we can rely upon it) in many ancient frescoes. To her reign belongs the poet Shota Rustaveli, the author of the strange romantic epic in quatrains 'The Man in the Panther's Skin' (*Vepkhris-tkaosani*). Much has been written about this author, whose work is certainly full of color and like the production of some Eastern troubadour. Mr. Khakhanoff gives an excellent analysis of it, and therefore it is in a way accessible to a person who cannot read Georgian. It is a

strange Oriental love-poem, the origin of which has been much disputed. Prof. Khakhanoff, as in duty bound, takes a hand in this discussion. Some people think the poem must have had a Persian origin, though there has never been found anything like it in Persian. The manners described in the epic are free from Mohammedan influences. On the other hand, there is nothing distinctly Christian about it, and so much was this felt that the clergy put the poem more or less under a ban. It had become a favorite production with the people. Indeed, the lines are on the lips of the Georgians as veritable household words. King Vakhtang VI., having established a printing press at Tiflis in 1709, set about printing 'The Man in the Panther's Skin,' just as Caxton soon tried his hand on an edition of Chaucer. To stop all scandals and prevent the clerical ban, the pious King furnished the poem with a religious commentary in which he made all the love-passages to be mystic, as has been done in other instances. As regards Rustaveli, he is said to have died at Jerusalem as a monk in 1215. His portrait is there shown in a fresco. Whether he cherished a hapless passion for the imperial Tamara we cannot say for certainty. It is so stated in Georgian writings, and if he did so he would only be like his brother troubadours in the West, who always nourished a hopeless passion for some exalted dame. Little has been done as yet to make this poem known to Western readers. A few years ago Mr. Arthur Leist published a very condensed version, substituting the heroic metre in the style of Pope's 'Iliad.' The quatrains would certainly prove very heavy ballast. We believe a much more minute version in prose may soon be expected from the pen of a young English lady who has shown considerable knowledge of these difficult languages in her 'Mingrelian Folk-Tales.'

We have no space for the strange romances of the same period. The glories of Georgia and of the Kartveli, as the people style themselves, were to undergo a rapid decline. This Christian nest, with its traditional glories of St. Nina, was surrounded with Moslem foes. It was harried by Mongols, Tatars, Persians, and Turks. In 1793 Tiflis was burned to the ground by the Persians. We cannot but feel that if the Russians had not stepped in, the Georgians would have had the fate of the Armenians, or would have been forcibly converted *en masse*.

Prof. Khakhanoff not only, as a native Georgian, is well acquainted with his subject, but understands how to write about it in a very readable way.

Camping and Tramping in Malaya: Fifteen Years' Pioneering in the Native States of the Malay Peninsula. By Ambrose B. Rathborne. London: Swan Sonnenschein & Co.; New York: Macmillan. 1898. Map. Illustrations. Pp. xi, 339. 8vo.

Twenty years ago the small native states on the southwestern coast of the Malay Peninsula had but recently come under British protection. The land was undeveloped, covered with forest and jungle, roadless, and sparsely inhabited by semi-savages, pirates, and slave-dealers. A few Englishmen were among them, some restraining and guiding the native rajahs, administering justice,

maintaining the peace, and putting down crime and misrule. Under the direction of others the natives were clearing the jungle for plantations, learning the best methods of agriculture and mining, and making roads from the coast to the interior. Among these "pioneers of progress" was the author of this book.

His first undertaking, a coffee-plantation, failed from lack of skilled labor, and the greater part of the time from 1880 to 1895 was spent in exploring, surveying, and road-making. These duties carried him into every part of the country, and his narrative gives a striking picture of its condition in its wild state. He has few exciting adventures to relate, but many interesting descriptions of life in the forest and villages, together with accounts of the native industries. Stories of personal encounters with wild animals are numerous, especially with tigers, which seemed to haunt every path, and invaded camps and even houses for their human prey. The primitive condition of those days is shown by the following incident: Into a hospital just opened there came one evening "that shy and exclusive animal the rhinoceros, which, entering at one end, walked calmly through one of the wards, passing between the beds of the astonished patients, and departed through the opposite doorway without harming any one or doing any damage." Mr. Rathborne visited a village whose inhabitants kept many "slave monkeys" chained near their houses to gather their fruit for them.

"When a coconut was wanted, a man or boy would fetch a light rattan reel, on which was coiled a long cord. The chain would be detached from the monkey's collar, and the string fastened to it instead, and he would then be led towards some tree where there appeared to be a ripe nut or two, and told to ascend it, which he would do in a somewhat sulky and protesting manner, stopping half-way up, until a sharp tug of the cord and an expostulatory remark from his master compelled him to continue; for in this respect the monkey is very human in his dislike of being made to do what he is told, if it is at all distasteful to him. On reaching the cluster of nuts near the top, several tugs of the cord would be necessary to assist him to make up his mind which was the ripest and easiest to detach, and to throw down the one required. Finding a suitable foothold, he would twist the nut round and round until it broke off and fell down—none too easy a task to accomplish, as its fibrous stem is tough and difficult to break. If another nut was wanted, a look of wearied disgust would overspread his face as he slowly proceeded to do as he was bid. The order to descend was obeyed with more alacrity, and, the string being rewound, he would be led back and chained up, and left to take his exercise, walking to and fro as far as his tether would permit."

This record of one Englishman's part in the development of a tropical country is full of lessons for us, now that we have assumed the sovereignty over islands similar in climate, natural features, and people to Malaya. It was not an easy task to teach these Malays the art of coffee cultivation, nor to search out in forests and swamps the best routes between the coast and the interior, and then to build the roads essential to the prosperity of the land. It was a life of constant toil and privation, of long periods of isolation from all companionship save that of natives, of dangers innumerable from man and beast, to which one must show apparent indifference if he is to gain the respect of his men. "I never, during all my travels," says our author, "carried a weapon of any sort other than a chopper-knife." He refers often, also, to the British magistrates

scattered here and there, describing their comfortless homes with the repulsive or unhealthy surroundings of a native village; pictures them listening patiently to grievances, settling disputes, quelling peaceably, with the aid of a few Sikh policemen, a riot in a Chinese mining-camp, sustained in their work by the hope of rescuing these childlike people from the rapacity of their native rulers, and enabling them to enjoy the fruits of their industry, more abundant as their labor is more intelligently directed. And the cost at which Great Britain does this civilizing work is not hidden. Writing of the sudden deaths of several of these men and of the self-sacrificing devotion to duty which characterized them, he says:

"I have often heard a beardless youth, still in the enjoyment of every boyish pastime, and with all his life before him, say to a friend (quartered in some more salubrious district, with whom he was on a visit to recruit his health), 'I must go back; I have my work to do.' An unanswerable argument; and the lad has returned perhaps only to succumb to his illness, with no witnesses to mark or appreciate his heroic disregard of all else but his sense of duty."

And the reward? Throughout his book, but especially in the last chapter, Mr. Rathborne gives some of the results of these fifteen years of British rule. Where he cut his way with severest toil through the virgin forest, forded torrents, and waded waist deep in pestilential swamps, there are now railways, macadamized and metalled roads. Bamboo villages have become well-built towns; the jungle is rapidly giving place to plantations of coffee and spices; tin-mining has been revolutionized by the introduction of machinery. Since 1880 the population has trebled, the revenue has increased from less than a million to more than eight million dollars, the foreign commerce from six to fifty-three millions, and railway receipts from nothing to more than a million and a quarter.

It only remains to add that the attractiveness of this interesting and suggestive volume is increased by some excellent reproductions of photographs of characteristic scenes.

Ignaz von Döllinger: Sein Leben auf Grund seines schriftlichen Nachlasses dargestellt von J. Friedrich. Erster Theil: von der Geburt bis zum Ministerium Abel 1799-1837. Munich: Beck. 1899. Pp. x, 506.

Döllinger's remote ancestors seem to have been officials in the service of spiritual or secular potentates, although at least as far back as two generations he might justly claim to have been what Oliver Wendell Holmes was wont to call "a descendant of the Academic Races." His grandfather was physician in ordinary to the prince-bishop and professor in the medical faculty of the University of Bamberg, of which he was the chief organizer. This institution was abolished on the secularization of the prelate principality and its incorporation into Bavaria in 1802. His father followed the same profession, and was one of the most distinguished anatomists and physiologists of his time. Agassiz, who studied embryology under his direction at Munich, praises him as a keen observer and deep thinker, and confesses that he first learned from him to "value accuracy in scientific research." The boy Ignatius inherited the same spirit, and was led to choose the clerical profession not so much from strongly religious feelings, as

from intense love of learning and the desire to fathom mysteries. He was fond of plying his father with all sorts of questions, to which he received ready and satisfactory answers; only when they touched the province of theology the reply was apt to be evasive, and to take the form of, "That I don't know," or, "No one can tell." These responses produced an effect which was quite peculiar and unexpected. Instead of inferring from his father's ignorance of these things that they could not be known, and thus ceasing to think about them, he had his curiosity stimulated, and came to the conclusion that by studying theology he should be able to understand what would otherwise remain a mystery. This notion was encouraged by his pious mother; and although the father did what he could to counteract this purpose by directing the lad's thoughts to other subjects, he did not directly oppose it, on the general principle of permitting every mind to follow its own bent. He deeply regretted that his son should become a priest, and decidedly disapproved of celibacy on physiological grounds, to say nothing of moral and social considerations.

Ignatius was remarkably precocious, although the statement that he could speak Latin at five and read Greek at seven may be rejected, on his own authority, as fictitious. It is certain, however, that he acquired a knowledge of several languages and their literatures in early youth. At ten he had read the works of Cornille and Molière, and knew the poems of Schiller by heart. A little later he learned Italian and English, and afterwards added Spanish and Portuguese to the list. Indeed, at sixteen, he was far more familiar with French than with German books, and this fact is mentioned as exceedingly characteristic of German culture, indicating an utter lack of national spirit.

In Prof. Friedrich's biography of his illustrious friend and academic colleague, considerable space is devoted to descriptions of the lives and times of the father and grandfather, thus giving the reader a clear conception of the environment in which the young man grew up, and furnishing also a valuable contribution to the intellectual history of Germany at the beginning of the present century. He draws a melancholy picture of the University of Würzburg under ecclesiastical domination and the bureaucratic sway of the bigoted and despotic Hapsburg dukes, when all scientific publications were subjected to a rigid censorship, and eminence in any department of research caused a professor to be an object of suspicion. It is a significant coincidence that this state of things should have led the elder Döllinger nearly a century ago to raise the question of the intellectual inferiority of Catholicism to Protestantism recently agitated by Prof. Hermann Schell of the same university. It is also a striking proof of his psychological insight and acumen that he explained the miraculous cures said to have been wrought by Prince Alexander von Hohenlohe at Bamberg in 1820 on the same principle of suggestion adduced by Prof. Charcot, Dr. Forel, and other neuropathologists in explanation of the wonderful healings performed by the waters of Lourdes and the holy coat of Trier. He did not deny their reality, but stripped them of their supposed supernatural character. It was also due to his influence that his son

was not carried away by the excitement among theologians, but took a sober and scientific view of the alleged wonder-workings.

Young Döllinger attended courses of lectures on philosophy, philology, anthropology, history, mathematics, aesthetics, physics, natural science, and law, and thus laid the foundations of a broad and general culture before entering upon the study of theology. He was fond of botany and entomology, in which he made as a student some original investigations recognized by no less an authority than Rees von Esenbeck. Still stronger was his predilection for philology and history, which unfortunately were then treated in the University of Würzburg as ancillary to theology; had a proper place been assigned to them as independent disciplines, it is highly probable that he might have chosen one of them as his specialty. The extent and accuracy of his bibliographical knowledge caused him to be selected to prepare a catalogue of the University Library when he was only eighteen years of age. Indeed, the versatility of his talents seemed to render it difficult to determine in what field of knowledge they might be most fitly employed, and it was the prominence assigned to theology at Würzburg that probably turned the scale and determined his final decision, since it tended to confirm his early conviction that this science alone can furnish a solution of the deepest problems of human life. In this connection he quotes the words of Proudhon: "Il est étonnant qu'au fond de toutes les choses nous retrouvons la théologie"; and adds: "Dans ce fait il n'y a rien d'étonnant que l'étonnement de M. Proudhon."

Especially interesting and important for a correct knowledge of Döllinger's early academic career is the account of his relations to Lamennais, Baader, and Görres in Munich, where he was appointed to a professorship of ecclesiastical history and canon law in 1826 and became a frequent contributor to the journal *Eos*, the organ of the "Görres-Verein." Among other papers, he wrote sharp criticisms of Heinrich Heine, who avenged himself in some coarse but witty verses, which are still quoted by Döllinger's foes, although the purely personal origin of the feud has been long forgotten.

The present volume closes with the publication of Döllinger's *Lehrbuch der Kirchengeschichte* in 1836, and its translation into English, French, and Italian soon afterwards. A second edition appeared in 1843, but when the publisher wished to issue a third the author refused, on the ground that, owing to the great change in his views, the whole would have to undergo a thorough revision. The work was very highly appreciated by his co-religionists in England, where he was offered a professorship in St. Cuthbert's College at Ushaw, near Durham, which he declined. This refusal did not cause any diminution in the cordiality and frequency of his intercourse with his English friends, and in Munich his house was for a long time the headquarters of the "English colony." Prof. Friedrich's biography will be completed in three volumes. It is the result of careful researches, is written in an attractive style and admirable spirit, and will correct many false notions by giving a faithful record of the life and aims of a remarkable man.

The Companions of Pickle: Being a sequel to 'Pickle the Spy.' By Andrew Lang.

With four illustrations. Longmans, Green & Co. 1898. Pp. xii, 308.

We recently reviewed 'Pickle the Spy,' Mr. Andrew Lang's elaborate demonstration of his firm but sad conviction that one "Pickle," whose name appears frequently in the records of the Secretary of State's office as an indefatigable spy and informer of all the proceedings of Charles Edwards's followers, was really Alexander Macdonell, the "Young Glengarry," and ultimately the head of his celebrated clan. For this exposure of a Highland chief Mr. Lang has been most bitterly assailed by the worshippers of all that is Celtic. It was bad enough that, a century and a half ago, Simon Lord Lovat, "McShimel," the Chief of the Clan Fraser, was convicted of the basest treachery; Highlanders cannot bear to have a brother chief stand in a symmetrical pillory on the other side of the porch of history. But Mr. Lang, who is conscious of no motive but a love of truth, has returned to the charge, multiplying and classifying his proofs of "Pickle's" identity with young Glengarry. To this he has added eight or ten papers dealing with other characters in the Stuart interest. The most amiable of these is George Keith, Earl Marischal, the friend of Frederick the Great, Voltaire, and Rousseau, who undoubtedly was a sensible, high-minded man, but hardly that epitome of all the virtues that Mr. Lang makes him. Of most of his other personages there is little good to be said, and indeed little, good or bad, to be said at all. Every additional scrap of contemporary information printed about the later Stuarts and their friends tends to show that they richly deserved to fall; princes and nobles alike were an effete race, living in a kind of dream-land, incapable of sound deliberation or prompt action, thinking when they should have struck, and striking when they should have thought, and always suspicious and irritable among themselves whether their sky was clear or clouded.

One of the most interesting chapters is a description of the state of the Highlands in the days before the '45, bearing out in all points Bailie Nicol Jarvie's account of their poverty and misery, and amply vindicating Macaulay's uninviting picture on which so much censure has been cast.

Mr. Lang's book is sumptuously printed and illustrated, but it takes more than mechanical beauty and literary skill to make the Stuart partisans anything but a "feeble folk."

Historic Homes of the South-West Mountains, Virginia. By Edward C. Mead. Philadelphia: J. B. Lippincott Co. 1899.

Between the Rappahannock and the James, and between the tide-water region and the Blue Ridge, lies a picturesque range of highlands, something more than hills and less than mountains, which bear the name of the South-West Mountains. Before the middle of the last century, pioneers who had left the thickly settled eastern country for the uplands were attracted by the beautiful scenery, pure air, fertile soil, and abundance of water, and fixed their homes here, to be soon followed by others. These families, enlarging their possessions, and knitting themselves together by intermarriage, became in some sense a peculiar people. The climate was less enervating than that of the lowlands, and the conditions of life less rugged

than those of the mountaineers in the west; and while the settlers shared the energy and thrift of the one, they also enjoyed the culture and refinement of the other.

Among them were the Jeffersons, Randolphs, Lewises, Pages, and others whose names have become historic. The ancient log-houses gave way to more pretentious erections, sometimes—like Monticello, which was thirty years a-building—adorned with a classical portico and tympanum; but more often of that nondescript but delightful style now called "colonial," which subordinated all rules of architecture to the comfort and convenience of the inhabitants. The ancient homes are now in part occupied by the descendants of the builders, while some have passed into the hands of aliens, who still cherish the traditions which cling about them.

Mr. Mead has here given accounts, descriptive, historic, and anecdotal, of nearly thirty of these ancient and beautiful homes, illustrated by photographs; and while the book, of course, possesses a more special interest for Virginians, others will read it with pleasure as giving glimpses of a state of society which the world never saw before, which lasted for about a hundred years, and will never be seen again—the life of the Virginia upland planter.

The Nation.

NEW YORK, THURSDAY, MARCH 9, 1899.

The Week.

The expiration of another Congress has occurred under the discreditable conditions which always characterize the end of the "short session," intensified by the unusual demands of the past winter for legislation of the first importance, which needed to be perfected with care and deliberation. There has been for the past fortnight a mad rush to get through, in some shape, one makeshift after another, which would serve to tide over the emergency and prevent the necessity of an extra session. In this way Congress has passed a bill for the reorganization of the army, which is so crude, ill-considered, and haphazard a measure that nearly all the Representatives who finally supported the compromise declared their disgust at the hateful necessity of voting for it.

The lawyers of the War Department are cutting their way through the tangle little by little. They have got as far as discovering that the President for the present can appoint only two major-generals, instead of eight as was supposed; and Gen. Otis and Gen. Shafter have been chosen for the places, on grounds both of seniority and special services. But though it is doubtful how many appointments the President has it in his power to make at once, it is certain that there are ten or twenty candidates for each "place." The White House is thronged with clamorous Congressmen as it has not been since the inauguration. Even those who most vehemently and on the highest patriotic grounds opposed the increase of the army, are hot after appointments in it for themselves or their friends. If a large standing army is going to break down the liberties of the people, they at least want to help do the breaking. But the muddles in the army bill seem to be as thick as the jobs in the river and harbor bill. "Is there a mess here?" inquired Gen. Wilson when, after the relief of Lucknow, he arrived half-mad with hunger at Cawnpore. "Yes, everything is a mess here," was the reply he got. That is what the distraught officials say who are trying to find out what the army bill means.

Speaker Reed never won a greater triumph than the one he scored in the Nicaragua Canal matter. He succeeded in heading off a piece of rash and confused and suspicious legislation, and in substituting for it a rational measure, without the smell of jobbery upon it.

In place of the \$5,000,000 which the Maritime Company was to get as a pure gratuity, under the Morgan act, that persistent beggar has to put up with an item of \$15,000 in the general deficiency bill, to reimburse it for expenses incurred in aid of the Ludlow Commission two years ago. Instead of a hasty appropriation of \$115,000,000 to build a canal which it was not yet known whether it would be possible to build at all, or, at any rate, for twice the money, the compromise provides only for a thorough inquiry, by competent engineers, into the comparative advantages and the cost of all competing routes and plans, and a report to Congress. This is surely but common sense. That the canal should be built is plainly the desire and determination of the country. It is a commercial necessity, and the military argument for it has some weight. But it is certain that if the country wants a canal across the Isthmus, it also wants it wisely and honestly constructed. This has now been made possible, and we owe it to Speaker Reed, whose firm and skilful opposition to a band of desperate speculators has not been displayed in the eye of the public, but has been deserving of the highest praise.

The apathy of the Senate was at last so far overcome that several Senators, including one member of the library committee, publicly announced on Saturday their opinion that the head of the Congressional Library should be a trained librarian of demonstrated capacity. This outcome of the discreditable self-pushing upon the part of several incompetent aspirants for that responsible position is something to be grateful for. It is hardly probable, after this pronounced stand by the Senate, that the President will appoint any but a trained librarian, especially as he has shown a readiness to secure such an official by tendering the place some weeks ago to Mr. Herbert Putnam. Mr. Putnam withdrew his acceptance under an unfortunate misconception of certain circumstances, but has since indicated his willingness to serve. His conduct of the Boston Public Library has been marked by success, and the same is true of his presidency of the American Library Association. Mr. Putnam would undoubtedly be the unanimous choice of the library profession, and there would seem to be no reason why the President should not promptly make him a recess appointment. In another column we call attention to some of the serious problems that would confront any appointee.

A glance at the General Orders which have been issued in Porto Rico by Gen.

Henry since December 28, shows what extraordinary duties and responsibilities are laid upon that officer. From all the accounts we get, we judge that Gen. Henry has shown great energy and intelligence as Military Governor, and has given general satisfaction; but what a thing it is to plunge a soldier into all the intricate details of civil administration! Thus, on December 28, we find Gen. Henry appointing a Board of Health at San Juan, and arranging for similar boards throughout the island, whose powers he defined. Two days later he was issuing a comprehensive order regulating taxation. Postal regulations and obligatory vaccination occupied his attention on January 3. Later in the month we find him promulgating orders designed "to remedy the evils due to unjust apportionments"; reducing notarial fees; abolishing the Insular Cabinet; regulating the use of cemeteries; suspending the foreclosure of mortgages; suppressing a municipal council, on the ground that the councilmen "quarrel with one another, that they refuse to act in the interests of the people, and that money is corruptly used" (oh that we had a Gen. Henry to deal with our Municipal Assembly!); revising the poor and marriage laws, etc., etc. Gen. Henry, in short, appears to be just the man we have heard people long for as the ideal ruler—a benevolent tyrant. He has practically absolute power, and he uses it like another Haroun al-Rashid. It is novel business for an American soldier.

There have been conferences in the Philippines between an Aguinaldo committee and an Otis committee, and the Aguinaldo committee have been making impossible demands, and are not enlightened men; but we are only finding these things out after having slaughtered some thousands of their constituents. The *Evening Post's* correspondent's opinion is that the Filipinos are too wild and heterogeneous to be bound by any one agreement or authority, and "that the people of the United States must make up their minds either to fight for these islands or to give them up." What a prospect fighting for them is, we learn from Gen. Otis's own dispatches. With forty thousand men, which is all we can now spare him, he hopes to drive the natives far enough from Manila to make them stop their skirmishing attacks on the city and suburbs, before the rainy season begins; but to do this he will have to penetrate the jungle. In other words, the most he hopes for this year is to drive the enemy back a little way from one city on the coast of one of the twelve hundred islands, before the hot weather begins. But the hot weather

has begun, and, although our military opinion is worth nothing, our opinion of the effect of military operations in a jungle in the wet weather, on Caucasian troops, as ascertained from the experience of other nations, is, that forty thousand men a year is about what we shall require for the subjugation of the islands, and for several years. The truth is, that those McKinleyites who are waiting to begin "developing" the islands will do well to remember that their "developments" in the interior will have to be protected by the United States troops, and that the American people, who often somewhat change their mind, may get tired of protecting capital in distant places, and become unpleasant to capital. Will not the McKinley band become a little reflective, and reason with Destiny and get her to "let up" a little on Duty?

A learned professor writes in the *Independent* of "Bible Versions which the Philippines Will Need." He specifies ten leading languages or dialects, and shows what the Spaniards have done to reduce these languages to writing, and what translations of what parts of the Bible have already been made in the different vernaculars. But our missionary societies must first determine what kind of Bible, and how interpreted, they mean to give the Philippines. How would the Beatitudes read just now in Tagalog? And suppose the Visayans said they preferred the Imprecatory Psalms? A careful selection of texts might be thrown into the native churches along with the shells from our batteries—such as those about not resisting evil, and turning the other cheek; but it would be just like the obstinate natives to return the compliment with the address of Nathan to David, done in choice Pangasinan, or a Zambal version of swearing to your own hurt and changing not. But the whole subject is one filled with difficulties, and we must respectfully turn it over to the Methodist bishops in whose dioceses Canton, Ohio, and Washington, D. C., are situated. Apparently there will be needed a new Bible Revision for use in the Philippines. Where the old rendering was "Heal the sick and say unto them, The kingdom of God is come nigh unto you," we shall have to read, "Mow down the natives like grass and say unto them, The Syndicate has arrived."

A new circuit judgeship has recently been created by Congress in the third circuit, which comprises the States of New Jersey, Delaware, and Pennsylvania, and the place has been offered by President McKinley to Senator Gray of Delaware, who has accepted it. There are various aspects of this incident. On general principles, it is most commendable that a Republican President should

give representation on the bench to the Democracy, at a time when the overwhelming majority of the Federal judges belong to the dominant party. The most creditable action of Benjamin Harrison, bitter partisan that he was, during his Presidential administration, was his giving three of the nine circuit judgeships at his disposition eight years ago to Democrats, and his appointment of a Southern Democrat to the Supreme bench. Mr. McKinley has been slow to imitate this excellent example. Indeed, only a few days ago, he refused to appoint a Democrat to another circuit judgeship when every argument of propriety demanded it—we mean the fifth circuit, comprising the States of Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas; all of which are overwhelmingly Democratic.

If a Democrat were to be appointed by a Republican President in this Northern circuit, it was essential that he should be a man rightly within the range of choice for a high judicial position. Mr. Gray is a lawyer of ability, whose training has been such as to qualify him for good service on the bench. A graduate of Princeton and a student at the Harvard Law School, he was admitted to the bar at the age of twenty-three, and made such progress that by thirty-nine he was the efficient Attorney-General of his State. Upon Mr. Bayard's transference to President Cleveland's cabinet in 1885, Mr. Gray succeeded him in the Senate, where he has served ever since. During the greater part of this period he maintained worthily the traditions of his little commonwealth for eminent service in that body, and a year ago his appointment to the bench would have commanded unqualified approval. We regret being compelled to add that such praise cannot now be bestowed upon the selection. Since Mr. Gray was threatened with an early end of his public life through the Republican conquest of Delaware in 1896, his course has been that of a politician seeking personal advantage rather than that of a statesman who would hold high the standards of public and private duty. His course as a member of the Peace Commission, and still more his extraordinary attempts at defending conduct which had surprised his admirers, startled those who had thought most highly of him; while his astonishing action during the last few days in endorsing that notorious corruptionist Quay, even while the latter is awaiting trial on a criminal charge, as a worthy colleague for honest Senators, has caused a most painful shock.

Editors continue to demand offices, and Governors and President continue to yield to their demands. The Philadelphia *Inquirer* is the chief Quay organ in Pennsylvania, and Quay's Governor

has just appointed the *Inquirer's* editor Health Officer of Philadelphia. The Chicago *Times-Herald* is owned by Mr. H. H. Kohlsaat, who organized the movement to pay off Mr. McKinley's debts a few years ago, and claims that his paper is the special organ of the President. The President has just given the United States district judgeship in Chicago to Mr. Kohlsaat's brother—a man who would never have been thought of for the place if the owner of the *Times-Herald* had not insisted upon his having it. The surprising thing about such performances as these is not the action of the Governor or the President, who shrinks from repulsing a man in control of such a weapon as a daily newspaper, especially when he is under personal obligations to this man; but the state of mind of the editor who is capable of making such a demand, for either himself or one of his family. Nothing could render more ridiculous the conventional boasts about the independence and high-mindedness manifested in "the profession of journalism."

The mystery as to the postponement of Quay's trial, upon the request of the prosecuting authorities, is not as yet cleared up; but some things have leaked out which throw light upon the probable cause. An analysis of the jury panel developed the curious fact that an unusually large proportion of the number came from the Quay wards of Philadelphia. Investigation has shown that a number of personal and political friends of the accused were on the list. One of the panel was a former school-mate of the Senator's son, Dick Quay; a second, a clerk under Collector Thomas; and a third, a member of the Penrose Club, named after Quay's colleague in the Senate. One juror tells a story of having been approached by a politician in the interest of Quay, while another reports that the writ-server who served the summons for jury service on him, deliberately, directly, and distinctly stated to him that "he would be in a position to help Quay and to make a good thing for himself." The significant fact is also noted that, when the District Attorney announced that he had determined to postpone the trial for reasons which he deemed sufficient and which the presiding judge approved, none of the counsel for the defence pressed him to give those reasons or showed the least curiosity concerning them. Altogether it seems reasonably clear that the prosecution had good grounds for apprehension that the work of "jury-fixers" would have rendered conviction impossible if the trial had been opened on Monday last.

Quay has now played his last card in the game. From the first he has relied upon the help of Democratic legislators when success without them should have

been proved impossible. The great obstacle has been the fact that any Democratic member who should vote for Quay would be suspected of having been bribed. To relieve his Democratic allies from this suspicion, it was essential that good reasons for their action should be furnished by respectable men. This has now been done. Ex-Congressman Sibley, one of the leading Pennsylvania Democrats, who has been steadily working in Quay's interest, has induced a number of Democratic Senators and Representatives in Congress to write letters saying that, if no Democrat can be elected, the best course for Democratic legislators is to help Quay to another term. Most of these letters are of the sort that was to be expected. Senator Daniel of Virginia, for example, lauds Quay's "spirit of broad Americanism"—was there ever a political rascal who was not "a good American"? Senator Jones of Arkansas says that Quay "in great struggles stood for the best principles of government," which means that he helped the Democrats in pushing their silver schemes and defeating force-bill legislation. Senators Vest of Missouri and Mitchell of Wisconsin favor Quay's election as the best way of demoralizing the Republican party, believing that, as the latter says, it would "drive a wedge into the Republican party, splitting them wide open."

In the matter of bad legislation, Governor Roosevelt has his opponents in the Legislature surely on the hip. He can not only defeat all their measures, but he can block every one of their raids on the State Treasury through his power to veto separate items of the appropriation bills. It may be that they are foolish enough to think that he will consent to favor some of their jobs if they will promise to let the bills he favors become law; but if so, they do not know their man. He is determined to put a stop to the reckless extravagance which went on during the Black administration, and to prevent, by rigid economy, an increase in the burden of the taxpayers. If he can get good men into the State service—and all of his appointments have been of that character—can stop bad legislation, can detect and punish thieves and rascals, and can put a check to extravagant use of the public money, he can rest secure. Those achievements alone will send us a long distance ahead on the road to good government. As for the more important of the measures which the opposition is holding up—the civil-service, biennial-session, and police bills—we can get on another year or two without these. So far as the first is concerned, the recent decision of the Court of Appeals, placing the Tammany Municipal Commission under the jurisdiction of the State Commission, makes that far less necessary than it was before. It is only desirable now as the formal repeal of the Black

"starchless" law. As for the removed starch, the State Commission is putting that back in a way which leaves little to be desired. The police bill is not a pressing reform measure, and even the biennial-sessions resolution can wait.

There are unmistakable signs of business improvement throughout the country. The cotton manufacturers in city after city of New England are restoring wages to the point from which they were reduced a year ago. A new scale has just gone into effect in the coal mines of the Birmingham (Ala.) district, which gives a decided advance in pay to about 10,000 men. An increase of 10 per cent. in wages for 6,000 employees of the Pennsylvania Steel Company was announced last week, and the Maryland Steel Company made a similar advance, while notices of the same sort come from the West. The action of the cotton manufacturers is based upon improvement in the market for cotton goods, and the other advances of pay upon the higher price of iron. There are no better tests of the purchasing power of the country than the markets for cotton goods and iron, and an improvement in both at the same time is a development of the first importance.

Mr. Kipling's recovery brings relief as general as the anxiety with which his acute illness has been followed by the English-speaking world. No author of his years ever received such a tribute—a tribute, not so much to his achievement as to his promise. Great as the powers have been which he has displayed, and the delight which he has spread in widest commonalty, his most attentive readers have felt that he was only at the beginning of his career. He flashed brilliantly upon the horizon as a new light in the literary heavens. It has been his distinction to appear to be one of those happy writers who, by dint of a fresh handling of the old material, by walking among the oldest and mouldiest literary conventions with a native vigor, succeed in recreating for the world from time to time the vital charm of literature. And there has been no apparent exhaustion of Mr. Kipling's original force. He has held himself well in hand. Money bribes have not tempted him to write himself to the dregs. Such accounts as we have had of the severe conscientiousness with which he does his work, have encouraged us to hope that with him the best was yet to be, "the last of life for which the first was made."

The accession of Silvela to the head of the Government in Spain promises nothing, we fear, but a new shuffle of politicians. Bitter complaints are heard from Spanish business men that the Cortes wastes time in political squabbles, while measures of economy and reor-

ganization, so imperatively needed, are neglected. The Associated Chambers of Commerce of Spain have put forth an address in which they say, "If public opinion in this country were treated with the respect it deserves, our task would already be done; but this is not the case." They go on to say that, instead of retrenchment, they see an actual increase in the budget, and that the Cortes has not passed a single law calculated to "restore to the country the tranquillity it has lost." These Spanish business men protest against the continuance of "the complete severance between rulers and ruled, governors and subjects," and call for an agitation which will impress upon the authorities the necessity of listening to the intelligent and propertied classes. This commercial movement is a novel thing in Spain, and it is daily growing in power. Successful meetings are held in the principal cities, new organizations are formed in different sections of the country, and there is a rising indignation against the political class which so coolly tells the merchants not to meddle with politics, but to leave all that to the professional politicians.

The threatening announcement addressed by Lord Salisbury to the London County Council before the last municipal election which resulted so disastrously for the Conservatives, produced no results at the last session, but has at last taken shape in a bill introduced by Mr. Balfour. It is, however, something much milder than was expected. Lord Salisbury's speech led people to look for a total dissolution of the County Council and the substitution of a set of small municipalities. The Council had been guilty of "too much politics," which really meant that it had been guilty of sacrificing the West End too much to the East End, in its improvements. The improvements it proposed, or began, might be good things, but it was the East End which most needed them, while it was the West End which had to pay for them, the Council being rather radically disposed. Under Mr. Balfour's bill the Council is left standing, with paramount authority, but—as well as we can understand it, on his statement merely—it is to rule now over thirteen municipalities, to which the Council is to assign powers, and which are to execute any work that the Council says must be done in that particular locality. The city of London proper, the old city, he does not touch. Sir H. Campbell-Bannerman, the new Liberal leader, had not much to say against the bill, as described in this introductory statement, except to indulge in a slight fling at the great descent it made from Lord Salisbury's original threat. But this is not by any means the first time in which Lord Salisbury's subordinates have had to tell the world that his "bark was worse than his bite."

DESTINY'S LITTLE BILL.

"While our Destiny higher an' higher kep' mountin' (Though I guess folks 'll stare wen she bends her account in)."

This extract from the "Remarks of Increase D. O'Phace, Esquire, Reported by Mr. H. Biglow," should have been printed on Monday over the statement of the appropriations made by the Fifty-fifth Congress; for the grand total, \$1,566,890,16, includes the first payment on account in the settlement of a bill which reads:

"Uncle Sam to Manifest Destiny. Dr.
To one year of Glory.....\$500,000,000."

About \$500,000,000 is the amount fairly chargeable, Chairman Cannon and Mr. Dockery agree, to the Spanish war, but, of course, that account is by no means closed. It is, in fact, only just opened. It is the real "open door," through which an army of 100,000 men will march and a navy doubled in size will sail, and a colonial service will make its entrance—all the logical and inevitable result of the war, all very glorious, but all presenting with distressing regularity their little bill for services. We shall speedily have to reckon in also items which, by the desperate exertions and skilful tactics of Speaker Reed and his lieutenants in the House, were kept out of the account which Destiny handed in during the last session. They succeeded in staving off the Nicaragua Canal bill with its \$115,000,000 (easily expandible into \$200,000,000), the Hawaiian-cable scheme, with its \$2,500,000, and the precious ship-subsidy scheme of the disinterested Hanna, with its \$50,000,000 to \$100,000,000. But we shall hear from them all again in the next Congress; and with no "short session" to block the passage, it will go hard but they too will make their way through the open door of the Treasury.

Even in this Congress, with the Speaker using every atom of his autocratic power to repel the raiders on the Treasury, the amount of incidental extravagance has been scandalously large. It is a curious fact that the only way to defeat a huge steal is to let a number of little steals go through. To prevent grand larceny we have to wink at sneak-thieving. Senator Morgan bitterly reproached Speaker Reed for having consolidated a secure opposition to the Nicaragua Canal bill by allowing a great number of public-building bills and river-and-harbor items of a doubtful nature to slip by him. The charge seems to be well founded. At any rate, a surprising number of Representatives seemed to develop Roman firmness in opposition to squandering public money on the Nicaragua Canal, just in proportion to their being permitted to squander a good bit of it in a new post-office building for Squeedunk. The general result was, naturally, an increase in the ordinary expenses of the Government, as well as in the extraordinary expenses growing out of the war. The Fifty-

fourth Congress was not regarded exactly as an economical Congress, but the present one exceeded its swollen appropriations by no less than \$40,000,000, quite exclusive of the outlay made necessary by the war. It has been a session when "omnibus bills" were successful as never before. An omnibus bill, we may explain for the benefit of the inexpert, is a bill in which some honest item, like the French claims, carefully passed upon by the courts, is made a sort of carryall for every sort of claim that can possibly be loaded upon it. The result is an "omnibus" in which one respectable passenger sits surrounded by thieves.

Well, what is the outlook for the Treasury? What is the prospect for the taxpayer? Mr. Dockery of the appropriations committee goes into the subject more fully than Chairman Cannon does, though his figures do not differ widely from those presented by the latter in his speech in the House a couple of weeks ago. The Treasury deficit at the end of the current fiscal year will be hard upon \$160,000,000. For the fiscal year 1899-1900 it will be not less than \$100,000,000. The upshot will be that the Treasury will be compelled, a year hence, to look about for new revenue. The \$460,000,000 of money put into it by the sale of bonds during the last five years will have been exhausted. There will then be just three courses open—another issue of bonds, an issue of exchequer bills, which the Secretary is now authorized to make to the amount of \$100,000,000, or new taxes. We say nothing of possible retrenchment, for that is morally impossible for years to come. By 1901, then, the taxpayers of the country will begin to perceive more clearly than they do now what the white man's burden is when translated into terms of cold cash.

It is an essential part of the Imperialistic gospel that salvation for subject races comes high for those who do the saving. The English Imperialists are beginning to worry about this. They find their expenses for the Empire growing uncomfortably large. This year, for the first time in history, the expenses of the English army on a peace footing exceed \$100,000,000. We can give our cousins odds in this game and beat them hollow, as our army appropriations, including pensions, will easily be upwards of \$200,000,000. In England, however, they are nervous over the smaller sum. One troubled member of the Government said the other day, in a speech to a Tory club, that they ought to go about among the people explaining that "Imperialism could not be run on the cheap." But, as Mr. Morley retorted, this is entirely unnecessary, as "the tax-collector is a more telling missionary of that gospel." He is, and he will be busily preaching it throughout this fair land for many years to come.

SHADOWS OF ENGLISH IMPERIALISM.

The colonial Empire of Great Britain undoubtedly represents, on the whole, a great triumph of civilization and philanthropy. Looking back to what India was, what Egypt was, what Cyprus was, before they came under English rule, and comparing their state then with what it is now, no one can think of the transformation as other than beneficent. The waste places of the earth, the habitations of cruelty, which England has seized and into which she has introduced law and industry and the arts of commerce, were taken over by her not primarily in a spirit of benevolence, but in obedience to the expansive push of a highly specialized industrial nation demanding new markets abroad. Yet a higher morality and justice and charity have gone with the trade. Still, the picture is not without its shadows. Current discussions in the English press and in Parliament have clearly brought out facts which show what appear to be the inevitable incidental evils of government forcibly imposed by a superior race upon an inferior one.

The operations of the English army in the Sudan have, in a way, brought as much shame and compunction to philanthropic people in England as the exploits of our soldiers in the Philippines have caused Americans. After the sifting of all the evidence, it is clear that many of the wounded Dervishes were unnecessarily killed. Gen. Gatacre, who was at Omdurman, says that "the composition of the army was such as to demand a close watchfulness being kept over it," and admits that "the Jaalin friendlies had good reason to hate the Dervishes, and I have no doubt that when they got a chance on the sly of knocking a wounded Baggara on the head, they would do so." Still graver is the admission by Gen. Gatacre that British machine-guns swept the crowds of fugitives pressing out of Omdurman, among whom were many women and children. He acknowledges that it was an awful thing to do, killing women and children so as not to allow the Dervishes along with them to "escape unmolested," but justifies it as "one of those necessary consequences which have to be accepted in war." But it has made thousands of Englishmen wince.

Still more disquieting has been the effect of the official admissions respecting the treatment of the remains of the Mahdi. The Government acknowledged in the House of Commons that the Mahdi's body had been dragged from its grave and thrown into the Nile. The Government did not say, but it is asserted by the *Morning Post*, that the Mahdi's skull and some of his bones are "in possession of officers who took part in the campaign." In any case, the rifling of a venerated tomb would, in the course of war with a civilized Power, have been

regarded as a gross and disgraceful outrage. It seems hardly a good way to begin civilizing the Sudanese. The act has been defended as a necessity, in order to show that the Mahdi had not, as the Dervishes are said to have asserted, really gone bodily to Paradise, but that he was just an ordinary mortal and impostor, whose tomb it would be absurd to convert into a second Mecca. But even Tory papers protest that the end did not justify the means, and that it would have been better and, in the long run, wiser to refrain from a deed alien to the spirit of civilization. Characteristically enough, it is the Irish who have made the biggest row about the affair in Parliament, and who threaten to vote against the grant to the Sirdar in consequence.

Even in India, which is the finest example of English government of subject races, the story has its dark side. The natives have been immensely bettered, yet they are discontented—more so just now, it appears, than at any time since the Mutiny. The murder of English officials at Poona a year ago was a startling reminder of the passions that were astir among the people; and now comes the news that the witnesses whose testimony convicted the murderers have themselves been murdered. There is a growing popular agitation on the basis of "India for the Indians," and it is buttressed by such facts as that out of 39,000 officials in the Indian service, 28,000 are English, to 11,000 natives, the latter drawing salaries to the amount of \$15,000,000 a year, while the English salaries amount to \$75,000,000. "In reality," asserts Mr. Dadabhai Naoroji, M. P., "there are two Indias—the prosperous India of the British and other foreigners, and the poverty-stricken India of the Indians."

English Imperialism has also a way, like our own, of proving costly beyond all estimates. The Sudan expedition was undertaken on the solemn assurance of the Chancellor of the Exchequer that it was not to cost the British taxpayer one penny. It has, however, already cost him rather more than \$10,000,000; and an item of £215,000 for the Sudan is in the budget now before the Commons. Similarly of other colonial adventures in Africa. Supplementary estimates have an unpleasant way of turning up. For Uganda, for example, the estimate of last March was \$720,000. This, it was explained at the time, was unusually large, as a "mutiny" was in progress. Two weeks ago, nevertheless, an estimate of \$1,690,000 for Uganda was laid before Parliament. No wonder Mr. Morley asks where this thing is going to end.

THE CENSUS SETTLEMENT.

The *Congressional Record* of March 1 contains a report of the proceedings in the House by which the bill for taking

the next census was disposed of. There had been controversies between the two branches of Congress on certain points, which had been referred to a conference committee. Mr. Hopkins of Illinois was the ranking member of the House conferees, and in that capacity explained the settlement which had been reached.

The original House bill had provided for the establishment of a separate Bureau of the Census. The Senate insisted upon making it a branch of the Interior Department, so that the Secretary of that department would be its chief officer. But the change really amounts to nothing, as the Director of the Census is to have full control of the Bureau, and it will be practically a separate establishment.

The really vital questions at issue were as to the disposition of the spoils. These were the only questions in which Representatives had any concern, and their concern in these was very lively. The first issue was as to the supervisors, of whom there are to be 300. It had been proposed at first that these officials should be appointed by the President absolutely. The Senate demanded that the advice and consent of that body should be required. The House conferees yielded to this demand. But the question was at once raised whether under this system the Senators would not seize more than their fair share of these 300 offices. "Does not the gentleman think," asked a colleague of Mr. Hopkins, "that under that proviso of the agreement that gives the Senate the right of confirmation as to supervisors, the chances are that the Senate will have the advantage as to that particular class of appointees over the House of Representatives?" The Illinois Representative was hopeful that this deplorable result would not follow. "I think not," he said, and added: "We found on examination that all of the previous census bills had provided for confirmation of supervisors by the Senate, and, it being an unbroken practice, they were unwilling to yield, and we felt that in the interest of the public service we had better agree to the Senate amendment in that respect."

Much more important was the question as to the thousands of appointments that are to be made in the Washington office. This is the provision of the bill:

"That the chief clerk and the chief statisticians provided for in section 4 of this act, and all other employees authorized by this act below the Assistant Director of the Census, shall be appointed by the Director of the Census, subject to such examination as said Director may prescribe: Provided, That no examination shall be required in the case of enumerators or special agents, nor of employees below the grade of skilled laborers at \$600 per annum."

It was this section of the bill which chiefly interested the members, and Mr. Hopkins was pressed for a full explanation as to whether the places were to be "under the civil service"—that being the almost invariable Congressional method of expressing the idea that of-

fices are under the competitive system established through the operation of the civil-service law. This was the way the discussion on the point began:

"Mr. Dockery—What provision is made as to the appointments? Are they under the civil service?"

"Mr. Hopkins—The appointments are not under the civil service, but it is provided that, aside from the enumerators and special agents, the appointments must be made on merit, and that the appointees must first pass an examination provided for by the Director of the Census."

But Representatives could not afford to have the slightest doubt left on this point, and so one after another pushed the inquiry in this fashion:

"Mr. Brosius—The examinations are under the control of the Director?"

"Mr. Hopkins—They are under the control of the Director. The language is substantially the language of the House bill."

"Mr. Brosius—Such examinations as he shall direct?"

"Mr. Hopkins—Yes."

"Mr. Handy—These examinations are entirely noncompetitive, are they not?"

"Mr. Hopkins—They are supposed to be noncompetitive, but will be of a character that will insure the highest degree of merit and efficiency."

The conclusion of the whole matter was expressed in a graphic phrase which Gov. Black of New York has made well understood throughout the country:

"Mr. Handy—The starch is all washed out of the civil-service provision, is it not?"

"Mr. Steele—I hope so."

"Mr. Hopkins—Well, I do not know about the starch."

Such was the low plane upon which the House of Representatives treated the arrangements for a great national enterprise, which is to reflect credit or disgrace upon the United States, not only in 1900, but whenever in the future the census volumes shall be consulted, at home or abroad. The only questions in which Congressmen are interested are whether the census places are to be made spoils, and whether Representatives are to stand as good a chance at the spoils as Senators. In short, Congress has done all that it could to eliminate expert ability from the Census Bureau and to wreck this great work.

The sole hope of avoiding this wreck rested with the President. The right sort of Director might still save the census. The law provides that appointments shall be made "subject to such examination as said Director may prescribe." Under this provision he can prescribe a standard which will rule out the whole gang of worthless protégés of the spoilsmen whom Senators and Representatives expect to unload upon him. Mr. McKinley might have secured for the position an almost ideal man in the person of Carroll D. Wright, who stands at the head of our statisticians, who has shown himself a first-class executive, and who has had the experience so desirable for the work in 1900 through his completion of the last census after Mr. Porter's withdrawal. That "Destiny" in whose hands Mr. McKinley says we are helpless, would appear to have made it inevitable that the President should

nominate him for Director, simply because "Providence" had trained him to do the work in the best possible manner. But "Destiny" and "Providence" seem in this instance to have been worsted by the demands of a persistent office-seeker, who insisted upon a reward for services to the President in securing his nomination and election for the present term, and whose coöperation is desirable in the political work that must be done with reference to a second term. So the place goes to ex-Gov. Merriam of Minnesota, as the only thing left in the President's gift "equally as good" as other offices which this politician has persistently but vainly sought since November, 1896. It would be ludicrous if it were not so outrageous that a man should be made director of a great statistical enterprise who has never had the slightest experience in statistical work, and who is expected to run the Bureau upon the same spoils principles which alone secured a moment's consideration of his name. For the second time a Republican Administration debauches the census in the interest of party supremacy.

THE LIBRARIANSHIP OF THE LIBRARY OF CONGRESS.

The present is a critical moment in the history of the Library of Congress, which is without an executive head. The man who shall finally be appointed to this responsible position will affect the Library, for weal or for woe, for a long generation. Even under ordinary conditions the responsibility of this appointment would be great, but there are peculiar circumstances connected with the librarianship at this time which make the situation unusually grave, and which demand the most serious consideration.

On the 30th of June, 1897, the Library of Congress consisted of a collection of books, maps, and such art works, engravings, etc., as had been received through the operation of the copyright law, crowded into inadequate quarters in the Capitol, with a staff of forty-two people, consisting simply of a chief and his clerks; the force being practically without organization. On January 1, 1898, six months later, the Library found itself spread out in its new, palatial quarters on Capitol Hill, covering acres of ground, with a force, besides the Librarian, of one hundred and thirty-two people, divided by legislative enactment into nine departments under subordinate heads. While the material part of the Library was thus promptly housed in one of the solidest structures in the United States, the library organization itself, formed only to the extent of filling the places provided by Congress, was like a huge, inflated balloon wobbling about in mid-air until those numerous anchor lines which true organization require should have been attached to its firm, material base and drawn properly

taut. The last six months of 1897 (the first six months of the reorganization of the Library) were consumed in making the new appointments required by the act of reorganization and in removing the collections into the new building—two difficult tasks, the proper execution of which would have fully justified this amount of time. Since that period more than a year has passed; and with a view to a correct understanding of what will devolve upon the new Librarian, it is desirable to state frankly what the situation is at this moment.

The late Librarian failed to adjust the elaborate and intricate organization to the great structure, and, although nineteen months have elapsed since the reconstitution of the Library, the departments, with the exception of the three principal ones, have not even been located, and, excepting the reading-room and to some extent the Copyright Office, none is settled and fully equipped for its work, but is, as it were, merely camping in some one of the magnificent halls of the Library building, with such temporary fittings and furnishings as could be obtained. Here, then, is one important task awaiting the new Librarian.

Of necessity, the act reorganizing the Library was drawn in advance of the removal to the new building, and without the aid of the knowledge which is gained only by experience in administering a large library on modern lines. It is consequently noticeably deficient in some directions. Salaries were provided for positions which are still non-existent, and some of which are likely to remain so; while other positions which a trained librarian, experienced in handling a library of parallel importance, would at once have seen to be absolutely necessary, were omitted altogether. The act referred to provides for a librarian and a force of 132 clerks. The duties of the librarian, besides the proper general supervision, involve the expenditure of all moneys appropriated for the purchase of books and supplies; and yet there was no provision for so important an adjunct as a "chief clerk." This defect has been made good only in this year's appropriations. The act failed to make any provision for an order and supply department. Every librarian of experience knows the importance attaching to this division of a library, and how great is the necessity for its proper equipment. But this necessity is especially great in the case of the Library of Congress because of the arrears in the book-purchasing, which will require special efforts in order that the lamentable gaps in the collection shall be made good. It should be remembered, also, that, as the copyright law provides the Library with copies of the ordinary current publications, the buying must be largely of foreign books, and must be supplement-

ed by well-devised and intelligently carried-out methods for filling up gaps in the equally important classes of literature not obtainable by purchase. In other words, this department of the Library should be one of weight, with a well-instructed, competent man at its head, supported by an adequate clerical force.

At present, the serious difficulties due to inadequate provisions for administration, such as we have cited, are met as best they can be by extemporized and unsatisfactory expedients. The incoming librarian must face the difficult problem of carrying on this great institution with an ill-adjusted and insufficient clerical equipment, until he can clearly formulate the urgent necessity of the Library in these particulars, properly present the same to Congress, and obtain provision for its administration commensurate with its needs. It is to be borne in mind that the Library, so far as its collection of books, maps, engravings, newspapers, and music is concerned, stands first of all the libraries in the country, while in its provisions as to administration it is probably behind the half-dozen leading municipal libraries in the United States.

But, serious as are the problems outlined above, the new incumbent will be met by yet another even more grave and fundamental, and which should be dealt with at the start if justice is to be done to the work of the Library, or true success secured for himself as its executive head. As yet, no comprehensive, coherent scheme of administration for the Library seems to have been applied or even framed. The result is, that there is neither the coördination nor the cohesion desirable in the different divisions of the Library, nor do they make a homogeneous whole or intelligently co-operate with one another. As a consequence, there is waste by reason of duplication of work and because the different departments work toward diverse ends. This is probably not from want of desire to coöperate, but simply because no general plan of work has been established so that each division of the Library has its understood part, and the work accomplished in any one department adds to the general advancement of the whole. No satisfactory result can be obtained in the long run without some such comprehensive scheme of administration; and it is clear that the new librarian will need to devise one first of all.

In doing this he will encounter his most serious difficulty. We have already referred to the inadequacy of the force, but this is exhibited even more in quality than in quantity. The selection of the present heads of departments in the Library of Congress was undoubtedly conscientious; but, as a consequence of giving way to the strong political and social pressure brought to bear in

behalf of incompetent or otherwise disqualified clerks in subordinate positions, these executive heads were left without proper material. The evil is not to be measured simply by the number of incompetents. The method of appointment instills an insidious poison which in time contaminates the whole force, rendering discipline practically impossible, and inevitably leading to disaster.

CARL SCHURZ.

Carl Schurz, whose seventieth birthday was publicly celebrated on Thursday night, is probably the only German-born citizen whose literary and political careers in the United States have both been a decided success. We do not mean to say that no other has equalled him in capacity, but no other has possessed nearly the same command of the English language; and this, in an English-speaking country, must of course be the first condition of eminence in public life. Among Mr. Schurz's various gifts, indeed, the gift of language must be considered the most remarkable. The number of Germans who speak English, and speak it well, is, of course, great. There are many Germans who make a respectable figure at the bar, but we know of none except Schurz who can claim a place in the first rank of American orators, without having to struggle for it, without having to argue about it, without having to explain why he ought to have it. There is really nothing in his speech for which he has to claim indulgence except a slight accent. We have been present when we knew he had been taken unawares, and when extempore speech was a necessity if he was to speak at all, and have listened to the faultless flow of his English with a feeling of amazement.

But skill in language alone would not make an American orator of Mr. Schurz's kind. There lie, behind all speech, regions of national or race mind, fields of political ethics, in which, if you do not wander in youth, you rarely wander afterwards; things which have to become possible or impossible to you through habit and association, not through books or instruction; things which are most easily described under the general term local political sense, the possession of which alone enables you to know how the millions around you of all classes and conditions are feeling. This is as necessary to an orator as language, perhaps more so. Without it, talk he never so well, he talks as a foreigner, and, too, can only grope his way to the national heart. This quality Schurz has, and no other German who has come among us has, within our knowledge. He knows how Americans feel without having it explained to him. He has got the Anglo-Saxon point of view. It may not always be the right view, or the view most easy to

defend artistically, but it is the view you must understand if you mean to be a political orator, and Schurz understands it. He was thus equipped as no other German has been for a career of public usefulness, and he began early. He was luckily but a youth when he was exiled from his native country, and he saw without hesitation what a country this might be to a man of his peculiar talents. He never wavered in his allegiance to it in the succeeding eventful years. Judged by the usual American political tests, he was not a success, for his official career has been short and troubled. He did a little diplomacy, a little soldiering, a little legislation, and a little administration—it was all well done, but it was not done in the way which, in the present conditions, gives a man a firm hold on American official life.

In short, he has not been a successful politician, as the term politician is understood among us to-day. Of him it is not true that thrift has ever followed fawning. He has never spoken for any party, and he has never had any party behind him, and unhappily continuous service is rarely possible in American public life in these days, unless a man devotes himself to a party and sees all public questions through party spectacles. But we do not think we exaggerate when we say that the better a man serves his party in our time, the less of a statesman he becomes. Schurz has never been willing to sacrifice the loftier position and the more enduring memory. He always sowed for the immortal gods. We cannot recall a single incident in his long career which one might cite as a distinct failure of judgment except the support he gave to Greeley's unfortunate candidacy in 1872. But even this mistake had virtue in it, for a host of good men saw in Greeley the promise of better things.

From the day Schurz landed in the country to this, his seventieth year, we can think of no good cause that he has not helped, no stream of evil which he has not sought to stem, and there have been many. No moralist has ever had a moment's doubt on which side of any public question he would stand. There was never any fear that he would come in when the "party bell rang," unless it rang for truth and liberty and justice. He was never ready to sacrifice his personality to any cause unless he was right well assured that it was a good one. We might cite many instances in which his eloquence served, or sought to serve, the state, but this task was well performed by the orators who portrayed his life at the late banquet. We seek simply to hail with thanks and congratulations a man who, in closing an illustrious career, can truly say that from prime to eve he has obeyed only one voice, and that has been the voice

which, since the dawn of civilization, has called the race to higher things.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE.

OXFORD, February 20, 1899.

As one looked round the spacious and well-filled International Hall of the Café Monico in Piccadilly Circus on February 11, on the occasion of the annual dinner of the London School of Economics and Political Science, one could hardly help rubbing one's eyes with a certain amazement. The School is only four years old, and, as most of those present were undoubtedly aware, it was in a sense the creation of the Fabian Society—that interesting body of middle-class and opportunist Socialists whose name, before imperialism dawned upon England, was in every one's mouth. In this sense only the creation of the Fabian Society, let me hasten to say, that it was by two or three of its leading members in their individual capacity that the School was planned, and the few hundred pounds obtained for initial expenses. Still, one might have supposed that that would have been enough to damn the undertaking; and yet the predominant note of the dinner in question was not merely that of success; it was that of respectability, so dear to the British bosom. That Sir Frederick Pollock, one of the few jurists known on both sides of the Atlantic, should take the chair, might have been an act of chivalry; that Mr. McKinnon Wood, the chairman of the London County Council, and Lord Reay, the chairman of the London School Board, should propose the toast of the School, might, perhaps, have been expected, for in both those bodies Progressive majorities are now in power; but that a great judge like Lord Justice Vaughan Williams, and a great civil servant like Sir Courtenay Ilbert, should come to express their satisfaction, was, indeed, significant. And when, from the opposite ends of the hall, first Mr. Bryce, that incarnation of sound sense, and then Mr. Leonard Courtney, that pillar of economic "orthodoxy," rose to give the School their blessing, one felt that its victory was indeed complete.

But such a success cannot have been won by mere craft; it is the just reward of the honesty of the creators of the School, among whom Mr. Sidney Webb deserves the first place. They said that they intended the School to be absolutely independent of all economic or political creeds, and they have kept their word; they secured as its Director Mr. W. A. S. Hewins, who, if he has a bias at all, is probably an individualist at heart; and Mr. Hewins has managed to obtain the services, for longer or shorter courses of lectures, of a surprisingly large number of the men who are generally recognized as competent to speak on their several topics. To mention some of those who this year are giving regular and systematic instruction, besides the Director, who teaches economic history, Mr. Edwin Cannan undertakes "the groundwork of economic theory," and Prof. Foxwell, trade, banking, and currency; Mr. Acworth lectures on railway economics, Mr. Lowes Dickinson and Mr. Graham Wallas on political theory, and Mr. Hubert Hall on palmography. All of these are names well known to American scholars. Shorter courses are given occasionally by such men as Prof. Edgeworth and Mr. R. H. I. Palgrave.

Teachers like these have naturally attract-

ed students. The total number of individuals registered for one or more courses in 1895 was 285; it is now over 400; of these there are some 80 who are pursuing a definite two-years' course and give the greater part of their time to it. Among the students there are perhaps fifty of the junior members of the civil service, taking courses on finance or other subjects bearing upon their official duties, and a like number of railway officials are taking railway economics; a score or more of the servants of the County Council and of the vestries attend lectures on municipal administration, and another score of bank clerks come to those on banking. In all these subjects a great deal of systematic instruction is possible, quite aloof from mere "matters of opinion." There is evidently an increasing amount of what the Germans call Administration to be got through somehow in a modern community; and he would be a pessimist indeed who held that experience had absolutely nothing to teach us. As all the courses of the School are given in the evening, there is no reason why an increasingly large number of the younger officials in London should not benefit by its instruction—especially if they suspect that their official superiors look with favor upon it; and herein will lie, perhaps, the main usefulness of the School. It is this that justifies the Technical Education Board of the London County Council in making the grant which now furnishes the School with its largest source of income. But it does not appeal to officials alone; and it is significant that it is already attracting both men and women who have been engaged in charitable work in "settlements" and elsewhere, and who begin to feel the want of some systematic study of the problems they once attacked with ignorant ardor.

Of the future of the School the Director and the Committee have noble visions. They have already helped in the work of reforming the examination requirements of the University of London; and they anticipate that in the near future the School will practically be recognized as the Faculty of Economics and Political Science in the teaching University about to be established. This is an anticipation in which Mr. Bryce and Lord Reay took pains to make clear that they both share. At present, moreover, the School has to be content to claim but a small part of the time, and to contribute but a small increment to the income, of teachers whose main obligations are to other institutions, such as the older Universities. But, of course, the School will not be worthy of its name until it can of itself provide a career and an income for a body of eminent scholars. That time is not in the immediate future, but it may reasonably be looked forward to.

Meanwhile, it is already worth while to ask what the School has to offer to American students. It will not be thought to be a reflection upon the School when it is said that men of ability, who have duly benefited by the teaching already provided in half-a-dozen or more of the American universities, will find the greater part of the ordinary regular instruction somewhat too elementary for their needs. Those who have taken their bachelor's degree in other subjects, and are beginning their study of economics as graduates, might assuredly do well to spend a year at the School, though, as one might expect, the lecturers have usually but little special knowledge of American conditions. But the

persons who will profit most by the existence of the new institution, are those who think of coming to England to investigate some particular group of concrete facts as to English commercial or industrial conditions. In the rooms, quiet enough during the day, which the School has secured overlooking the Thames (at No. 10 Adelphi Terrace, W. C.), they will find a useful collection of printed material. The "London Library of Political Science," which is in process of formation, aims especially at the collection of reports, blue books, circulars, annual statements, balance sheets, etc., etc.—all that "literature," in short, which it is usually so difficult to get hold of in sufficiently large quantities for purposes of comparison and criticism. And as the Director makes it his business "to keep in touch" with business men and officials all over the kingdom, there is perhaps no one to whom a student, with proper credentials, can go with a like certainty of obtaining the advice and the introductions necessary for his purpose. Already this is realized in other countries; and an American student who comes with such objects in view can even now exchange ideas with men from Brussels and Berlin and Munich and Moscow.

W. J. A.

Correspondence.

JOHN QUINCY ADAMS ON QUIXOTIC IMPERIALISM.

TO THE EDITOR OF THE NATION:

SIR: On the 4th of July, 1831, John Quincy Adams delivered an oration at Washington, his subject being "The Mission of America." In this address he used language which, it seems to me, it is worth while to bring before the public just now:

"She [America] has abstained from interference in the concerns of others, even when the conflict has been for principles to which she clings, as to the last vital drop that visits the heart. She has seen that, probably for centuries to come, all the contests of that Acedama, the European world, will be contests between inveterate power and emerging right. Wherever the standard of freedom and independence has been or shall be unfurled, there will her heart, her benedictions, and her prayers be. But she goes not abroad in search of monsters to destroy. She is the well-wisher to the freedom and independence of all. She is the champion and vindicator only of her own. She will recommend the general cause by the countenance of her voice and the benignant sympathy of her example. She well knows that, by once enlisting under other banners than her own, were they even the banners of foreign independence, she would involve herself, beyond the power of extrication, in all the wars of interest and intrigue, of individual avarice, envy, and ambition, which assume the color and usurp the standard of freedom. The fundamental maxims of her policy would insensibly change from liberty to force. The frontlet upon her brows would no longer beam with the ineffable splendor of freedom and independence; but in its stead would soon be substituted an imperial diadem, flashing in false and tarnished lustre the murky radiance of dominion and power. She might become the dictatrix of the world; she would no longer be the ruler of her own spirit."

I applaud the strong fight which the *Nation* is making against the new craze, and believe future elections will show, if the Democrats have sense enough to give the voters a chance, that the people are more level-headed than the money-grabbers think. The impression is gaining ground that the "war for humanity" was begun and carried on for the

benefit of those who are already dangerously rich and powerful. If "imperialism" is successful, the above quotation from ex-President Adams will take its place among inspired prophecies.

T. A.

SANDUSKY, OHIO, March 4, 1899.

THE CLERGY AND THE WAR.

TO THE EDITOR OF THE NATION:

SIR: Incidentally you have drawn attention to the attitude of the Christian clergy of the United States with respect to the war debauch which has swept the country during the past year. In this city, with hardly an exception, the sentence of the ministers of the Christian religion, like that of Moloch in the infernal council, was and is "for open war." This was alluded to by Gov. Pingree a few weeks ago when he introduced Dr. Fuller of Boston, an eloquent missionary of peace, to a small audience of 300, assembled in the Armory Hall of this city. Whatever else Mr. Pingree may be, he has from the first been a consistent denouncer of the present war of conquest. Upon introducing Dr. Fuller, he said in substance: Where are the ministers to-night? Why are they not here when we meet to talk of peace? I remember a few months ago, when the cry was "War! war!" that they nearly trampled upon one another in their endeavor to reach the platform and pour forth the volumes of their warlike eloquence. Not one is here to-night!

As I listened, I thought of the noble words which Landor puts into the mouth of Melanchthon:

"*Melanchthon.* Cannot we agree to show the nations of the world that the whole of Christianity is practicable, although the better parts never have been practised, no, not even by the priesthood, in any single one of them? Bishops, confessors, saints, martyrs have never denounced to king or people, nor ever have attempted to delay or mitigate, the most accused of crimes, the crime of Cain, the crime, indeed, whereof Cain's was only a germ, the crime of fratricide, war, war, devastating, depopulating, soul-slaughtering, heaven-defying war. Alas! the gentle call of mercy sounds feebly, and soon dies away, leaving no trace on the memory; but the swelling cries of vengeance, in which we believe we imitate the voice of heaven, run and reverberate in loud peals and multiplied echoes along the whole vault of the brain. All the man is shaken by them; and he shakes all the earth.

"*Calvin.* I beseech you, do you, who guide and govern so many, do you (whatever others may) spare your brethren.

"*Melanchthon.* Doubtful as I am of lighter texts, blown backward and forward at the opening of opposite windows, I am convinced and certain of one grand, immovable verity. It sounds strange; it sounds contradictory.

"*Calvin.* I am curious to hear it.

"*Melanchthon.* You shall. This is the tenet. There is nothing in earth divine beside humanity."

If the Rev. John Watson, alias Ian Mac-laren, be accepted as the spokesman of the Christian priesthood, a sufficient answer, as delivered at Philadelphia a few days ago, is, "In our time we have had considerable areas of the earth's surface thrust by Providence upon us." Thus it seems possible that strangers to the real parties in interest, by Providential dispensation, may transfer whole empires, together with their inhabitants, by simple gift *inter vivos*. By the same logic, the thief who steals the Reverend Dr. Watson's purse will offer a complete defence to a charge of robbery by pleading that the purse was providentially thrust upon him by the Almighty.

Dismissing the ethical unrest involved in

the act of taking possession of "considerable areas" of other people's property, one is tempted, at the risk of being thought irreverent and impertinent, to ask why the Divine Donor imparted such full and perfect knowledge of his real-estate transactions to the reverend gentleman, when he has seen fit to leave innumerable other souls to grope in Egyptian darkness in the endeavor to make out the links in the chain of title.

"May the Lord deliver us from all cant and damnable palaver."

WILLIAM H. HOCKADAY.

DETROIT, MICH., March 4, 1899.

"THE LIMITS OF OUR KNOWLEDGE."

TO THE EDITOR OF THE NATION:

SIR: An interesting letter in your issue of March 2 raises, in a special case, a question by no means new, and of much wider application. In using a language no longer spoken, to what extent may we properly be called upon to produce examples from its classic writers for the very words and phrases which we employ; and how far are we justified in following natural and unstrained analogies? How much, for example, may we take for granted with regard to forms not actually found in what remains to us of classical Latin? May we, or may we not, use a form of expression analogous to one found in some classic author, but not identical with it? There is an antecedent probability that the wisest course is one equally removed from license and from slavishness. That we cannot freely extend idioms even in our own language needs no demonstration. We speak of a stream "running dry"; we should hardly venture to say "flowing dry," although, in regard to streams, "to run" and "to flow" are synonyms. On the other hand, when we have occasion to use any form, however strange, of any verb in the language—such an uncouth form, let us say, as "thou circumventedst"—do we ever think it necessary to justify ourselves by a precedent? Do we even care whether anybody has ever used this particular form before? And why should we think that the ancients felt otherwise? In Latin there are verbs known to be defective. We do not attempt to use, say, the first and second persons plural of the present indicative of *sto*, a verb known to be defective, although all the rest of that tense is found. But does this in any way imply that, in the case of common verbs, not known to be defective, we dare not use whatever form we may need of a tense against which we have no warning? Must I find *amaretis* in some author of repute before I venture to use it? No one will say so. In short, when the ancient grammarians have left us no warning that a verb or noun is defective, we cannot be required to limit ourselves wholly to forms of that verb and cases of that noun which, if challenged, we could produce out of some classic author. This would be, not merely to acknowledge a language to be dead, but wantonly to kill it. Let us now apply these general ideas to the letter referred to. We shall see that the learned writer has joined together two cases which do not stand in the same predicament.

With regard to the impersonal use of the passive infinitive of *ire* with the first or accusative supine of purpose to form a substitute for the absent passive infinitive, it is evidently impossible, if there is no supine; and, while I believe that the assumption that a supine never existed if not found in our

scanty remains of the language is open to criticism, I am ready to say that it is safer to avoid using it, because we know many verbs, and whole classes of verbs, that have no supine. But I cannot but regard your correspondent's remarks on *fore ut* as downright pessimism. For I think I may defy any one to give a respectable reason why *fore ut* should be right with one verb and not with all verbs not known to be defective in the required form of the subjunctive. As to Plautus and Terence, that is no doubt specially true of their conversational language which is true in a less degree even of literary Latin of the most formal type, that periphrastic forms were avoided willingly, if not sedulously. Instead of "Argyrippus spero *fore ut possit exorari*," the comic dialogue prefers to say "Argyrippus *exorari spero poterit*." And so I should be likely to express myself on the football ground, in the case proposed by your correspondent, "Nostri, credo, vincentur." But I am not ready to admit that I should not be equally right in using the formula *fore ut* with this or any other verb not known to be defective in the form required. And, as to what Cicero or Quintilian would think of it, that is a question which may be put off to the day when we can confidently say just what Chaucer would think of such perfectly proper expressions as "mental gymnastics" in the letter referred to. In all things, we poor mortals must be content to use partial knowledge under pain of never doing anything. We all write, more or less, in our own language; but which of us can say that he knows his mother tongue perfectly, even as now spoken? Have we not all heard of that learned grammarian who picked flaws in the Latinity of Cicero himself, and did not hesitate to call him an Allobrogian? FRANCIS PHILIP NASH.

GENEVA, N. Y., March 4, 1899.

"THE LAW OF THE ROAD."

TO THE EDITOR OF THE NATION:

SIR: The frontispiece to *Harper's Magazine* for January, an equestrian picture of Gen. N. B. Forrest, illustrating Dr. Wyeth's excellent article upon the Confederate cavalry leader, mentioned in your issue of the 9th inst., struck me at first as a palpable blunder on the part of the artist. Several "horse-ey" men of my club failed to see what at a glance was obvious to me: the rider grasps his reins with his right hand. I made merry over the artist, and fully committed myself before the text had shown me that Forrest was a left-handed man and wore his sabre upon his right side. I had served near Forrest at Shiloh (Pittsburgh Landing), and had known him quite intimately after the war. Although I could detect at a glance that the bridle was held in the wrong hand, I had failed to observe that the living man was left-handed.

This led me to reflect on road law. When, in 1865-'66, in the course of my law studies, I read that "Keep to the left" is the law of the road in England, I supposed it was a mistake of writer or printer. It was inconceivable how the colonists, fresh from the mother country, could exactly reverse one of the most useful of English customs, most in daily use, and most likely to be, traditionally and by habit, preserved. That custom must first have grown up among horsemen, long before vehicles were in use. Most men are right-handed. To mount upon the left required that the left should be the bridle-

hand, thus leaving the stronger hand free to draw the sword. Awkward as it is now to mount upon the right, or to hold the bridle with the right hand, I can conceive of no other reason for it than the necessity for leaving the strong right hand free for use.

This granted, two equally good reasons appear why "Keep to the left" should have been the law of the road. It is easier and more natural to draw the rein to the bridle-hand side. My recollection of riding days is that horsemen lost by night make the lost-circuit to the left, as a lame man gyrates to the side of his shorter leg. The stronger reason, perhaps, is that the mounted cavalier, in those palmy days, had good reason to have the approaching traveller upon his right. Thus he could, at once, draw his sword from the left and cut or thrust upon his right, or strong-hand, side.

These reasons are entirely satisfactory to me as to the origin of the English "law of the road." They leave wholly unexplained the more curious and more interesting question, Why did our colonial ancestors change it to "Keep to the right"? The law-books are silent altogether as to that. The older text-books devote but meagre space to roads and highways. Blackstone gives little more than three pages to the subject of easements. In Elliot on Roads and Streets, p. 618: "In England the customary rules of driving are: 1st. In meeting, each party must keep to the left." In a note it is said:

"This rule is thus stated in an old rhyme:

"'Tis a law of the road,
Though a paradox quite,
If you keep to the left,
You'll always be right."

The author continues: "In this country a different custom or system of rules has grown up. . . . The first and most important rule is, that, in meeting, each party shall keep to the right." Cases are cited from Delaware, Maine, Michigan, New Hampshire, Massachusetts, and Wisconsin. It is also laid down that, in the absence of a statute, proof of this custom is not necessary, for the courts will take judicial cognizance of it. In the American and English 'Encyclopædia of Law,' vol. 12, p. 957, the rule is laid down and cases are cited from Maine, Massachusetts, New York, Kentucky, New Hampshire, and Connecticut.

The New England colonists were not, at least for some years, I think, a riding or a driving people. The Virginia colonists were a riding people almost from the first settlements. I might suspect that the latter had, at least at first, brought over the traditional rule of the mother country. But all the authorities seem to agree that the rule is universal in America, "Keep to the right." I can find no warrant for a belief that it has ever been otherwise in any of the colonies.

H. M. DOAK.

NASHVILLE, TENN., February 20, 1899.

Notes.

Doubleday & McClure Co.'s spring announcements include the Temple Edition of Dickens's Works in forty volumes (in connection with Dent & Co.); 'With Sampson through the War,' by W. A. M. Goode; 'Life Masks of Great Americans,' by Charles H. Hart; 'The United States of Europe: On the Eve of the Parliament of Peace,' by W. J. Stead; 'The Real Hawaii,' by Lucien Young, U. S. N.; 'How to Plan the Home Grounds,'

by S. Parsons; 'Within the Hedge,' verse, by Martha Gilbert Dickinson; 'Nature's Garden,' an aid to our knowledge of wild flowers, by Nellie Blanchan; and 'A Voyage to the Moon,' by Cyrano de Bergerac.

Houghton, Mifflin & Co.'s list embraces 'James Russell Lowell and his Friends,' by Edward Everett Hale, profusely illustrated; a 'Life of Edwin M. Stanton,' by George C. Gorham, in two volumes; 'Thaddeus Stevens,' by Samuel W. McCall; 'Charlotte Cushman: Her Letters and Memories of her Life,' by Emma Stebbins; 'The Life and Work of Thomas Dudley, Second Governor of Massachusetts,' by Augustine Jones; 'The End of an Era,' by John S. Wise, son of the late Gov. Henry A. Wise of Virginia; 'England and America after Independence, 1783-1892,' by Edward Smith; 'Letters of Carlyle to his Younger Sister,' edited by Charles T. Copeland; 'The Conjure Woman,' by Charles W. Chesnutt; 'Under the Beech Tree,' poems by Arlo Bates; 'Hermione, and Other Poems,' by the late Edward Rowland Sill; 'The Throne-Makers'—Bismarck, Napoleon III., Koosuth, and Garibaldi—by William Roscoe Thayer; 'Through Nature to God,' by John Fluke; 'Psychology and Life,' by Hugo Münsterberg; 'The Antigone of Sophocles,' translated into English by Prof. George H. Palmer of Harvard; and 'Corn Plants,' by Frederick Le Roy Sargent.

G. P. Putnam's Sons are printing 'Two Women in the Klondike,' by Mrs. Mary E. Hitchcock, widow of the late Commander Hitchcock, U. S. N., and Miss Van Buren, a great-grandniece of President Van Buren. The illustrations will be copious.

The fifth volume (1821-1837) of McMaster's 'History of the People of the United States' is forthcoming from D. Appleton & Co., along with 'A History of American Privateers,' by Edgar S. Maclay; 'Admiral Porter,' by Prof. J. R. Soley; 'The Reminiscences of a Very Old Man (1807-1897),' by the late veteran engraver John Sartain; 'The Principles of Taxation,' by David A. Wells; 'Outlines of the Comparative Physiology and Morphology of Animals,' by Joseph Le Conte; 'Montaigne's Education of Children,' by Dr. L. R. Rector; and 'Idylls of the Sea,' by Frank T. Bullen.

Prof. Macvane's translation of Seignobos's 'Political History of Contemporary Europe, 1814-1896'; 'Elements of Finance,' by Prof. William M. Daniels of Princeton; 'Talks to Teachers,' by Prof. William James of Harvard; 'Economics,' collected papers of the late Gen. Francis A. Walker; 'Standard English Poems,' selected by Henry S. Pancoast; and a one-volume unillustrated edition of Britton's 'Flora,' are among the works soon to be issued by Henry Holt & Co.

The biography of Elizabeth of Austria is announced for publication by Harper & Bros. under the title, 'The Martyrdom of an Empress.' The author is a lady of the Austrian Court, one of the very few admitted to the intimate confidence of Elizabeth. From the same house will issue also 'An Incident, and Other Happenings,' a volume of short stories by Sarah Barnwell Elliott; 'Espiritu Santo,' a novel of operatic life in Paris, by Henrietta Dana Skinner, daughter of Richard H. Dana, author of 'Two Years before the Mast'; and 'The Jacksonian Epoch,' by Charles H. Peck, being the political history of the United States from the battle of New Orleans to Tyler's accession to the Presidency.

The Clarendon Press, Oxford (New York:

Henry Frowde), has in active preparation 'A Concordance of the Proper Names in the Septuagint,' by H. A. Redpath; 'The Oxyrhynchus Logia and the Apocryphal Gospels,' by the Rev. C. Taylor; 'A Dictionary of Vernacular Syriac,' by N. J. Maclean; 'Letters of Ricardo to Trower,' edited by James Bonar and J. H. Hollander; a second series of 'Studies in Dante,' by the Rev. E. Moore; a Supplement to Bosworth's 'Anglo-Saxon Dictionary,' by T. N. Toller; and 'Modern Land Law,' by E. Jenks.

'The Irish Washingtons, at Home and Abroad,' by George Washington, of Dublin, Ireland, and Thomas Hamilton Murray, of Boston, is announced by the Carrollton Press, Woonsocket, Mass.

The "Teachers' Professional Library," to be edited for Macmillan Co. by Prof. Nicholas Murray Butler of Columbia, will soon be launched with 'The Practical Lessons of History,' by Wm. T. Harris, United States Commissioner of Education.

The tide of reprints is again rising. From Messrs. Scribner flow in three more volumes of the Gadshill Dickens, edited by Andrew Lang, viz., 'Christmas Stories,' and 'Edwin Drood' with 'Master Humphrey's Clock,' that well forgotten sequel to the 'Pickwick Papers,' and parent to 'The Old Curiosity Shop'; and a new edition of John Addington Symonds's charming 'Sketches and Studies in Italy and Greece,' in the handsome uniform reprint of his works. The same firm sends us two more volumes of Downey & Co.'s uniform edition, in very bold type, of the novels of the Brontë sisters—'The Tenant of Wildfell Hall,' by Anne Brontë, whose portrait is after a drawing by Charlotte.

Macmillan Co., on their part, renew the Dent series of pocket Temple Classics with the timely reprint of the first edition of Mrs. Browning's 'Aurora Leigh' (1856) and of Robert Browning's 'Men and Women' (1855), a curious gathering together of poems to be redistributed afterwards—some being among the most famous of his shorter ones; and the delectable North's Plutarch (1579) in two volumes. In all these cases Mr. Gollancz's sub-editors supply just the proper amount of bibliographical apparatus. Purposely restrained, also, are the not too numerous footnotes of the Eversley edition of Shakspeare, edited by Prof. C. H. Herford, and published by the above firm. The first of ten volumes, very presentable in its open typography, has appeared, and furnishes "the cultivated but not learned reader" a general introduction, and special introductions for each of the four plays beginning with "Love's Labour's Lost." The editor has profited by the labors of his predecessors, and will not be thought to have needlessly enlarged the shapes in which Shakspeare has been made accessible and intelligible to all classes.

Our notice of the admirable 'Encyclopædia of Sport' (Putnam) appeared some weeks ago, upon its conclusion in the separate parts. The bound second volume (H-Z) has now come to hand, to mark the final completion of a very successful and creditable enterprise.

The Nestor of German novelists, Friedrich Spielhagen, has recently, in his seventieth year, published what a number of literary journals in the Fatherland regard as the strongest and best production of his prolific pen. It bears on its title the one word "Herrin." Quite naturally it is a "Kultur" novel, intended, if not to adorn a tale, at any rate to point a moral. It is the story

of an emancipated and strong-minded Jewish girl, who, having broken with the faith of her fathers, seeks to shine in the masculine rôle of a manager of a great landed estate (hence the title), but, failing in her purpose of "buying" social distinction and a titled husband, ends her career in lunacy. Spielhagen's publisher is Staackmann in Leipzig.

The Muret-Sanders German-English 'Encyklopädisches Wörterbuch' (Berlin: Langenscheidt) has now reached the word "gering." The English-German part, compiled by Prof. Muret, was completed some time ago, and published in two massive volumes of about 2,500 large quarto pages; the completion of the second part, under the editorial management of the veteran lexicographer, Prof. Daniel Sanders, is promised for the year 1900, in about equal bulk. This dictionary gives not only the customary definition, pronunciation, and similar data, but a wealth of idiomatic expressions, dialectic forms, etc. A unique system of signs and abbreviations has made possible a remarkable condensation. A smaller edition in two handy volumes is also being issued, at a cost of 7 marks each in good binding. It is unfortunate that the mass of matter has compelled the use of rather small type.

We may be familiar with the collection of Watts's hymns, or we may know in a general way of the existence of the Song-Book of Henry the Eighth, but some of us may be surprised to find that there still remains a comparatively large body of ancient Buddhist hymns which have been preserved in the Pāli, or sacred language of Gotama, in the verses in which they were chanted or sung by the monks and priests of India centuries before the Christian era. These form a part of the canonical texts of Buddhism, and they have recently been made more generally accessible in a German translation by the Vienna scholar Dr. Karl Eugen Neumann, whose renderings of Buddha's sayings and of other writings are already known among specialists. The present interesting and important work appears in Berlin under the title 'Die Lieder der Mönche und Nonnen Gotamo Buddhō's' (New York: Lemcke & Buechner), and its contents make a volume of nearly four hundred pages. These so-called hymns, or, rather, selections of "stanzas (*gāthā*) of the male and female elders," comprise each a few verses, although some of them are longer. We know their traditional authors individually by name, although there is actually, no doubt, anonymous material among them, as in any hymnal to-day. The tone, the minor chord, and the characteristic notes of Buddhism are all present, and these rhapsodical songs are dominated by the influence of the powerful personality of the Sakya Sage who preached on the banks of the Ganges stream five centuries before the dawn of that day on which the morning stars sang together.

In a little brochure with the sweet-sounding title 'Der ewige Friede' (Munich: Haushalter), one of the older professors of jurisprudence at the University of Munich, Freiherr von Stengel, defends the blessings of war and large military establishments in words that will rejoice the hearts of our own expansionists. Assuming that America's desire to rule the world and dictate her laws to declining Europe will grow stronger as time goes on, "Shall the German Empire," he exclaims, "in the event of war between America and Europe, stand peacefully by and

humly bow down before America? Surely not!"

Mr. Eben Putnam's 'Ancestral Charts' (Salem, Mass.) has reached a second edition. It is a set of blanks, capable of indefinite multiplication, to exhibit the bare facts of lineal descent for four generations, and hence a convenient epitome of genealogical acquisitions.

In the *Library Journal* for February to be remarked is Mr. Rudolph's account of the genealogical index undertaken by the Newberry Library in Chicago. The work is a key to hundreds of genealogies, town histories, anniversary celebrations, war and pension records, rosters, etc., and will, it is estimated, embrace nearly 700,000 entries by the time it is ready for the printer; and it is nearing completion. Mr. Iles also reports progress on the annotated bibliography of American history which Mr. J. N. Larned is editing with an able corps of assistants. This may contain as many as 1,800 titles.

We read in the Roman *Minerva* of February 5 that the Turin League against pornography, having to combat the indecencies figured upon match-boxes, which are among Italy's most stable exports, has gone into the business of making and selling match-boxes of its own, and that these find a ready sale.

In the *Revue des Deux Mondes* for February 1, M. F. Vié describes the striking contrast between French colonial extension for glory but without profit to the mother country, and German commercial colonization without conquest, but to the national advantage. The writer speaks more especially of *connaissance de cause* of the origin, growth, and activity of the German commercial colonies in and around the Antilles and in the Spanish-American republics on the Atlantic. In Hayti and San Domingo, in Guatemala, Venezuela, Colombia, Costa Rica, Nicaragua, San Salvador, commerce is preponderantly, and in some ports almost exclusively, in the hands of Germans, who carry, for example, four-fifths of all the coffee from Guatemala to Hamburg, the remaining fifth going mostly to England, also partly in German bottoms. In Venezuela nearly all the wholesale houses, and in Costa Rica almost all the banks, are German, and so on; the French being now and then represented by one or two firms.

Under the catchy title of "Afrikanische Gaiensskizzen," the African traveller Oscar Baumann, at present Austrian Consul at Zanzibar, has been publishing in the Vienna *Zeit* a series of sketches of German methods of colonial government that have attracted wide attention. Baumann was the chief witness in the Peters trial about two years ago, when this representative German was convicted of having taken the law into his own hands and put a number of blacks to death. Baumann declares that Peters's acts are to this day imitated and even surpassed by the officials in German East Africa, and that the hanging of natives has become almost a fashionable amusement of those in authority. The official in charge of affairs at Kilwa has a collection of ropes that have been used for this purpose, and has kept an account of these in his books under the rubric, "Entertainment of foreign guests." These hangings are generally attended by the photographic amateur as well. Baumann gives a long array of facts and figures implicating

also the former Governor, Von Wissmann. The German papers have become nervous over these charges, and declare that they cannot be ignored; and the Berlin *Post* states that the German Government has already taken steps to investigate the truth of them.

Those interested in contemporary German literature may be pleased to have their attention called to a dramatic poem, "Der Thor und der Tod," by Hugo von Hofmannsthal, which is published (with illustrations) in *Die Jugend* for February 4 (Munich), after having been brought out on the stage under the auspices of the Münchener Litterarische Gesellschaft. The poem was written in 1893, when the author was not yet twenty, and is remarkable for both contents and form. No other works of the promising young dramatist have as yet been published, but his drama "Donna Diana" was last year given at the Freie Bühne, and another, "Die Hochzeit der Sobelde," was recently being studied at the Deutsches Theater in Berlin.

The intensive pursuit of special lines of study, made possible by the division of labor in the higher institutions of learning, brings us face to face with the strange phenomenon of a modern professor of engineering vying with Matthew Arnold and Goethe in his protest against the encroachments of mathematics. Prof. Paul von Lossow (Munich), discussing the education of engineers in *Hochschul-Nachrichten* for January, inveighs against the useless ballast of mathematical learning with which the technical Hochschulen burden their students at the expense of more important, profitable, and broadening branches of knowledge. The bare elements of the differential and integral calculus are sufficient to follow intelligently the lectures on theoretical mechanics by two of the most eminent specialists in that branch—so the writer states after carefully going over his own note-books; while "among thousands of engineers who have been surfeited with mathematics in the Hochschule scarcely one has, in after life, occasion to apply them to advantage." This question of reducing the requirements in mathematics in order to improve the general and technical education of engineers has been agitated for some years past in the *Zeitschrift des Vereins deutscher Ingenieure* and in monographs by leading professors.

A large part of the *Consular Reports* for February is taken up with notices from the principal countries of Europe in regard to the policies adopted by their respective governments to extend foreign commerce. The topic of most general interest which they treat is technical education, the general testimony seeming to be that a great improvement in manufactures and an increase in exports are due to the influence of the industrial and commercial schools. Austria has 15 state industrial schools, and "devoted to commercial interests are 12 high schools, 28 commercial high schools, and 79 schools for advanced instruction." A list of 67 subjects is given in which technical instruction may be had in London, while in Belgium there are 225 schools for training young girls in housekeeping. Among other important topics touched on is our trade with China, which is shown to be steadily increasing, especially in Chefoo, where in 1897 the value of American imports was over two million dollars, or "almost ten times greater than those specified as from Great Britain."

The Calendar of the Tokyo Imperial University for the years 1897-'98, now a portly volume of 375 pages, gives the lists of professors, students, and graduates, and the titles of the Journals, Memoirs, and Bulletins of the various faculties published since 1887. These monographs show hopefully the practical application of science to manifold local problems as well as to questions of cosmic interest. In the various colleges there are now 2,239 students. The total number of graduates is 3,045.

A memorial to a bright and stimulating mind, the late Robert Herbert Quick, of high repute as an educational writer, has been projected in the shape of a "Quick Memorial Library" in connection with that of the Teachers' Guild of Great Britain and Ireland, already begun by 900 volumes on modern pedagogy given by Mrs. Quick, together with a collection on historical pedagogy. It is hoped to raise £500, of which the interest shall permanently replenish this library. Many Americans join in the appeal. Subscriptions may be sent to Prof. Foster Watson, University College of Wales, Aberystwyth.

The friends of Pasquale Villari propose to celebrate his fortieth year of service in the Florentine Istituto di Studi Superiori, of which he is President of the faculty, by establishing a fund whose income will be distributed in prizes for historical work of preëminent merit; and an international committee has been formed to enable his admirers in other lands to participate. Little is known in this country of Villari's tireless labors for the promotion of well-ordered liberty in Italy and of culture in its widest sense, but his classical lives of Machiavelli and Savonarola have won the regard of all students of the Italian Renaissance, many of whom will doubtless be glad to aid in this testimonial to his honor. Communications on the subject may be addressed to Henry C. Lea, No. 2000 Walnut Street, Philadelphia.

—The *Atlantic Monthly* for March has an entertaining article, by John Fiske, on "Some Cranks and their Crotchets." When Mr. Fiske was assistant librarian of Harvard College, he undertook to classify under the head of "Insane Literature" books dealing with questions which their authors would describe as coming under the head of Mathematics, Physics, Political Economy, or Literature, but which the judicious would grieve to think of as illustrating anything but "the pathology of the human mind." Under the rubric of Insane Literature, therefore, Mr. Fiske put all books in the library propounding the solution of the problems of squaring the circle, of perpetual motion, of the Great Pyramid, of the hollowness of the globe, etc. Unfortunately, this valuable innovation was open to the objection that the authors of the books in question, some of whom lived in the neighborhood, would probably feel hurt, if not libelled, at finding themselves solemnly adjudged lunatics in this way by an institution of learning. Consequently, Mr. Fiske substituted for "insane" the word "eccentric," and under the head of "Eccentric Literature" all such books are now catalogued at Harvard. Mr. Fiske goes on to say that one lot of books, which he indelicately calls "The Bacon-Shakespeare stuff," intended by him to have been put in this class, but overlooked, "still remain absurdly grouped along with the books on Shakespeare written by men in

their senses." Enlarging upon his text, he gives an amusing account of the "crankery" which leads to the production of literature of this sort, and incidentally gives the reader many a useful hint. The further we read, the wider we see the horizon of the insane in print expanding, and gradually perceive that there exists a vast audience of dupes for whom books are regularly written by persons of diseased minds, and who (but for the fact that there is no pecuniary imposition) occupy towards the writers in question the relation which stockholders do to the projectors of Keely motors, or to inventors of processes for extracting gold from seawater. The second instalment of Dr. William James's "Talks to Teachers in Psychology" contains a brief theory of education. He traces "a certain disparagement of emulation as a laudable spring of action in the schoolroom" to Rousseau, who, in 'Emile,' branded rivalry between one pupil and another as too base a passion to play a part in an ideal education; and he thinks that the depth and primitiveness of the sense of ownership, as displayed by the young of the human animal, "would seem to discredit psychologically all radical forms of communistic utopia in advance." Mrs. Howe's "Reminiscences" contain some good anecdotes illustrating Charles Sumner's want of humor. She might have added that, as in most such cases, the deficiency was so little suspected by Mr. Sumner himself that he would, on an important occasion, not only venture on a joke, but also subsequently be at considerable pains to explain it. An instance well known and often told among his friends was of a memorable pun on the word "buffalo"—explained by the punster as being founded on the double signification of the word, as designating the bison of the West and the city of the same name in the State of New York.

—*Harper's* contains a paper of a somewhat novel sort—an historical essay by a North American Indian; Simon Pokagon, chief of the Pokagon band of Pottawatomie Indians, being the author. He gives an account of "The Massacre of Fort Dearborn" at Chicago, as gathered from the traditions of the Indian tribes engaged in the massacre and from the published accounts, and what he has to say is well worth reading. He quotes his father as having always declared to the day of his death that if there had never been fire-water, there never would have been a Fort Dearborn massacre. He gives at length a speech of Tecumseh's, handed down by tradition, as good a specimen of oratory as any which we used to read in the pages of early white chroniclers. The old account-books of the American Fur Company, kept for inspection as relics, show, he says, how the glorious "winning of the West" was greatly effected by making the aboriginal proprietor of the property to be won drunk, and he adds in his quaint way that while examining them the Great Spirit whispered in his ear, "Pokagon, you can rest assured, if these books are required in evidence against the white man in the Supreme Court of the world beyond, no expert will be called for to read them." Was there a time when the good Indian, the noble savage, whom we now regard as an invention of romancers, was a reality? The sceptic should compare such a paper as this with the novels of Cooper, and he will not only find, to his surprise, that there was a basis of fact for the creations of the author of

the 'Last of the Mohicans,' but will be left with much doubt in his mind as to whether history, as reflected in Indian minds and hearts, would show as many examples of white generosity and honor in dealings with Indians as we have preserved in our own libraries of these virtues as shown by Indians. Tecumseh's picture of the ordinary white man, "cunning, crafty, cruel, without honor, without natural affection"—is almost precisely our picture of the ordinary bad Indian. Can it be that in the sight of the Great Spirit pugnacity, cruelty, and greed are no more creditable in one race than in another?

—*Scribner's* contains an instalment of Mr. G. F. Hoar's Political Reminiscences. It seems that his account of the national conventions in which he had taken part (in the February number) was the first chapter of these. His first political service, he tells us, consisted in folding and directing circulars sent out in 1848 by the anti-slavery Whigs who bolted the regular nomination of Taylor, and thus set on foot the division which ended in the destruction of the Whig and the creation of the Republican party. It is certainly curious and interesting for those who like to trace the continuity of public careers, to see Mr. Hoar, in his old age, again a bolter on principle from the councils of the party which in his youth he helped, by bolting, to found. He publishes for the first time a letter written by Webster to his brother, the late E. R. Hoar, giving his reasons for refusing to join in the secession. Four years later, Mr. Webster was a discredited man, while the Free-Soilers, casting in Massachusetts in the election of 1848 only 37,000 votes, had among their number all the men who subsequently became dominant in the State. The rise of Sumner, Adams, Andrew, the two Hoars, and Wilson, to mention only half-a-dozen, was brought about by the disintegration of the party to which they belonged in their earlier years. The flood of war literature shows signs of ebbing. This department of the magazines has been nearly worked out, and the point reached at which it is difficult to avoid repetition. Even the interest of Mr. Roosevelt's "Rough Riders" suffers from the fact that it has been told by everybody else before. Fond as we are of the pomp and noise and danger of war, there is one thing of which the magazine reader, even the most patriotic, is fonder, and that is novelty. He must have new subjects, and refuses to be thrilled with one emotion for more than a certain length of time.

—The *Century* has added to its "Heroes of Peace" series an article on "Heroes of the Railway Service," illustrated by Jay Hambridge. It is written by Charles De Lano Hine, a graduate of West Point, who, after serving as an officer for four years, voluntarily resigned his commission in the army to become a freight brakeman. After some railway service as a brakeman and a yardmaster, he reentered the military service as Major in the First District of Columbia Volunteer Infantry. He points out that railroad organization is semi-military in character, and that in some respects railway service is the more dangerous of the two; the danger, however, being a matter of such every-day routine that it attracts little attention:

"A soldier fights his battle, and may not be again under fire for a week, a month, or a year. While actually engaged, his is a maximum of danger. The railroad man is usually

in much less danger than the fighting soldier. What the railroader lacks in intensity of interest he makes up in quantity. He is under fire, so to speak, every working day or night of his life. The washouts of spring, the blinding dust of summer, the treacherous fogs of autumn, and the icy car tops of winter, all teach him to be careful of his hold in this world, lest he slip suddenly into the next. As the battle is the true test of the officer and the soldier, so is the wreck the measure of the coolness or pluck of the official and the employee."

The "casualties" in the latter class every year in this country he puts at 20,000. All this without distinction, glory, pomp, or show, and hitherto without magazines to make it known. This "Heroes of Peace" series is the first attempt—so far as we know—to reduce to their true proportions the ridiculous pretensions of military life to a monopoly of courage, nerve, and endurance. We have read with interest Mr. James Bryce's advice to us on the management of our new colonies in his article called "British Experience in the Government of Colonies," but we are bound to say that the most important statement in it is the following: "Were I a citizen of the United States, I should be among those who are opposing their annexation." The difficulty with his advice that we imitate the English colonial system (by establishing a civilized colonial service, and instituting a sort of benevolent despotism which shall keep a "firm hand" on "white adventurers") is, that it is addressed to a government in the hands of a party which is annexing for the benefit of white adventurers, and itself consists of white adventurers. It is for the very reason that white adventurers may thrive, that the White Adventurer's Great Father must turn a deaf ear to such advice.

—By the Northwest Ordinance of 1787, when we were still living under the Articles of Confederation, which established a Congress consisting of but one branch, it was provided that as soon as there should be a certain number of inhabitants in the district northwest of the Ohio River, they should be allowed to have a General Assembly, consisting of a Council and a House, and that this body should have the authority "to elect a Delegate to Congress, who shall have a seat in Congress, with a right of debating, but not of voting, during this temporary government." After the adoption of the Constitution and the organization under it of the new government, which provided, among other things, for a national legislature composed of two houses, the general Government obtained by a deed of cession the territory south of the Ohio River, and in 1790 an act of Congress was passed, which extended to the inhabitants of that region all the benefits, privileges, and advantages previously granted those of the Northwest Territory, and established there a similar government. This proved to be an inadvertent and embarrassing piece of legislation when, in 1794, James White laid before the Speaker of the House of Representatives the credentials of his appointment as a Representative in Congress of the Territory south of the River Ohio. Representative in Congress? In which branch of Congress should he take a seat? Some members thought it much more proper that he should go into the Senate. He was elected in a manner similar to that of Senators, and Senators more resembled Delegates than did Representatives of the people. Others held that he had a right to speak in either branch

when the affairs of the Southwestern Territory were under discussion.

—Mr. Boudinot of New Jersey, who had been a member of the Continental Congress, was very positive that, as the old law could not be fully executed, Mr. White ought to go where members elected by Legislatures went—to the Senate; but he thought an act of Congress should be passed in reference to the matter. Strict constructionists contended that Delegates from Territories were unknown to the Constitution, and for that reason Mr. White could not be admitted to either branch. The liberals maintained, on the other hand, that the Representatives had a right to admit any one whatever to a seat in the House, for the mere purpose of participating in the debates. The moderate men argued that nothing in the new Constitution excluded these Delegates; that the privilege of representation had been solemnly conferred upon the very people who had elected Mr. White; that Sevier had represented them in the old Congress when they belonged to Carolina, and that they had separated into a new State under the promise of this privilege. It was now too late, they added, to say that laws under which action had been taken were incapable of execution. This view prevailed, and Mr. White was admitted, but the House, by a vote of 42 to 32, held that he should not take the oath of a member of Congress.

—Some years ago the Gresham Life Assurance Company entered upon an investigation of the risks incident to professional military and naval lives, and the results are very pertinent to the "colonial policy" of the United States. Two great divisions of the subject may be made, one giving the conditions in peace and another in war; but there are other influences of moment. The rate of death at the home-stations in peace may be taken as the normal mortality, and this was found to be about 5 per 1,000 for commissioned officers, and 7 or 8 per 1,000 for non-commissioned officers and men—a rate even lower than that for the male population of the United Kingdom. This applies, however, only in early manhood, for ages under 35; beyond that point the civilian has the advantage. At foreign stations in time of peace the climate risk must be considered, and while the different services give different results, the average is 15 per 1,000, or double the normal rate. The same figure expresses the mortality rate for a small war; so it is safe to assert that, under the best of management, the occupation of a reasonably healthy possession costs in life as much as a war of moderate proportions. The application of this to the army of the United States will be evident. The tropics are not healthy regions naturally, and our men are not accustomed to foreign service. An occupation may, and most likely will, cost in life each year as much as a war of fair proportions.

ROPES'S CIVIL WAR.

The Story of the Civil War: A Concise Account of the War in the United States of America between 1861 and 1865. By John Codman Ropes, LL.D. With Maps and Plans. Part II., The Campaigns of 1862. G. P. Putnam's Sons. 8vo, pp. xii, 475.

In his second volume Mr. Ropes has adhered to the method of giving only selected campaigns and battles as illustrating the general progress of the war, the qualities of

the commanding generals, and the military administration of the Government. He has greatly enlarged the fulness of his references to the Official Records of the armies, so that it is easy to trace his authorities for the assertions of fact in his descriptions of the events he narrates. In this he cannot be too highly commended. There is nothing more wearisome than the attempt to run down the sources of an historical statement, when no reference is given, in so vast a thesaurus as even the first series of the Records. The Publishing Board has done all in its power to help us by system in the compilation, by copious indexes, and by full tables of contents in each volume of all preceding volumes, by grouping everything relating to one campaign in the several parts of one volume, separating reports from correspondence and National matter from the Confederate, by giving chronological tables of current related events and even calendars of the year to determine dates when days of the week are mentioned—for all which they will get thanks from generations of investigators yet unborn; but when all this is done, it requires no little patience to find a quotation without citation of volume or page. In proportion to this labor, the author puts us under obligation who tells us where to find the material he uses, so fully and carefully as Mr. Ropes has done in this book. It is also a guarantee of good faith, and is a salutary check upon the author himself, making him careful in his statements. The evolution of a true history is thus greatly accelerated; for the weighing of such mountains of evidence is not to be done in a day, and dubious or disputed points will long remain after the most conscientious efforts to reach solid verity.

In the progress towards an agreed narrative of the facts in the campaigns and battles with which Mr. Ropes deals, therefore, he has done good work which, it is safe to say, will have permanent recognition. He is also very pronounced and free in his judgments of men and of their conduct and capacity, but here it will naturally happen that he will find his readers exercising their own judgment and not infrequently differing from him. This is all the more likely because it is rarely the case that the grounds of such personal judgments are or can be fully stated, and the particular events in regard to which they are applied do not always seem to imply necessarily the conclusions which are stated. The capacity and character of the successive commanders of the Army of the Potomac have been so much the subject of heated partisan discussion that, in trying to gauge the author's treatment of men, it will be well to go to some other theatre of operations. Let us take the Middle West, and the relations of Lincoln, Stanton, Halleck, Buell, and Rosecrans.

Toward the close of the summer and in the early autumn of 1862, a Confederate army in two columns, one under Bragg, the other under Kirby Smith, had, by manoeuvre, forced back the national army under Buell from northern Alabama, across Tennessee and Kentucky to the Ohio River. Considerably reinforced, Buell again advanced, fought an indecisive battle at Perryville, Ky., and followed the retiring enemy southeast to Mt. Vernon and London on the upper waters of the Cumberland River. There the pursuit ended, and Buell turned the march of his columns toward Nashville, though his orders from Washington were to press the

pursuit of the enemy and occupy East Tennessee. It may be a hard rule of war that a general is judged by results, but it is a recognized one. When A. S. Johnson lost Fort Donelson and retreated to Corinth, Miss., he said to Mr. Davis that he could not complain if the rule were applied to him. Lee said the same after Gettysburg. Buell himself, on October 16, recognized it, in the letter in which he declared his purpose to change his course to Nashville.

The right of Halleck, as general-in-chief, and of the Government, to order the continued advance is too plain for argument. Such order removed the responsibility for the plan from Buell's shoulders and left him only that of vigorous execution. It was the subordinate's privilege to ask to be relieved if he thought he must fail in the execution, but no wrong was done him in giving the order. Halleck did not confine the pursuit to the route the enemy had travelled and wasted. He indicated at least two others as being eligible, including one directly across Tennessee to Chattanooga, which place, as he pointed out, was as near as Nashville, and led through a region abundantly able to support an army, which the Confederates even after another year of war looked to as one in which a large army could live. To occupy Chattanooga and East Tennessee while the country roads were good and the autumn weather pleasant, then to repair the Chattanooga and Nashville Railroad and make firm the advance so gained, was an intelligent and reasonable plan, shown to be feasible by subsequent operations in the same region. It was under such circumstances that Buell was relieved and Rosecrans appointed, after Mr. Lincoln had once revoked Secretary Stanton's order to the same effect and Buell had persisted in refusing to follow the directions sent him by the general-in-chief. In the actual condition and situation of the army under Bragg, there is good reason to think Halleck's plan would have succeeded, and a new base for further movements might have been established at Chattanooga a year before it was actually done.

In these circumstances, how does Mr. Ropes treat the President and his advisers? Of Halleck he had earlier said that he had but slender intellectual capacity, and an unmilitary cast of mind (p. 235), and repeats that he had an "inability to grasp a military problem" (p. 385). In the present juncture, Halleck is said to be only the mouthpiece of the President's determination, and is absolved in this way from the chief responsibility, while Lincoln and the Secretary of War are denied whatever support they might get from the concurrence of Halleck's opinion. It is generally agreed that Halleck failed as a field commander of an army; but it is also generally admitted that few, if any, were his equals in knowledge of military theory and history. His books on the Art of War and International Law, as well as his translation of Jomini's Napoleon, have always stood well, and have been regarded as sufficient proof of intellectual capacity and ability to grasp a military problem. Still more are these shown by his voluminous correspondence during his service as general-in-chief, when candidly analysed. That he blundered, as everybody else blundered, is of course true; but we do not believe that final historical judgment will deny to him knowledge or

brain power. His correspondence with Buell in this campaign was by no means a mere iteration of the Government's wishes. He expressed his own opinion vigorously, that it was possible to drive the enemy from East Tennessee and keep him out. "If we cannot do it now, we need never hope for it," he said (*O. R.*, xvi., pt. 2, pp. 623, 626).

Thus having isolated the President and his Secretary from the military assistance of the general-in-chief, our author, after asserting that "no one capable of forming a judgment on the military questions involved in it can hesitate an instant in arriving at the conclusion that General Buell was in the right," turns upon Mr. Lincoln and Mr. Stanton with—"The President and Secretary were neither willing nor competent to discuss the question on purely military grounds." It cannot be necessary to defend Mr. Lincoln from the charge of being unwilling to seek, with intense earnestness, in every direction for light on the problem of making his country victorious. When, the year before, protest was made to him against his patient endurance of McClellan's exasperating disrespect, and he replied, "I will hold his horse if he will only conquer this rebellion," he spoke in the spirit of self-abnegating devotion which animated him till the day of his assassination. As to his capacity to understand and discuss military reasoning, after two years of life in the focus of military responsibility, with Scott, McClellan, McDowell, Meigs, Hitchcock, and Halleck around him in both formal and informal presentation of their views in unrestrained discussion, with his keen shrewdness sifting their arguments, and with his peculiar power of generalizing principles from complicated facts, we should rather ask, Who could understand and who discuss, if not he? But, besides this probable evidence from his well-known powers, there are his letters in the Records, giving his actual discussion of real and present military problems on purely military grounds, and they demonstrate his competency to do it ably and thoroughly, as we have had occasion to show in these columns (within three months), and as Mr. Ropes has admitted in this book (p. 439, note).

Without going into a detailed criticism of Buell's campaign, it is enough to say that, though his cautious defensive strategy was criticised at Washington, Mr. Lincoln had revoked the order relieving him on this account, and reissued it only when the General persisted in retiring on Nashville instead of continuing to follow the enemy by any route. The real question was between the continuance of such cautious defensive and a bolder aggressive. It would be an anachronism, to-day, to argue in favor of bold, continuous initiative in war. That question has been decided affirmatively, if anything can be settled. Mr. Lincoln has the world with him. That the good weather of the autumn was rapidly passing, was only another good military reason for "pushing things." But there were political reasons for the same course, so strong that they seem to show the radical incompleteness of a discussion of the campaign which ignores them.

The public discontent with the progress of the war was so great that it showed itself in the elections of this same autumn by the loss of the control of the House of Representatives by the Administration. The Congressional Committee on the Conduct of the War brought the whole weight of the most

vigorous element of those in favor of the war to bear upon the Administration, insisting upon a more aggressive military policy. Governor Morton of Indiana, with the coöperation of the Governors of Ohio and Illinois, protested against the conduct of the campaign in Tennessee and Kentucky. Their opinions and those of the whole Northwest were fairly expressed in a letter of Morton to the President on October 7, in which he said:

"Another three months like the last six, and we are lost—lost. We cannot afford to experiment a single day longer with men who have failed continuously for a whole year, who, with the best-appointed armies, have done nothing, have thrown away the greatest advantages, evacuated whole States, and retreated hundreds of miles before an inferior enemy. To try them longer, trusting that they may yet do something, would, it seems to me, be imperilling the life of the nation."

On the 21st he said: "In the Northwest, distrust and despair are seizing upon the hearts of the people." East Tennessee was a loyal district, represented in Congress by Horace Maynard, represented in our army by regiments of brave men whose families at home were in the enemy's power. A loud appeal went up to the President not to allow the winter to come without bringing that loyal region within the Union lines. The dangers of foreign complications, by reason of the efforts making to secure a recognition of the Confederacy by England and France, were so great a peril that the Government and all its friends regarded it as an imperative reason for extraordinary and unrelenting energy in aggressive warfare, that we might recover at least all we had lost during the summer, before the British Parliament should meet in January. Unless war is made for some other reason than to subvert the statesmanship of the country, such considerations ought to be imperative in favor of extraordinary exertions, ought to justify exceptional privations, and forbid the easy-going deliberateness which is not content with an army superior in numbers, in equipment, and in supply, but demands exemption from risk of short rations, of interrupted communications, of forced marches. In such circumstances such demands spell nothing but "Give it up."

It was in such circumstances that Rosecrans was chosen to succeed Buell because he was thought to have the energy to make such aggressive, indefatigable war. He was told that this was expected of him when the appointment was sent to him, and that delays could not be tolerated. He had his option to take the command on those terms or to decline it; and he took it. As Halleck afterwards told him, they at Washington believed that Buell would succeed at some time, if not hurried; but inexorable events were hurrying. And yet, when Halleck's urgency was reiterated through six weeks and no visible progress was made—a period as long as the whole Austro-Prussian war of 1866—when the autumn was gone and December was begun, when the conditions on which the appointment was made were all broken, when the grief and apprehension of the patriot in the executive chair found voice in warning that another change might have to be made, Mr. Ropes sees nothing in it all but an improper threat of removal, and says that Rosecrans deserved the thanks of his profession for resenting it! He even justifies Rosecrans in delaying three weeks longer. Meanwhile Bragg had gone out of Kentucky at its southeast corner by way of Cum-

berland Gap, had traversed the whole length of East Tennessee some two hundred miles to Chattanooga, which was much nearer our army than the enemy at the time the pursuit was abandoned, and had come back northwest from Chattanooga a hundred and twenty miles to Murfreesboro, thirty miles from Nashville. Can we now be asked to believe that praise for Rosecrans and contempt for Lincoln and his advisers is the final word of history? Can anybody wonder that Mr. Lincoln said that if his generals did not want to use the armies, he wished they would lend them to somebody who could? For the victory at Murfreesboro, incomplete as it was, he was generous in praise, and made it the reason for condoning the waste of most of the next summer.

In the treatment of the question of numbers of opposing armies, Mr. Ropes seeks to make the official statistical returns to the Adjutant-General's Office the basis of his computations, and in this he is unquestionably right, though he does not always adhere to it with entire consistency. He has adopted a rule of deducting 20 per cent. from the returns of the "present for duty," for "men on extra duty, etc." This is a manifest error. In the original returns are separate columns for officers and men present sick, in arrest, and on extra duty, but in neither the National nor the Confederate returns is this triple group included in the numbers reported "present for duty." In the *Nation*, No. 1440 (p. 86), was given an analysis and comparison of the forms of return, and the Confederate method of reporting "effectives" was shown. In Nos. 1538 (p. 462) and 1543 (p. 71) the relative reliability of statements of numbers made by officers in other forms than the regular returns was examined. Without discussing the subject again, it still seems that the reasons for adhering to the "returns," when they exist, as the supreme authority in military statistics, are conclusive, and we cannot go with Mr. Ropes when he "adopts substantially the numbers given in the Confederate (narrative) reports" written long after such a battle as Antietam, when they are inconsistent with the statistical returns made in regular course of duty.

To illustrate: Lee's army, with which he began the campaign against Pope at the end of July, was 82,632 "present for duty," as we learn from the statistical returns. By the same means we learn that there remained to him after the battle of Antietam in September, close to 44,500, as Mr. Ropes states it (p. 332). This leaves more than 38,000 as the total losses of the Confederates in the two months' campaigning—a conclusion from which there is no escape. But, adding to the numbers remaining in September the casualties in the battles of South Mountain and Antietam, Mr. Ropes argues that, according to the returns, Lee had on the morning of the battle last named 58,000 men. As a compromise with other general statements in reports, he reduces this below 40,000 (p. 377). Yet he has given his estimate of the force with which Lee crossed the Potomac at about 55,000 (p. 337), which would make the Confederate losses for Harper's Ferry and South Mountain 15,000; but nobody could for a moment accept this. On the other hand, if Lee crossed the Potomac with no more than 45,000, his losses in the campaign against Pope were nearly 38,000. Mr. Ropes very clearly declares the conflicting data to be irreconcilable, and offers his estimates as only approximate.

It is utterly useless to try to reconcile the claims of commanders, in general statements, with their official returns, or to compromise between them. Such statements only show the extent to which errors of memory or careless assertion can go. We shall have taken a long step towards historical truth, in this respect, when all investigators shall have learned the simple fact that no general officer in an army has any means of knowing the numerical strength of that army except the statistical returns consolidated as they come up through companies, regiments, brigades, divisions, corps, brought together at the army headquarters, and transmitted to the seat of government. This is not to be thought of as one of the means of knowledge; it is literally and exactly the only means. The army is not counted in any other way, by anybody whomsoever. What is not got from these returns is not got at all. What conflicts with them is thereby convicted of being false. On the return itself are columns for "Alterations since last report," and the series is either continuously self-proving, or the return is annotated by explanations of any apparent discrepancy. No intelligent officer could ever pretend that he had any knowledge on the subject except what is obtained either directly or indirectly from these returns. If one of a series is lost, we must, of course, supply its information by such evidence of what the lost return contained as we can get; but it must accord with the others of the series and be consistent with that which precedes and that which follows. Reports of statistics by medical officers, by provost-marshal, etc., are subordinate parts of the same system. In the published Official Records are only abstracts of the full returns, but in case of doubt the originals are accessible and the accuracy of the abstract may be tested. The historical importance of such a criterion of truth is, we hope, a sufficient justification of calling attention to the actual system until its authority shall be fully recognized.

PROBLEMS OF NORTH AMERICAN ARCHAEOLOGY.

Introduction to the Study of North American Archaeology. By Prof. Cyrus Thomas. Cincinnati: The Robert Clarke Co. 1898. 8vo, pp. 391. Illustrated.

In dealing with this volume, and the same may be said of any other work upon the subject, it is well to remember that but few of the more abstruse problems connected with the prehistoric remains of America can be said to be definitively settled. We have, it is true, measured the length, breadth, and height of many of the mounds and raked over their contents, just as we have explored the ruined cities of Mexico and Central America, and compared their architecture with that of less favored regions; and it is safe to say that, from these and other indications, we have gained a reasonably correct idea of the mode of life of the people who built these mounds and lived in these cities, so far as it is revealed to us by a study of their arts and industries. At all events, the conclusions drawn from these sources have an actual basis of fact, and to this extent are believed to be indisputable. But when we go further and ask who were the builders of these mounds and cities, or, assuming that they were a different people or a people in a different stage of civilization from the former occupants of these

several regions, inquire where they came from, and by what route they reached the localities where these remains are found, we are at once upon debatable ground.

Thus, for example, if called on to account for the presence of man on this continent, we may, without doing discredit to our intelligence, answer, with Powell, that he was here before he acquired articulate speech, and that "there is no valid reason why the Eastern World may not have been peopled from the Western"; or admitting his foreign origin, we may bring him over from either Europe or Asia, and land him at different times and at different places, on the same or opposite shores of either North or South America. Indeed, there are those among us who do not hesitate to resurrect submerged continents whenever it is necessary to smooth his pathway. So, too, in regard to his development. It may have been indigenous, or it may have been colored by Asiatic influences. Both opinions are held, and as there does not appear to be any immediate prospect of deciding the matter either one way or the other, it is, perhaps, just as well not to waste any time in discussing what for the present, at least, is a question of probabilities.

Such, in fact, seems to be our author's opinion, for although he believes (pp. 369-378) that man originally arrived in America by way of the extreme Northwest Pacific Coast, and (p. 379) that there may have been "prehistoric contact on the western coast of Mexico with people from the Pacific Islands or Southeastern Asia," yet he is so far from insisting upon these points that he leaves us free to accept any theory that will help us to a solution of these questions. In the same spirit, he dismisses the problem of palæolithic man in America (p. 5) as not proven; and, contrary to his usual fairness, he disposes of the Calaveras skull and the implements found in the auriferous gravels of California by a resort to the fallacy of "begging the question." In other words, he tells us (pp. 190 *et seq.*) that these remains could not have been of the same age as the geological stratum in which they are found, for the reason that, being neolithic, they indicate a higher phase of development than was in existence when that stratum was laid down; this being precisely the point at issue.

With these problems out of the way, and bearing in mind the necessarily conjectural character of much of the evidence, we are now ready to take up the story as told by our author, though it seems advisable to reverse his line of investigation, and begin, instead of end, with our prehistoric American at the time he made his home in "the inhospitable region that lies between the western shore of Hudson's Bay and the Rocky Mountains." From this point as a centre, population is said to have flowed southward in two streams; "parted by the great treeless plains stretching from the Saskatchewan to the Rio Grande, one moved south along the mountain skirt, passed to the Pacific side," and, still pushing on, finally reached Mexico and Central America; while "the other crossed to the Atlantic side," and, circling around the lakes, took possession of the Mississippi valley and the Eastern and Southern seaboard. In the course of this long and wearisome movement, "requiring possibly thousands of years," these people split into different stocks and tribes, "If, indeed, they had not

been differentiated before reaching the continent," though it is said (p. 8), and, as we believe, rightfully, that "they belonged apparently to the same race, its members being popularly known as . . . American Indians."

In coming to this conclusion, our author summons to his aid language, tradition, and other factors in the problem, his main dependence, however, being upon the evidence furnished by the monuments and other remains that are found scattered over the country. These are carefully studied, and as a result of the comparison instituted between them and the works of the Indians, they are attributed (pp. 22, 138, 229, 240, etc.) to the people found inhabiting these sections at the incoming of the whites, or to their ancestors—in other words, to these same Indians. To this statement we, certainly, do not object: neither have we any fault to find with the separation of these remains into three (or, omitting the Arctic, into two) great divisions which Prof. Thomas styles the Pacific and the Atlantic. Such a classification is not only convenient but it is real, for it is based upon the dissimilarity that exists in the remains found in the two sections, and, what is more to the point, it marches, geographically speaking and in a general way, with the linguistic groups into which Brinton divides the Indians. Whether these differences are of such a character as to mark them as the product of different ethnic groups, is a matter of some doubt, though it is admitted that they were due to different influences, or, as Bandelier expresses it, to the exigencies of another climate and of varying natural resources. Be this as it may, it is not of much moment in the present investigation, since it is not so much with the origin of these different kinds of remains that we are concerned as it is with their existence and distribution. These, so it is thought, furnish clues to the movements of population in prehistoric times, and it is by following these clues to their sources that our author traces the Indian back to his original home in the broad stretch of country that extends from Hudson's Bay to the Rocky Mountains. Accordingly, it is from this region that the primeval American is started on his march southward, bearing along the seeds of that civilization which culminated in Mexico and Central America on the west, and in the mound centres of the Mississippi Valley on the east.

This, in brief, is a summary of our author's theory, and, in the present state of our knowledge, there is no reason why we should not accept it, except in so far as it relates to what are termed "the prehistoric movements of population." These are found to depend, so uniformly, upon conjecture that, taken in connection with what is known of the wanderings of our tribes in recent times, they may be relegated to the realm of uncertainties. Indeed, all mention of them might have been omitted without lessening our knowledge of Indian life and civilization. This fact our author seems to recognize, for although he devotes to the discussion some forty pages, in which the terms "possible" and "probable" occur with exasperating frequency, yet, in the end, he leaves us free to accept, as an alternative, the theory that America was peopled from Europe, and that the "spread of population was from the Atlantic border."

For the remainder of the volume, and es-

pecially for the description of the various remains, as well as for the account of the arts and industries, etc., of the Indians, we have only words of commendation. And yet, such is the uncertainty that attends an investigation into prehistoric life, and so difficult is it to gauge the full force of acknowledged facts, that, not unfrequently, we find ourselves at odds with our author. Take, for instance, the statement (p. 248) that "the form of government among the Aztecs was a well-regulated monarchy; . . . the title under certain conditions passing from father to son," and how can we reconcile it with Bandelier's carefully studied conclusion "that there was neither monarch, autocrat, nor despot in Mexico; that merit alone on the battlefield could promote to the rank of war chief (or, as he was sometimes called, emperor); that no dignity was transmissible by inheritance, and in fine, that Mexico was a barbarous but free military democracy"? Or again, what are we to think of the "advanced culture" (pp. 8, 240) of the Mexicans when we are told by Brinton ('American Race,' p. 44) that, "leaving out of consideration the objective art of architecture and one or two inventions, the Aztecs of Mexico and the Algonquins of the eastern United States were not far apart"? So, too, in regard to our own Indians, the occasions for a difference of opinion are somewhat frequent. We do not, for instance, believe that the use of masks on the Atlantic side of the continent (p. 182) was comparatively rare, when both Adair and Lafitau—one in the north and the other in the south—tell us that, made of gourds, bark, or other material, they were worn by the Indians in some of their solemn ceremonies; and, finally, we are by no means of the opinion (p. 159) that the Shawnees were a different people from the Mascoutens, or, as they are sometimes called, the *Nation du Feu*, when the Jesuit Relations make it plain that these were different names for the same tribe. But it is unnecessary to pursue this subject further. Enough has been given to show the character of the statements to which objection may be rightfully made; and as they are of secondary importance, and might be controverted or omitted altogether without detriment to the main contention, further comment would savor of hypercriticism.

In conclusion, we may be permitted to say that, good as this work is, we prefer Thomas when he deals with tangible facts, as he does in his exhaustive account of the Mounds of the Mississippi Valley, rather than when he goes wool-gathering in fields where, according to his own admission (p. 148), success is impossible.

The Establishment of Spanish Rule in America; An Introduction to the History and Politics of Spanish America. By Bernard Moses, Ph.D., Professor in the University of California. G. P. Putnam's Sons. 1898.

The pathetic ending of the first great colonial empire of modern times naturally arouses a new interest in the process of its establishment. For us, too, who are shuddering with light hearts the burden that was crushing Spain, some knowledge of the foundations of that empire, on the ruins of which we must build, would seem to be indispensable. This need is admirably met by Prof. Moses in this study of the beginnings of Spanish America. His qualifications for the work are exceptional. His special studies

in comparative constitutional law, his long residence in California, and his sojourns in Mexico and Spain, have given him a first-hand familiarity with the Spanish stock and Spanish institutions which invests his discussion with a clearness and a certain insight and sympathy that are beyond the reach of the mere student of documents.

After a brief review of Spanish history and of the general aspects of the colonial policy of the Spanish kings, including a description of the Council of the Indies, Prof. Moses gives a very lucid and detailed account of the Casa de Contratacion, based on Captain John Stevens's 'Spanish Rule of Trade to the West Indies.' Owing to the rarity and high price of both this work and its original, the 'Norte de la Contratacion de las Indias Occidentales' of Veltia Linage, this chapter supplies information as to the colonial trade hitherto not easily accessible away from the large libraries. The organization of the administration of the colonies is illustrated by a concrete study of the Viceroy and the Audiencia in Mexico. Later in the book the ecclesiastical establishment in Mexico is examined to show the relation of the Church to the King. It is characteristic of Prof. Moses's practical aims and his soundness of method that these great institutions should be studied historically as they existed in Mexico, that part of the Spanish empire which is of most interest to us and with which he is familiar by travel. Five chapters are devoted to South America, one of which deals with the Jesuit missions in Paraguay. The volume is brought to a conclusion with a discussion of Spain's economic policy and a comparison of her American colonies with those of England.

As a whole this work is admirably adapted not only to provide the thoughtful reading public with a useful body of knowledge in regard to the origin of the institutions of our Spanish-American neighbors, but also to aid teachers and students in extending the scope of courses in American history. The chief defect which we notice can easily be remedied in a second edition. An historical work in a neglected or little-known field should be furnished with a brief annotated bibliography, comprising the most important original sources and the most serviceable secondary authorities. This is especially necessary in the case of Spanish history, owing to the lack of systematic bibliographies of Spanish publications. In the present instance the absence of such a list of authorities is the more keenly felt from the rather careless method of citation employed by the author. No clue is given to the date or place of publication of the Spanish works which are referred to. Then there are references like these: "Robertson, New York, 1839, I. 384, 523," and "Watson, I. 73, 74." Is the first reference to William Robertson's 'Charles V.' or to his 'History of America,' or to J. P. Robertson's 'Letters on Paraguay'? Is the second a reference to Robert Watson's 'Philip II.' or to Robert Grant Watson's 'Spanish and Portuguese South America during the Colonial Period'? Again, the student interested in the economic aspects of the Spanish colonial policy should have his attention called to Roscher's masterly discussion in his 'Koloniën und Kolonialgeschichte,' and to the equally important chapters which Leroy-Beaulieu has devoted to the subject in his 'Colonisation chez les Peuples Modernes.'

The commercial policy of Spain towards her

colonies must be regarded as a monumental example of misdirected regulation and untutilized opportunity. That the Spaniards erred more profoundly and adhered to their error more persistently than the other colonial Powers, is to be accounted for partly by the conservative and reactionary position which Spain occupied in the great European conflicts of the sixteenth century, and partly by the fact that the Castilians were not a mercantile or an industrial people. The expulsion of the Jews had deprived the country of that portion of the population which had business aptitude and insight; and later, when progressive economists analyzed the situation and pointed out the remedy, the restrictions on printing prevented their work from having the influence that it would have exerted in a freer country. Notwithstanding their uncommercial character, the Spaniards were greedy of wealth. The result was a policy singularly narrow and oppressive, and wholly subservient to the apparent immediate interests of the mother country.

Prof. Moses's final chapter, comparing Spanish and English colonies, is a very dispassionate and lucid review of contrasted ideals and divergent practice. The balance from every point of view is not on the side of the English, although the practical results in our eyes clearly show that freedom of migration, laxness of control, and the encouragement of individual enterprise, rather than paternal oversight and restriction, are the secrets of colonial growth. Many worthless Spaniards did get to America, but the colonies were never made the dumping-ground of the social wastage as were some of the English settlements. The Spanish ideals were in some respects higher than the English, but less well adapted for promoting a progressive and vigorous civilization. A progressive civilization, however, was the last thing that Spain wanted. Therefore, in passing in review the colonial policy of Spain, we must keep in mind that the ideal aimed at was one with which we have no natural sympathy.

Really to get at the heart of the matter, the Spanish colonial policy should also be compared with the policy of England towards her Oriental dependencies. Spanish colonial America partakes quite as much of the nature of British India as of the nature of English America. When England had a problem somewhat similar to that of Spain, her policy developed striking similarities. Where England has to rule a large native population, we find as little self-government as in New Spain, and that of the same kind, in minor municipal affairs. The English Council of India might have been copied from the Council of the Indies. The legislation of British India is as despotic as that of Spanish America. There is, in short, as marked a similarity in governmental machinery as there is a contrast in quality of administration and in commercial policy. The English give good government to India, the Spanish Kings gave bad government to America. The secret is not so much to be found in the machinery of administration as in the ideals and character of the men who conduct it. If a political spoils system should get hold of India, her history would repeat that of the Philippines. If an American spoils system is introduced into our new islands, their future will be but a repetition of their past. If a democracy is to administer successfully the government of alien dependencies, it must adopt a self-denying ordinance as regards the spoils of its political victories.

"The Georgian Period." Being Measured Drawings of Colonial Work, by Charles L. Hillman, Frank E. Wallis, Claude Fayette Bragdon, David Gregg, Francis Swales, Glenn Brown, and others. Parts I, II, and III. Boston: American Architect and Building News Co. 1899.

The list of American books on architecture is growing, and some of the books whose titles occur in it are of excellent quality. One of the most important is, and will remain for some time, the work which is gradually taking definite shape, and whose title is given above. In our previous notice (in June, 1898) it was assumed that there would be two parts and no more, but with the third part is issued a leaflet stating that there will be an indefinite number of parts issued in succession. The statement of the editor is to the effect that suggestions were made in the *American Architect* of last August "as to the publication of other collections of measured details of colonial work," and that the result is the publication of Part III. and the collection of material enough for a farther issue.

"Instead of issuing a fourth and final instalment, very much larger than its predecessors, we [the editors] have decided to continue the series without definite term, and allow it to become, if fortune favors, a sort of *omnium-gatherum*, to which seekers may turn in search of definite architectural information regarding architecture of the Colonial and Provincial periods, down to the revival of classic forms in the early part of this century."

It seems right, however, to review the book in its present state, because it contains already 121 plates, contributed by many architects and draughtsmen, and because it is of necessity devoid of systematic form or unity of plan, being essentially the work of different men, contributing each what has come under his own observation. It is announced, indeed, that there will be reprinted "some of the many interesting essays on the subject which have been published" in the *American Architect*; but these also will be detached essays, of course, and the collection will be rather an encyclopædia than a book, with a book's unity of purpose.

Sixteen different contributors are named on the title-pages, and on each title-page occur the final words "and others." Generally, and, perhaps, in every instance, the name of the patient student who has made the drawings is given on each plate. These sheets are crowded with matter, details being packed into the spaces left by the general drawings, and a sensible disregard of spacious and comely aspect being generally manifest. Other plates, however, are devoted to drawings in perspective, such as the very picturesque one of the Old State House in Boston; and sometimes one or two small perspective studies come in a plate with measured drawings of the structure represented. There are also a certain number of large photographic pictures, gelatine prints, which are certainly very good; only one in the first part, but eight in each of the others. These are an attraction—certainly they are an added element of strength to the publication; but its true purpose is indicated in its title "measured drawings"; that is to say, facts and figures which one may swear by. No one may be allowed to despise the two photographic views given of the beautiful circular double staircase in the New York city hall; but still the measured drawings of the front, of one pavilion

on a larger scale and on a smaller scale of a section through the rotunda and bell turret, are the immediate cause—that and their like—of the work's existence. The pains and care, the thought as well as patience, that have been put into these careful drawings, are appreciable only by those who have done the thing themselves. If the reader who is not a draughtsman, though interested in architectural work, should need a significant hint, let him observe how great is the number of books with architectural purpose which, in these later days of photography, are illustrated by pictures unaccompanied by plans, even the most rudimentary. Let him contemplate even such serious and important books as the 'Treatise on Gothic Art' by Louis Gonse, and wonder at the neglect, in so elaborate a treatise and so beautiful a book, of the obvious necessity of partial and local as well as general plans, ground plans and other. The reason for all this is that, after the photographer has been sent to the spot and has done his work, a new plant has to be made ready and a wholly new expeditionary force has to be set on foot, if even the plans (without reckoning sections, elevations, and measured details) are to be made from the building under examination. In this country of few skilled workmen, few men of leisure to pursue their studies, of scarce and dear intellectual labor, it is not so surprising that measured drawings are rare; but it is wonderful that important French or German books should ever come out without their measured details. They have skilled labor at hand and at a low rate of remuneration in those older lands; but in America we have little of it because there are greater opportunities for men to "get on" and make a rather easy living than there are for steady and deliberate intellectual work. It is the more surprising and the more admirable that this body of trustworthy drawings has been got together.

The epoch covered by these plates ranges from 1636 (the Fairbanks House at Dedham, Mass.) to about 1815, the date given for the tower and doorway of the North Church at New Haven. The student of old buildings will hope for some rendering in future parts of this publication of the valuable ancient houses of no great size and of no pretension whatever which still exist, or existed until very lately, in the old towns of Connecticut, Rhode Island, and Massachusetts. It is to be observed, however, that the tendency of the book is undoubtedly towards the Georgian architecture properly so called, as well as to architecture of the Georgian period, by which is meant that a study of late classic (or, as some would say, pseudo-classic) architecture is the purpose of this publication, to the exclusion, perhaps, of buildings of freer and less academic character in their design. No fault is to be found with the work, or its projectors, if it should prove to be so limited. The most that can be said is that an appendix giving the simple clapboarded houses, with overhanging second-story pendants terminating the uprights of those upper stories, would be a good thing to have. It might almost have been expected that the Philipse Manor House at Yonkers would have been left to be included in such an appendix; but here it is in the second part. No more interesting dwelling-house exists in America. It is a survival of the much older English houses of single or simple plan—that is

to say, of those without corridors, with each room occupying the whole width of the structure and lighted from either side. A little plan in the corner of Plate 24, where the elevation and some details are given, explains this to those who do not know the interesting and curious mansion now used as the city hall of Yonkers; and there are half-a-dozen plates more of spirited and interesting detail. Plate 31 of the second part gives the front of Faneuil Hall, "the Cradle of Liberty," a tolerably uninteresting piece of architecture, but great in its associations. In Part III., Plates 21 and 22 are devoted to an important house in Philadelphia, and the plan of the house on a sufficiently large scale for intelligent study is given in the table of contents. Plate 24 is a gelatine-print of the Tudor Place at Georgetown, D. C., and this also has a plan which multiplies many times the value of the picture. From Charleston, S. C., is taken St. Paul's Church, Ratcliffeboro', dated 1819, and from the immediate neighborhood comes the church, St. James, Goosecreek, a little building which stands, or stood, alone in the open country, a mere church for the planters living around, without a village near. On the same plate with this church is the old "Stone House," Richmond, Va., which is as free from classical influence as even the New England houses whose existence was recalled in a previous sentence.

John Sullivan Dwight, Brook-Farmer, Editor, and Critic of Music: A Biography. By George Willis Cooke. Boston: Small, Maynard & Co.

Mr. Cooke, who has before now proved himself the faithful and loving Old Mortality of the epitaphs of the Transcendentalists, has added a volume of memoirs to his recently published volume of correspondence between John S. Dwight and George William Curtis. He has the advantage which belongs to a later generation, in a wider survey of facts, based on more ample materials, while he has the disadvantage of being often obliged to rely upon the memory of others, contributed in some cases at a time of life when memory grows less trustworthy. A curious instance of this occurs in the very preface, where he "corrects," evidently on some authority other than his own, a statement made in the Dwight-Curtis volume, where Curtis himself speaks in a letter of a series of papers in the *Dial* called "Ernest the Seeker" as being written by William Henry Channing. Mr. Cooke now says of these papers, "They were in reality written by William Ellery Channing, the poet (cousin of the preceding), one of Thoreau's most intimate friends and his first biographer" (p. xiv). As a matter of fact, Curtis knew perfectly well what he was writing, and whoever informed Mr. Cooke to the contrary was greatly in error. His informant doubtless confounded the half-autobiographical fragment of the elder cousin, "Ernest the Seeker," with another semi-autobiographical series in the last volume of the *Dial*, "Youth of the Poet and Painter," by the younger cousin. The two relatives were totally unlike in temperament, and no person who knew them could confound the grave and lofty meditations of William Henry Channing with the cynical humor of the other. But it must be remembered that the three Channing cousins, all having William for their first

name, and varying only in the middle name, are always the source of perplexity to historians of the Transcendental period, and Mr. Cooke only shows this further when he mentions the third cousin, Dr. William Francis Channing (inventor of the telegraphic fire-alarm), as "Mr. F. W. Channing," on a later page (p. 163).

Apart from this piece of bad luck, we have found the book singularly accurate, although even the author cannot quite master the original relation between the *Atlantic Club* and the Saturday Club, inasmuch as he attributes the origin of the *Atlantic Club* partly to James T. Fields, who, on the contrary, brought it to an end, after taking charge of the magazine, because he thought the club dinners too expensive for the more modest contributors. Mr. Cooke has, however, given undoubtedly the best description yet written of the Saturday Club, the better known and longer lived of the two. In regard to Brook Farm he has also given some additional particulars, and has brought out in some degree the curious combination of singularly sensitive men, such as Hawthorne, Bradford, and Dwight, with certain people who, as Miss Marianne Dwight wrote (p. 101), "though good in their way, yet lack that refinement which is indispensable to give a good tone to the place." These people, according to Miss Dwight, were "providentially" called away, and she adds, "It always seemed to me a great mistake to admit coarse people upon the place." How far the cattle in the barn would have been tended and fed without the aid of these coarse people, will always remain undetermined; and some light is thrown by Miss Dwight's confession upon a scene still vividly remembered, at one of the social-reform meetings in Boston during the Brook Farm period, when Dwight appealed to the chairman to silence a certain Farmer Allen, who was revealing with the most undisguised frankness some of the harmless social events of what was then called "the Community."

In the chapter on "The Autocrat of Music," we find manifested the same necessity of depending on the opinions of others who knew Dwight in his prime. Mr. Cooke does not understate the later criticisms in respect to Dwight and his work, but he does not quite recognize the fact that his work from the very beginning met with open disapproval from other men of his own time and of similar training, among whom Mr. Francis Boott was perhaps the most eminent. These men frankly expressed the opinion that Mr. Dwight had, so to speak, begun too far along, and that he had, as one of them used to say, made the whole people of Boston hypocrites in respect to Beethoven. These men also dissented from the utter contempt with which Dwight was wont to speak even of the higher class of plantation melodies as composed by Stephen C. Foster, whereas these critics maintained his music to be the spontaneous outcome of a national musical instinct as yet untrained. But whatever may be said on points like these, no one has brought out better than Mr. Cooke the service rendered by Dwight in what may be called the literary interpretation of music. He lived at a time when, as a brilliant woman said on her first visit to Boston, "Bostonians seemed to regard music, painting, and sculpture as mere branches of literature"; and of Dwight's value at that precise time there can now be little question. Mr. Cooke ad-

mirably says of this service: "Dwight translated music into literary form, showed the public what to find in it, and how to discover its profound spiritual charm and power. This is what no one else has done with anything like such beauty of language or such persuasive skill to convince and enlighten" (p. 236).

The typography and general appearance of this book are admirable, but the absence of an index is a great defect, this omission being due in all probability to the publishers. The previous volume of Curtis-Dwight letters had the same fault.

The New Economy. By Laurence Gronlund. Chicago: Herbert S. Stone & Co. 1898.

The construction of imaginary commonwealths is as agreeable to many minds as building castles in Spain—which, indeed, may not be now a synonym for delightful day-dreaming. Few people seriously believe that any of the numerous utopias which have been described by philosophers and fools will ever have a real existence, and it seems absurd to criticise these visions from the point of view of practical statesmanship. But they may be compared with one another and their differentia noted, with some useful results; for while the visions cannot be realized, there may be enough people captivated by them to make them dangerous. The book before us aims not at equality, but at the destruction of the capitalists. The difficulty with the present system is that under it "you cannot benefit the poor without benefiting the rich, and that you cannot injure the rich without injuring the poor." The remedy is for the Government to take the place of the capitalists, conduct the industries of the country itself, and thus abolish all profits. But, in the conduct of these industries, the author very rationally maintains, ability is necessary. Salaries as high as \$7,000 may wisely be paid, and the able men who now realize such prodigious profits will have to come down to this figure, or starve. It is natural to raise the objection that, in spite of the abolition of the competitive régime, these \$7,000 places will be scrambled for; indeed, that the struggle for office will be more desperate than at present. But let not the believers in equality think that their panacea of making all places equally unattractive gives their schemes any advantage. They admit that the success of these schemes depends on the elimination of selfishness; and when human beings cease to be selfish, it is hard to see why one ideal commonwealth should not answer as well as another.

On the other hand, Mr. Gronlund must not be uncharitable to rival visionaries. If he assumes modifications of human nature in order to give his system a practical air, he should not deny this liberty to other people. Hence we cannot but reprehend his denunciation of the late Edward Bellamy as an unsound teacher. He complains that Bellamy ignored ability; but Mr. Gronlund ignores it beyond the \$7,000 limit. Bellamy also abolished the wedding-ring, favored vegetarianism, and changed the whole nature of woman; none of which changes happen to please Mr. Gronlund. But he can give no reason for his hostility except that Bellamy "shares the common American error of wanting to invent social remedies; he assumes that men can construct any social system they choose, and

so he sets up his own ideal system, and expects the people to realize it according to the sketch he has made." In short, he "entirely fails to connect with reality, and is purely a dreamer." These strictures suggest that the construction of utopias ought to be limited to people having some perception of the incongruous. The idea of one social reformer denying another liberty to "invent social remedies" is rather too startling.

Africa in the Nineteenth Century. By Edgar Sanderson. With portraits. Charles Scribner's Sons. 1898. 8vo, pp. vii, 335; map.

The aim of the author of this summary review has been to give a popular account of the principal events in the history of Africa during the last hundred years. There can be no question of his success in arousing the interest of his readers, so numerous are the stirring episodes of exploration, colonization, and conquest, both by the force of arms and by the arts of peace. Mixed with much that is evil and debasing in the white man's part in creating this new Africa, there is far more that is heroic, self-sacrificing, and encouraging. Possibly a clearer and more comprehensive knowledge of the history of the various countries would have been gained if Mr. Sanderson had treated each one as a whole before touching upon another. The value of the summary would have been increased, also, if he had dwelt less minutely on the details of campaigns and battlefields, and more fully on the equally important though less exciting political history of recent years. Space should have been found, too, for a brief mention, at least, of Emin Pasha and his rescue by Stanley, the indirect results of which are still felt in Uganda. There are here and there marks of hasty writing and the lack of careful revision, as, for instance, in the statements that Sir Harry Johnston was Commissioner of Uganda, p. 270, and that Sir Garnet Wolseley was the successor of Sir Bartle Frere as High Commissioner in South Africa, p. 279.

The portraits are of four noted Englishmen, and there is a sketch map showing the treaty boundaries, together with an excellent index.

BOOKS OF THE WEEK.

- Bardeen, C. W. *Authors' Birthdays. Second Series.* Syracuse: C. W. Bardeen. \$1.
 Barracand, Leon. *Roberte.* Paris: Colin & Cie.
 Bernhardt, W. *Haumbach's Waldsoellen.* Boston: D. C. Heath & Co. 35c.

HENRY HOLT & CO., 29 West 23d Street, NEW YORK

HAVE RECENTLY PUBLISHED:

THE RAPIN.

By HENRY DE VEE STACPOOLE. Author of "Perrot." 12mo, \$1.25. A novel of the Paris of to-day.

MUSIC AND MUSICIANS.

By Prof. ALBERT LAVIGNAC, of the Paris Conservatory, author of "Wagner and His Music Dramas." Edited for America by H. E. KEMMEL, and translated by WILLIAM MARCHANT. With 94 illustrations and 510 examples in musical notation. 12mo, \$3.

A brilliant, sympathetic, and authoritative work; practically a cyclopedia of its subject, with 1,000 topics in the index.

THE FRENCH REVOLUTION AND THE ENGLISH POETS.

By DR. ALBERT ELMER HANCOCK, of Haverford College. With an introduction by PROFESSOR LEWIS E. GATES, of Harvard. 12mo, \$1.25.

N. Y. Evening Post: "He has a taking subject for historical criticism . . . the diverse effects of that mighty event upon Shelley, Byron, Wordsworth and Coleridge furnish material for psychologic as well as poetical and political study. We shall hope to report further on Mr. Hancock's treatment of his theme."

DISCUSSIONS IN EDUCATION.

By the late President FRANCIS A. WALKER. Edited by JAMES P. MUNROE. 8vo, \$3.00, net.

Boston Transcript: "These papers [show] the peculiar power he possessed of enlisting and retaining the attention for what are commonly supposed to be dry and difficult subjects, and the capacity he had for controversy, sharp and incisive but so candid and generous that it left no festering wound."

FOR EARLY PUBLICATION.

TALKS TO TEACHERS.

By Prof. WILLIAM JAMES of Harvard, author of "The Principles of Psychology," etc.

ALGEBRA FOR SCHOOLS.

By GEO. W. EVANS, Instructor in the English High School, Boston, Mass. 438 pp. 12mo, \$1.12, net.

A fresh and enthusiastic presentation of a subject often regarded as abstract and unreal. The pupil's interest is won at the start. He is led to think of his algebra problems as related to life, and by applying them to science, geometry, etc., to feel the unity and usefulness of different studies.

LE RETRAITE DE MOSCOU

PAR LE COMTE DE SKOUR. Edited by Prof. O. B. SUPER of Dickinson, editor of Balévy's "L'Abbé Constantin," etc. viii+135 pp. 16mo. Boards, 35c. net.

SCENES DE VOYAGE.

De Paris à Aix-la-Chapelle. Selections from Hugo's *Le Rhin*. Edited by T. B. BRONSON of the Lawrenceville (N. J.) School, editor of Coppée's "On Rend L'Argent," etc. xvi+277 pp. Narrow 16mo, 85c. net.

FRENCH LYRICS.

The best lyrics since the Renaissance, with particular attention to the XIXth century. Over 50 poets are represented by some 220 poems. Selected and edited by Prof. A. G. CANFIELD of the University of Kansas. xii+382 pp. 16mo, \$1.00, net.

GERMAN SIGHT READING.

By Miss IDELLE B. WATSON of Hartford High School. 41 pp. 16mo. Boards, 25c. net. Short passages of good unhackneyed prose, well graded.

DIE SCHRIFTEN DES WALD-SCHUHLMEISTERS.

Von PETER ROEGGER. Abridged and edited with the author's sanction by Prof. L. FOESLER, University of Nebraska. With two poems by Baumhach. xii+158 pp. 16mo. Boards, 40c. net.

The West Indies

A History of the Islands of the West Indian Archipelago, together with an account of their Physical Characteristics, Natural Resources, and Present Condition. By AMOS KIDDER FISKE, A.M., author of "The Jewish Scriptures," "The Myths of Israel," etc. No. 55 in *The Story of the Nations Series*. Fully illustrated. Large 12mo, \$1.50; half leather, gilt top, \$1.75.

The events of the past year have begotten, at least in the United States, a new and keener interest, not only in Cuba and Puerto Rico, but in all of that group of American islands which still remain so largely under European control. Professor Fiske's purpose has been to compress within the compass of the moderate volume, and yet to present with adequate form and color and in a popular style, the information about the West Indies—their history and physical aspects, their natural resources and material condition, their political relations and apparent destiny—which would meet the needs of that numerous but undefinable person, the "general reader."

G. P. PUTNAM'S SONS,
27 and 29 West 23d St., New York.

The Magic of the Horse Shoe

With Other Folk-lore Notes

By Robert Means Lawrence, M.D.

Second Impression. 8vo, \$2.25.

"A most entertaining book. . . Folk lore is to-day a science, and Dr. Lawrence's research has furnished a valuable contribution to this department, which seems almost exhaustive of the matter."—[Boston Transcript.]

"One could go through this volume and make innumerable extracts which would be interesting and curious."—[Brooklyn Eagle.]

The Nation.

NEW YORK, THURSDAY, MARCH 16, 1899.

The Week.

Other Congresses have been extravagant, but we doubt if any was so urged and hurried into extravagance by the President as was the Fifty-fifth. That is a point to be set down in its favor. It was spendthrift, but it was not so wantonly prodigal as the President would have had it be. Not only did no warning against lavish appropriations come from him, such as almost every President for years has felt it his duty to utter; not only did he fail to interpose with his veto to save the Treasury one squandered dollar; but by open recommendation and private prompting he tried to get Congress to spend some \$200,000,000 more than it did. The Nicaragua Canal bill nominally carried \$115,000,000, and would surely have led to at least \$50,000,000 more, yet Mr. McKinley favored that costly leap into the dark. The shipping subsidies bill stood to take anywhere from \$50,000,000 to \$100,000,000 out of the Treasury, and the President advised Congress to pass that. He informed it that the Hawaiian cable bill, appropriating \$2,500,000, was "a paramount necessity," and should be made law at once. All these Executive incitements to extravagance Congress withstood. It had a more careful regard for the national finances than had their sworn guardian, the President. Never before was such a thing seen in this country—the Chief Magistrate leading in advocacy of reckless expenditure, and the House of Representatives refusing to follow him.

It is gratifying to learn that a bill slipped through Congress during the last hours of the session which will work important reforms in the pension system. One abuse of that system has been the marriage of veterans, sometimes almost in their dotage, to young women, who expect that their husbands will soon die, and that they will thereafter draw widows' pensions for the rest of their lives. The new law provides that no pension shall be granted to the widow of any pensioner who marries him after the approval of this act, on the 3d of March. There are a number of State and national homes for soldiers, many of the inmates of which, besides being supported by the federal or State Government, have received the full amount of their pensions, like their fellows outside. The new law provides that, when a pensioner enters such a home, one-half of his allowance shall be paid to his wife or to his minor children. Under the old system, a pen-

sioner with a family might desert his wife and children and still draw the full amount of his pension. The new law provides that, when a pensioner is guilty of such desertion, one-half of his pension shall be paid to his family.

Senator Foraker, an Ohio man who takes pains to say that he is not getting the smallest "piece" of the "good things going" in this Ohio Administration, secured the adoption of an amendment to the army bill which not only is a bit of cold devilishness, but is calculated to bring to naught the most benevolent plans of the President and his friends to "assimilate" Cuba. This amendment reads:

"And provided further, That no business franchises or concessions of any kind whatever shall be granted by the United States, or by any military or other authority whatever, in the island of Cuba during the occupation thereof by the United States."

What a blow this was to the plans of our most benevolent statesmen, was made clear at once by their outcries. Hanna of Ohio opposed the amendment; so did Platt of New York; so did Sewell of New Jersey. All these eminent men, brooding night and day on schemes for doing good to the Cubans and (incidentally) to themselves, saw immediately that this Foraker amendment would ruin the whole colonial system, and almost make them sorry that they had shed their blood to free Cuba. But a spiteful and narrow-minded Congress passed it nevertheless, and the colonial board appointed by the President to study questions relating to the judiciary, and taxation, and the sale or gift of franchises, railway grants, street-car line concessions, electric-light and other municipal monopolies was shunted off from Cuba to Porto Rico.

In view of the fact that the new army law compels the President to reduce in rank such men as Gens. Ludlow and Wood, and gives him no opportunity to make Gen. Otis a regular Major-General, the bestowal by Congress of the prized rank of Brigadier-General in the regular army upon Col. Frederick C. Ainsworth has caused no little comment among army men. Formerly a surgeon in the regular service, Gen. Ainsworth, as we must now call him, was made Chief of the Record and Pension Office of the War Department some years ago. By the introduction of a card catalogue, he very rapidly made what had been one of the most useless departments in Washington one of the most serviceable and efficient. In 1892 he received the rank of Colonel, to the amazement of the army, and was borne upon the army register in a place by himself, since he belonged neither to the line nor to the

staff. But even this did not satisfy his ambition, and as a result the new army law provided the Brigadier's star for him, besides "creating a place" for John Tweedale, chief clerk of the War Department, as his assistant with the rank of Major. There are now no good reasons why the head clerks in the Weather Bureau and Agricultural Department should not be Colonels, and we are glad to notice that Mr. McKinley is also of this opinion, since he is said to have promised to bestow a vacant paymastership, with the rank of Major, upon an elderly private secretary, hitherto content to be a civilian.

Now that a spoilsman has been given charge of the Census Bureau, earnest attempts are made to convince the country that it will not be run on the spoils basis. Director Merriam has announced that "all applicants will be subjected to an examination, before appointment, which will be as rigid as the examinations before the Civil-Service Commission," and that no political influence will be sufficient to put on the roll any person of whose competency the Director has not been satisfied, or to keep one who proves on trial to be incompetent. Such a statement from a known believer in civil-service reform, like Carroll D. Wright, would carry weight; people would feel no doubt that a Director of this type would live up to it. The difficulty about accepting it from Mr. Merriam is that, if he were to live up to it, the change of habit would be as great as it would be in Col. Wright's case were he to turn spoilsman. Mr. Merriam got his own place through "pull," not merit; and it will be the most extraordinary thing ever seen if such a man shall honestly enforce the merit system among his subordinates.

It seems that the appointment of a statistician as Assistant Director of the Census, after a spoilsman had been placed at the head of the Bureau, was not a matter of choice on the part of the President. The law left him no discretion in the premises. It provides that "there shall also be an Assistant Director of the Census, who shall be an experienced, practical statistician." Even the spoils-seeking Congressmen realized that, with a "practical politician" at the top and the same sort of employees at the bottom, there must be somewhere an official who has had some experience in statistics. But this is almost the only concession to such considerations which we can find in the law. On the other hand, great care was taken by Congress to guard against the entrance of trained men outside the places of Assistant Director and five chief statis-

ticians, "who shall be persons of known and tried experience in statistical work." One illustration of this is found in the curious provision that "employees in the existing branches of the departmental service, whose services may be specially desired by the Director of the Census, *not exceeding six in all*, may be transferred without examination, and at the end of such service the employees so transferred shall be eligible to appointment in any department without additional examination, when vacancies exist." There are several hundred persons in the classified service who have had training in census and statistical work, and it would have been a great advantage if any number of these had been made available for present need, and then returnable to the classified service. As originally drawn, the bill provided that such transfers might be made without any restriction. But the spoilsmen were so afraid that "their workers" might be kept out by this employment of skilled clerks who were "under the civil service," that they insisted upon limiting the number of such transfers to six—a perfectly ridiculous restriction in any other light than as a bar to the free entrance of experience, skill, and demonstrated merit.

Before leaving Washington for his vacation in Georgia, President McKinley appointed Herbert Putnam to be Librarian of the National Library. The nomination cannot be sent to the Senate until the next session of Congress opens, but there can be no doubt that it will then be confirmed, so that the incident may now be considered closed. Mr. Putnam's "platform" as Librarian at Washington has been drawn up by himself. About two years ago the Joint Congressional Committee having charge of the institution gave a hearing as to the policy which ought to be adopted for its regulation in the new building. Mr. Putnam appeared before the committee, and, after expressing his views on the subject, said:

"I should suppose that the man who is to have the final administration of that library must have, above all things else, administrative ability. . . . I do not believe that your chief administrative officer, attending properly to the business problems of the library, need be a profound bibliographer or need know the most, of all the persons in the library, as to what the library contains. He should know enough of the literary side of the library, of bibliography, etc., to appreciate intelligently the needs of the several departments of specialized work. I should regard him as bearing a relation to the library something similar to that borne by the President of a university to the several departments of that university."

This, in substance, was the picture drawn by the Council of the American Library Association for transmittal to the President on January 30; and it is the opinion of the foremost librarians of the country that Mr. Putnam is best qualified of their craft to organize the National Library on wise lines, take it

and keep it clean out of politics, and make it the guiding star of the library movement in this hemisphere. The post is his with no political or personal obligations whatever.

We hear of a good deal of dissatisfaction and disgust among Republicans over the Thomasville trip of the President's. Why, they ask, should he let Hanna carry him off so ostentatiously? Why should he give color to the talk that Hanna is very anxious about the next Presidential nomination and campaign, and that he is really taking Mr. McKinley off for a "rest" which will consist of interviewing politicians from all over the country, and planning for the contests of 1900? Why, above all, these nervous Republicans are wondering, should the President choose just this time, when the forces of Bryanism and revolt are rallying to the cry that monopolists and speculators are in control of the Government, to go off as the personal property of the chief agent of the monopolists and speculators? It gives too much plausibility to the charge that Hanna is really the Government—not simply the power behind the throne, but on the throne itself a good part of the time. Already has this idea taken firm root in the simple minds of the Filipinos. Witness this astonishing dispatch, included in the documents printed with the Peace Treaty:

"Cortes family, representing wealthy, educated families Manila, implore you in name humanity and Christianity not to desert them, and aid to obtain annexation Philippines to America."

To what potentate does the reader suppose this appeal was addressed? Why, to "Hon. Marcus Hanna, United States Senate, Washington." In other words, the Filipinos went straight to headquarters, and applied to the man whom they understood to be the real President. It would be an embarrassing thing, say the disquieted Republicans whom we are quoting, to have that idea get into the heads of people in this country, too.

If the Beef Court of Inquiry is really purposing to bring in a report whitewashing Alger and his canned roast beef, it would be wise to get out of Chicago as soon as possible. Every time that its members look into the meat-canning industry there they discover evidence which is very damaging to Alger and his favored contractors. They brought out the fact on Friday that the so-called canned roast beef which was sent to the army in Cuba and elsewhere was not roast beef at all, but simply boiled beef, usually of the kind that had been rejected as unsalable because of its leanness. On Saturday it was shown, on the testimony of an inspector of the Bureau of Animal Industries, that in a certain canning-house "diseased beef was re-

moved from the top of a rendering tank after it had been placed there for destruction," and had been sold in the Chicago market. Whether any of this had been sent to our soldiers, did not appear from the testimony, but the description tallies well with that which many of the soldiers have given of what they were supplied with. In regard to the canned beef which he knew had been sent to the soldiers this inspector testified that it was the kind known as "chuck," the cheapest grade of all, taken from the poorest cattle in the market, and worth from three to four cents a pound. Does not this tally precisely with the evidence given by the officers and men regarding the "canned roast beef" which they had?

It appears from Mr. Howell's candid statement on Saturday that one of the most vexatious of the custom-house regulations which he quotes has no statutory basis at all. It is, we presume, the composition of Mr. Gage or of Mr. Howell himself, for he says that it was framed "recently," that "it is still in force," and that it is "a new order." We may rely upon it that, could he have put it off on anybody else, he would have done so. Read it again, fellow-citizens, and in doing so remember that this is A. D. 1899, not 1799; that this is the United States of America, not Morocco or Turkey; that the object of taxation in civilized states is not to plunder or build up character, but to collect revenue for the Government; that all our Government gets from this grand "regulation" is \$140,000 a year, and that for securing this portion of a revenue of \$340,000,000 it annoys, vexes, insults, delays, and endangers the health of the average of 120,000 persons who arrive in first-class steamers at this port from Europe every year:

"Whenever the baggage of passengers arriving from abroad is found to contain any articles purchased abroad which have not been declared by the passengers, they shall be described on the back of the baggage declaration by the inspector and submitted to the appraising officers for appraisement, and the inspector will be held responsible for the failure to so find and report such articles, regardless of their value."

Read it carefully, we say, and do not throw away such a product of constructive statesmanship, and then, having chosen some quiet place for reflection, will it not occur to you, if you have received even a common-school education, that the whole of this preposterous custom-house machinery, inspectors, appraisers, and deputy surveyors, might be dispensed with by exacting from each passenger, as he descends the gangway, a fixed sum of one dollar, or of one dollar and a half, for the privilege of landing in America?—

"My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing."

In this way the Government would get

its revenue much more surely than at present, nobody would be vexed, inconvenienced, or detained; everybody, even poor teachers or professors, would pay the dollar gladly. We will undertake, for our own part, to pay two dollars. Is it not astonishing that when two statesmen like Messrs. Gage and Howell set about concocting such a god-like "regulation," this scheme did not occur to them? We ask all our readers boldly if they know of any American business man of mature age who, if he was going to frame a regulation that was likely to annoy and insult many thousands of his fellow-citizens, would not wait to see by his books how much it would bring in to his account, and, on discovering that the amount was very small, would not ask himself whether there was not some easier and less offensive way of bringing in the same amount?

The desire of the people in Fort Wrangel, Alaska, to be set off from the United States to Canada, in order to get decent government, seems natural enough when we learn what sort of officials the Washington authorities have been sending there. Gov. Brady of Alaska is authority for the statement that there are sixty men in whose hands is the government of the Territory; that "they have no interests in Alaska except to grab whatever they can and get away"; that "they are like a lot of hungry codfish"; and that "seven of these officials, 11 per cent. of the entire government, are now under indictment for malfeasance in office." As one sample of the methods pursued, he cites the fact that our Government prohibits the sale of liquor, and yet collects a revenue from its sale. As illustrations of the way that the liquor laws are enforced, Gov. Brady says that he has known judges who would try a "joint"-keeper, and then go to his saloon for a drink with him; and that one of the officials now under indictment was proved to have made a raid on a "joint," and then turned around and sold the liquor back to the saloon-keeper! "The native has no respect for such a government," says Gov. Brady, "and who can blame him?" "The way that those appointments are made is abominable," is another of his comments. All this is more important for its bearing upon the future of "our new possessions" than upon the present of a possession which we have had for more than thirty years. One expansionist at least has got his eyes open to the significance of the Fort Wrangel incident. In a speech on Saturday evening Gov. Roosevelt said:

"Have you read in the papers that an Alaskan town wants to be transferred to Canada? It wants to get from under our flag merely because no one has thought it worth while to give Alaska good government. If we govern the Philippines, Cuba, Porto Rico, and Hawaii as we have governed Alaska, we shall have the same results."

The eleven car-loads of our citizens who journeyed to Albany last week in the interest of the Amsterdam Avenue bill, received an object-lesson in the modern science of government which should be of great value to them. They learned more in a few hours about the wonderful system under which they are living in this city than years of quiet observation and experience have been able to teach them. They went confident that Croker was with them, that he would exercise his absolute power over the Tammany members of the Legislature in favor of their bill, and they were even able to think kindly of him for thus exercising his power in the interests of the people. Surely a boss who was willing to exert his influence for good in this way could not be such a very bad man after all. Possibly the stories about his using his great power mainly for purposes of blackmail might be mere inventions of his enemies. The newspapers are shamefully reckless about charges of this kind against public men, you know. Well, they arrived in Albany, and went to the "halls of legislation." They were received by the Senators, and an adjournment of five minutes was voted in order that they might shake hands with the statesmen. Then the Senate reassembled, and the visiting citizens were treated to what the Boys call a "whirl." The bill that they desired to have passed was taken up, and an amendment was proposed which meant its death. It was opposed valiantly by the champions of the measure, and defended with great plausibility by the leading statesmen who represent the eminent Mr. Croker in the Senate, assisted by the leading statesmen who represent the eminent Mr. Platt in the same body. A vote was taken, and these two bodies of leading statesmen were discovered to be working heartily together for the amendment that would nullify the bill. What did that mean? Why, simply that the "orders" of the two bosses had either been different from what the visiting citizens had been assured they were, or else the representatives of the bosses had misunderstood them.

While the visiting citizens were trying to unravel this mystery, there came a second "whirl" to add to their confusion. No sooner had word reached the Assembly that the Senate had amended the bill, than the latter body turned about and passed it in its original form without amendment. Strangely enough, this action was taken by the same combination of boss-representatives that had succeeded in amending the bill in the Senate. Indeed, in making the combination in the Assembly, the Battery liquor-dealer who has the honor to be the personal representative of Mr. Croker in that body, announced that the "gen-

tleman who has the honor to preside over and direct the affairs of the city of New York told me on Sunday night that he did not want the Democratic organization of Tammany Hall to oppose or vote against this bill." That silenced all opposition, as well it might. It was in the nature of a royal edict. When word of it reached the Senate, the representatives in that body of the "gentleman who has the honor to preside over and direct the affairs of the city of New York" were dumfounded, of course. They must have misunderstood their orders, but, whether they did or not, they were determined to adhere to their amendment to the bill. What is the result? Simply what is known at Albany as a "see-saw." Each house will make it a "matter of principle" to stand by its bill. The Senate will insist upon its amendment as vital; the Assembly will insist that to permit the amendment to prevail will destroy the usefulness of the bill. Consequence—no legislation.

The native hue of resolution is being sicklied o'er with the pale cast of thought on more than our side of the water. In other words, the bills have begun to come in, and there is such a difference in one's spirits usually between the time when one is spending and the time when one is paying! In England there is a huge deficit in the revenue for the year, and the newspapers are warning the Chancellor of the Exchequer not to add to the income tax, but there is, of course, no general agreement as to the exact place where he is to get the money. The protectionists are all alive with the hope of getting a tax on corn and other farm products, that will make the landlords and farmers happy, and make the laborer share more fully in the work of civilizing the "brown man" and get a piece of "the glory." But ever since Lowe tried to tax lucifer-matches, Chancellors have been chary about direct taxes on the common people which these can see too plainly, as they have no Griggs in England to tell the working people about "glory." We may feel sure that from this time forward the "white man's burden" will begin to feel too heavy for comfort. We are rapidly entering on the educational period, in fact, for expanding democracies. No drunken fit ever fails to be followed by a period of headache and reflection. Then we fear the great "alliance" of last year of the two branches of the Anglo-Saxon race is not "panning out" as was expected. Conquering America is not what they thought it in England. The campaigns in Cuba and the Philippines have not made America seem such a help against the "brown man" as was expected. The beef, and Alger, and Egan, and the prodigious bard-like literature of the war have offended English taste, and even *Punch* has ventured to satirize Hobson's osculatory performances.

"CHAOS."

The expansionists have begun to threaten us with "chaos" if they stop killing people with machine-guns in the Philippines, just as they threatened us with "a renewal of the war" if the treaty with Spain was not promptly ratified, concealing from us carefully who was to renew it. One thing they apparently do not see, and that is that they are accustoming us to "chaos." What are we doing but establishing chaos and carrying it on as a sort of business in which we are proud to excel? What is chaos but gun government, many thousands of deaths by violence, absence of civil law, great sense of "insecurity" among the peaceable, daily growth among large bodies of the population of intense hatred and study of revenge towards the people claiming the government, indefinite postponement of peace and order and trade and commerce and industry? Why, bless your innocent souls, expansionists dear, chaos has been the normal state of the Filipinos for generations, and what we thought you were going to do was to put an end to it. Now you tell us that if you stop killing the Filipinos and try kindness and conciliation, "chaos" will begin. But there cannot be worse chaos than you are carrying on. Every dispatch from Gen. Otis tells of chaos, and nothing else. It tells only of skirmishes, slaughters, assassinations, burnings, of the general destruction around Manila of all the works of civilization, of the death of thousands of half-civilized men, solely because you choose to call them "rebels," though they have never acknowledged your authority, and you have not a particle of claim to their allegiance except what is based on a bogus purchase from a bankrupt vendor—and you Americans!

The truth is that we, "foremost in the files of time," have simply bought the good will of a chaos business from a broken-down old dealer, the last left in the world, and have begun to carry it on at the old stand in precisely the old way, except that we are substituting Protestantism for Catholicism, enlightenment for superstition, American bragging and blowing for Spanish bragging and blowing, and keen, effective slaughter for Spanish old-fashioned, clumsy slaughter. We are, in fact, trying to do exactly what the Spaniards were trying to do—that is, hold down a wild people against their will 8,000 miles away. We are trying to do what Spain tried to do in all the Spanish-American republics and in Cuba, without success, and with a government much less adapted to the work than Spain's. Our government was made for peaceable, industrious, homogeneous, Protestant men. We are abandoning our ploughs and looms to engage in the old detestable Spanish business of "chaos"-making and "concentrating," for which we have neither fitness nor expe-

rience. What do we think of a conquering Power whose Secretary of War had to quit the army to avoid court-martial, and promptly uses his authority to serve decayed beef to the troops, whose Commissary-General blackguards the Commanding General in a carefully composed essay in the language of a drab in the stews, and is rewarded by the Executive with six years' vacation on full pay? To be a successful conqueror you must not only have guns and soldiers, but a conqueror's manners and the ways of a conqueror, and you must modify your Christianity.

Many good people who do not approve of "chaos" are asking themselves in a helpless way, "What are we to do? we are in for it," and so on. Well, we luckily know something about these "rebels" from the experience of the Spaniards—that the "rebels" rely mainly on their climate and the wide and scattered nature of their territory. All the difficulties will be much greater for us than for them, except cannonading from the shore—that is, a few miles. If the rebels will not accept our rule through conciliation, we can avoid a long war and great loss of life and probable ultimate relinquishment of the enterprise only by leaving the islands to their own devices. We assure those who are afraid of anarchy and chaos that there will be less of that in the native way than in ours. All Spanish-American states have had anarchy at first. But sooner or later there comes to the top a man of their own blood, race, and religion who understands them, and he gets hold of power, has a following among them, and eventually establishes some kind of government suited to the wants of their civilization. We have undertaken this enterprise through the advice of men who know nothing of the subject, backed by adventurous youths who wanted the fun of war, and parsons who had grown tired of Christianity. They wanted to spread the Gospel with improved weapons instead of the old pikes the Spaniards used to spread it with.

THE NEGLECT OF HAWAII.

If the action of Congress, or, rather, its failure to take action, respecting the government of Hawaii were a fair indication of the benevolent attention which our island territories are likely to receive from us, they might be tempted to think their last state worse than their first. The case seemed clear for prompt legislation. There has been no war in Hawaii. No preliminary work of pacification was necessary. The islands, moreover, had long been accustomed to a representative government. The inhabitants were ready for some form of local rule under American sovereignty. Full material for judgment was before Congress; a commission had made an exhaustive report and offered a bill; Ha-

waiians and Americans alike declared the matter to be one of great urgency; yet Congress did just nothing at all. We forget—it did one thing: it extended our navigation laws to the Hawaiian Islands. They asked for the bread of a territorial government, and we gave them the stone of an obsolete and restrictive shipping law.

That the affair may stand out in its true light, we set forth the successive steps which seemed to lead straight up to legislative action, but which led only to legislative neglect. The joint resolution of July 7, 1898, annexing the islands, declared that the Congress of the United States "shall provide for the government of such islands." In order that Congress might be able to act intelligently, the resolution further provided for the appointment of a commission to "recommend to Congress such legislation concerning the Hawaiian Islands as they shall deem necessary or proper." Such a commission was duly appointed by the President, visited the islands, and made a report to Congress which, with recommendations, filled 560 pages. President McKinley brought the whole matter to the attention of Congress. He said, with his beautiful faith in Congress, that he "believed" the recommendations of the Commission would receive from Congress "the earnest consideration due to the magnitude of the responsibility resting upon you." But a President who "believed" that would believe anything. Congress simply chucked the whole thing overboard. It would not even discuss the bills for Hawaiian government. Its way of dealing with the magnitude of responsibility is to ignore it altogether. Even when the President sent in a special message to remind it that at least a bill to lay a cable to Hawaii was "a paramount necessity before the close of the present Congress," Congress coolly said, "Oh, you think so, do you?" and threw his message into the waste-basket.

There was particular reason for haste in legislating for Hawaii because the resolution of annexation had left the islands in a very awkward legal situation. The Hawaiian Supreme Court had held that the jurisdiction of the local courts had been seriously impaired. They were inhibited from passing on all cases arising under the laws or the Constitution of the United States, yet no court of competent jurisdiction had been erected in their stead. All admiralty questions, for example, are indefinitely hung up in Hawaii, because no court has jurisdiction to try them. It seemed that the least Congress could do was to pass a remedial bill to cure this unlucky legal muddle of its own creating. But it did nothing. The Hawaiians cried out for relief, but 2,000 miles is a long way for the human voice to carry, especially when there is so much louder and nearer a clamor from the "deestrics." A Congressman could not well be expected to

attend to the jurisdiction of a court in Honolulu when he had to spend his days and nights hustling for a new courthouse in Liberty Corners.

There must be a moral in all this, but we will leave the expansionists to draw it. They told us how the horizon of Congress was to be "broadened" by having to legislate for distant possessions. They explained how inevitable it would be that a more serious tone and a higher statesmanship should result from our plunging into world-politics, as the Germans say. The way to develop a sense of responsibility was to undertake new duties; that is, to cure a weak back, pile on more burdens. Well, we know that the case of Hawaii must prove all this to be true, for the expansionists are never mistaken, but they ought to explain at least to the wondering Hawaiians just how it all happened, and how the wisdom and benevolence of Congress were displayed towards the islanders by letting them severely alone.

The real reason of the failure of the Hawaiian bills to receive any attention from Congress is, we presume, the "short session." When legislation is in a state of chronic congestion, and desperate efforts have to be made to get through the bills necessary to keep the Government going, it takes a powerful push indeed to get any other measure to the front. If the Hanna-Payne ship-subsidy bill, with its enormous bribes, its tremendous array of selfish interests in support of it, could not get a hearing, it is not, perhaps, surprising that the Hawaiian bills were turned out of doors. Nor do we suppose any serious or lasting harm will be caused by delay. The courts in Hawaii will find some way to punish crime. The men in control of the Hawaiian government will manage to keep the concern going. They and we shall flounder along in the good old American way. As for confident predictions, one way or the other, what the effect of all this on American political life will be, we decline to make any, except that which a wise English critic made when asked what he thought would be the effect on English literature of the disappearance of the three-volume novel. He said he did not precisely know, but was sure it would leave English literature very much what it was before.

LOBBYISTS AND LEGISLATORS.

The lobbyist has been much under discussion in Indiana during the session of the Legislature which ended a few days ago. Gov. Mount, who is a plain-spoken sort of Executive, took up the matter in his message to the Legislature, and said:

"The lobbyist who seeks to dominate legislation adversely to the public weal is an enemy to the public good. Hired lobbyists are a menace to free government. The time is rapidly approaching when the hired tool of corporate greed will be excluded from the halls of legislation. The just law that commends itself needs no schemer, with doubtful

methods, to secure its enactment. Labor is the creative power of wealth. Workingmen from the farm, the mines, and the shops cannot become lobbyists. They have not the means to this end. Business men and the common people have not the time. It becomes, therefore, the sacred duty of law-makers to look after the people and to see to it that no inroads are made upon their rights."

Indiana newspapers agree that there was abundant warrant for such talk by the Governor. "Every State in the Union has suffered more or less from lobbyists," says the *Indianapolis Journal*, "and none more than Indiana." During the last ten years a number of important reforms have been carried through the Legislature. The *Journal* testifies that "every measure of progress and reform that has been enacted in the State has been passed over the opposition of a lobby determined to maintain conditions favorable to a few and unfavorable to the masses."

Radical measures of reform were sought from this year's Legislature when it met last January—particularly in the matters of township and county government. Both parties had pledged themselves during the campaign last fall to favor such legislation, but, when the session opened, it was found that a powerful lobby had been organized, with the purpose of defeating the reform. A local observer reports that this lobby embraced all who had been profiting under the old system—extravagant and dishonest county commissioners; greedy county officers, to whom such commissioners had been "very kind"; party bosses who live on the crumbs of corruption that fall from political tables; courthouse rings, bridge-building companies, stationery and blank-book-supply houses, county officers who are reformers before election and fee-grabbers after, plausible citizens who are "in favor of real reform but not of this bill," small politicians who think that platform pledges are made to catch votes—in short, every person who had profited or hoped to profit under the old system. At the head of this formidable combination was the Association of County Officers, which opposed the bills of 1891 and 1895, substituting salaries for fees, and is still trying to undermine and whittle away the law on that subject which is now in force.

The shamelessness of these lobbyists increased as the contest over the reform measures grew close, and their impudence became remarkable. When the important vote on passing one bill to its third reading was being taken, one of the lobbyists slipped into the seat of a Representative, near the rear of the hall, who was absent. When the Representative's name was called, this lobbyist sang out, "No"; the clerk caught the response, and recorded him as voting in the negative. The lobbyist then slipped out of the seat, priding himself upon having secured the recording of a supporter of the bill against its passage—

although the scheme did not succeed, as two or three members had observed the trick, and made the clerk expunge the false vote.

The legislative reporter of the *Sentinel* who related this incident, wrote that "there is no adequate way of describing the impudence of some of these lobbyists," and he gave these further illustrations of their methods:

"They slip into the seats of members, and pester them by sending pages in constantly with requests that they come out into the lobbies. One lobbyist from Shelby County has made himself especially obnoxious. When pleading tactics will not avail, he attempts to bulldoze, and several of the members will no longer pay any attention to his cards when he sends them in. As the strife over the bill becomes more acute, the lobbyists for the county officers are assuming more and more the attitude that they own the House of Representatives, body and soul, and are no longer as sly and secretive as they were."

What shall be done about such a scandal? The natural reply to such a question, considering the American tendency to seek relief in a statute, is to pass a law to stop it. Years ago there were a good many people who thought that the only thing necessary to put an end to lobbying was to enact some sort of law. An experiment in this line was made in Massachusetts, some time ago; but, after thorough trial, there is a general agreement that little of real value has been effected by the registration of men who claimed the right to urge or oppose measures before the Legislature, or by the attempt to restrict their activity. The only sure way to get rid of lobbyists is to have legislators who cannot be influenced by their methods. No law was required to keep lobbyists from slipping into the seats of members at Indianapolis, and answering on roll-call to the names of absent Representatives; no statute was necessary to prevent legislators from answering calls to leave their seats and meet lobbyists outside the chamber. A sense of decency should be sufficient to make short work of all such tactics. The great trouble at Indianapolis was the tenderness of the law-makers towards the lobbyist. Even when the fellow was caught trying to falsify the roll-call, nothing was done except to correct the record by those who discovered his villainy.

No law was ever needed to protect George F. Edmunds and Justin S. Morrill, Allen G. Thurman and Thomas F. Bayard, from the approaches of lobbyists. No body of law-makers composed of such Republicans and Democrats as these men would ever suffer from corrupt attempts to influence its action. A Legislature could not be composed of men with such talents as these leaders at Washington possessed, but there is no reason why men of as high character as theirs should not be chosen. Without legislators whom lobbyists know that they cannot affect, there is little hope of abolishing the lobby.

NEW YORK CHURCHES.

For the origin of the troubles in the West Presbyterian Church of this city it is necessary to go back to the time when the late Jay Gould was one of its shining lights. His religious walk and conversation inevitably had a metallic ring. The style of preaching fitted to win his approval had necessarily to be very practical, and the management of church affairs in his day was above reproach on the financial side. The West Church was then, in fact, known as "the brokers' church." It used to be whispered about, in an awed way, how many "millions" every Sunday Dr. Paxton was in the habit of preaching to. We forget what the total was, but it was certainly large enough to make the Almighty think twice, as the French nobleman said, before damning men with such bank accounts. Several years of this intensely practical religion could not but bring about in the trustees of the church a state of mind which made it seem to them the most natural thing in the world to ask their pastor to resign, not because he was not eloquent or godly, or successful in drawing the unchurched to his ministrations—for it is agreed that Dr. Evans has been all these—but because there is a shortage in the money receipts.

Just what the financial situation of the West Church is, seems to be in dispute. A mortgage of \$45,000 on the church property is said to be held by one of the trustees, Mr. Russell Sage. We have heard it said that Mr. Sage ceased attending the Brick Church and "took a pew" in the West Church for reasons not unconnected with this mortgage, but of this we know nothing. Reporters tried to get light from Mr. Sage on the whole case on Sunday, but, owing to his severe rule never to discuss even semi-worldly subjects on the Sabbath, they failed.

There is, however, no doubt whatever that financial reasons alone led to the demand that the pastor resign. He should not have been surprised at this, considering how the pecuniary note was made dominant in the church during so many years. As one of the indignant younger members is quoted as saying, in those days no one who could not pay \$500 for a pew was wanted. Heaven was then described from the pulpit as a sort of glorified Wall Street.

It would be an exaggeration to say that this West Church case is typical. We should be sorry to say we thought it was. Yet there is no doubt that it suggests one of the perplexing and difficult problems which confront many pastors and churches in New York city. We need not specify the many instances during the past few years of ministers of different denominations and in various parts of the city being practically compelled to surrender their pulpits, on the ground that the cash returns from

their ministry were not satisfactory, however the case might be with the spiritual returns. Church trustees in New York have a terribly business-like way of looking at these matters. They have not a word to say against their pastor. He is a good man and a good preacher; but the Midases have given up their pew, the Georgeouses advertise theirs for sale, and what are you going to do? This is their hard-headed way of interpreting the promise they made when calling their minister, to leave him "free from worldly cares." Worldly care is, in fact, the thing which breaks down ten clergymen to one who succumbs to spiritual burdens.

The truth is, we believe, that few men outside of New York realize the enormous difficulties of the work of a pastor in this city. Most vacant pulpits are filled by drafts on country towns, and the country clergymen must be rare who are not surprised by the stress and strain of a New York pastorate. Many of them succeed, of course, and of them we hear most. They are the ones who are pointed to as showing the influence and power of a New York pulpit. But the many who fail, and who go away broken in health and spirit and with ruined prospects, are forgotten; and it still remains a subject of congratulation when a preacher who has had great success in a town or small city receives a "call" to New York. Too often it is a call only to fierce competition, to incessant and heart-breaking labor, to overwhelming anxieties, and to final failure. But the illusion will doubtless persist, and the great prizes of the pulpit in New York will be striven for as diligently as ever by the rural clergy.

It will be noted that this peculiar kind of church trouble is rarely heard of except among the non-episcopal churches. Independent churches seem to struggle for life more fiercely. One is all the while bidding against another. In the same denomination a certain kind of "comity" is usually observed in not locating one church too near another; but rival sects show little consideration, and push for eligible sites on "the avenue" as eagerly as if they were so many clubs. Yet even the episcopally governed churches steadily abandon the poorer sections of the city, and show how powerful the financial motive is with them, too, as indeed it seems that it must be with any voluntary church. Doubtless in time some scheme will be evolved amounting to endowment of churches in the parts of the city where the people are not able to support them. But at present the situation is one which saddens and burdens many hard-working pastors and workers among the poor. They steadily feel the pain and humiliation of seeing Christianity given a mercenary aspect—an aspect which, to most of us, is only occasionally and disagreeably brought home by such an incident

as the action of the trustees of the West Church.

THE BICYCLE IN GREECE.

ATHENS, January 25, 1899.

It has been repeatedly suggested to me, by the regrets of a considerable number of the members of the American School at Athens, that I should give some public expression to the utility of the bicycle in Greece. I put aside certain temptations to praise the bicycle generally, and speak of it only as a help here in the study of archaeology.

Every year men come to us saying: "I left my wheel at home, thinking it would be of little use in this rough country." After some reflection on "the difficulty of having it sent over after them, they rent wheels a few times, after which, deterred partly by the awkwardness of having to hunt up a wheel for every little excursion, and partly by suffering from the poorer quality of wheels that are to be had on loan, they drop the habit of bicycling. But the wheel has been so keenly appreciated here by generations of students that this dropping out is to be very much deprecated. Archaeology does not consist entirely in the study of books and museums. That it does largely so consist it must be confessed; but a legitimate and important part of Greek archaeology is the knowledge of the face of the country; the tracing out of its ancient routes, going over the passes and climbing now and then a mountain; the skirting its coasts; the visiting its places of great renown; the studying of its battle-fields; and the seeing of the landscapes on which rested the eyes of Pericles and Epaminondas, of Sophocles and Pindar. Especially important is this for one who has but one year to spend in Greece. It is well for him, even at the expense of some time which might well be spent in the museum or in the library, so to fill his mind with the landscapes of Greece that, when he goes back and stands before his classes and speaks, for example, of Leuctra, he may be looking with the mind's eye upon the slopes down which the Spartans came charging, the opposite slope where the Thebans stood, and the valley between, where they clashed. The class is then sure to catch some of this vivid presentation, and feel that they have almost seen Leuctra themselves. If, then, one should spend the whole of his year in museums and libraries, we might say to him, "This ought ye to have done, and not to have left the other undone."

Granted that one wishes to see the country and to become familiar with it, so that he will read Greek history, and Greek poetry, too, with other eyes, the bicycle becomes evidently indispensable. To take an example: One morning, to shake off a headache incurred by sitting too long in a close room at an invaluable meeting of the German School the night before, I bicycled with a member of our School, who had never been there before, to Liopesti (Pæania), the birthplace of Demosthenes, stayed long enough to chat with the villagers and take a glass of their resined wine, with which one is supposed to drink in the gift of talking modern Greek, and came back to Athens all in three hours, taking it very leisurely at that, and returning by a roundabout way, reaching home full of oxygen and sans headache. We might have walked, to be sure, but not to Pæania, unless we had given the whole day to it.

Railroads will take you already to many

parts of Greece, and in a few years, if the affairs of the country go well, you will be able to proceed by rail from the northern border of Thessaly to Kalamata at the southern end of Messenia. But even railroads cannot do all for us which the bicycle does. Exercise, open air, and, perhaps more than all, the delight in propelling one's self, will make one prefer the wheel. We can reach Eleusis by bicycle as quickly as the train takes us, and choose our own time for starting, without the alternative of sitting some time at the station or losing the train.

There are many other charming spots in Attica where no railroad comes in to help. Marathon and Salamis are two such places, to which we make excursions every year. Last year some of us rode out on Thanksgiving Day through Deceleia to a point where we saw Oropus and the Euboean Gulf at our feet, and Dirphys, the highest mountain in Euboea, rising opposite us, and then turned around with the recollection of one of the finest views in the world to add to enjoyment of our Thanksgiving dinner. In twenty minutes, had we so wished, we could have been in Oropus. On any day one can start out from Athens and reach the end of Attica in any direction and get home to an early dinner. In fact, we have sometimes taken dinner at home after straying as far as Megara and Thebes. The acquaintance which some members of our School have gained with Attica, in all its nooks and corners, by single day's bicycle-riding, is something noteworthy; and when, in 1897, on Thanksgiving Day, we turned out ten men for a ride across Salamis to Megara for a luncheon, and came home by the shore road, we felt considerable *esprit de corps*.

The notion which foreigners have of the roads of Greece, that they are bad compared with those of other countries, is an error. A bicycle journey through Italy and Sicily disabused me of that notion. The worst road that I ever tried was that between Caserta and Naples, and the next worse was that leading into Rome from the north. There are, of course, some bad roads in Greece; but even Sicily, to say nothing of worse roads in Italy, cured me of complaining against Greece. For a pure pleasure ride, the road between Tripolitza and Sparta would be hard to match anywhere in the world. It is in capital condition, and, on account of its gentle grade, involves very little walking. Six hours suffice for the journey in either direction, and the view either way is superb. The ride through Ætolia and Acarnania, regions considered half civilized in the classical period of Greek history, but always fine in natural beauty, with big lakes, and rivers that "move in majesty" (a rare thing in Greece), hedged in by high mountains, is perhaps the best in Greece. One rides from the shore of the Corinthian Gulf opposite Patras to Arta (Ambracia) in two days, with a comfortable night at Agrinion, passing the historic Missolonghi and visiting the ruins of Calydon, Pleuron, Cēniadē, Stratos, Limnæa, and Amphiloehian Argos, while to the right and left are other ruins which invite one to make détours if one is not in a hurry. And one ought not to omit the recently excavated Thermon, the ancient capital of Ætolia, even if it does cost an extra day. The long-known and impressive ruins of Cēniadē, the chief city in Acarnania, also invite one to linger a whole day instead of spending a few hours in passing.

The first five cities of ancient Greece in renown and interest were Athens, Sparta, Argos, Thebes, and Corinth. One can ride from Athens to Thebes or Corinth and back in a single day; he can also easily reach Argos from Athens in a day, and this leaves a rather long day's work for reaching Sparta. Any good bicyclist would find it no great matter to leave Thebes and pay his respects to Athens on the first day, visit Corinth and Argos on the next day, and sleep comfortably at Sparta the next night.

Perhaps, however, no better example of what one may enjoy with a bicycle can be given than the journey which I have just finished. Last Thursday the clouds dissipated themselves in such a way as to make me believe that we were about to have a few days of that winter weather which is "rarer than a day in June," and so, taking the train to Eleusis, to spare myself a little at the start, I rode over the famous Treis Kephala Pass into Boeotia. I thought when I was at the top of the pass that the view presented was the finest in Greece. Not to mention lesser glories, Parnassus was close at hand on the left, Dirphys almost equally close on the left, while very distant, but very clear, directly in front, was "snowy Olympus," a perfect mass of white. After lunching at Thebes, I wheeled easily along to Lebadea, entering it as the setting sun was turning the white mountains into pink. The next day, more clear and beautiful than the first, if that were possible, brought me to Lamia in Thessaly, via Thermopylae. The third day, in order to get a nearer view of Olympus, I rode and climbed up to the top of the ridge which formed the old border between Greece and Turkey, before Thessaly was incorporated into the kingdom of Greece, and on which, in the late war, the Greeks made their last stand after the battle of Domoko. From this point Olympus is, indeed, grander than from the passes of Cithæron, while the whole Pindus range, and the grand isolated peak of Tymphrestus, which some think would prove (if properly measured) to be the highest peak in Greece, stand up in majesty. Parnassus and the Aetolian Mountains make a fine showing on the south. From this point, on this same third day, as clear as the two preceding, I reached Amphissa at evening, after climbing two passes and enjoying new glories at each. It was, in fact, a continuous intoxication, to recover from which it required two days of archaeological study at Delphi. This was, to be sure, almost equally intoxicating, but, being an intoxication of another sort, it let me down gently. In three days I had got a glimpse of nearly all Greece in such weather as only a Greek winter can give.

RUFUS B. RICHARDSON.

JOSEPHINE AT THE MALMAISON.

PARIS, February 24, 1899.

M. Frédéric Masson has published a sequel to 'Josephine de Beauharnais' in a new volume, entitled 'Josephine Impératrice et Reine.' The transition is perhaps the most interesting epoch in the life of Josephine. The *liaison* with Bonaparte formed at the house of Barras was transformed very rapidly into an offer of marriage. At what moment? M. Masson prints a letter, unfortunately without date, which seems to mark the psychological moment; in this letter Bonaparte defends himself against the reproach of not loving Josephine for herself. Eleven

days after, having still done the honors of the house of Barras, she accepts Bonaparte's offer. She was thirty-two years old, she had two children; Barras was very fickle and had left her several times already for Madame Tallien. She felt no love for the young general, but her friends told her that he had genius, he was generous, he was ambitious, he was on the point of taking command of a great army. She felt, perhaps if not love, some pity for the young hero who wrote her such ardent letters. She consented, but Bonaparte was really in her eyes a *pis-aller*, and she thought sincerely that she was conferring a great favor.

M. Masson does not observe the chronological order in the publication of his volumes. After Josephine's life before her marriage with Bonaparte, he ought to have given us her life in the interval between the marriage and the 18th Brumaire and during the Consulate; his new volume takes up Josephine in 1804, when she has become an Empress. The reason is, that this 'Josephine Impératrice et Reine' had already been published apart in a splendid edition by Goupil, which was too dear for the general public. The new volume gives only the text of this magnificent edition, but M. Masson has added to it a fresh chapter on the Malmaison, the house which Josephine inhabited during the Consulate and after her divorce.

The Malmaison deserves a special mention all the more because it is on the point of becoming a great Bonapartist museum. A rich financier has recently bought what remains of it, with the intention of making a complete restoration of the place which will always be identified with the time of the Consulate. The Malmaison is situated on a bend of the Seine, in the pretty region, so well known to the painters, which comprises Ruell, Bougival, Marly, and St. Germain. At the time when Josephine was Madame de Beauharnais, she lived much at Croissy, which is in the same region. She was there in 1792, again in 1793; she returned to Croissy on coming out of prison. She saw from Croissy, on the opposite side of the river, the château of Malmaison, with its high roofs; it became the home of her dreams, though it was not very architectural, only a central part with two side pavilions; and fifteen windows in all on the façade. "Near the château there was a farm; the park was not very large; there were some vineyards besides (there are still some vineyards in that neighborhood, where people make a little wine as sour as the famous wine of Suresnes or Argenteuil)." The name of Malmaison comes from *mala domus*; it is rather common in France.

In 1771 the château belonged to a *famille de robe* connected with the Parlement, an intellectual family, as was apt to be the case. After the Revolution, it was in the hands of the only *fermier-général* who had not been guillotined, M. du Moley. He was in need of money; Josephine took Bonaparte to Malmaison immediately after her marriage; an offer of 250,000 francs for it was made, but the negotiation was interrupted by the expedition to Egypt. In his absence M. de Moley sold the house to Josephine, in her own name, as she was married *séparée de biens*. The price of the house was 225,000 francs; the furniture was bought for 37,516 francs. As soon as possible Josephine established herself at the Malmaison. She was dying to play the part of a *dame de château*. "The first person whom she in-

stalls in it is Citizen Charles, the ex-assistant to the Adjutant-General of the army of Italy; Charles, the *boute-en-train*, the *colembouriste*, with whom she likes to prolong in the night, or under the indiscreet rays of the sun, sentimental journeys in the great avenues. 'How she loves her brother!' say the peasants of Ruell, who see her through the grille on their way to the Hallea."

Josephine had debts; she could not bring herself to sell the jewels which Bonaparte had given her after the Italian campaign. She had borrowed money to pay for the Malmalson; she had not paid her taxes; she owed money to everybody, even to her servants. Her Bonaparte relations refused to help her; but, with the unconsciousness and levity of a true creole, she continued to spend, to buy whatever pleased her. With a childish pleasure she showed her neighbors her pearls, her diamonds, her cameos, and, in her house, the pictures, statues, mosaics which had been presented to Bonaparte in Italy. It was time that Bonaparte should return; he did return. He did not go to the Malmalson, but to the Rue de la Victoire, where took place the famous scene in which Bonaparte, who had come back determined on divorce, was reconquered by Josephine. While in Egypt his relations had informed against her, he had written her the most angry letters; he had the most serious grounds for a divorce, but he could not resist the tears and entreaties of Josephine. They were reconciled, and she at once took him to the Malmalson.

"It was," says M. Masson, "a real home for one who had never lived anywhere but in colleges, schools, barracks, huts, palaces, inns, through which he went having nothing but what he wore on his body; now he has a house which he can call his own, a garden where he can cool his ardor, a few acres of which he can call himself master; and he pays, but in his own name, not in the name of Josephine, the 210,000 francs still due to Du Moley; he pays the rest, the clamorous debts—all he is asked to pay for."

The *coup d'état* of Brumaire follows almost immediately upon the return from Egypt; and as soon as the blow is struck, as soon as Bonaparte feels himself master of France, he goes to the Malmalson for repose. For a moment he thinks of leading a quiet life, of playing the Cincinnatus; but he cannot keep quiet, and, having nothing better to do, he summons architects. He confers with Fontaine, the architect of the day, and orders changes and additions to the Malmalson. He must have a larger dining-room, a library, etc. When he returns to Italy, Josephine superintends the works. Six hundred thousand francs were spent on all these additions and improvements. Pictures were ordered for the Malmalson from all the good painters of the time—Gérard, Girodet, and others. The subjects were: "Ossian evoking phantoms to the sound of the harp on the shores of the Lora" and "Ossian and the warriors receiving in Valhalla the French warriors who had died for their country." Ossian was a great favorite with Bonaparte. "You have had a grand idea," said Bonaparte to Girodet, who had chosen this last subject; "the figures are really phantoms; I recognize the generals." Other pictures represented "The First Consul sleeping with fatigue at the passage of the Alps," and "General Bonaparte on the summit of the Alps." The painters of that time had very singular notions of the Alps, but had Napoleon himself not told Gros to represent him in the Alps "calm on a fiery

horse"? Portraits of Josephine, of Madame the mother of Bonaparte, completed the decoration of the great salons. In other rooms there were Pompeian decorations on panels: vases, tables in stucco, busts of all sorts. The whole ornamentation was in that style which we call the Empire, afterwards much neglected and despised, and, strangely enough, now coming again into fashion.

Josephine spent much of her time in discussion with the architects and with her gardeners—more, I suspect, than with her librarian, for there was also a library at the Malmalson. The librarian was Father Dupuy, who received a salary of 3,600 francs a year. He was a Minim of Brienne, whom Bonaparte had not forgotten. All the books at the Malmalson were modestly bound in calf, and bore on their covers the monogram P. B. (Pagerie-Bonaparte). When they were sold, there was a printed sale catalogue, but I have never been able to procure it. It would be interesting to know what books Josephine and Bonaparte read during the Consulate. Many of the volumes, however, were presents. The most important were the great works printed at the Imprimerie Nationale, such as the famous 'Description de l'Egypte,' a folio which can still be picked up at a moderate price.

Josephine was passionately fond of flowers; she had hot-houses and a botanical garden. She appointed Redouté (author of a fine work on roses) to be her flower-painter, and authorized him to publish the 'Jardin de la Malmalson,' a beautiful work, which cost her in all 130,000 francs. Josephine's expenditures were so great that Napoleon had to make a yearly budget, but it was never respected, and there were always extraordinary credits to be opened. M. Masson enters into the most minute details concerning all the improvements and additions devised by Josephine—temples, grottoes, artificial rocks, bridges, statues, vases, English gardens, antiquities, columns, ancient pictures, mineralogical cabinets.

Napoleon grew by degrees tired of the Malmalson; he lost his interest in it when he was able to take the Palace of Saint-Cloud as a residence. The Malmalson, however, is near Saint-Cloud, and Josephine, even when she became Empress, always considered the Malmalson as a home. It seemed to her a sort of material tie between Napoleon and herself; her perpetual fear of a divorce rendered dearer to her the house in which she had lived with Napoleon before dynastic preoccupations took possession of him. She knew that the Malmalson would be her retreat if the divorce was pronounced, and if Napoleon took a second wife. When Napoleon installed himself at Saint-Cloud, his first care was to build a good road between the Malmalson and Saint-Cloud. Josephine bought land along that road, when she found an opportunity. Her dream was to be able to go to Saint-Cloud without going out of her own land.

It is to be hoped that the Malmalson will soon be restored. In its present state you would hardly recognize it as it figures in the engravings of the time and as it is described in M. Masson's book. This book will be a valuable document for those who have undertaken the restoration. It will be very difficult, if not impossible, to acquire all the land which once belonged to Josephine's estate, as it has been sold in lots, and is partially covered with villas. The restoration of the ancient park is less important than the re-

storage of the château, which is a very easy task; and when once the château is rebuilt on its former plan, and furnished in its old style, probably many gifts will be made to the museum, which will help to give it the character of a true museum of a very definite and historically very important period.

Correspondence.

THE RIGHTS OF MAN AT THE WEST.

TO THE EDITOR OF THE NATION:

SIR: To a man born, educated, and trained in the East and long resident in the Middle West, there are many opportunities for observing the really essential differences of temperament and character between the citizens of those sections. In perhaps nothing is that divergence more manifest than in the attitude of those two sections towards the Philippine question. How the plain citizen feels in the East about the question I have no means of knowing at first hand, but it is quite evident in my mind that the plain people of the West are almost unanimously in favor of expansion. To explain precisely why would be a hard task; but there seem to be at least two considerable factors in producing this popular feeling.

Our people—and I mean by that farmers and inhabitants of small towns, cities, and villages in the Mississippi valley—our people feel in the first place that they are just as good as any other people on earth, individually and collectively. Having never come in contact with others superior to their own class, this illusion has never been jostled appreciably. Intensely, perhaps fanatically, patriotic, they are great readers of newspapers, and when they see from day to day the world's doings and the small part that America plays therein, their pride is hurt; they feel that there are a good many good things going on abroad in which they as Americans have no share. Geographical and financial considerations prevent their taking closer view of these glorious performances, so luridly set forth in their darling newspaper. Sturdy Americans as they are, they are jealous of "abroad," and want to know more about it. Hence the frantic eagerness of Chicago to have the World's Fair brought to our very doors, where we could see and study foreign nations. The further removed our citizens are from the currents of the world's activities, the more interested they become therein. Consequently, when the Philippine question came up, the most enthusiastic expansionists were those who lived farthest away from the political centre of the equilibrium of the world. So when McKinley asked these people, "Will (I) we take these foreign islands?" there was not the slightest delay in the response. The answer was: "Sure thing, the sooner the better." Their mental attitude was precisely that of a country yokel who had been gazing at circus posters all his life, and was suddenly asked if he would like to join the circus.

After that arose the question as to the rights of the inhabitants of the Philippines, and, strangely enough, our people turned an absolutely deaf ear to such queries. Why they should do so is one of the enigmas of modern political psychology for which many explanations have been adduced, but I suspect that our publicists have been overlook-

ing one factor in our national life which may shed some light on the conundrum. Roughly stated, it may be said that our people are beginning to doubt the doctrine of political equality. As if to satirize the idea, Europe has been sending us object-lessons by the million, and the negro has contributed valuable lessons for us. We have been gradually growing tired of folks inferior to ourselves, and, doctrine or no doctrine, we have not failed to show it. Whatever we may have once thought of the negro, there is no blinking the fact that nowadays we do not esteem him. Roaming gangs of tramps have opened country folks' eyes on points in comparative anthropology. Traditions of encounters with savage Indian tribes hereabouts are not all dead in the country districts, and when it was alleged that the original inhabitants of the islands were no better than Indians, tramps, negroes, or Hungarians, etc., the average American Mississippi valley citizen had no scruples in allowing a denial of rights to such cattle. The average American to-day believes in the immortal principles of the immortal Declaration of Independence if carefully enclosed within a circumscribed circle and applied with discretion and strictly to our own people. And he also has the temerity to say that such were the views of the immortal George and the immortal Thomas, or would be if they were permitted to see to what extent their views had been distorted in subsequent years. Personally, I think the farmers and villagers are right. I have read the *Nation* religiously for twenty-five years; I admire its keenness, honesty, and fearlessness, but I am surprised that it fails to read the signs aright of the growing popular distrust of the doctrine of Equality in America.

A WESTERN AMERICAN.

CHICAGO, February, 1899.

A TEST CASE.

TO THE EDITOR OF THE NATION:

SIR: It is with great satisfaction that I see you have taken up the subject of the ignominy imposed on our homeward-bound travellers by the custom-house rules. I became conscious of it the first time I returned alone from Europe. I presented my declaration, together with exact lists of the articles supposed to be dutiable which I was bringing in, and which were carefully packed, with the bills, in a separate trunk. When the custom-house official proceeded to open my other baggage I resented and resisted his doing so. Friends who had come to meet me warned me that I had better not make him angry. I was too angry myself to care, although he was tipsy, very impertinent (before any discussion arose), and made offensive remarks about his tests whether women's gowns had been worn or not; but this is aside from the point, as well as the fact that his examination was superficial and that the duties were trifling. When I asked what was the object of the declaration if the baggage was to be examined afterwards, I was told that it was only a form, devised, not for persons like myself, but for those who would smuggle, and that the officers know to a certainty whom to suspect; that the examination of other people's trunks was merely another form. Then why make the suspected declare? For the form. Then why examine the unsuspected? For the form. I put the questions as a logical dilemma without get-

ting any further. The law compels smugglers to become also liars and perjurers, and puts honest people in the position of being liars, perjurers, and smugglers to boot. My amazement and disgust that hundreds of thousands of respectable Americans yearly submit to this infamy were unbounded, and I registered a vow never again to undergo it.

On my next return from abroad, now ten years ago, I declined to make a declaration, saying that I would rather have my trunks emptied on the wharf. But on landing I found that this was not the alternative. No declaration? Then my baggage *would not be opened on the wharf*, but must go to some Appraiser's office, bonded warehouse, or other place of storage, I forget what. My demand to have it examined then and there was vain; it was carted off, and, as business hours were nearly over, I was told that nothing more could be done about it that day. I went home, a three hours' journey, and returned early next morning to prove whether I could reclaim my property without classing myself with smugglers, liars, and perjurers. My head was giddy and my legs were weak from the voyage; delays and difficulties were many; if I remember right, I was obliged to apply at five places, driving to and fro across New York below Park Place through the narrowest thoroughfares at the most crowded time of day. More than four hours were spent in this manner. Every official in succession stared and asked the same question: "Why did you not make a declaration?" and on my answering, "Because I would not make a declaration and then have my baggage examined—one or the other, not both," he stared again and recommenced the explanation that it was only a form, etc. At length I reached the final stage; a courteous and kindly personage gave me the order of release for my trunks, and repeated the official question and explanation. I asked him if he had sons: "Yes, two, nearly grown up." "You expect them to be honest, honorable men?" "I hope they are so already," he replied, flushing. "Then," I said, "you had better teach them not to accept the imputation of dishonesty and dishonor, as that blunts the sense of honor."

I went home victorious, but nauseated, to be indisposed for weeks from my exertions and experience. What struck me as the worst symptom I had met with was the universal surprise at my objection to write myself down liar and perjurer. Most of my friends said I was a fool, and I fear the rest thought so. What I thought of them was that the Government had destroyed the self-respect of the country. I tried to write you a short account of the matter then, when the precise details were fresh in my mind, and entitled it "A Nation without the Point of Honor," but I was ailing too long to do so while the grievance was fresh. It may not be too late yet, however, since you are stirring up our sluggish sensibilities.—Yours gratefully, AN AMERICAN WOMAN.

March 9, 1899.

"THE LAW OF THE ROAD."

TO THE EDITOR OF THE NATION:

SIR: The letter of Mr. H. M. Doak has recalled to me much about road law that has long lain dormant in my memory. I have had driving experience both in England and in America, and have had a good deal of travelling on horseback or behind a horse in

England and on the Continent of Europe. My people have led a country life for generations, farmers and yeomen, so that there has been among us a kind of tradition of horse for ever so long. But I have never heard any suggestion to explain the British rule of road, "Keep to the left," as Mr. Doak does. What my father told me, when he used to take me out in his gig or dog-cart, was this: You turn to the left when you meet a horse and cart because, by passing on that side, you do not run any risk of pressing or hurting the man in charge; for, if the horse is led, the man leads him by the *right* (the strong) hand, and the man is thus on the side of the horse most distant from passing carriages if they keep to the *left*.

So much for the horse and cart. Next take two carriages, each driven by a man on the box: the coachman in every country I know sits at the *right*-hand side of the box. Now, what is the safest rule to make for meeting and passing, taking the coachman's seat into account? Evidently it will be the rule that will give the coachman the most exact knowledge of the position of his carriage as he meets or passes another carriage. It is therefore obvious that, with coachmen sitting on the right side of the carriages, the safest rule for meeting is for carriages to be right to right, and that is equivalent to saying, "Keep to the left." For passing, the safest rule would be that the overtaking coachman should have the overtaken carriage on his right, and that also means, "Let the *faster* of the two carriages going in the same direction keep to the *left*." Then, of course, the *slower* must go to the *right*.

So we can now understandingly examine both the English and the American rules. The former is, "Keep to the left meeting, to the right overtaking"; the latter exactly the reverse, "Keep to the right meeting, to the left overtaking." Of the rules for meeting, the English is better; of those for overtaking, the American would be the better but for one consideration, namely, that the slower overtaken vehicle pushed over to the right-hand side of the road may immediately need to meet a third vehicle, and to do this properly has to cross the road. It is this consideration which has, I believe, led to the adoption in England of the opposite rule, in accordance with which the slower vehicle grinds along at the left-hand side of the road undisturbed by either meeters or passers.

The case of the led horse remains: in his case the main point is to keep him from being able to strike out at meeting or passing horses or vehicles. To secure this, he is kept close to the edge of the road, and the man leading him keeps between him and all other traffic or animals. He leads him by his strong hand, his right hand; and so the led horse is kept as close as possible to the right-hand edge of the road, looking in the direction in which he is travelling, and everything gladly makes way for him.

I am inclined, when driving in America and continental Europe, to be less comfortable in meeting a carriage or wagon than in overtaking it, while in England my feelings are exactly the reverse. I would gladly hear the experiences of others in a similar plight. One thing is quite beyond my comprehension, namely, the fact that the Americans, even of English descent, appear to have utterly rejected the English practice. In Canada the majority do the same, but in some towns (is Toronto among them?) the English

practice obtains. How is this to be explained?

WILLIAM GOW.

ORANGE, N. J., March 10, 1899.

[In St. John, New Brunswick, twenty-five years ago, the rule of keeping to the left prevailed; and perhaps it still prevails. What was more surprising to right-handed foreigners was that the same rule determined the passing of pedestrians on the sidewalks.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: The letter of Mr. Doak on "The Law of the Road," in the *Nation* of March 9, presents the curious question, Why did our English forefathers reverse their own English usage, and thereby establish in this country a new law of the road—that of keeping to the right instead of to the left?

The English usage did not originate with gentlemen on horseback carrying swords, but with English carters in smock-frocks, riding the "near horse" or plodding along on the left side of the road. The usage was established before the days of canals, steamboats, or railroad trains, when the heavily laden dray, moving in long trains, did all the transportation service of the country, and when there was no driving in the modern sense of that term.

The reason why the English keep to the left in driving, and why all horsemen mount on the left side of the horse, is because all men (substantially) were created right-handed. That much is plain; the feeblest intellect can grasp it. The carter's chief instrument for guiding and animating his team—for inflicting punishment and making a noise—was his carter's whip. Being right-handed, it was necessary that he should carry his whip in his right hand. To use it effectively, it was necessary that it should be, as near as might be, in the middle of the field of operations. If the carter would mount the left horse, he must mount on the left side, and if he would not mount and dismount in the middle of the road, where the English mud was deepest, the team must be on the left side of the road. When he dismounted there, he found, and helped to make and maintain, a foot-path along which he trudged, having his team within reach of his whip hand, and the horse on which he rode nearest to himself; whence the terms "near horse" and "off horse," which in modern days are to the American meaningless.

The reason why all horsemen in European countries as well as in England mount on the left side is likewise because their fathers were created right-handed. Being right-handed necessitated carrying the sword or sabre on the left side. If they had mounted on the right side, they would have had to clutch the scabbard and lift it over the horse when they mounted. In a word, the origin of the English usage of turning to the left and of the universal usage of mounting a horse on the left, is plain—it sprang from a general condition of right-handedness.

But apprehending the real reason for the English usage does not help us to a solution of the problem, Why did Englishmen in America, when on the highway, do exactly the opposite of that which they had been accustomed to do in the land where they were born and bred? When I was a boy, I was told that our Northern winters, deep snows, and drifted roads had brought about the

change. It was said that the greater part of the travelling in the early colonial days was done after the sleighing was good—that when two sleighs met and both had to "turn out" into the unbroken snow, it was better for the driver to be free to spring out and hold up his sleigh without having his legs crushed by the one he was meeting—that on the right side he could see where he was going, which was of more importance than seeing whether his sleigh would scrape against the other sleigh. (Here I may note parenthetically that the driver at an early day had shifted his seat from the carter's side of the vehicle to the right side, and for the same reason, viz., that he might have his whip-hand free.) But this explanation of snow and snow-drifts failed me when I found that "Keep to the right" was the law of usage from Canada to South Carolina. My inquiries have not been scientific or exhaustive, and there may have been parts of the country wherein, in the early days, drivers "turned out" to the left. The English railroads followed the carter's usage and ran on the left track. The railroads in New Jersey followed the English railway usage, and for a long time obstinately continued to do so. There may have been a left-hand usage in New Jersey upon the highways. Yet in South Carolina there was a conservative English community, and in South Carolina there was neither snow nor sleighing, nor wagon-traffic with the snow-bound States; and yet there they keep to the right, and the memory of man runneth not to the contrary.

I have not looked into early colonial and State statutes to ascertain the earliest legislation in regard to the law of the road, and I should attach but little importance to what might be found, for legislation merely regulates and enforces usage. The singular and extraordinary fact remains to be explained that different and remote communities, when transplanted from one continent to another, without law or obligation of any kind, immediately, or almost immediately, took to doing exactly the opposite of what they had all their lives been accustomed to do.

CHARLES C. NOTT.

WASHINGTON, March 11, 1899.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent on this subject has given reasons for the English rule which should be satisfactory to all. In reply to his question, Why did our colonial ancestors change it to "Keep to the right?" I would say that the reasons referred to apply to an old, long-civilized country, where drivers are in a large majority. There the driver, sitting on the right, must turn to the left, on meeting any other vehicle, in order to watch his wheels in passing those of the other. In a new colony, where agriculturists abound, ox-teams must far outnumber all wagons and carriages. The teamster, walking at the head of his cattle, on the left, must, for the same reason, keep to the right to watch the wheels. "Keep to the right," with us, is too firmly fixed to change. Some drivers adapt themselves to it by sitting on the left, but at the loss of the freedom of the whip-hand.

F. B.

CAMBRIDGE, March 10, 1899.

THE "MISOGONUS" AND LAURENCE JOHNSON THE MARTYR.

TO THE EDITOR OF THE NATION:

SIR: The "Misogonus," of which Collier

long ago gave an analysis, and which Prof. Brandl of Berlin has just edited (with many curiosities in text and notes) in his 'Quellen des weltlichen Dramas in England' (Strassburg, 1898), is so early and so interesting a specimen of English university comedy that any information about it is worth recording.

The manuscript which has preserved the play is signed, under the list of *dramatis personae*, "Laurentius Bariona. Ketheringe. Die 20 Novembris, Anno 1577." The fifth letter of the surname is said by Collier to be a Greek omega; Prof. Brandl makes it a 'w'; Dr. F. I. Carpenter, of the University of Chicago, who has examined the manuscript, assures me that Collier is right. No attempt to identify this Bar-Jona has been made, so far as I know. Brandl contents himself with remarking: "hebräisch=Taubensohn." Clearly we should seek in Bar-Jona not a Semite, but a scholarly Englishman who for some reason (in jest or earnest) wished either to conceal his name or to play a verbal trick with it.

"Bar" is, of course, "son," and we may without temerity recognize in "Laurentius Bariona" plain Laurence Johnson.

Laurence Johnson is no mythical being. He was fellow of Brasenose College in 1569, and applied for his B.A. on November 25, 1572. Certain conditions were imposed, and it is not known whether he fulfilled them or not. At all events, he went to Douay in 1573, to study for the Roman Catholic priesthood, and later to Rheims. In 1577 he took priest's orders, and in the same year he returned to England as a missionary. In 1581 he was indicted for treason, being associated in the indictment with the celebrated Jesuit Edmund Campion and several other priests. On the 30th of May, 1582, he was hanged at Tyburn. We have two accounts of his execution, both from eye-witnesses. One is from the pen of Anthony Munday, who had given evidence for the prosecution ('A breefe and true reporte of the Execution of certaine Traytours', 1582, reprinted by Collier in his Shakespeare Society edition of Munday's "John a Kent and John a Cumber," 1852). The other is from a friendly hand, and may be found in the 'Concertatio Ecclesiæ Catholicæ in Angliā adversus Calvinopapistas et Puritanos,' Treves, 1588, folio 93 v^o ff. Johnson was not a Jesuit, but a secular priest.

On his return to England in 1577, Johnson had assumed the alias "Laurence Rickardson," his father's Christian name being Richard, and it is in this same year that we find him (if my conjecture is correct) concealing his real identity under the punning disguise of "Bariona" in the "Misogonus" manuscript.

A reviewer in the *Literarisches Centralblatt* for February 11 (col. 206) remarks that "Laurentius Bariona" stands in the British Museum Catalogue as the author of a "Cometographia, London, 1578." This book I have not had a chance to examine. Its title however, indicates that the author was a Christian: 'Cometographia quaedam Lampadis aeris qu[æ] 10 die Novemb. apparuit Anno a virginis partu 1577,' and we need not hesitate, provisionally, to ascribe it to Laurence Johnson. One might even conjecture that he adopted the pseudonym for the special purpose of this book. At all events, the signature in the Misogonus MS. and the date of the comet are less than a month apart. The 'Cometographia' was doubtless not so

much astronomical as prodigious and exemplary, like T. T[winer?]'s English book on the same subject, which appeared in the same year: 'A View of certain wonderful effects . . . newly conferred with the presignifications of the Comete, or blasing Star, which appeared in the Southwest vpo the .x. day of Nouem. the yere last past 1577.' The Comet of 1577 is that which gave Tycho Brahe the materials for his famous investigations on the parallax of comets, and the whole of part ii. of his 'Opera Omnia' (Frankfort, 1648) is devoted to it. Some account of the ominous character ascribed to this "blasing star" may be conveniently found in Stanislas Lubieniec's *Historia Cometarum*, Amsterdam, 1666, pp. 373-7, whence we learn that, after the disastrous campaign of Don Sebastian in Africa, the comet was by many thought to have prefigured the death of Sebastian, Muley Mohammed, and Abdel-Melek. For contemporary impressions, see the letter quoted in Strype's 'Annals of the Reformation,' bk. ii., chap. 10, ed. 1725, ii, 510. American readers may like to consult Increase Mather, 'KOMHTOPPAEIA. Or a Discourse Concerning Comets,' Boston, 1683, pp. 101-3.

The prologue to the "Misogonus" is signed "Thomas Richardes." A person of this name was one of Johnson's fellow-students at Oxford (college unknown), and applied for his B.A. on December 7, 1571 ('Register of the University of Oxford,' ed. by A. Clark, II., 13, Oxford Historical Society Publications, Vol. XII.), shortly before the date of Johnson's application.

The authorship of the "Misogonus" is still an open question. If, as Collier thinks, the play was written in 1560, the author may have been neither Johnson nor Richardes.

Information with regard to Johnson may be found in the following works: Anthony & Wood, 'Fasti Oxonienses,' ed. Bliss, I., 189 (cf. 477, 478); 'Register of the University of Oxford,' ed. Clark, as above, II., 18; Foster, 'Alumni Oxonienses,' 1500-1714, II., 815; Challoner, 'Memoirs of Missionary Priests,' Manchester, 1803, I., 54 ff.; Richard Simpson, 'Edmund Campion,' 1867, pp. 320-2, 309; Henry Foley, 'Records of the English Province of the Society of Jesus,' II. (revised edition), 170 ff., III., 42, IV., 259; letter from C. Hodgson to L. Johnson, April, 1580, 'Calendar of State Papers, Domestic Series, Addenda, 1580-1625,' p. 4.

G. L. KITTREDGE.

CAMBRIDGE, MASS., March 8, 1899.

Notes.

R. H. Russell announces 'The Portfolio of National Portraits,' eight portraits of historic Americans, engraved on wood by Gustav Kruehl, in a limited edition of 250 copies; 'English Portraits,' large lithographs by Will Rothenstein, of which the American edition is twelve copies; 'Political Hits,' cartoons by W. A. Rogers; 'The King's Lyrics,' verse of the time of James I. and Charles I., selected by Fitz Roy Carrington, and illustrated by prints of the period; 'Just Rhymes,' humorous verse by Charles B. Loomis, illustrated by F. J. Cory; 'The Baronet and the Butterfly,' Eden versus Whistler, by the artist; uniform editions of "Cyranos de Bergerac," Hauptmann's "The Weavers" and "Lonely Lives," Ibsen's "Hedda Gabler" and "The Master Builder," and Augustus Thomas's "Alabama." Finally, "Treasures of the

Metropolitan Museum of Art,' by Arthur Hoeber, illustrated.

The Baker & Taylor Co. have in press 'George Müller of Bristol,' by the Rev. Arthur T. Pierson; 'From the Child's Standpoint,' studies of child nature by Florence Hull Winterburn; and 'Wild Flowers,' illustrated, by E. M. Harding (Maud Goings); and 'Vedānta Philosophy,' lectures by the Swāmi Vivekānanda.

Macmillan will soon publish 'A Selection of Poems for School Reading,' by Marcus White, Principal of the State Normal Training School, New Britain, Conn., and 'An Introduction to the Poetical and Prose Works of John Milton,' by Prof. Hiram Corson of Cornell.

The first separate reprint of Robert Louis Stevenson's 'Morality of the Profession of Letters' (from the *Fortnightly Review* for April, 1891) is announced by the Brothers of the Book (Laurence C. Woodworth), Gouverneur, N. Y. It will consist of 350 copies on hand-made paper, bound in crushed buckram.

Mr. Charles Welsh, pursuing his well-known antiquarian researches into things childish, desires contributions of nursery rhymes and jingles, especially local or distinctly American, with a view to tracing the evolution of a national nursery literature. He may be addressed at No. 67½ Wyman Street, Jamaica Plain, Mass.

A good opportunity for linguistic discipline is promised in 'Unsere Monarchie: Die Oesterreichischen Kronländer zur Zeit des fünfzigjährigen Regierungs-Jubiläums Franz Josef I.' (Berlin: Werner Co.; New York: Lemcke & Buechner). This jubilee work will take the shape of an oblong folio, to be issued in twenty-four monthly parts, each having twelve full-page photographic illustrations. The text is in four parallel columns, in German, Bohemian, Polish, and Italian.

We have frequently called attention to 'Monographs on Artists,' thin volumes, copiously illustrated, edited by H. Knackfuss and published by Velhagen & Klasing in Leipzig (New York: Lemcke & Buechner). Hitherto the text has been German, but a reissue (from the same house) has now begun in English, the translator being Campbell Dodgson, M.A., assistant in the department of prints and drawings at the British Museum. This will be welcome news to many non-German art-lovers, and the Raphael and Holbein just put forth in more familiar garb are excellent examples of the extensive picture-gallery which the subscribers to this series amass. We regret that the fresh departure has not improved upon the original scheme by providing both tables of contents and indexes.

We have received from the Macmillan Co. two more volumes of the "Rural Science Series," edited by Prof. L. H. Bailey of Cornell University. One of them, by Prof. F. W. Card, is a treatise on 'Bush-Fruits,' and is compact with practical information. The other is entitled, 'The Principles of Agriculture,' and is intended rather for schools and rural societies than for the ordinary farmer. It does not follow that the ordinary farmer will not be profited by reading it; but it is an exposition of fundamental principles, not an agricultural manual.

Col. J. D. Miley's 'In Cuba with Shafter,' which the Scribners have just published, does not throw any light on the real mystery of the Santiago campaign—which is, why the

plan of attack prepared by the naval officers and at first approved by Gen. Shafter was afterwards abandoned by that officer. One controverted point Col. Miley does, indeed, clear up. This is the doubt whether Gen. Wheeler did not disobey the order of June 24, assigning his division to Daiquiri, and, by pushing on in front of Gen. Lawton, bring on the engagement of Las Guásimas. Col. Miley explains that Gen. Wheeler, who was chief in command on shore, pressed on so very early in the morning of June 24 that the order detaining him did not reach him. For the rest, the book is a plain narrative of the battle, siege, and capitulation, with some added pages giving fresh matter in the shape of an account of Col. Miley's expedition to receive the surrender of the outlying Spanish garrisons. The military maps at the end are finer than any we have seen in similar publications.

From the Scribners, too, we have a new book of Carlyle. Rather, it is a very old book, being nothing less than the studies and sketches he made for his long projected but finally abandoned history of the Civil War and Commonwealth. The MS. was docketed by Carlyle himself in 1865 as "probably about 1849—have not looked at it since, nor will." It has now been edited by Mr. Alexander Carlyle, and is published under the title 'Historical Sketches of Notable Persons and Events in the Reigns of James I. and Charles I.'

As a gift-book for grown people, it would be hard to imagine anything more attractive than the volume of 'Early Italian Love Stories' just issued by Longmans, Green & Co. It contains twelve *novelle*, translated by Una Taylor, and adorned with thirteen beautiful full-page illustrations by Henry J. Ford. The "early" of the title should not be interpreted too literally, as half of the stories belong to the sixteenth century. The authors represented are Boccaccio, Giovanni Fiorentino, Masuccio, Cinto, Erizzo, Straparola, and Bandello. None of the tales selected are gay, and most of them end tragically. Giovanni Fiorentino contributes the famous narrative of the Lady of Belmonte. The translation, while very free, preserves, without the use of tiresome archaisms, much of the antique flavor of the originals. The peculiar charm of these tales can hardly fail to awaken in the reader a feeling of regret that the *novella*—one of the most characteristic manifestations of the Italian genius—is so little studied and so little accessible.

The Boston Record Commissioners issue their twenty-eighth report, consisting of lists of the marriages recorded on the town records from 1700 to 1751, checked for the period 1709-1751 by the publications (Intentions of marriage), and supplemented from church records and a few other sources. The key to this unpretentious volume of 350 pages is an index one-third as bulky. Genealogists may be trusted to appreciate the labor bestowed on this compilation by Mr. Edward W. McGlenen, of the Registrar's Office.

Mrs. Susan Whitney Dimock, who published two years ago as a labor of love a handsome volume of 'Births, Marriages, Baptisms, and Deaths from the Records of the Town and Churches in Coventry, Conn.,' has produced a companion work for the town of Mansfield in Windham County (New York: Baker & Taylor Co.). In each case of town or church record the compiler has grouped in alphabetical order the vital facts for a given

family or name. Thus, at the very beginning we have, under Abbe, the children of Gideon and Mary (Wood), Gideon and Keziah (Walker, second wife), Gideon and Bathsheba (Smith [presumably third wife]), etc. Nothing could be more convenient for the searcher. In other words, we have not a mixed chronological transcript, but a classified arrangement answering (with the index to the several divisions) every need, if we assume the correctness of the copy. Mrs. Dimock appeals to the State to print these records of the elder towns which are fast becoming illegible, and are already partly destroyed—especially the church records.

The Rumanian Geographical Society has issued the fourth and concluding part of the first volume of its 'Grand Geographical Dictionary of Rumania.' It consists of more than 200 quarto pages of three columns each, and treats of the localities arranged alphabetically between Botosani and Bucharest. Detailed descriptions of the larger cities are given, and more than a third of this number is devoted to an exhaustive account of Bucharest.

'Schantung und seine Eingangspforte Kiautschou' is the title of a handsomely printed volume of more than 300 octavo pages (Berlin: Dietrich Reimer), in which that eminent authority Baron von Richthofen discusses the practical benefits which ought to follow Germany's acquisition of a Chinese port. Although for the most part a mere repetition of what had already appeared in the author's great work on China published about twenty years ago, and based on a journey made thirty years ago, it possesses the interest conferred by the element of timeliness, and is further rendered useful by the addition of new matter concerned chiefly with details as to mineral wealth, possibilities of manufacturing and commercial development, the openings for railroads and the like. The view taken is throughout a sanguine one. The author considers it a blessing for China that a friendly Power, not over-anxious for territorial expansion, has established itself in the harbor of Kiaochau, and is about to establish a city there which will serve to open up a rich province whose population is, perhaps, the most vigorous, manly, and reliable to be found in China. Whatever may be thought of Richthofen's opinions, there can be no doubt of the intelligence and industry with which he has assembled a great mass of valuable material, which no one can neglect who wishes to be informed on the current problems concerning the Far East.

A paper on the economic condition of the Philippines, by Max L. Tornow, occupies the larger part of the *National Geographic Magazine* for February. It contains a useful summary of information in regard to the resources, agricultural and mineral, of the islands, with statistical tables embracing many details of the foreign commerce since early in the century. Less than a tenth of the available arable land is under cultivation, nor can there be any extensive plantations until railways, good roads, and laborers are provided. There are extensive coal-fields of excellent quality, and iron-ore comparing favorably with that of Sweden, waiting to be worked. The author, who has lived in Manila and experienced the blighting effects of the rapacity of the Spanish officials, closes with a brief exposition of the necessities of the situation, which may be summed up in the two words, honest government. There

follows a lively account of Manila after Dewey's victory over the Spanish fleet, by the German military attaché at that place, Major A. Falkner von Sonnenburg. Describing the Spanish operations against the insurgents on the outskirts of the city, he says that "the character of the country seems to be almost ideal for the kind of warfare which military men call 'guerilla fighting.' Only a very methodical and slow warfare gives reliable and enduring results." He says a good word for the Jesuits, as the only religious order which has succeeded "in being loved and esteemed by native and government alike."

As railway tunnels have made the Alps, for the tourist and for trade, merely a geographical expression, so a ferry service soon to connect Reggio and Messina will abolish the Sicilian straits. Syracuse will thus become the southernmost port of Italy taken as a whole, and will compete with Naples for the transit to and from Malta and Alexandria and Bombay. Daily trains from Calais will convey goods in bulk to the Sicilian land's end, and in time passenger trains will likewise be ferried across for Palermo or for Syracuse. A weekly fast palace-car train will serve London (by way of Calais) and Berlin, and shorten the course from the former city to Syracuse to sixty-one hours, possibly to fifty-eight, and enable the traveller leaving London at nine A. M. on Thursday to be in Alexandria at six P. M. on Monday. The sea passage will be reduced from sixty-four hours to forty-four. The *Giornale di Sicilia* foresees a marked increase of visitors to the island itself; and so does the great personal conductor Cook. America is left out of account; but nothing is surer than that Palermo will vie with Genoa and Naples hereafter as the American's door to Italy, in view of the shortened voyage and the delightful welcome in scenery and climate. No doubt the unhappy population is to gain, morally and politically, by this closer connection with the peninsula and contact with foreigners.

We notice that the "Electra" of Sophocles is to be presented in English by the graduates of Adelphi College, Brooklyn, on April 6 and 7 at the Germania Club in that city; the proceeds to go to the Alumni Fund. Miss Frances Greene has composed the music for the occasion.

Mr. William I. Fletcher's Department of Library Economy in the Sauveur Summer School at Amherst, Mass., will open on July 10 for a session of six weeks.

A correspondent writes: "In a Note in your issue of the 2d inst. you speak of the amusing argument as to when the twentieth century properly begins. Mr. Gilbert Parker, in his recent fine story, appears to share in the somewhat general confusion as to how many years it takes to make a century. In the proem to 'The Battle of the Strong' he says: 'There is no man living to-day who could tell you how the morning broke and the sun rose on the first day of January, 1800. . . . The lit of the sensations, the idiosyncrasy of voice, emotion, and mind of the first hour of our century,' etc."

—The Oxford Historical Society, during the fifteen years of its activity, has published, through the Clarendon Press (New York: Henry Frowde), a number of learned and expensive volumes on the early history of Oxford. They have thus rendered accessible to the few who are likely to be interested the Register of the University from 1449,

the memorials of individual colleges such as Merton and Magdalen, and other records of great value to the antiquary. These works have been issued at the rate of one or two a year. In 1898 was published, under the editorship of Mr. H. Anstey, 'Epistolæ Academicæ Oxonienses,' in two volumes, a collection of letters and other documents illustrative of academical life and studies at Oxford in the fifteenth century. The contents of Mr. Anstey's volumes are a reproduction of the register commonly known to Oxford antiquarians as *Registrum F.*; it has never before been printed, and hardly explored. The MSS. were, in most cases, very difficult to decipher, as may be seen from the facsimile reproductions, and the editor has devoted to the task the leisure of five years. Of the 527 records printed by Mr. Anstey, 48 are in English—the rest in what may pass for Latin. To the casual eye they would seem to possess a minimum of interest for even the most limited of Oxford dons; but that would be a most mistaken judgment. Many of these records have the interest of genuine "human documents." The servility, the ignorance, the petty vanity, the poverty, and pardonable greed of a mediæval academic body are laid bare for the entertainment of the judicious reader of these letters. The imposing list of benefactors of the University of Oxford, as one hears it read to-day, produces the impression of nobles and gentry giving freely of their riches to an august body that received their tribute with becoming dignity. One should read the begging letters of the University from 1427 to 1509 to appreciate the real foundations of Oxford's greatness. A University without books, without money enough to pay the fare of a representative to Basle, with buildings so dilapidated that academic functions could not take place in windy weather, was an alma mater that must have been a burden to her sons.

—Duke Humphrey of Gloucester was Oxford's greatest benefactor in these times. *O celica inspiratio* is the favorite title of honor for him in the letters; a London grocer who sent a copy of Josephus is addressed as *reverencia tua*. The Duke's books were chained to desks lest the needy M.A.'s should steal them. They were chiefly theological, but included a small collection of Latin and Italian authors. A list of the volumes is reprinted from the Register, and from it we catch an interesting glimpse of the private library of an English duke in the fifteenth century. The copy of the 'Golden Ass' of Apuleius must have been a pleasing gift to "All the hole Universitie of Oxon."—as the authorities loved to style themselves when they wrote in English to kings and queens who were not expected to understand Latin. The study of Greek did not exist at Oxford in the time covered by the larger part of the letters; it was not till the early years of the sixteenth century that, under the influence of Grocyn and Erasmus, Greek was included in the "curriculum." Towards the end of "Registrum F.," the registrar, one Farley, proudly signs his name in the Greek character, which was probably all he knew of the language. All who are interested in the study of surnames should consult Mr. Anstey's volumes, where are to be found many surnames, still in common use in England, with extraordinary variations of spelling, even in the compass of a single letter. The phonetic spelling of some of the English letters rivals that of certain specimens among the "Paston" collection. It is amus-

ing to observe how, towards the end of the century, the solemn religious tone of the earlier epistles gives place to more business-like language.

—Vols. xxxv. and xxxvi. of the 'Jesuit Relations' (Cleveland: Burrows Brothers Co.) contain a good variety of documents, but in beginning to notice them we are oppressed by a sense of loss. The Huron Mission exists no more, and we must seek elsewhere for our principal topics. After Garnier and Chabanaud had been added to the list of martyrs, and, more particularly, after the Iroquois war-parties had devastated the Neutral and Tobacco nations, the Jesuits were forced to abandon Huronia altogether. The remaining savages in that region were rendered docile enough by their horrible afflictions, but they were only a remnant, and they longed for such shelter as could be found under the guns and ramparts of Quebec. The words with which Lallemant opens the Relation of 1649-50 are equally a confession of failure and a tribute of resignation: "Your reverence will have already learned by the return of the first vessels the sequel of the disasters to, and the utter wreck of, the Huron Mission, which the fury of the Huroquois has at last accomplished. . . . Our eyes and hearts, seeing and feeling these blows from the hand of God, have but this reply to make: 'He is the sovereign Lord of His works, and the Ruler of our insignificant projects conceived for His glory. It is for us to accept His decrees, and never to disapprove what He performs.'" The immediate effects of this catastrophe were considerable. Lallemant was urged by his associates in New France to return home for aid, and did so, leaving Ragueneau, who was now at Quebec, to act as Superior. The fugitive Hurons, though they could not be altogether cared for, were generously helped, and new life was thrown into Jesuit undertakings in the Laurentian valley. The region of the Kennebec, which more properly belonged to the Capuchin sphere of influence, also received attention. And with it is to be connected Drulillettes's narrative of his New England trip in 1650-51.

—The aim of this journey was to secure English aid against the Iroquois who then threatened the Abenaki converts. Drulillettes left Quebec on the 1st of September, armed with passports from the Governor, D'Ailleboud, and accompanied by one of the leading Sillery Indians. They went south, partly by land and partly by sea, and arrived at Boston on the 8th of December. The circumstantial details of the Jesuit's visit to the Puritans are highly entertaining. His purpose was an ambitious one, in that it involved the coöperation of four English settlements with French and Roman Catholic allies. Evidently great respect was paid Drulillettes on account of his hard work among the Abenakis, and he has nothing but warm praise to report of the hospitality extended to him. On December 13 Gov. Dudley gave a formal dinner which was followed by an audience, and at it counsel was held concerning the common danger. However, the men of Boston were unwilling to proceed independently of their brethren, and sent Drulillettes to Plymouth, whither he went on the 21st, and received courteous treatment from Governor Bradford (whom he curiously calls Jehan Brentford). In Boston his host had provided a

special room for his religious observances, and, at Plymouth, Bradford showed his consideration by providing a fish dinner on Friday. Altogether he received more practical encouragement at Plymouth than in Boston. No definite arrangements were concluded before Drulillettes's return, but he left Massachusetts in a mood of hope. One picturesque episode of his embassy was a meeting with the Rev. John Elliot (xxxvi., p. 90): "J'arrivay a Roxbury [Roxbury] ou le ministre nomme Maistre heliot qui enseignoit quelq. sauvages me recust chez lui a cause que la nuit me surprenoit et me traita avec respect et affection me pria de passer l'iver avec luy." Seldom in the seventeenth century did Jesuit and Calvinist reach terms of such politeness and amity!

—With every explanation, the mystery of Asiatic trade increases. Commissioners sent out by chambers of commerce, as well as resident officials dwell upon the subject, and yet all point to the future while speaking slightly of the present. The experience already gained is slurred over, and the brilliant promise of what is to follow an extension of holdings forms the basis for eulogy. M. Doumer, Governor-General of Indo-China, has recently presented his views, and to a body of merchants and economists, so it is not probable he dwelt upon the darker phases. France holds territory in Asia three times the size of her own state, with a population of about 25,000,000, of whom 12,000,000 are in Cochín-China and 10,000,000 in Tonkin. The cost of managing these possessions is about \$15,000,000 a year, and of this \$8,500,000 will be charged on the French budget. In 1897 there were imported from these dependencies a value of \$4,360,000; and the exports from France were \$6,100,000; a total of \$10,460,000—or about 70 cents on the dollar of Governmental expenditure. Nor does the fervid praise of the country by M. Doumer shed light on the question. Cochín-China and Tonkin are fertile, growing rice as the leading product. The extensive rivers and canals offer ready means for shipping this crop. Some pepper and cotton exhaust the list of exports, though the forests may yet become important. Annam and Cambodia are without water-courses, or have such as cannot be made navigable because of the floods and the formation of bars.

—The most promising returns from future development are to be found in the cultivation of transplanted crops. Tobacco-plants are being brought in from Sumatra, gutta-percha plantations have been established, and tea is cultivated in Annam. Coffee is mentioned as a possibility, and sugar is sent to Hong-Kong. The cotton of Cambodia, a short staple, finds a market in Japan, while that of Annam is to be used in a French mill now building at Haiphong. The most important market—that of Tonkin—is thus described: "The population is very dense on the delta, the rest of the country has been ravaged for forty or fifty years by Chinese bands. Revolts, invasions, and wars have made certain parts of this country a veritable charnel-house; in the suburbs of Sontay, Tuyen-Quang, Kep, etc., corpses infect the plains. Settlements cannot be made for some time to come." A not very promising picture. Failing to prove that the Asiatic possessions of France are actually productive in lines capable of feeding French trade, M. Doumer falls back upon the provinces behind Indo-China, and

dwells upon the exceeding richness in mineral deposits of Yunnan. M. Beylard, a French engineer, has reported enthusiastically on the situation, and Yunnan is said to be "the natural economic complement to Indo-China. The importance of this region, from the commercial point of view, is recognized. It yields to no other in political importance. It is, in fact, the parting-place of the Hindu and Chinese races. It is to the east what Afghanistan is to the West." The fact is, that France is gambling on the future in Asia, and even the Governor-General cannot hide the hollowness of present conquests—margins, as it were.

—The text of the Act now to hand enables us more fully to understand the scope and character of the New Zealand measure for old-age pensions than did telegraphic reports. "Subject to the provisions of this act, every person of the full age of sixty-five years or upwards shall, whilst in the colony, be entitled to a pension as hereinafter specified." Twenty-five years' continuous previous residence is obligatory, allowing absences for sailors, and two years' total occasional absences for others. During these twenty-five years he (including she) must not have been imprisoned for five years, nor during the previous twelve years imprisoned on four occasions or for four months, for any cause "dishonoring him in the public estimation." If married, he or she must not without just cause have deserted partner or children. He must be of good moral character. His yearly income must not exceed £52. The net capital of his accumulated property may not amount to £270. He must not have deprived himself of income or property to qualify. The pension is £18 yearly (payable in monthly instalments), and to vary with varying income or capital, diminished by one pound for every complete pound of income above £34, and also by one pound for every complete £15 of net capital. The act runs to eleven pages and a half. The above essential provisions are comprised in one page and a half. The text is occupied with detail, registrational and otherwise. A perusal does not give much encouragement to the hope of the possibility of the application of a similar measure to countries of wide extent or large population. Aboriginal natives are included, to whom "moneys other than pensions" are not paid out of the civil list. Chinese and other Asiatics, whether naturalized or not, are excluded.

THE BROWNING LOVE LETTERS.

The Letters of Robert Browning and Elizabeth Barrett Barrett, 1845, 1846. With portraits and facsimiles. In 2 vols. Harper & Bros. 1899.

Here are all the letters that ever passed between Mr. and Mrs. Browning (with one exception). After their marriage they were always together, and letters would have been a superfluity. The exception is a letter of May 23, 1845, which was destroyed by Mr. Browning, it having been returned to him by Miss Barrett on account of its "wild speaking," presumably an offer of marriage after he had seen her for the first time, on Tuesday afternoon, May 21. Browning destroyed all the rest of his correspondence, but, not long before his death, said of these letters, "There they are: do with them as you please when I am dead and gone!" It is

not to be believed that he intended to permit their publication. His meaning must have been, "Keep them or destroy them," finding himself unable to lay violent hands on them. Few who knew Browning personally or in his books will be able to convince themselves that his words intended, even as possible, the construction which his son has put on them. Standing off from these letters as a dramatist, he may have perceived their dramatic value, but to proceed from such perception to their sacrifice upon the altar of "the world's new fad, Publicity," would have been quite another matter—an irreverence strangely at variance with "a certain inlaid box, into which they exactly fitted, and where they always rested, letter beside letter, each in its consecutive order and numbered on the envelope by his own hand."

This said, the critic may excuse himself for displaying the contents of these volumes on the ground that Mrs. Browning has made him free of her part of the correspondence when she writes, February 17, 1846:

"I, for my part, value letters as the most vital part of biography, and for any rational human being to put his foot on the traditions of his kind in this particular class does seem to me as wonderful as possible. . . . We should all be ready to say that if the secrets of our daily lives and inner souls may instruct other sorrowing souls, let them be open to men hereafter as they are to God now. Dust to dust, and soul-secrets to humanity—there are natural heirs to all these things."

If she had had a thought of her own letters to Browning ever being published on this ground, it might have given her pause. At the same time it may be cheerfully conceded that, if she and Mr. Browning had been consciously premeditating printers' copy for this year of grace, they probably would not have done so well as they did in their complete unconsciousness, nor could their letters have been more free from anything and everything diminishing in any way our admiration for this pair of lovers. There are abundant protestations, and there is a great deal of that commodity of which Byron wrote that

"More than half the charm is lost
Of kisses that arrive by post."

But, once admitted into this sacred privacy, the admirers of the Brownings will find nothing which does not heighten their appreciation of their characters, their relation to each other and to that art of poetry which was the "blithe go-between" that fructified the flower of love itself had planted in their hearts. At the same time it may be doubted whether the effect produced by these letters might not have been produced more delightfully by judicious selections from the correspondence. The most of them are love letters pure and simple. The amount of personal and literary matter, aside from their main purpose, is hardly more than Falstaff's bread in contrast with his sack. When the correspondence has been going on a year, there are 104 letters, and after that their frequency increased until on September 19, 1846, they reached an absolute end; that being the day, one week after the marriage, when they ran away together.

Miss Barrett's letters, like Mrs. Browning's, were not remarkably good, and Robert's were much worse, in "form and moving." He might often say with Father Taylor, "My verb has lost its nominative, but I'm bound for the Kingdom of Heaven all

the same." Oftener it is his nominative that loses its verb. There are sentences that go on for half a page and more and never end. After reading these letters for an hour, a few pages of 'Sordello' would be good to rest the weary mind. There are scores of pages in the aggregate about the days when Browning is to come for his clandestine visits. The day first set can seldom be kept free. Sometimes it flutters back and forth a whole week long. How these meetings and the almost daily correspondence went on while the insanely egotistical father knew nothing about them, is passing strange. It would seem that he must have known enough to divine their import, and have been preparing for himself with secret joy such a dramatic exhibition of his *patria potestas* as would surpass all previous exhibitions in that kind. One of the hardest things for Browning was to see her father through Miss Barrett's eyes. Could he have let himself go, we might have had a letter or a personal encounter for which a dozen or twenty of the less important letters given might easily have been spared.

So far as they were mutually concerned, the course of these true lovers ran as smoothly as need be. There were no quarrels to be made up. The nearest approaches to them resulted from their endeavors to outdo each other in unselfishness. Browning's headaches were a minor trouble. These are a deduction from our robust Browning as heretofore conceived. In Mrs. Browning's sympathy they loomed quite as portentously as her own weakness and suffering in his more hopeful eyes. Next to fixing the right day for the next meeting, these headaches furnish the most recurrent note. In his first letter, January 10, 1845, he writes that he loves her books with all his heart, "and I love you, too." After his offer of marriage, the May following, the letters become somewhat more literary, but before long the truth blazes out again, and then begins the long struggle, on his part to win her consent to a final marriage, on hers to prevent him from burdening himself with the weight of her chronic misery. When he discovers that she uses opium to mitigate this, there is expostulation on his side, pathetic palliation upon hers, but generally she is the more level-headed of the two. It is interesting to see how his parenthetic style is clarified by the stress of passionate emotion, while hers is affected in an opposite manner.

Once he has the promise of marriage, a new struggle begins over the fixing of the happy day. The dread of her father's horrible displeasure holds her back. At length the month is set. Suddenly her father broaches a scheme of general house-cleaning, and the whole family is to move out. The best-laid plans of the lovers are threatened with miserable abortion by this untoward scheme. The envelope of her letter of September 12, 1846, is endorsed in Browning's hand, "Saturday, Sept. 12, 1846 ¼ 11—11¼ A. M. (91)," showing that even when on pleasure bent he had a careful mind. The "(91)" indicates the number of his visits to her since the first in May, 1845. The marriage was solemnized in Marylebone Church—not in St. Pancras, as stated in Mrs. Orr's biography of Robert Browning. They did not meet after the 12th until the leave-taking on the 19th. Browning had become a master of equivocation by this time; witness the fact

that when he was already engaged to Miss Barrett, and some one had offered to present him to her, he had answered, "Don't you know, she never sees any one?" But he could not ask for Miss Barrett when that lady had become Mrs. Browning. As for Mrs. Browning, she loved him just too much to write him that the marriage was invalid and he mustn't come for her, so hard it was for the first time in her life to pain her father by a voluntary act—the father who would never speak to her again nor open one of her letters to himself.

Very beautiful are some of the confessions upon either side, as where Browning, in the later stages of his happiness, confesses that in the earlier stages he had sometimes shortened his visits a little that he might the sooner take her hand. The "Portuguese Sonnets" prove to have been simply a faithful transcript of an experience which enriches the treasury of high-minded love by one more great example. The difference between the two as poets is an interesting one. Her poetical self-consciousness is much keener than his. Especially does she think of herself as an artist, whereas it can hardly be doubted that her grand defect was that she was so much less artist than poet. Without extravagance, they are rivals in their mutual admiration, and his admirers who are contemptuous of her ability should lay his praise of it to heart. Even for those earlier things, of which she came to think little, he has sincere applause; the lover possibly getting the better of the critic. His last 'Bells and Pomegranates' are coming out, and there is much said of different numbers of the series, especially "Luria." All lovers of that noble drama will value every word of Browning's criticism on it. It was his hope to write a poem that should be, not dramatic, but lyrical and subjective, but there is no evidence that he even so much as began to carry his idea into effect. She assures him that he is "never misty—even in 'Sordello'—never vague"; and he protests that his one purpose is to make himself as clear as possible.

The glimpses of other people are but few. Mackay is dismissed by Browning as a "prince and potentate of Commonplaces." Miss Barrett will not admit Carlyle's "mannerism": it is "not his dress but his physiognomy—or more than that even." There is much trouble in cleaning up after Miss Mitford, she leaves about so many scandalous reports—especially about Miss Barrett's friend Thorne, mentioned scores of times in the letters and not once in the index: "He pours libations on his bare head out of the water-glasses at great dinners," and, being rejected by a lady with £50,000, the same evening offers himself to a lady with £40,000. Mrs. Procter also, wife of Barry Cornwall, has an unguarded tongue. In one day Miss Barrett has a visit from Miss Martineau and Mrs. Jameson, "one talking Mesmer and the other Homer." Dickens invited Tennyson to go to Switzerland with him. Tennyson declined: "I should be entreating him to dismiss his sentimentality, and so we should quarrel and part and never see each other again." Browning describes Tennyson as "a LONG, hazy kind of a man, at least just after dinner." Going to see a representation of his own "Strafford," Browning was asked, "Is not this the author of 'Romeo and Juliet' and 'Othello'?" and answered, "No—so far as I am aware." "The author of Othello!"—so he comments—"when he can be and is *William*."

Barrett's own R. B.!" He is severe on the Howitts, and asks, "What ails them of a sudden that they purvey this kind of cat-lap? . . . not a venerable commonplace excused on account of its age." At one time Carlyle talks "constrainingly, bracingly"; at another he tells of an American "who was commissioned by a learned body of his countrymen to ask him [Carlyle] two questions: What's C.'s opinion as to the future state? and, What relation Goethe was to Goethe's mother's husband?" There is a good word from Browning for Lord Byron: "Only a little longer life and all would have been gloriously right again." 'Consuelo' is incontinently damned, with some injury to Miss Barrett's feelings. The excellent Mr. Kenyon, who set up Mr. and Mrs. Browning financially so handsomely, is, with serene unconsciousness and the best possible intentions, always getting in the way. Flush, too, Miss Barrett's dog, is much in evidence, but makes an appreciable diversion by getting lost just as the situation was becoming extremely tense on the eve of the prisoner's escape. Browning's reality is generally unimpeachable; but when he professes his willingness to give up his vocation as poet to take care of Miss Barrett, as Mrs. Browning, there is the slightest undulation of his broadcloth, as if he were laughing in his sleeve.

THORPE'S AMERICAN CONSTITUTIONAL HISTORY.

A Constitutional History of the American People, 1776-1850. By Francis Newton Thorpe. 2 vols. Harpers. 1898. Pp. 486, 520.

Mr. Thorpe's book is an illustration, on a somewhat extended scale, of a method of treating history, and particularly American history, of late years much in vogue. Older writers, setting down their facts in appropriate order, and with such literary skill as they could command, were, as a rule, content to label their work simply "a history" of this or that country or time. With a crude conception of the unity of history, they fondly imagined that a truthful record of human progress could be presented only by him who, according to his light, should present the whole of it. Nowadays, a considerable class of writers, of unquestioned industry and learning, seem inclined to a different view of the matter. They take a single phase of a subject, or, better still, a minute and relatively isolated topic, treat it exhaustively, erect (often) a slender structure of text upon a massive foundation of footnotes, and seek distinction by labelling the result a "social," or "political," or "economic," or "legal" history. Of all the terms thus introduced to show precisely the kind of thing a writer thinks he has done, that of "constitutional" history has been most abused. At different times and in different hands it has been made to mean a history of legal notions, a history of party politics, a history of representative government, and a plain chronological statement of facts. And now comes Mr. Thorpe, with a 'Constitutional History of the American People,' in which the term receives still another application, and with the confident assurance, apparently, on the part of the author that, notwithstanding the limitations and misapprehensions of others, he, at least, is on the right track.

Mr. Thorpe has not, indeed, failed to de-

fine the term he uses. Constitutional history, he tells us in his preface, is

"the history of a constituency which, consciously or unconsciously, is ever striving to promote its own welfare. A constitutional history deals primarily with persons, not with documents. Laws and constitutions, written or unwritten, are the evidence of the efforts of a constituency to secure its ends. The development of constitutional government consists, essentially, in the definite limitation of authority, in order to accomplish purposes either implied or specified. . . . Our constitutional history, like that of every other people, is a history of the evolution of religious, of political, and of industrial rights. The steps in all this progress are recorded in the results of many struggles. Among these are the struggles for the extension of the suffrage, for the equitable apportionment of representation, for the abolition of discrimination on account of race or of previous condition, for the organization of systems of education free to all, for the separation of the state from questionable practices, and for the establishment of government directly upon the will of the people. Incidental to these processes has been the slow definition of the functions of the state, of its rights as a moral person in coördination with the rights of the individual, and of its powers and their fields of operation—executive, legislative, and judicial. . . . The evidence enables us to deduce, with approximate accuracy, the principles on which government in America rests. . . . The principal authorities upon which the evidence rests are the laws and constitutions of the country, and the journals, proceedings, and debates of constitutional conventions" (pp. v—viii).

We are not particularly disposed to quarrel with Mr. Thorpe's definition, though we should not like to see it accepted as sufficient; but the application of it suggests some important questions. The first four hundred pages of the thousand to which the work before us extends are devoted to a discussion of the notions of sovereignty, popular government, and the state in America in the eighteenth century, the organization of government in the States, the formation of the first State constitutions, the early conditions of suffrage, the westward expansion, the issues involved in the admission of Missouri, the annexation of Texas, and the absorption of Mexican territory, together with a special chapter on the status of free negroes. For further light on the chief "constitutional" problems of the first half of the present century, we are next pointed to the discussions in the State constitutional conventions between 1845 and 1850. Four States are selected as types—Louisiana for the South, Kentucky for the border States, Michigan for the North, and California for the new West—and four hundred pages are given to a detailed abstract of the debates in the conventions of each. The contents of the remaining two hundred pages are indicated by the titles of the chapters—"A Half Century of Constitutional Changes," "Corporations, Finance, Local Government, and Education," and "The Courts, the People, Social and Civil Progress."

These topics, clearly, are such as one would expect to find discussed at length in a constitutional history of the American people. But how does Mr. Thorpe treat them? An examination of his volumes shows that the chief emphasis throughout is laid upon two or three subjects only, those, namely, of citizenship, suffrage, and eligibility for office. Page after page is taken up with a rehearsal of the arguments of this or that person or this or that convention on some proposition, intended to settle one or other of these questions. Two-fifths of the entire

space, as we have seen, is devoted to an account of constitutional conventions in four States. In other words, Mr. Thorpe's conception of constitutional history, if we may gather it from this his latest work, is that of a history of the formation of State constitutions; and it is this that he has given us in his book. Alike in the chapters on the four typical States mentioned and elsewhere, attention is insistently called to the formulation of a document, the turning of a phrase, the precise definition of a right, an obligation, or a restriction. With the exception of the legal status of the negro, scarce any of the great questions which agitated the political and social life of the United States between 1776 and 1850 receive in Mr. Thorpe's pages more than brief incidental mention; and the person who should read the book without a considerable equipment of previous knowledge, could not be blamed for concluding that the United States had had no foreign relations, no tariff controversy, no struggle with a national bank, no attempts at nullification and secession, and no serious foreign or domestic insurrection, but that the matters of vital concern to us had been such as whether a residence of three months or ten years should be prescribed as a prerequisite for voting, or whether cities and country districts should have equal or proportional representation in a State Legislature, or whether a candidate for Governor should be required to own real estate and profess his belief in God.

We have dwelt at this length on the inappropriateness of Mr. Thorpe's title, not because the label is of greater significance than the contents, but because a comparison of the title and the subject-matter points the way straight to the essential limitation of the book. That Mr. Thorpe is confident that he has written a constitutional history, and written, moreover, from the one standpoint properly to be taken for such a work, cannot be doubted; and his pages show abundant evidences of knowledge, industry, and zeal. Yet we can but think that his work is, after all, hardly more than an elaborate monograph, a valuable section of a possible larger whole, but wanting in the broad conception of the subject which his title implies. For constitutional history is not merely the record of the struggle of a people to surround their political privileges with suitable documentary safeguards, or to define the immediate relation of the individual to the administrative machinery of government, or to assign to each element of the population its appropriate sphere of action; it is, rather, the exposition and appraisal of every influence which has so far entered into the life and thought of a people as to shape the form of their government and establish its theoretical basis. Curtis, essaying to compass the requirements of so great a task, treated the subject with judicial clearness and precision, though with the limited mental range of the constitutional lawyer. Von Holst conceived of American history as a seething caldron set over the fires of slavery, nullification, and State rights, and studied the conflagration until surrounding objects became somewhat indistinct. Schouler put his trust in a plain, unvarnished tale, left facts to tell their own story, and subordinated reflection to narration. Mr. Thorpe, avoiding direct competition with his predecessors, has fixed his eye on an important and hitherto neglected

part of the administrative organization, and has given us an estimate of it which, if there were nothing more to be said, would stamp the American people as a nation of legalists, to whom the particular method of individual participation in affairs had been the main subject of political concern. The method is novel and the results are valuable; yet nothing can be surer than that, if terms mean anything, this is not, in any but an extremely narrow sense, constitutional history at all.

While, however, we cannot think that Mr. Thorpe's work is what it professes to be, it nevertheless makes important additions to our knowledge of American history. Throughout, reliance has been placed upon primary sources, especially the journals and proceedings of constitutional conventions, and the constitutions and laws of the several States. The accounts of the debates in the constitutional conventions of Louisiana, Kentucky, Michigan, and California are extremely full. Particularly valuable are the discussions of the legal status of the negro, and the issues involved in the various propositions for negro representation in legislative assemblies; while the status of the free negro, the onerous restrictions imposed upon him, and the arguments, especially of the South, for and against emancipation, have nowhere, we think, been so elaborately set forth. To many readers the relative importance of the free negro as an element in the slavery controversy will very likely be something of a revelation. The discussion of State sovereignty gains in freshness, though it loses in completeness, by being carried on mainly from the standpoint of the State conventions. Into the subjects of citizenship, suffrage, and eligibility for office, as we have said, Mr. Thorpe enters at great length; and we fancy that most students will be inclined to accept many of his results as final. The tables inserted at various places, showing the qualifications of voters, Senators, Representatives, etc., in the different States, for different periods, are a form of aid not to be despised.

It is not easy to summarize an author's conclusions where the mass of detail is so great. In the dry and formal record here presented, however, we can see how the notion and practice of universal manhood suffrage gradually emerged from conditions of restriction and limitation. From the time when property-owners and church members were alone thought fit to vote and hold office, to the time when the ballot was given to foreigners not yet naturalized, was a long step, particularly when measured by the degrees of expansion of the intellectual horizon. Upon the developing form of the electoral system deep marks were made, in the North by Native Americanism, in the South by the profound concern over the definition of property in slaves, the right of emancipation, and the adjustment of electoral privileges between slaveholders and non-slaveholders. We recall no writer who has brought out so clearly, from official records alone, the essentially defensive attitude of the South in the whole slavery controversy; a South struggling to maintain an institution the legitimacy of which, in any sound view of developing human rights, could never be assumed, but which must be upheld by more and more elaborate argument and increasing subordination of reason to force. Even to the North, the negro was an object of suspicion and legal discrimination; but to the South his presence, and the apparent impos-

sibility of dealing with him by other than repressive measures, wrought widespread perversion of the moral sense, and made him, from whatever point of view, a stone of stumbling for those with whom his lot was cast.

Granted the limitation already pointed out, Mr. Thorpe has done his work, for the most part, with commendable thoroughness. That the subject does not readily lend itself to entertaining literary treatment is, of course, obvious; but it must be said that large portions of Mr. Thorpe's volumes are hard reading, and that the work, as a whole, is extremely dry. The last three chapters of vol. II., with their summaries of miscellaneous provisions of State constitutions, read like a Stimson's 'American Statute Law' thrown into literary form. A further embarrassment to the reader is the scarcity and incompleteness of dates, those especially in the chapters on the four typical States being at times so introduced as to necessitate a long search through the preceding pages to ascertain either the month or the year. The titles of chapters III. and VIII. of volume II. are hardly appropriate, corresponding as they do with but a small portion of the contents of the chapters themselves. Finally, the restricted scope of the work, together with the amount of previous general knowledge it apparently assumes, would seem to limit its profitable use to relatively mature students, though to the attention of such it is assuredly to be commended.

Three Studies in Literature. By Lewis E. Gates. Macmillan Co. 1899.

Cardinal Newman's rank as a prose-writer, and the position of Jeffrey and of Matthew Arnold in the history of criticism, are in the category of *res judicata*, for the present generation at any rate. Moreover, critical essays on writers of critical essays, unless they display unusual brilliance of wit or insight, are likely to be dull and unprofitable reading. A study of Francis Jeffrey has, indeed, some excuse for existing. The great Whig editor's name stands, in these days, for an obsolete school of literary criticism, and he lives, if he may be said to live at all, in the minds of persons of general information, as a purblind opponent of Romanticism, who compromised himself for ever by the phrase, "stuff about dancing daffodils." Dogmatic criticism, in his person, died hard. Mr. Gates shows clearly where Jeffrey drew the line at Romanticism. Let it be decorative, as you find it in Scott and Keats, and he will recognize its charm; but take it seriously, make your leech-gatherer symbolic, exalt him into a moral type, and you offend the taste of a well-bred Whig reviewer. He erected his prejudices into canons of taste, and in compositions that conflicted with those canons he could see no merit. "England will never admire, nor indeed endure, your German divinities," he said to Carlyle, and he sincerely believed that it was impossible for a scholar and a gentleman to tolerate the realism of Goethe.

Matthew Arnold also was an *arbitrarius*, and not always entirely trustworthy. But when he erred it was on the side of over-appreciation, and the range of his literary taste could hardly have been wider. Mr. Gates makes some nice points in his study of Arnold's style, and illustrates certain faults of manner that were pointed out in passing by the author of

'Obiter Dicta' in his witty essay on Arnold; for example, an irritating jauntiness of style, and an assertion of inferiority so elaborate as to amount to supercilious condescension. This was a pose most calculated to annoy, and was chiefly affected when the author of 'Literature and Dogma' was baiting bishops. Arnold, in his mid-career, as a missionary to the middle classes, is Arnold at his wittiest. Mr. Gates could not resist quoting a famous passage from the preface of 'Essays in Criticism'—nor can we. Arnold relates a conversation between himself and a portly jeweller from Cheapside, who is his fellow-traveller on the Woodford branch of the Great Eastern Railway. The jeweller was greatly disturbed at a murder that had lately been committed in a railway carriage, and Arnold tendered him consolation:

"I reminded him how Caesar refused to take precautions against assassination, because life was not worth having at the price of an ignoble solicitude for it. I reminded him what insignificant atoms we all are in the life of the world. 'Suppose the worst to happen,' I said; 'suppose even yourself to be the victim—*il n'y a pas d'homme nécessaire*—we should miss you for a day or two on the Woodford branch, but the great mundane movement would still go on, the gravel walks of your villa would still be rolled, dividends would still be paid at the bank, omnibuses would still run, there would still be the old crush at the corner of Fenchurch Street.'"

Whatever reservations we may be disposed to make in the matter of the Gospel according to Matthew Arnold, we are all good Catholics over Newman's prose. "You and Keble are the philosophers, I the rhetorician," he wrote to Froude apropos of the management of the Tractarian agitation. Newman was a rhetorician after the manner of De Quincey, whom, according to Mr. Gates, he consciously imitated. Certainly De Quincey might have written the following from the sermon on the 'Fitness of the Glories of Mary':

"But she, the Lily of Eden, who had always dwelt out of the sight of man, fittingly did she die in the garden's shade, and amid the sweet flowers in which she had lived. Her departure made no noise in the world. . . . Pilgrims went to and fro; they sought for her relics, but they found them not. Did she die at Ephesus or did she die at Jerusalem? Reports varied, but her tomb could not be pointed out; or, if it was found, it was open; and instead of her pure and fragrant body, there was a growth of lilies from the earth which she had touched."

Newman wrote the 'Apologia' to prove his love for Truth from the record of his life. And what was the result of this long life spent in the search after Truth? "I think it impossible to withstand the evidence which is brought for the liquefaction of the blood of St. Januarius at Naples, or for the motion of the eyes of the pictures of the Madonna in the Roman States. I firmly believe that portions of the True Cross are at Rome and elsewhere."

Mr. Gates traces Newman's connection with Romanticism and the charm he found in mediæval Christianity. His conception of Newman as a great mediæval ecclesiastic astray in the nineteenth century is, we think, very just. On the whole, his Essay on Newman is the most suggestive and readable of the three; partly, no doubt, because its subject is, and always will be, something of a mystery to every-day men. Newman saw things not as we see them; everything in him "tended towards the sublime," and it is because of that, and because much of the sublime in his life and motives is so fatally new

to childish absurdity—or seems so to our narrow vision—that he calls for the most delicate appreciation.

Enough has been said to show that Mr. Gates's unpretentious volume, while it makes no attempt at brilliancy or great originality, is a careful, thoughtful performance, containing one or two really valuable hints towards the appreciation of his authors. And it is no slight thing to have achieved so much—at any rate in the case of two men who are still so vividly before the world's eyes as are Arnold and Newman.

The Silva of North America: A Description of the Trees which grow naturally in North America exclusive of Mexico. By C. S. Sargent, Director of the Arnold Arboretum of Harvard University. Illustrated with figures and analyses drawn from nature by C. E. Faxon. Vol. XII. Boston: Houghton, Mifflin & Co. 1898.

The publishers make the interesting announcement that, since it has been found impracticable to include in the twelfth volume of Prof. Sargent's great work the general index to the whole, a thirteenth volume containing this index, together with descriptions and illustrations of recently discovered species, and such corrections of the original volumes as recent explorations have made necessary, will be sent to subscribers without charge as soon as ready. This proposition is in full accord with the generous policy which has marked the progress of the work from its beginning. The illustrations have been copious and of the highest order of excellence in every feature of their execution. Mr. Faxon's drawings have been spirited and lifelike; his analyses have been characterized by accuracy and clearness, and the transference of these to the plates has been thoroughly good from first to last. Taken altogether, the original drawings and the engravings are, from their absolute fidelity to nature, helpful to all classes of students and even casual readers. The explanatory and descriptive text has been carefully considered and judiciously proportioned; the economic aspects of the subject have received adequate and careful treatment.

The nomenclature, to which reference has before been made in this journal, is the only blemish. It is not in accord with generally accepted rules, nor does it keep pace with the innovations; its own changes are not likely to be found to be acceptable to anybody. But it should be said that the author has been scrupulously consistent throughout in following the rules laid down at the outset.

There are two features in the text which characterize almost every page: these are, first, the editorial skill which gives to the separate parts their proper perspective, and, second, the vividness of description which comes from wide and fond contact with the trees themselves. Prof. Sargent's colossal undertaking has already given new hope to the lovers of forests, and it will long continue to inspire enthusiasm in forest culture and conservation. A large part of the influence which it exerts must be ascribed to the felicity of expression of the author, who carries his readers over wide ranges of territory without weariness, because he himself loves the trees and the forests of which he writes.

The present volume deals with larches,

spruces, firs, and the like. They are members of the great group of plants with uncovered seeds, the so-called gymnosperms, and are regarded as direct descendants of the gymnosperms which formed, with the ferns and the allies of the ferns, the bulk of the vegetation in the greater coal period. Some of them have come down with little change during the long time which has passed since the carboniferous epoch, while others have been evolved as if in prompt response to the changes in environment. Hence, for a student of the past history of plants, these groups possess a singular attractiveness. Investigators do not seem to grow weary in conjecturing when and how have arisen the adaptations by which these plants have come to be what and where they are. Therefore, even the thickets of low spruces in the far North, with their monotonous colors and uniformity of shape, are deeply interesting to the thoughtful student of the past, while the towering groves which can yield the loftiest masts, present certain questions in plant-life and distribution which are very difficult to answer, and which are, therefore, all the more engaging.

It is probably known to all our readers that one of the spruces rivals the white pine in value as a timber tree, but perhaps it is not so widely known that its usefulness also as a source of cheap paper-pulp puts it in imminent danger. The regular issue of the newspapers for a single Sunday, in any one of our largest Northern cities, sweeps away not far from ten to twelve acres of this valuable spruce, while the larger issues at Christmas, or in some period of great excitement, go far beyond this conservative figure. And the worst of it is, the clean sweep of the trees in such cases is a prodigal waste, for it does not concern itself, as a sound system might, with the possibility of replacement. It is, however, difficult, if not impossible, to discover any way of checking this spendthrift waste. Without any policy of forest care, and without any present likelihood of the framing of such a policy on an acceptable basis in our North, the question of complete destruction of the spruce appears to be one of a few years only. Certain other conifers are taking the places of their predecessors in small districts a little further south, and in a few limited areas the coniferous forests are even gaining ground. But these are exceptional—hopeful, to be sure, but, from their exceptional character, the more exasperating. In laying down this volume, with its cautious and yet strong statements as to the uses and possibilities of our shrinking forests, we shudder to think how our forest inheritance is imperilled by the shortsighted selfishness of the very men who should protect it. If a wise State and national policy of forest conservation is established in our "North America exclusive of Mexico," within the life of the present generation, it will be largely due to the thoroughly sound influence emanating from Prof. Sargent's work.

William Blackwood and His Sons: The Annals of a Publishing House. By Mrs. Gerald Porter. Vol. III. Scribners. 1898.

It would be idle to expect that the third volume of the Blackwood annals should come up to its predecessors in interest. A success of scandal is seldom followed by a success of merit, and, when it is, one does

not look for excitement. The history of the Blackwood firm is the story of "Maga's" adventures. From the mystery and fun of the 'Noctes' we now pass to sober and responsible reviewers—from the stormy petrels C. North and Lockhart to Mrs. Oliphant and George Elliot. In "Maga's" roystering youth, a review in her pages was likely to contain affronts that could be washed out only with blood; we cannot suppose that the revelation of Mrs. Oliphant's identity as a reviewer can ever have ranked as a question of life and death; and when George Elliot unmasked there was no result more sensational than the discomfiture of Mr. Liggins. The atmosphere of assured success and large checks is the natural atmosphere of the Epitaph, and they find it agreeable; for us the romance of the Blackwood house ceased with its founder.
